How does the generator levy affect competition?	• No compelling evidence supporting that the current approach is creating innovation. • Creates higher business costs across operations and supply chains. • The current price of $145 is not competitive (for private facilities). Metro Vancouver has funds and existing infrastructure, and being both regulator and competitor, it's not fair competition.

	• Comment that Metro Vancouver will not license any private facility to receive municipal waste in the region. • Currently haulers end up winning contracts based on proximity to facilities as opposed to other factors • Ensures that only Metro Vancouver can take waste out of the region, which has negatively impacted smaller waste businesses.
Discussion Question	**Feedback**

What alternative regulatory approaches could be considered for Metro Vancouver?	• Fees collected at solid waste facilities need to go up to encourage more recycling
	• Cost of the generator levy should be charged upfront (at the point of sale or the beginning of the product life cycle) rather than at the time of disposal; so the payment amount is still based on the level of consumption, but it's at the front end instead of the disposal end.
	  • For example: Everyone pays half a cent for items bought – including visitors – so it's not all borne by the residents since visitors create a lot of waste.
	• Distribute the costs more evenly throughout the system
	• Incentivize with lower disposal fees on items that are highly recyclable
	• Put in a mechanism to report tonnage for private transfer stations and use that to fund the public regulatory system
	• Politically, it would be better to have a higher levy so those costs are baked into the services provided to municipalities
	• Look and what Singapore, Taiwan, and other high-density populations where there's a lot of waste generation potential. Are there takeaways we can adopt?
	• Less government intervention/input; the private sector can be more nimble than the regional district or the province.
	• Standardize requirements through provincial regulation – need legislation passed to establish a broader approach to long term waste management
	• Look at how we're spending the money now, to help analyze how effectively the funds are being used; is there a way we can manage the money from generator levy better to increase value from our efforts?
	  • Example: San Francisco's disposal rate high because they apply a levy on waste, take money back from the levy and apply the surplus to subsidize recycling
	• Suggest Metro Vancouver put regional facilities up for auction and focus on regulating and compliance. Let private industry manage facilities and provide services.
	• Suggest a hybrid version where private sector can accept waste, pay a discounted generator levy to acknowledge their

	investment in infrastructure, and must accept the same materials as Metro Vancouver sites
Additional Comments	**Feedback**
	• Consistent political lobbying is needed within the industry • Our priority must be to remove recyclables from the waste. Focus on creating and enforcing restrictions and regulations that support resource recovery. • Government/Metro Vancouver does not have private sector expertise to effectively innovate and develop infrastructure. • Invest in and fund more diversion technologies and projects.

MEMBERS PRESENT:

Craig Hodge, Director, Metro Vancouver Board of Directors (Co-Chair)

Solid Waste and Recycling Industry Advisory Committee Meeting
October 8, 2024
1:00 PM – 3:00 PM
In-Person

Agenda

1. Agenda
   1.1. October 8, 2024, Meeting Agenda
2. Minutes
   2.1. September 10, 2024, Meeting Minutes
3. Reports and Items for Discussion
   3.1. Progress Update on Solid Waste Management Plan Update Timeline
   For Information and feedback
   Designated speaker: Terry Fulton, Senior Project Engineer, Solid Waste Operations
   3.2. Solid Waste Management Plan Update: Idea Generation Workshop
   For input/feedback
   Designated speaker: Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services and Samantha Joy, Engagement Specialist, Solid Waste Services
   Small group and plenary discussions proposed questions:
4. Other Business
   4.1. Zero Waste Committee and Other Updates
   For information
   Designated Speaker: Paul Henderson, General Manager, Solid Waste Services
   4.2. Waste-to-Energy Facility Tour
5. Information Items
   5.1. Regional Waste Flows
   5.2. 2024 Work Plan

Co-Chair, Director Craig Hodge, called the meeting to order at 1:08 p.m. and welcomed attendees to the Solid Waste Industry and Recycling Advisory Committee (Industry Advisory Committee) meeting.

Co-Chair Hodge noted that the meeting was being live streamed, and a public record of the meeting would be posted to the website.

1. AGENDA

1.1 October 8, 2024, Meeting Agenda

Co-Chair Hodge reviewed the October 8, 2024, meeting agenda. No additions were made.

2. MINUTES

2.1 September 10, 2024, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the meeting Minutes of September 10, 2024. There were no changes or additions to the meeting Minutes of September 10, 2024.

It was noted that a feedback summary from the September meeting has been published to the Industry Advisory Committee webpage under the September meeting tab. Anyone experiencing challenges with locating the report was encouraged to contact Metro Vancouver staff.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Progress Update on Solid Waste Management Plan Update Timeline

Terry Fulton, Senior Project Engineer, Sold Waste Services, shared a presentation about the Solid Waste Management Plan and reviewed the remaining priorities. The presentation highlighted the following:

- Project overview and committee involvement
- Process for moving the plan through the Idea Generation stage and public engagement to the Board of Directors for adopting goals and targets
- Discussion of the goals and evaluation criteria for performance indicators that will inform the Plan over the next year
- Timeline targeting of mid-2026 for Plan completion.

3.2 Solid Waste Management Plan Update: Idea Generation Workshop

Samantha Joy, Engagement Specialist, Solid Waste Services, shared a presentation on Idea Generation and the solid waste management plan update engagement.

Four questions were presented for discussion. Industry Advisory Committee members were divided into breakout groups and allocated time in two different roundtable groups, with 20 minutes each, to consider the questions below or any other relevant questions put forward. Each breakout group included a Metro Vancouver staff note taker.

Questions for consideration:

"As Metro Vancouver updates the plan, what ideas and actions can build on our success to:

- *Leverage knowledge and expertise through collaboration*

- *Plan for future waste management infrastructure and systems*
- *Enhance accountability for eliminating waste*
- *Promote confidence in recycling systems?"*

Following small group discussions, Samantha Joy initiated a full group discussion, and the following comments were offered:

- There is a need for regulatory certainty to move forward with plans and strategies as past uncertainly has stalled projects
- There is a disconnect between municipal and provincial government departments, particularly with multi-year delays in obtaining permits, that makes it difficult to build the necessary infrastructure for pursuing projects; aligning permitting processes with infrastructure goals is necessary to plan future systems.

In closing, it was noted that all ideas will be considered as input to the Idea Generation Phase. A summary of feedback from the small group discussions is available in a separate document posted to the Industry Advisory Committee web page.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Solid Waste Services, provided an update on recent discussions and activities of the Zero Waste Committee and highlighted:

- Solid Waste Services – Financial Plan 2025-2029 – projects the budget and tipping fees for the next 5 years along with the 2025 Solid Waste budget
    - The report will go to the Board on November 1 for approval
    - The report proposes a $7 per tonne increase in garbage tipping fees. The generator levy is also included in that report.
- Report on the single-use item reduction campaign called Create Memories Not Garbage that is run around Christmas time
- The City of Vancouver finalized an agreement regarding the piping for the District Energy project
- Procurement updates:
    - District energy (RFQ) for construction of the pipe system
    - Recycling and waste centres (RFQ) – operations and maintenance contract
    - Waste-to-Energy Facility (RFP) – operations and maintenance contract
- There is a new Executive Director at the Recycling Council of BC
- Metro Vancouver and the National Zero Waste Council provided letters in response to federal consultations on greenwashing and right-to-repair

- Feedback from Industry Advisory Committee small group discussion on the generator levy are posted on the website and will be reported to the Zero Waste Committee. The draft report to the Zero Waste Committee will be circulated to Industry Advisory Committee members for feedback before publishing.

- Seeking participants for interviews on development of a source reduction incentive program, focusing on processors and haulers to help maximize recycling among residents and businesses.

- The Independent Consultation and Engagement Panel provides a platform to share ideas and feedback on the Solid Waste Management Project; there will be an opportunity to present to the panel in early 2025, with a focus on receiving comments on how the engagement process has gone so far.

4.2 Waste-to-Energy Facility Tour

There is an Energy Waste Facility tour at 11:00 a.m. on November 22, 2024.

5. INFORMATION ITEMS

5.1 Regional Waste Flows

5.2 Industry Advisory Committee 2024 Work Plan

No questions were raised in relation to the Information Items.

In response to a question regarding a Co-Chair who has missed two meetings it was confirmed that, according to the terms of reference, regular attendance is required, and Co-Chairs can agree to remove any member for non-attendance. Staff regularly update the Co-Chairs on member attendance, and reach out to understand any barriers to participation.

In response to a question regarding Section 4, it was confirmed that the proposed tipping fee increase is $7 per tonne. The overall proposed tipping fee increase in 2025, about 5%, is driven by inflation and rising capital costs, as the portion of the budget allocated to capital has grown. Waste flow projections have also been adjusted based

ADJOURNMENT

Co-Chair Hodge thanked members for their comments and feedback and advised that the next Solid Waste and Recycling Industry Advisory Committee meeting would be held on November 5, 2024, via Zoom.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 2:49 p.m.

Solid Waste and Recycling Industry Advisory Committee
Key Topic Discussion Feedback Summary – October 8, 2024

At the October 8, 2024 Solid Waste and Recycling Industry Advisory Committee meeting, committee members participated in a discussion idea generation for the solid waste management plan update. A summary of feedback received is presented below.

This feedback will be considered as part of the idea generation phase of engagement on the solid waste management plan update.

Discussion Topic	Feedback

Leverage knowledge and expertise through collaboration	**Information Sharing**
	• Collaboration on reporting out and tracking where materials are going:
	  o Improve data sharing
	  o Proprietary information can make it challenging for private industry to share information
	• Metro Vancouver needs to be able to listen and act on feedback of committees such as Industry Advisory Committee.
	• Continue the conversation past the solid waste management plan update.
	• Bring all advisory committees together to discuss issues (Public/Technical Advisory Committee, Regional Engineers Advisory Committee Solid Waste Sub-committee, Industry Advisory Committee)
	
	Education
	• Metro Vancouver can fund non-profits to take on education role, non-profits can build trust
	• More public education (for example for reducing contamination)
	  o Collaborate with Extended Producer Responsibility (EPR) agencies on education
	  o Collaborate with provincial and federal government
	  o Need more education on materials not included in EPR programs:
	  ▪ Priority items - lithium batteries, potentially hazardous waste in recycling bins
	  ▪ Difficult to get hard-to-recycle items through regulation and into programs because this is provincial jurisdiction - Metro Vancouver advocacy needed
	  o Outreach to businesses, property managers

	Innovation
	• Private sector could demonstrate where innovative technology is in place, for example AI sorting technology in Materials Recovery Facilities (MRF)
	  o No appetite for collaboration if you are competing with regulator
	• Consider collaboration on mixed solid waste recovery facility
	  o Example: Durham Regional District
	• Entrepreneurial workshop - getting people together to solve problems. Information sharing.
	
	Circular Economy
	• Leverage expertise from potential users to connect products to users
	• Mandated post consumer recycled content through bylaws
	
	Industry Representation
	• Industry representation on Zero Waste Committee
	• Make space for all voices (non-profits, women, underrepresented groups)
	• Connect executive chairs of waste industry associations (SWANA, WMABC, etc.) other executive chairs
	  o Will help to represent the waste industry in multi-sector situations (organics management, construction and demolition)
	  o Metro Vancouver could provide centralized location, make the connections, break down silos
	
	Shared Issues
	• Collaborate on emerging legislation from other orders of government
	  o For example the Federal plastics registry
	• Collaboration with adjacent regional districts/province for inter-jurisdictional issues
	
	Regulation and Incentives
	• Incentivize/encourage private industry
	  o Generator levy dis-incentivizes collaboration
	• Consider results-based regulation
	• Have a private utility to manage waste (e.g. BC Utilities Commission)

Discussion Topic	Feedback
Promote confidence in recycling system	**Education** • Use social media to get facts out. • Auditing and reporting are done but not known by the public – increase transparency and inform. • Identify the public's main concerns and address them. • Honesty builds trust: Be honest with the public and show the limitations, what we're doing, and how we're trying to improve – start with the definition of recycling. • Simplify: focus on tangible examples of recyclable products. • Show true stories of circularities happening in the region. **Data and Tracking** • Understand how much is residual waste and how much is being recycled – set a reasonable target to improve. • Have good metrics to track and report. Combine with public tours and media, key influencers, etc. • Eliminate performative recycling • Grow recycling through reduction (e.g. plastic ban) **Consider Enforcement** • Have inspectors at the generators and issue tickets/fines
Discussion Topic	**Feedback**
Plan for future waste management and infrastructure systems	**Best Practice Solutions** • Our problems are not unique we can consider other countries' best practices when considering solutions to our own waste management challenges in the region. • Improve systems to ensure the utility of outputs (end-use markets). Explore funding from a variety of sources including provincial/federal grants, solid waste fees, private sector partnership, innovation fund, etc. • Look to tested solutions, such as organics in Edmonton, for solid waste infrastructure strategies. **Regulation and Incentives** • Streamline regulations and shorten decision-making processes to facilitate private investment in infrastructure. • Improve permitting and licensing programs to move more quickly and be more accessible to a wider range of service providers. • Processing capacity for different streams; multiple years for permit approvals: preventing solutions being implemented. • Efforts to be compliant do not seem to reap any rewards in terms of moving through permitting processes any easier.

	• Consider the public-private partnership (P3) model; can be challenging, but need to consider all options. The profit motive cannot be a disincentive for a successful system. • Look to the province, and other levels of government, to help provide more support in searching for solutions to various problems. • Develop markets and identify investment opportunities; lack of certainty discourages private sector from taking on opportunities. • Look to results-based regulation • Improve engagement between government policy makers and industry – currently feels like government is out if touch with how the industry functions. • Consistency is needed for regulatory regimes, processing and permitting/licensing to allow for cost-effective infrastructure investment and operation (cross country/provincially/regionally). For example: public shingle recycling options at private landfills. • Foster opportunities for more private investment.
Discussion Question	**Feedback**
Enhance accountability for eliminating waste	**Governments** • From the point of view of haulers: Provide companies with some kind of certification that is acknowledged by industry or government. • Protect and incentivize the best actors and players. • Prioritize licensing programs for businesses that are actively investing in new technology – help protect businesses willing to take financial risk. • Orders of government to implement procurement policies. There should be industry mandates to produce and use recyclable materials. • Recognize that shifts in the industry and manufacturing may not be within the scope and control of Metro Vancouver. Some changes and shifts are global. • Focus on simplifying the materials that are put into the market, especially plastic. • Recycling definition should be more clear (there is a misconception that energy recovery is the same as recycling) • Enhance clarity and transparency of what materials go through Metro Vancouver and other facilities. **Waste and Recycling Industry** • Improve monitoring policies and incentives to ensure proper recycling and disposal and reduce contamination, otherwise no investment will be made.

	○ Private market can handle recycling if right infrastructure and incentives are in place. For example, there is a huge composting program in Nova Scotia. They have expansive use markets (e.g., landscaping) and there are no market shortages • There is not enough infrastructure capacity and incentives for recycling. An example of limited processing capacity is the organics processors • Work to level the industry playing field and facilitate healthy competition. Big manufacturers should not be allowed on the board of RecycleBC, as this is potentially a conflict of interest. • Competition issues can be solved by shifting the responsibility to the generator. **Business and Manufacturing** • Design for reparability and recyclability • Encourage or regulate manufacturers to reduce their footprint and minimize consumer packaging. • Encourage redesign and enhance accountability for future manufacturing and construction. • Celebrate and look to larger companies that have already started working at reducing footprint, materials, and packaging. • For construction and demolition waste (C&D), support innovative ideas and focus on marketing C&D waste. • Incentivize use of more recyclables at the procurement stage. • Think more globally and focus on moving up the waste hierarchy. **Waste and Recycling Generators** • Point of view of generators: Create regulations to encourage mandatory three containers for businesses. • Education is more of a natural process as people naturally eliminate waste and harmful products when they learn and find out about them. • Multi-family buildings show the lowest accountability for their waste (high contamination) – increase education and focus on these demographics. • A solution to the multi-family sector could be clear bags for everyone. • Need high enough surcharges to cover for increased costs of contamination. • Enforce EPR: The stewardship program is there, but is not being enforced.

	• Accountability should go back to the generator (not the haulers). • Focus on the compactors and record footage in multi-family buildings, this could raise privacy concerns. • Waste audits and inspections can help, especially in the Industrial Commercial Institutional (ICI) sector. But who would be held accountable in multi-family sector? Strata corporations?
Additional Comments	• Where will we see the practical infrastructure solutions being considered/implemented as part of this solid waste management plan update process (for all waste streams)? • Planning for capacity – need clear solutions for long-term solid waste streams • Need to look at infrastructure planning and using the existing system as a foundation • There is a need for advanced processing solutions • There will be operational challenges with some of the "big-ideas" solutions • Planning needs to consider logistical challenges for tighter geographic constraints and lack of industrial land continues to be an issue. • Real need for Industry Advisory Committee members to see how input is going to meaningfully impact outcomes (i.e., influence new solid waste management plan) • Disposal bans have been effective, however, there should be technology and infrastructure to process the diverted material at a reasonable cost. • Recycler's point of view for certain materials: In some cases, up to 95% of diverted material goes to landfills.

   Designated Speaker: Lyndsay Seidel-Wassenaar, Project Lead, Sonnevera
   Small group and plenary discussions proposed questions:
   - *What should Metro Vancouver consider when evaluating potential metrics to include in the updated solid waste management plan?*
   - *How do you see the waste and recycling industry being involved?*
   - *What types of information/data could the recycling and waste industry reasonably provide?*

   3.3. 2025 IAC Draft Work Plan Development
   For input/feedback
   Designated Speaker: Lori Bryan, IAC Co-Chair
   Plenary discussion proposed question:
   • What are some potential topics the committee could focus on in 2025?
4. Other Business
   4.1. Zero Waste Committee and Other Updates
   For information
   Designated Speaker: Paul Henderson, General Manager, Solid Waste Services
   4.2. 2025 Meeting Dates (Tentative)
   For information/feedback
   Designated Speaker: Samantha Joy, Engagement Specialist, Solid Waste Services
5. Information Items
   5.1. Regional Waste Flows
   5.2. 2024 Work Plan
   5.3. 2025 Draft Meeting Schedule

Co-Chair, Director Craig Hodge, called the meeting to order at 2:06 p.m. and welcomed at endees to the Solid Waste and Recycling Industry Advisory Commit ee (Industry Advisory Commit ee) meeting.

Co-Chair Hodge noted that the meeting was being live streamed, and a public record of the meeting would be posted to the website.

1. AGENDA

1.1 November 5, 2024, Meeting Agenda

Co-Chair Hodge reviewed the November 5, 2024, meeting agenda. No additions were made.

2. MINUTES

2.1 October 8, 2024, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the meeting Minutes of October 8, 2024. There were no changes or additions to the meeting Minutes of October 8, 2024.

It was noted that a feedback summary from the October meeting has been published to the Industry Advisory Committee webpage under the October meeting tab. Anyone experiencing challenges locating the report was encouraged to contact Metro Vancouver staff.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Developing Goals and Targets for an Updated Plan

Terry Fulton, Senior Project Engineer, Solid Waste Services, shared a presentation titled, "Developing Goals and Targets for an Updated Plan". The purpose of this presentation was to provide goals and context to frame the discussion on performance metrics questions that followed. The presentation highlighted the following:

- A summary of the plan components
- BC Waste Hierarchy vs. other hierarchies (which de-emphasize disposal)
- Considerations for updated targets
- Previous feedback on performance metrics
- Conceptual goals

3.2 Solid Waste Management Plan Update – Performance Metrics Review

Lyndsay Seidel-Wassenaar, Project Lead, Sonnevera, shared a presentation titled, "Performance Metrics Study Update". The highlights from the presentation include:

- Considerations for developing metrics
    - When selecting metrics, it is important to consider the key purpose of tracking information
    - Several metrics will be required to properly review and analyze different trends
- Summary of performance metrics project scope
- Considerations for developing a performance metrics applicability criteria
- Examples of performance metrics from a jurisdictional review

Lyndsay Seidel-Wassenaar shared that the next steps include continuation of this work over the next few months and to review with Metro Vancouver.

Co-Chair Hodge advised that attendees would be placed into smaller groups for the breakout discussions. Before proceeding to the breakout rooms, attendees were asked if they had any questions about the presentation that was just shared. The following questions and *responses* were provided:

- Why was Richmond used as a comparable jurisdiction when they are part of Metro Vancouver?
  - *Richmond had specific examples and areas that they are leading in (construction waste for example) that warranted more inquiry. In addition, we looked at cities outside of the Lower Mainland (e.g.Victoria) and other areas in North America and Europe.*
  - *Committee members were encouraged to share other jurisdictions that should be included in the research.*
- In the previous presentation shared by Terry Fulton, there was a list of concerns and considerations outlined. At what point are we addressing those and/or how will they be followed up to ensure they are addressed?
  - *All the feedback received from the Industry Advisory Committee this year is being considered as input to the solid waste management plan update. In addition, we are reporting to the Zero Waste Committee in November on feedback heard from the Industry Advisory Committee regarding the Generator Levy.*

Three questions were presented for discussion. Industry Advisory Committee members were divided into breakout groups and allocated time in four different roundtable groups, with 20 minutes each, to consider the questions below. Each breakout group included a Metro Vancouver staff note taker.

Questions for consideration:

- *What should Metro Vancouver consider when evaluating potential metrics to include in the updated solid waste management plan?*
- *How do you see the waste and recycling industry being involved?*
  - *What types of information/data could the recycling and waste industry reasonably provide?*

Following the breakout, a representative from each group reported back on key highlights from their discussions. The following comments were either verbally shared in the Zoom meeting or the notes from the breakout session was shared onscreen for all attendees to see.

A summary of feedback from the small group discussions is available in a separate document posted to the Industry Advisory Committee web page.

3.3 2025 IAC Potential Topic Development

Co-Chair, Lori Bryan, shared a presentation titled, "Industry Advisory Committee Draft 2025 Work Plan Development" and provided a review of the different items discussed in 2024.

Committee members were asked the following question for consideration: "What are some potential topics the committee could focus on in 2025?" The following comments were offered:

- Need to determine which waste hierarchy will be used before determining new topics.
- Topics that were suggested, but not included, in 2024's plan can be revisited for the new plan.

A committee member asked about soil management and why this is not currently a Metro Vancouver solid waste issue?

- *Soil is a material that is not covered in the current Solid Waste Management Plan. Although it is a significant issue in the region looking at soil as a specific issue is considered out of scope*
- *Co-Chair Hodge recommended adding this topic to the list of potential topics for further discussion along with metrics.*

Co-Chair Bryan stated that the next steps include sharing the potential topic areas with attendees in January 2025. IAC members will vote on the work plan in early 2025. Co-Chair Bryan stated that any suggestions on what to include in the 2025 plan can be sent to Metro Vancouver staff for consideration and inclusion.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Solid Waste Services, provided an update on recent discussions and activities of the Zero Waste Committee and reported:

- The Consultation and Engagement Panel terms of reference was updated, which relates to creating a mechanism to add additional members to the panel.
- The Industry Advisory Committee Feedback Summary Report was circulated to the committee two weeks ago and did not receive additional feedback.
- There is a combined Zero Waste Committee and Public/Technical Advisory Committee meeting happening in November. This meeting is part of the engagement process for the Idea Generation phase of engagement for the solid waste management plan update. There are 14 individual presentations; each presenter has five minutes to present and receive questions:
  - The regular Zero Waste Committee meeting is at 1:00 p.m., and public participation meeting will take place at 2:00 p.m.
  - This meeting will be livestreamed, and participants can be viewed online.

4.2 2025 Meeting Dates (Tentative)

Samantha Joy, Engagement Specialist, Solid Waste Services, shared a slide with the tentative meeting dates for 2025. A finalized calendar will be shared in January. Members were reminded that the Co-Chairs can request more or less meetings than what is proposed as per the Terms of Reference.

5. INFORMATION ITEMS

5.1 Regional Waste Flows

5.2 2024 Work Plan

5.3 2025 Draft Meeting Schedule

No questions were raised concerning the Information Items.

ADJOURNMENT

Co-Chair Hodge advised attendees that the Waste-to-Energy Facility tour is taking place on November 22, 2024. Members can either advise Metro Vancouver staff they will be attending or respond to the calendar invite directly. Co-Chair Hodge thanked members for their comments and feedback and advised that the next Solid Waste and Recycling Industry Advisory Committee meeting would be held on January 7, 2025, virtually via Zoom.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 3:35 p.m.

Solid Waste and Recycling Industry Advisory Committee
Key Topic Discussion Feedback Summary – November 5, 2024

At the November 5, 2024 Solid Waste and Recycling Industry Advisory Committee meeting, committee members participated in a discussion on applicability and selection of performance metrics for the solid waste management plan update. A summary of feedback received is presented below.

This feedback will be considered as part of the idea generation phase of engagement on the solid waste management plan update.

Discussion Questions	Feedback

With respect to performance metrics and applicability to the updated SWMP plan:
 	
What should Metro Vancouver consider when evaluating potential metrics to include in the updated solid waste management plan?
	Confidentiality, accountability, and administration
	• Define the frequency and purpose of reporting – how and when will the data will be used.
	• Consider the administrative burden for haulers, processors, and Metro Vancouver staff.
	• Collaborate with industry to determine who is tracking and accountable for providing information and thresholds for businesses that are asked or required to report.
	• Determine who will have access to the data, how much will be shared, and ensure no impacts to business confidentiality.
	
	Measuring, Reporting, and Consistency
	• Prioritize measuring versus estimating:
	  • Enhance detail level (e.g. composition data versus tonnage)
	• Ensure the waste stream is consistent with what is being measured and how it is being tracked (tonnage)
	• Perform composition breakdowns for mixed loads (organics, recyclables)
	  • Waste composition studies should occur more often.
	• Consider how waste streams are changing – investigate if measuring by 'tonnes' is still the most applicable or if there is another more relevant metric (e.g. composition).
	
	Definitions, transparency, and practicality
	• Examine terminology – agreement on the definition of recycling is needed.
	  • Measure concrete and asphalt separately
	  • Do not track materials sent for incineration as recycled.

	• Track commodity markets from recycled materials to assess whether what we're recycling makes sense and if there is a market for it.
	• Targets have to be measurable/quantitative.
	• Interpret numbers based on what is recycled according to various materials rather than the overall percentage.
	• Ensure that chosen metrics support financial responsibility with taxpayer dollars by generating practical data that members and taxpayers can relate to and understand.
	• Ensure chosen metrics can provide meaningful/actionable insights.
	• Increase clarity and transparency with data that is generated from metrics.
	• Transparency about the materials that can't be recycled (no market), being sent to cement kiln and considered as recycling. Terminology is very important to define what materials are being considered recycled and where those materials end up
	  • E.g. RDF material being considered recycled even though being sent to cement kiln
	
	Application and performance indicators
	• Prioritize metrics that are business-related (e.g., cost per tonne, financial review, financial efficiencies at the landfill or waste-to-energy facility); metrics that members and taxpayers can relate to.
	• Adopt lifecycle view of materials and calculate greenhouse gases [GHGs] from extraction to the point of recycling.
	• Focus on reduction and reuse when considering the change of tracking method, materials tracked, and metrics used
	  • Anything that is not relevant to measuring reduction and recycling that is currently included should be reconsidered.
	• Choose metrics based on relevancy to the waste material
	• Track organics and recyclables
	• More metrics needed on C&D Waste and greater clarity is needed on data, in terms of what is being tracked (i.e., waste type, locations, etc).
	• Greatest factors/impacts that will influence diversion need to be looked at more closely.
	• Consider changing waste streams – the change in material and makeup of the waste stream over the years and into the future.
	• Base metrics on what's produced versus what is recycled

	• Report in terms of various materials rather than percentage in total. • Example: concrete and asphalt skew the statistics
Discussion Question	**Feedback**
How do you see the waste and recycling industry being involved? What types of information/data could the recycling and waste industry reasonably provide?	**Data Collection and sharing** • Example: WMABC launched a program to measure ICI waste materials disposed of or diverted. Took this on to help them advocate at government levels knowing there are a number of jurisdictions looking at this type of data for policy development. Launched this project internally with members. We are not submitting raw data to Metro Vancouver, but it will provide aggregated numbers. • In other jurisdictions, industry reports on waste and recycling quantities; assigned a 'generator number' etc (similar to hauler licensing) • Balance between confidentiality on one hand, and on the other hand and sharing the generation number to help advance recycling across the region **Collaboration with solid waste and recycling industry** • Report total tonnage – tonnage in should equal tonnage out • Report residual waste (from recycling facilities) • Include recycling amount exported vs recycled in BC • Comparison reports on Metro Vancouver waste how much is disposed of vs diverted, disposed of in different locations, Waste-to-Energy vs. landfill vs. other options • Tipping Fee Rates – increase them to drive diversion from landfill and stimulate market development and innovation in other waste streams (eg., shingles in 2010) • Develop mechanism for industry to report on efforts in this area (e.g. measuring GHGs, tonnage reported), still needs to be protected as it is highly sensitive due to competitive industry. • Needs a lot of discussion to get to what that mechanism could be so that private sector and government are in agreement.
Additional Comments	**Feedback**
	• To help enhance engagement, it could be helpful to have a waste hierarchy graphic with explanations to clarify what the terms mean (above and beyond the traditional three R's)

MEMBERS PRESENT:

Lori Bryan, Waste Management Assoc. of BC (Co-Chair)

   Designated Speaker: Samantha Joy, Engagement Specialist, Metro Vancouver, Solid Waste Services
6. Other Business
   6.1 Zero Waste Committees and Other Updates
   For information
   Designated Speaker: Paul Henderson, General Manager, Solid Waste Services
   6.2 Concrete and Asphalt Recycling Options Webinar
   For information
   Designated Speaker: Paul Henderson, General Manager, Solid Waste Services
7. Information Items
   7.1 Regional Waste Flows

7.2 2025 Draft work plan topics
7.3 2025 Meeting Schedule
7.4 Letter to Minister of Environment and Parks - Expanding Product Categories in Extended Producer Responsibility

Co-Chair, Director Craig Hodge, called the meeting to order at 2:02 p.m. and welcomed attendees to the Solid Waste and Recycling Industry Advisory Committee (Industry Advisory Committee) meeting.

It was noted that an entity shown as "AI" in the Zoom waiting room was not being given access to the meeting as only Industry Advisory Committee members were permitted.

Co-Chair Hodge noted that the meeting was being live-streamed, and a public record of the meeting would be posted to the website.

1. AGENDA

1.1 January 7, 2025, Meeting Agenda

Co-Chair Hodge reviewed the January 7, 2025, meeting agenda. No additions were made.

2. MINUTES

2.1 November 5, 2024, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the meeting Minutes of November 5, 2024. There were no changes or additions to the meeting Minutes of November 5, 2024.

It was noted that a feedback summary from the November small group discussions was published to the Industry Advisory Committee webpage. Anyone experiencing challenges with locating the report was encouraged to contact Metro Vancouver staff.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Notice of Bylaw Violation Engagement – Tipping Fee Bylaw Provisions

Paul Henderson, General Manager, Solid Waste Services, shared a presentation titled, "Notice of Bylaw Violation – Tipping Fee Bylaw Provisions". The presentation highlighted the following:

- Notices of Bylaw Violation are an administrative compliance promotion tool available to local governments
- The penalties are up to $500 per offence, with discounts for early payment and surcharges for late payment
- This is in place for 19 out of 21 member jurisdictions
- An engagement process is being launched in the next few weeks and will include:
  - Sharing information on potential amendments to the Notice of Violation Bylaw to include Tipping Fee Bylaw provisions
  - Comment and feedback period
  - Review and consideration of feedback received
  - Proposed bylaw amendments to Zero Waste Committee and Board for consideration

The following comments were offered in response to questions following the presentation:

- Prior to having authority to issue Notices of Bylaw Violation, the solid waste, liquid waste, and water functions only bylaw enforcement option was through the courts.
- The adjudication process involves a third-party independent of Metro Vancouver employees.

Committee members asked for more information on how the third-party adjudicators are selected.

3.2 Draft 2023 Recycling and Garbage Statistics

Kelly Du, Project Engineer, Metro Vancouver, Solid Waste Planning, shared a presentation titled, "2023 Annual Report – Integrated Solid Waste and Resource Management Plan Progress". Highlights from the presentation included:

- The data used to calculate disposal and recycling rates is from various sources, including municipal surveys, private facilities data, Metro Vancouver solid waste facilities weigh scale data, producer responsibility organization reports, and population data.
- Disposal and recycling data do not include: agricultural waste, industrial waste, forestry waste, water and wastewater treatment plant residuals, material managed on-site, excavation soils, landfill cover materials, and scrap metal from yards or automotive recycling.
- 2023 recycling highlights include increases in wood, gypsum, and plastic, which are common construction materials and could be correlated to the increase of new housing construction in 2023.
- The 2023 recycling rate remained at 65%, the same as 2022, and the region achieved a per capita disposal rate of 0.42 tonnes in 2023, a decrease from 0.44 tonnes in 2022.

To avoid skewing the data and to be conservative, Metro Vancouver fixed the concrete and asphalt numbers at the 2021 values. If the overall reported data for concrete and asphalt for all sources were used, the final value for recycling would have increased from 65% to 69%.

Actions to be integrated into future reporting include:

- Separately report materials that are used as fuel substitutes (i.e. Continue to report as recycling but state the quantities used as a fuel substitute). This data will be collected commencing in 2025.
- Integration of new metrics following the solid waste management plan update.
- Continue to review and improve reuse data and accuracy of recycled materials data.
- Explore using a dashboard format to increase accessibility of data.

The following comments were offered by members following the presentation:

- Concern about using 2021 values for concrete and asphalt, especially when other values are being used in real-time.
- Concrete and asphalt numbers should not be included in the calculation, as it is not within Metro Vancouver's control.
- Question as to whether the intent is to start counting material disposed at the Waste-to-Energy Facility as recycling.

Paul Henderson confirmed that garbage disposed at the Waste-to-Energy Facility would continue to be counted as disposal with the only materials counted as recycling being materials recovered from the facility for beneficial use (e.g. metal).

4. INDUSTRY ADVISORY COMMITTEE 2025 KEY TOPICS AND WORK PLAN DEVELOPMENT

Co-Chair, Lori Bryan, shared the list of potential topics for the 2025 committee work plan. Members were invited to review the list and share with the group if there were missing topics or topics deemed unnecessary.

The potential topics were broken down into two categories:

- General topics:
  - Circular Economy – Share, Reuse, Repair Update
  - Climate 2050 Roadmap
  - C&D Reduction Update
  - Public Education – the role of public and private education
  - Soil Management
- Solid Waste Management Plan Update Topics:
  - Adoption of a waste hierarchy and draft goals
  - Feedback on evaluation criteria
  - Idea generation report back
  - Metrics – targets and performance indicators
  - Options analysis workshop
  - Regulatory framework
  - Residuals framework (resulting from studies)

The following comments were offered regarding the potential topics:

- Disposal options should be included as a work plan topic.
- The residuals framework does have an element of disposal capacity, but this topic should be called out specifically as it is important.
- Members would like to be made aware of what Metro Vancouver is working on and how it can impact them and their work.
- Discussion on landfill capacity and options.
- Question with respect to the cost of contingency disposal reported in the September 2024 Zero Waste Committee report.
- Discussion about C&D residuals and continued interest in working on solutions for this market.
- Continued interest in planning for effective public and private collaboration.

In response to comments Paul Henderson noted:

- There was an annual report that went to the Zero Waste Committee in September 2024, which included the overall cost of three disposal options: Waste-to-Energy Facility, Vancouver landfill, and contingency disposal
- The primary cost of the recycling and waste centres is associated with the core operation of receiving and processing garbage.
- Recycling and waste centre costs are allocated proportionally to the portion of waste for each disposal option that is transferred through a recycling and waste centre.
  - In the Waste-to-Energy Facility, about 50% of all the materials that are delivered are direct haul; the cost of recycling and waste centres is all-inclusive.

- The cost that is used for the recycling and waste centres, cost per tonne, is based on the overall cost of running the facility.

- Regarding the Vancouver Landfill: the current Vancouver Landfill agreements specify a 20 million tonne limit in waste disposed since 1997. The physical capacity of the Landfill exceeds 20 million tonnes. Discussions are underway as to potential to update the agreements. The additional physical capacity beyond 20 million tonnes is estimated at 5 to 10 million tonnes depending on many factors.

Members were encouraged to forward any additional work plan topic suggestions to staff and Co-Chairs and were advised that a vote on the work plan would occur in February 2025.

5. NEXT STEPS

5.1 2025 IAC Call for Membership Submissions – February 2025

Samantha Joy, Engagement Specialist, advised that there is a call for committee membership submissions for the 2025 Industry Advisory Committee. The submission period is from January 15 to February 12, 2025. The online form will be available via a link in the email that will be sent out to committee members and industry contacts and on the Industry Advisory Committee webpage. The first meeting for the 2025 committee will take place on March 4, 2025.

Members were reminded that the committee requires existing members to re-apply each year if interested in continuing on the committee.

5.2 2025 Committee Meeting Dates

Samantha Joy, Engagement Specialist, shared the 2025 Meeting Dates and advised there were meeting time changes on the bolded dates. Members can consult the meeting calendar attached to the agenda package for more information. The schedule for 2025 is:

- January 7
- February 4
- March 4
- April 8 (in-person)
- **May 6**
- June 10
- **September 9**
- October 7 (in-person)
- **November 4**

6. OTHER BUSINESS

6.1 Zero Waste Committee Updates

Paul Henderson informed that the next Zero Waste Committee meeting would be held on Thursday January 9, 2025, at 1:00 p.m., and is open to the public and will be live-streamed.

6.2 Concrete and Asphalt Recycling Options Webinar

Paul Henderson advised that the Concrete and Asphalt Recycling Options webinar will take place on Wednesday, January 22, 2025, from 9:30 a.m. to 12:00 p.m. If members are interested in attending, they can register for the webinar through the link that was emailed or contact Metro Vancouver staff for more information.

7. INFORMATION ITEMS

7.1 Regional Waste Flows

7.2 2025 Draft Work Plan Topics

7.3 2025 Meeting Schedule

7.4 Letter to Minister of Environment and Parks – Expanding Product Categories in Extended Producer Responsibility

No questions were raised in relation to the Information Items.

ADJOURNMENT

Co-Chair Hodge thanked members for their comments and feedback and advised that the next Solid Waste and Recycling Industry Advisory Committee meeting would be held on February 4, 2025, virtually via Zoom.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 3:20 p.m.

Verbal update
Designated Speaker: Lori Bryan, Industry Advisory Committee Co-Chair

6. OTHER BUSINESS

6.1 WMABC Conference – February 27, 2025
For information
Designated Speaker: Director Craig Hodge, Industry Advisory Committee Co-Chair

6.2 Zero Waste Committee and Other Updates
For information
Designated Speaker: Paul Henderson, General Manager, Solid Waste Services

7. INFORMATION ITEMS

7.1 Regional Waste Flows

7.2 2025 IAC Meeting Schedule

7.3 Incoming Correspondence: Ministry Response to Metro Vancouver's Letter Re: Expanding Product Categories in EPR

Committee Co-Chairs:
Director Craig Hodge, Zero Waste Committee Vice-Chair
Lori Bryan, Executive Director, Waste Management Association of BC

Membership:

Abrams, Izzie – Waste Connections of Canada
Bryan, Lori – Waste Management Association of BC
Collins, James – Tymac Launch Service Ltd.
Crawford, Jeremy – Waste Control Services
Deol, Harwant – Super Save Group
Dietrich, Christian – Ecowaste Industries
Furtado, Glen – Cement Association of Canada
Hankins, Grant – Canada Minibins.com Ltd.
JansenVandoorn, Josh – Anaconda Systems Ltd.
Jessa, Imran – Delta Textiles Exporters Inc.
Johnson, Gord – Northstar
Kaminski, Jamie – HSR Zero Waste
Kawakami, Sean – Convertus Canada Ltd.
Kiani, Aiden – Lock-Block Ltd.
Koehn, Leanne – Ridge Meadows Recycling Society
Lannin, Mike – Super Save Group
MacNeil, Patrick – Wescan Disposal Ltd.
MacFarlane, Angus – Growing City
Mallari, Achilles – Sierra Waste Services Ltd.
McAra, Matthew – GFL Environmental Inc.
McRae, Ralph – Revolution Infrastructure Inc.
Millman, David – Waste Management of Canada Corp.
Moucachen, Maya – Merlin Plastics
Pantazopoulos, Dimitri – Waste Connections of Canada
Prasad, Shad – Cascade Recovery +
Scaldaferri, Fabio – Pacific Mattress Recycling Inc.
Skei, Dayton – Evergen Infrastructure Corp.
Sigmund, Sandy – Encorp Pacific Canada, Return-It
Turner, John – BC Biocarbon Ltd.
Van de Wetering, Jasper – Heidelberg Materials Canada Ltd.
Vargas, Pinky - Republic Services
Young, Stewart, GFL Environmental Inc.
Zarbl, Michael - Major Appliance Recycling Roundtable

Metro Vancouver and City of Vancouver Staff:

Allan, Chris – Metro Vancouver
Belanger, Lynn – City of Vancouver
Henderson, Paul – Metro Vancouver
Joy, Samantha - Metro Vancouver
Liu, Stephanie – Metro Vancouver
Mizan, Zeenia – Metro Vancouver
Underwood, Chris – Metro Vancouver
Vidler, Lynne – Metro Vancouver

METRO VANCOUVER REGIONAL DISTRICT
SOLID WASTE AND RECYCLING INDUSTRY ADVISORY COMMITTEE MEETING

Minutes of the Regular Meeting of the Solid Waste and Recycling Industry Advisory Committee Meeting held at 2:00 p.m. on Tuesday, February 4, 2025, virtual Zoom meeting.

MEMBERS PRESENT:

Lori Bryan, Waste Management Assoc. of BC (Co-Chair)
Craig Hodge, Director, Metro Vancouver Board of Directors (Co-Chair)
Izzie Abrams, Waste Connections of Canada
James Collins, Tymac Launch Service Ltd.
Glen Furtado, Cement Association of Canada
Grant Hankins, Canada Minibins.com Ltd.
Gord Johnson, Northstar
Jamie Kaminski, HSR Zero Waste
Leanne Koehn, Ridge Meadows Recycling Society
Mike Lannin, Super Save Group
Angus MacFarlane, Growing City
Ralph McRae, Revolution Infrastructure Inc.
Achilles Mallari, Sierra Waste Services Ltd.
David Millman, Waste Management of Canada Corp.
Maya Moucachen, Merlin Plastics
Shad Prasad, Cascade Recovery +
Sandy Sigmund, Encorp Pacific Canada, Return-It
Dayton Skei, EverGen
Pinky Vargas, Republic Services
Michael Zarbl, Major Appliance Recycling Roundtable

MEMBERS ABSENT:

Edwin Berkhof, Evergen Infrastructure Corp.
Jeremy Crawford, Waste Control Services
Happy Deol, Super Save Group
Jen Diamant, Capital Salvage
Christian Dietrich, Ecowaste Industries
Jeff Gontovnick, 1-800-GOT-JUNK?
Josh JansenVandoorn, Anaconda Systems Ltd.
Imran Jessa, Delta Textiles Exporters Inc.
Sean Kawakami, Convertus Canada Ltd.
Aiden Kiani, Lock-Block Ltd.
Patrick MacNeil, Wescan Disposal Ltd.
Matthew McAra, GFL Environmental Inc.
Dimitri Pantazopoulos, Waste Connections of Canada
Fabio Scaldaferri, Pacific Mattress Recycling Inc.
John Turner, BC Biocarbon Ltd.
Jasper Van de Wetering, Heidelberg Materials Canada Ltd.
Stewart Young, GFL Environmental Inc.

METRO VANCOUVER STAFF PRESENT:

Allen Jensen, Senior Project Engineer, Solid Waste Planning
Brooke Atkinson, Senior Engagement Specialist, Solid Waste Services
Chris Underwood, Division Manager, Solid Waste Planning
Kelly Du, Project Engineer, Solid Waste Planning
Paul Henderson, General Manager, Solid Waste Services
Lynne Vidler, Lead Senior Engineer, Solid Waste Services
Samantha Joy, Engagement Specialist, Metro Vancouver
Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services
Terry Fulton, Senior Project Engineer, Solid Waste Planning

PREPARATION OF MINUTES: Megan Krempel, Raincoast Ventures Ltd.

Solid Waste and Recycling Industry Advisory Committee Meeting

February 4, 2025
2:00 PM – 4:00 PM
Virtual, Zoom Meeting

Agenda

1. Agenda
   1.1. February 4, 2025, Meeting Agenda
2. Minutes
   2.1. January 7, 2025, Meeting Minutes
3. Reports and Items for Discussion
   3.1. Solid Waste Management Plan Update: Timeline Update
   For information
   Designated Speaker: Terry Fulton, Senior Project Engineer, Solid Waste Planning
4. Voting Item: 2025 Industry Advisory Committee Work Plan
5. Next Steps
   5.1. 2025 IAC Membership Call for Submissions Reminder – Submission date February 12, 2025
   Verbal Updated
   Designated Speaker: Lori Bryan, Industry Advisory Committee Co-Chair
   5.2. Co-Chair Nominations in March
   Verbal Update
   Designated Speaker: Lori Bryan, Industry Advisory Committee Co-Chair
6. Other Business
   6.1 WMABC Conference – February 27, 2025
   For information
   Designated Speaker: Director Craig Hodge, Industry Advisory Committee Co-Chair
   6.2 Zero Waste Committees and Other Updates
   For information
   Designated Speaker: Paul Henderson, General Manager, Solid Waste Services
7. Other Business
   7.1 Regional Waste Flows
   7.2 2025 IAC Meeting Schedule
   7.3 Incoming Correspondence: Ministry Response to Metro Vancouver's Letter Re: Expanding Product Categories in EPR

Co-Chair Craig Hodge called the meeting to order at 2:04 p.m. and welcomed attendees to the Solid Waste and Recycling Industry Advisory Committee (Industry Advisory Committee) meeting. Members were reminded to ensure their full name was visible on the Zoom platform so attendance could be confirmed and that they had access to the Zoom raised hand function in preparation for voting.

1. AGENDA

1.1 February 4, 2025, Meeting Agenda

Co-Chair Hodge reviewed the February 4, 2025, meeting agenda. No additions were made.

2. MINUTES

2.1 January 7, 2025, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the January 7, 2025 Industry Advisory Committee Meeting. No changes or additions were brought forward.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Solid Waste Management Plan Update: Timeline Updates

Terry Fulton, Senior Project Engineer, Solid Waste Planning, shared a presentation titled "Solid Waste Management Plan Update – Timeline Update". The presentation highlighted the following:

- Completion of many of the direction-setting steps, including the vision and guiding principles, and near completion of the idea generation phase
- Feedback from idea generation engagement will be summarized into a report and will inform the development of the options analysis phase
- Currently working towards submitting the draft updated solid waste management plan to the Province in 2026
- The solid waste management plan's goals will be closely tied to the waste hierarchy
- Targets will be used to measure progress
- Actions and strategies are specific components of the plan and include:
  - Regulatory framework
  - Residuals management options framework
  - Options analysis criteria
  - Recycling and waste centre requirements
- Opportunities for the Industry Advisory Committee to have input on:
  - Goals and hierarchy
  - Options analysis criteria
  - Targets and performance indicators
  - Framework for residuals management options decisions
  - Framework for regulatory initiatives
  - Evaluation of actions and strategies.

4. VOTING ITEM: 2025 INDUSTRY ADVISORY COMMITTEE WORK PLAN

The updated Draft Industry Advisory Committee Work Plan was reviewed, and the following highlighted:

- Previous feedback on what should be prioritized in the 2025 Work Plan:
  - The solid waste management plan update

    - Disposal options, including contingency disposal, waste-to-energy, and the Vancouver Landfill
    - Soil management
    - Carry-over items from the 2024 Work Plan
- The Work Plan was developed through input from the Industry Advisory Committee members, Co-Chairs, and the solid waste management plan project team
- Solid waste management plan update topics have been indicated with "SWMP" on the work plan

Paul Henderson, General Manager, Solid Waste Services, welcomed any additional proposals or amendments to the 2025 Work Plan prior to the vote.

During discussion, it was suggested that the "hierarchy for solid waste management" tied closely with solid waste management plan goals. The Work Plan was amended to include "Draft Goals and Hierarchy".

Co-Chair Hodge reminded members of the process for motions to be approved, per the Industry Advisory Committee Terms of Reference.

It was MOVED and SECONDED
That the Draft 2025 Solid Waste and Recycling Industry Advisory Committee Work Plan be approved as amended.

CARRIED

5. NEXT STEPS

5.1 2025 Industry Advisory Committee Membership Call for Submissions Reminder – Submissions date February 12, 2025

Committee members were reminded that 2025 Industry Advisory Committee membership submissions were due on February 12, 2025. The Committee members were thanked for their contributions to the committee over the past year and were encouraged to consider continuing participation on the committee. A final email reminder for membership submission would be sent on February 10, 2025. Members were invited to reach out to Metro Vancouver staff with any related questions.

5.2 Co-Chair Nominations in March

Co-Chair Hodge advised that nominations for the Industry Advisory Committee Co-Chair would be accepted at the March 4, 2025, Industry Advisory Committee Meeting. Additional nominations would be received up to the election at the April 2025 meeting.

6. OTHER BUSINESS

6.1 WMABC Conference – February 27, 2025

Co-Chair Hodge advised that the Waste Management Association of British Columbia (WMABC) Conference would be held on February 27, 2025, and would include industry presentations, learning sessions, and networking opportunities.

Lori Bryan, Co-Chair, further informed that the one-day WMABC Conference would be held at the Sheraton Hotel in Guildford, Surrey. Government and provincial updates would be

provided along with sessions related to deconstruction and reuse and pioneers of recycling, among other topics.

6.2 Zero Waste Committee and Other Updates

Paul Henderson reviewed the agenda for the February 6, 2025, Zero Waste Committee Meeting and noted the meeting would be livestreamed.

Meeting agenda topics include:

- An update on activities related to the Zero Waste Conference on November 27, 2025, and the National Zero Waste Council:
  - The Zero Waste Conference is to be held every two years
  - A potential theme being considered was making the business case for waste prevention
- Public /Technical Advisory Committee update to Terms of Reference
- Annual solid waste and recycling statistics
- Engagement panel recruitment is ongoing
- Procurement for recycling and waste centre operations and maintenance service contracts in light of five facility contracts expiring in 2025:
  - Two separate Request for Proposal processes; one for three larger facilities and another for two smaller ones.

A Committee member alerted Metro Vancouver staff that they had no longer been receiving email notifications of upcoming Zero Waste Committee Meetings. Metro Vancouver staff noted they would look into the past process and follow up with the member. Staff would additionally circulate an invitation to "save the date" for the Zero Waste Conference on November 27, 2025, noting that the fee would be waived for Industry Advisory Committee members.

7. INFORMATION ITEMS

7.1 Regional Waste Flows

7.2 2025 IAC Meeting Schedule

7.3 Incoming Correspondence: Ministry Response to Metro Vancouver's Letter Re: Expanding Product Categories in EPR

No additional questions or comments were put forward regarding the information items.

A comment was offered in regard to the ambitious Industry Advisory Committee Work Plan and the hope that the Industry Advisory Committee could work hard to accomplish many of the work plan items. Chair Hodge acknowledged the members of the Industry Advisory Committee and felt confident about the group's achievements over the coming year.

ADJOURNMENT

Co-Chair Hodge thanked members for their comments and feedback and advised that the next Solid Waste and Recycling Industry Advisory Committee meeting (for 2025 Committee members only) would be held on March 4, 2025, virtually via Zoom.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 2:35 p.m.

6. Industry Advisory Committee Co-Chair Nominations and Election – Voting Item

7. Information Items
   7.1 Regional Waste Flows
   7.2 2025 Industry Advisory Committee Meeting Schedule
   7.3 2025 Industry Advisory Committee Work Plan
   7.4 Industry Advisory Committee 2025 Committee Member Biographies

Co-Chair Craig Hodge, called the meeting to order at 1:05 p.m. and welcomed at endees to the Solid Waste and Recycling Industry Advisory Commit ee (Industry Advisory Commit ee) meeting. Members were advised that the meeting was being live-streamed.

Co-Chair Hodge requested a brief roundtable of introductions take place as the meeting was in-person and the members do not often have the opportunity to meet face-to-face.

1. AGENDA

1.1 April 8, 2025, Meeting Agenda

Co-Chair Hodge reviewed the April 8, 2025, meeting agenda. No additions were made.

2. MINUTES

2.1 March 4, 2025, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the March 4, 2025, Industry Advisory Committee meeting. It was noted that Ralph McRae was in attendance for this meeting and this needed to be reflected in the Minutes. No other changes or additions were brought forward.

3. REPORTS

3.1 Solid Waste Management Plan: Introduction to Options Analysis and Engagement Overview

Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services, Metro Vancouver, shared a presentation titled "Solid Waste Management Plan Update" and highlighted:

- The local solid waste system involves many players with different roles and responsibilities, including Federal and Provincial government, First Nations, Metro Vancouver, member jurisdictions, businesses and institutions, non-profits, and residents.
- The new plan will identify how the region can continue to reduce waste, increase reuse and recycling, reduce greenhouse gas emissions, and work towards a circular economy.
- The upcoming "Options Analysis" phase will evaluate ideas that were generated in the previous phase.

Co-Chair Hodge invited members to share related questions and/or comments on the presentation. No comments were made.

4. ITEMS FOR DISCUSSION

4.1 Solid Waste Management Plan: Draft Hierarchy and Goals

Terry Fulton, Senior Project Engineer, Solid Waste Services, Metro Vancouver, shared a presentation titled "Solid Waste Management Plan – Goals and Hierarchy" and highlighted:

- The draft hierarchy shows priorities for managing waste, beginning with reduce (prevent, use less), followed by reuse (reuse for original purpose, repair, and repurpose), recycle as

material, recycle as energy (fossil fuel substitutes), and disposal (landfill and Waste-to-Energy)
- Four draft goals were shared: (1) Prioritize waste prevention (2) Keep materials in use as long as possible (3) Make it easier to recycle effectively and (4) Dispose of remaining garbage responsibly.

Co-Chair Hodge welcomed questions and comments from members before breaking out into small groups for continued discussions. The following questions and comments (Q/C) and responses (*R*) were captured:

Q/C: Has Metro Vancouver completed a "scorecard" to determine how well strategies were implemented during the 2011 Solid Waste Management Plan?

R: There has been a bi-annual review of the plan's progress with respect to achieving the goals and strategies, which is published every two years. A part of the "Idea Generation" phase for the upcoming plan included reviewing of the previous ideas and identifying previous actions that could still be appropriate for an updated plan for consideration during options analysis

Members broke out into small groups for continued discussion on the presented draft hierarchy and goals. Metro Vancouver staff ensured they had representation with each group and took notes on the discussion. Groups were asked to consider the following questions:
- Is there anything missing from the draft hierarchy and goals?
- Is there anything that should be changed or removed?
- Any other feedback?

The committee reconvened, and members were invited to highlight important discussion points to share with the larger group.

A feedback summary from the small group discussion will be posted to the Industry Advisory Committee web page separately from the minutes.

4.2 Solid Waste Management Plan: Draft Metrics

Lindsay Seidel-Wassenaar, Project Lead, P.Eng., Sonnevera, joined the Industry Advisory Committee meeting via teleconference and shared a presentation titled "Solid Waste Management Plan – Metrics" and highlighted:
- Performance metrics and indicators enable monitoring of the plan goals and actions.
- Work that has already taken place includes completing a jurisdictional/organizational scan, interviews with jurisdictions/organizations, data summary and comparison, and assessment of metrics against criteria.
- Performance metrics applicability criteria include: specificity, data type, data quality, data source, effort, and data accessibility.
- Next steps include:
  - Finalizing the performance metrics report with recommended primary metrics

- Publishing a draft report and distributing to the Industry Advisory Committee for feedback.
- Using the report to inform discussions on targets after options are analyzed.

Co-Chair Hodge opened the floor for members to respond to the information presented. The following questions and comments (Q/C) and responses (*R*) were captured:

Q/C: What is the consideration for the waste stream change? Composition of waste stream has significantly changed – how is this being considered in the metrics presented?

R: The current plan has a primary goal centered around recycling however Metro Vancouver intends to include a suite of metrics in the updated plan which will help to provide a more complete picture.

R: Having a suite of metrics will allow us to follow the trends more accurately. This data is ever-changing, so it is important to look at it from a variety of angles.

Q/C: How can you determine the "score"?

R: Most of the metrics have current data for the baseline measurements. The next step is setting the targets, but identifying the metrics is the first step.

Q/C: As the world continues to evolve and composition changes, is there going to be a mechanism to analyze information over time? Will there be a way to normalize what we are seeing to ensure that apples are not being compared to apples when there is a significant, yet unique, occurrence?

R: It is important to look at "per capita" rather than "total" data for this reason. Per capita calculations can help normalize information rather than looking at the totals. The annual reporting process aims to provide additional context to help identify changes that may correspond to economic, social or other factors.

R: Extensive waste composition data coupled with information from external sources helps to indicate and explain how waste is changing over time.

4.3 Solid Waste Management Plan: Draft Options Analysis Criteria

Karen Storry, Senior Engineer, Solid Waste Services, Metro Vancouver, shared a presentation titled "Options Analysis Criteria and Process" and highlighted:

- This phase involves evaluating ideas generated in the Idea Generation phase to produce a list of potential actions for the updated plan.
- The draft idea evaluation criteria is presented in four categories: Economic, Environmental, Social, and General.

Members were invited to share comments in a plenary discussion and the following questions were shared:

- Is there anything missing from the draft criteria?
- Is there anything that should be removed or changed?
- Any other feedback?

The following questions and comments (Q/C) and responses (*R*) were captured:

Q/C: This is a good, inclusive list, but what happens when they conflict? For example, if something is better for the environment but is not affordable. How will the decision-making process manage this?

R: There will be a standardized way of looking at the information coming forward, and a thorough assessment will be made. These decisions will also be brought forward to members for their input with ongoing opportunities to provide feedback along the way.

Q/C: Unsure what "collaboration" means.

R: In this context, it refers to initiatives that can be done by working with other parties.

Q/C: Consideration should be made to include "open competitive markets" and "investments in infrastructure" under the economic category.

Q/C: Minimize risk and liability by ensuring the system does not create risk for the future.

Q/C: Does "resilience" consider economic challenges?

R: "Resilience" is not just an "environmental" element (the category it is placed in currently), and consideration will be given to where this is best represented.

R: Suggestion to create a new section where criteria that are applicable to multiple categories can be captured separately.

Q/C: Suggestion to change "general" to "operational" or something more functional.

Q/C: Collaboration needs to be broader than just "economic".

Q/C: How do we measure "reuse" as this happens informally all the time? The depots are making great efforts and there is massive recycling taking place, but no one is getting credit for it.

R: In previous annual reports, the annual reuse by tonnes was estimated. It was recently pulled out as there is a need to better quantify this, and this is a goal Metro Vancouver is working towards. It is difficult to measure this when it is informally being done.

R: A suite of metrics will help support this work. Having secondary suite of metrics to reflect how things are evolving. It does not give the entire tonnage picture but can demonstrate progress over time.

It was noted that any additional comments and feedback can be submitted to Metro Vancouver staff.

5. OTHER BUSINESS

5.1 Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Solid Waste Services, Metro Vancouver, gave the following updates:

- Ashcroft Ranch sale has been completed. Metro Vancouver previously owned a ranch for the last 25 years – the land was purchased initially with the intention of developing a new landfill. The ranch was sold for $28 million (market value) to local First Nations.

Zero Waste Committee updates:

- There was no meeting in March 2025
- In April, a report proposing updates to the Notice of Bylaw Violation Bylaw to include Tipping Fee Bylaw provisions, will be going to the Board at the end of April 2025.

6. INDUSTRY ADVISORY COMMITTEE CO-CHAIR NOMINATIONS AND ELECTION – VOTING ITEM

Co-Chair Hodge advised members that a Co-Chair will be elected for a one-year term by a 50% plus one majority vote of voting members present. Voting members are defined as Industry Advisory Committee members who have held membership for at least one month prior to the day of the vote.

It was noted that Lori Bryan was nominated at the March 2025 Industry Advisory Committee meeting.

Nominations were called by Co-Chair Hodge three times prior to proceeding with the election. No other nominations were made and Co-Chair Hodge congratulated Co-Chair Lori Bryan for serving another year as Co-Chair.

7. INFORMAITON ITEMS

7.1 Regional Waste Flows

7.2 2025 Industry Advisory Committee Meeting Schedule

7.3 2025 Industry Advisory Committee Work Plan

7.4 Industry Advisory Committee 2025 Committee Member Biographies

Co-Chair Hodge stated that the next in-person meeting is planned for October 2025. In-person meetings allow a deeper discussion of related topics, and members are encouraged to submit topics of interest. This will be further explored during the May 2025 meeting.

It was noted that the Committee Member Biographies have been provided, and any required changes should be submitted to Metro Vancouver staff.

The landfill tour will take place on September 18, 2025, and more details will be sent to members soon.

ADJOURNMENT

Co-Chair Hodge thanked members for their comments and feedback and advised that the next Solid Waste and Recycling Industry Advisory Committee meeting would be held online on May 6, 2025.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 2:55 p.m.

Solid Waste and Recycling Industry Advisory Committee
Key Topic Discussion Feedback Summary – April 8, 2025

At the April 8, 2025, Solid Waste and Recycling Industry Advisory Committee meeting, committee members provided input and feedback on the draft hierarchy, goals, and criteria for the updated solid waste management plan. A summary of feedback received is presented below.

Discussion Questions	Feedback
Draft Hierarchy *Is there anything missing?* *Anything that should be changed or removed?* *Other feedback?*	**Industry representation** • Concern for businesses that deal in disposal – perception that they are ranked lower in the hierarchy. • Composting and anerobic digestion are not included. Compostable products, where do they fit (recycled as material or recycled as energy?) We know fibre can be composted, recycled as energy with the disposal side of things. • What about cement production which produces energy, which then produces a product. Why should it not count as high priority as recycled as material rather than recycled as energy? • The hierarchy doesn't specifically include metal recycling – why isn't it included? It's a good percentage of what is generated. • Animal rendering – where does that even fit? **Definitions and Hierarchy priorities** • May be hard for average consumer to understand the applicable meaning of "reduce". • Possibly expand on definitions of what would fall under each classification – definition is important for each of the steps. • Need to define "recycle". • Alternative to "recycle as energy" is "waste-to-industry" or "recycle as energy for industry" because you're driving economic value so put it higher in the hierarchy. • First two items in the hierarchy are manufacturer or consumer driven. Haulers have no ability to reduce, but they will recover materials. • Counter view: Onus on waste collectors to educate customers about waste prevention as well – so industry does have a role. • "Recycle for energy" isn't actually recycling – it is displacing fossil fuel but not actually recycling anything. • "Reduce" should be up to government; everything below that is more relevant to industry/private sector action.

	• Disagree with not including Waste-to-Energy/landfill outputs in "recycle as energy"; not clear why this would be separated out.
	• "Recycle as energy"; should be understood as looking for opportunities to replace fossil fuel use with cleaner alternatives – this seems confusing when Waste-to-Energy outputs are not represented in the same way.
	• "Repurpose" or "use as fuel" makes more sense than "recycle as fuel".
	• "Recycle as energy" should also be greyed out (like disposal) or moved to the bottom of the hierarchy with disposal.
	• Anything to do with fuel should go at the bottom.
	• Create more definitions and differentiations to describe the two sections of recycle as disposal and recycle as energy –
	• "Recycle as energy" is confusing. It is ultimately the same thing as Waste-to-Energy so why is it classified differently?
	
	Hierarchy Design
	• Hierarchy doesn't need to be a triangle; consider other ways to model it visually.
	• Suggest splitting the bottom disposal triangle to ensure we account for waste-to-energy and landfill separately without indicating one is preferable over the other.
	• Bottom triangle should be bifurcated and pointing in a different direction all together.
	• Waste-to-Energy should not be at the very bottom as disposal, because we're still producing something of value.
	  • Disposal at the landfill can also involve opportunity to extract landfill gas as a beneficial use. So, in both Waste-to-Energy and landfill, you are getting beneficial use as a byproduct of the method of managing waste
	
	General Comments and Feedback
	• New proposed Hierarchy:
	  - *Reduce*
	  - *Reuse*
	  - *Recycle as new or alternative material - define what this means – materials recycled, break that down*
	  - *Recycle as energy – define further what this means*
	  - *WTE*
	  - *Landfill*
	• Metro Vancouver is a distinct market – focus on that while considering the hierarchy – consider the end markets always while applying the hierarchy

	• If we have a mandate to divert, there is no incentive to do better. It kills innovation when we say we can convert materials into a fuel for energy. • Materials are more valuable than energy.
Discussion Questions	**Feedback**
Draft Goals *Is there anything missing?* *Anything that should be changed or removed?* *Other feedback?*	**Goal 1 – Prioritize waste prevention** • Change to "waste reduction and prevention" • Prioritizing waste prevention seems counter productive to promoting market growth. The need to prevent waste is a good goal, but it needs to be done sustainably so industry can adapt as necessary to changing market dynamics. **Goal 2 – Keep materials in use as long as possible** • It should more clearly state that that materials and products are kept cycling in their highest and best value/use. **Goal 3 – Make is easier to recycle effectively** • What does this mean for waste and recycling industry? • Challenged by practical aspects – how is this achieved? • Words like "effectively" and "responsibility" are not well defined or actionable; subjective/ambiguous. • Begins at the consumer level. If there's no incentive, then the problems begin. Education is core. **Goal 4 – Dispose of remaining garbage responsibly** • If you're following the hierarchy – it makes this goal irrelevant. **General comments** • Affordability is missing in the goals - it was a top priority in the guiding principles • Missing references to collaboration and competition. • Didn't see anything about technology or innovation – how can we promote innovation in Metro Vancouver? • Should add a goal related to investment in business and industry.
Discussion Questions	**Feedback**
Draft Criteria *Is there anything missing?* *Anything that should be changed or removed?*	• Add in the liability component. • Have separate column that holds themes more broadly applied – like resilience. • Collaboration – move to a general category that applies to all of the themes – not just economic. • Consider adding an operational column – practicality of application of each of the criteria to each theme

Other feedback?	• Remove "general" – change to "operational" • Does the criteria address out of region disposal facilities processing garbage within Metro Vancouver region? • What happens if two criteria are opposing? Is there a hierarchy for how to chose? Are the criteria weighted equally or are some more important?
Discussion Questions	**Feedback**
Metrics *Any questions?*	• How to tangibly measure reuse – there's lots that happens informally – how to quantify that? • Are we tracking from a specific point in time as a baseline? • As the economy changes is there a mechanism built-in to account for changes and maintain integrity of the data?
Additional Comments	
	• General public is frustrated by the constant changes in what counts as recyclable materials; more consistent messaging across municipalities will help. • What about when licensed facilities in Metro Vancouver are sending materials to landfills State-side that local authorities want closed? Will issues like these be addressed within the plan? • Very expensive to remove compost residuals properly in landfill vs. burning it. Need regulations to encourage compliance. • Need to have cost penalties to make consumers feel the same pain as collectors and processors if they don't recycle properly. • If a customer isn't ready to pay more to do the right thing, the hauler is then paying or investing in cameras and enforcement methods etc. which is not cost effective. It only works if all companies play by the same rules. • Need incentives for consumers but also end up spending a lot of money policing that.

   5.1 Regional Waste Flows
   5.2 2025 Industry Advisory Committee Meeting Schedule
   5.3 2025 Industry Advisory Committee Work Plan

MEETING MINUTES

Co-Chair, Director Craig Hodge, called the meeting to order at 2:30 p.m. and welcomed at endees to the Solid Waste Industry and Recycling Advisory Commit ee (Industry Advisory Commit ee) meeting. Members were advised that the meeting was being live-streamed and a recording would be posted to the Industry Advisory Commit ee webpage.

1. AGENDA

1.1 May 6, 2025, Meeting Agenda

Co-Chair Hodge reviewed the April 6, 2025, meeting agenda. No additions were made.

2. MINUTES

2.1 April 8, 2025, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the April 8, 2025, Industry Advisory Committee meeting. No additions or changes were made.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Updated Draft Hierarchy and Goals

Terry Fulton, Senior Project Engineer, Solid Waste Services, shared a presentation titled "Updated Hierarchy and Goals" and highlighted:

- The waste hierarchy provides an indication of priorities, a decision-making framework, a way to categorize ideas, and is linked closely to plan goals.
- Next Steps:
  - Goals and hierarchy to Zero Waste Committee and Greater Vancouver Sewerage and Drainage District Board
  - Fall: Options analysis and target setting discussions
  - Early 2026: Review and comment on draft updated solid waste management plan

Co-Chair Hodge invited members to share related questions and/or comments on the presentation. The following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: The Provincial government includes fuel substitutes in its definition of recycling, but other countries have excluded creating fossil fuels from their definitions. Has Metro Vancouver confirmed that fuel substitutes should be included in the recycling section?

R: Metro Vancouver is not bound by the Provincial hierarchy; however, the current practice is to count material used as a fuel substitute as recycling.

Q/C: So this was a decision by Metro Vancouver to include materials used as fuel substitute in the recycling definition? There have been many voices saying that this is not

appropriate. This does a disservice to the recycling industry who are trying very hard to find markets for materials that can be recycled.

R: *One of the potential metrics and targets for the updated plan could include tracking and maximizing the amount of material that is recycled into new products and materials. Metro Vancouver will continue to be responsive to feedback on potential metrics. Ultimately it is our board that will make the decisions. They will hear all the feedback we've heard from all audiences throughout the plan update process.*

Q/C: I believe this requires more discussion before it's adopted because this is ultimately going to hold us back from achieving our goals.

3.2 Recycling and Waste Centre Strategy Development

Paul Henderson, General Manager, Solid Waste Services, Metro Vancouver, shared a presentation titled "Recycling and Waste Centre Strategy Development – Component of an updated Solid Waste Management Plan" and highlighted:

- Draft Guiding Principles for Recycling and Waste Centre Strategy:
  - Consistent and maximized reuse and recycling opportunities
  - Best practices in facility design, construction, and operation
  - Reasonable and consistent drive times
  - New facilities developed in areas with expected future growth
  - Resilient and cost-effective service delivery
- Recycling and Waste Centre Strategy: possible elements to include:
  - Describe future upgrades to existing facilities
  - Outline potential locations for future facilities
  - Highlight plans to expand reuse and recycling
  - Identify best practices in facility design, construction, and operation.

The members broke into small groups for continued discussion on the presented draft guiding principles and possible elements for the Recycling and Waste Centre Strategy. Metro Vancouver staff took notes on the discussion. Groups were asked to consider the following questions:

- *"Is there anything missing or that should be changed in the draft guiding principles for the Recycling and Waste Centre Strategy?"*
- *"Are there any comments on the possible elements for the development of the Recycling and Waste Centre Strategy?"*
- *"Any other comments?"*

The group reconvened, and one representative from each small group was asked to highlight main ideas discussed to share with the larger group. The following comments were provided:

- Need to provide deeper definitions, including scientific data and percentages
- How to determine reasonable and consistent drive times?
- Effective cost savings measures need to be prioritized
- Ensure investment in capital structures to ensure longevity

- Define “best practices”
- Clarification needed on “resilience” and “service delivery”
- Collaboration with private sector is still a high priority for this committee
- Determining services available at private and public facilities is a priority for this committee

Co-Chair Hodge invited other committee members to share related questions and/or comments on the breakout activity. The following questions and comments (Q/C) were captured:

Q/C: Previously, facilities served single-family and multi-family, and industrial, commercial or institutional would go to the private sector.

Q/C: The primary customer at Metro Vancouver’s facilities is not business, it is small vehicles.

Q/C: Need economies of scale, should have one central facility, and have drop-off facilities serving industrial/commercial/institutional, multi-family, and single-family, and create a consistent flow of material.

A feedback summary from the small group discussions will be posted to the Industry Advisory Committee web page separately from the minutes.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Solid Waste Services, Metro Vancouver, shared a presentation titled “Other Business” and highlighted:

- May 2025 Zero Waste Committee meeting cancelled
- Used oil is now accepted at the Langley Recycling and Waste Centre
- National Zero Waste Council is the recipient of the Knowledge and Insights Leadership award through the Canada Plastics Pact.

Co-Chair Hodge invited members to share related questions and/or comments on the presentation. No comments were made.

4.2 Upcoming Meetings and Key Topics

Co-Chair Lori Bryan shared a presentation titled “Upcoming Meetings” and highlighted the remaining meeting dates and key topics for 2025. The committee was invited to give feedback on the preferred topic for the second in-person meeting in October and to review the remaining key topics in the workplan to ensure they will have the chance to give input on the topics of most interest.

Co-Chair Hodge opened the floor for members to respond to the information presented. The following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: Add “SWMP: Options Analysis/Targets” topic to the October meeting.

Q/C: Industry Advisory Committee members can direct additional topic ideas to Co-Chair Hodge or Co-Chair Bryan.

Q/C: Request that Metro Vancouver inform the Industry Advisory Committee members on goals and targets proposed to include in the draft solid waste management plan before the fall. Members will comment on specifics at the October meeting.

Q/C: Industry is waiting to understand their role within the region’s waste management plan. Currently it there is too much uncertainty around private industry capital investment as we wait to see the draft plan.

R: A draft plan should be prepared by early 2026, and Metro Vancouver will seek feedback from the Industry Advisory Committee.

Q/C: Are there any items on the list that do not seem relevant to the Industry Advisory Committee, or anything that needs to be weighed in on prior to that draft?

Q/C: The topics have been discussed, and the concrete and asphalt study report was reviewed two years ago. There are consultations and documentation on all these topics.

R: We will add the concrete and asphalt recycling report as an information item rather than as a workplan item and note the change on the workplan.

Q/C: Prepare four to five topics from the plan with a summary for review by the Industry Advisory Committee at the October meeting.

Q/C: Find private sector opportunities within this plan.

Q/C: The intent of the Industry Advisory Committee was to deal with big, hard topics, and we are not talking about those hard issues. In today’s working group, what was presented was too lofty and generalized, with insufficient detail. This industry is stalled due to uncertainty in regulation, and as a result there has been no capital investment. Metro Vancouver should put together the draft plan and let industry comment on it.

R: Part of the work will involve defining the role of the private sector.

R: The September meeting will be a good time to provide an outline of the solid waste management plan.

R: The "Concrete and Asphalt Recycling Opportunities Review" will be circulated; the key interests are noted, with a need to focus on the key items.

R: This is an Industry Advisory Committee for industry input. Metro Vancouver will provide Industry Advisory Committee feedback to the Zero Waste Committee. The Industry Advisory Committee also provides valuable feedback on relevant items apart from updating the solid waste management plan.

4.3 Review of the Industry Advisory Committee Terms of Reference

Co-Chair Hodge shared that the committee terms of reference requires regular review.

- The Industry Advisory Committee will review the Terms of Reference at least every 18 months, for consideration on whether any amendments or modifications are required.
- Requesting the Industry Advisory Committee review the Terms of Reference prior to the June 2, 2025, meeting and reach out to staff or Co-Chairs with any changes required.

Co-Chair Hodge invited members to share related questions and/or comments on the Terms of Reference. No comments were made.

5. INFORMATION ITEMS

5.1 Regional Waste Flows

5.2 2025 Industry Advisory Committee Meeting Schedule

5.3 2025 Industry Advisory Committee Work Plan

ADJOURNMENT

Co-Chair Hodge thanked members for their comments and feedback and advised that the next Solid Waste and Recycling Industry Advisory Committee meeting would be held online on June 10, 2025.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 4:30 p.m.

Solid Waste and Recycling Industry Advisory Committee
Key Topic Discussion Feedback Summary – May 6, 2025

At the May 6, 2025, Solid Waste and Recycling Industry Advisory Committee meeting, committee members provided feedback on the draft guiding principles and elements for a recycling and waste centre strategy that will be a component of the updated solid waste management plan. A summary of feedback received is presented below.

Discussion Topic	Feedback
Draft Guiding principles for a recycling and waste centre strategy	**Best practices in facility design and operation:** • Need to define "recycling" • Need to define "best practices" • Recycling and waste centres – suggestion they be renamed: "diversion centres" • Suggestion to show private facilities as well as public ones on the regional waste facilities map **Reasonable and consistent drive times:** • May be different for different people what reasonable times and distance – things like traffic flows, time of days, other factors like directions need to be considered • Need a working definition of "reasonable drive times" **Resilient and cost-effective service delivery:** • Cost effective is in the eye of beholder – what does it mean in this context? Definition needed. • What does resilient and cost-effective delivery mean? Need more quantifiable data to really understand what they mean. **General comments:** • What are the numbers and data that are driving these guiding principles? • More defined terms and objective are needed – these draft principles are too vague • Desire to learn about Metro Vancouver's goals and objectives and get clarity about what level participation is available from waste and recycling industry. • Key issue: what is the role of private sector if Metro Vancouver develops competitive facilities? For private sector, can't invest in business if no certainty. • Recycling is all about economies of scale. Is this strategy focusing on providing services that private industry that cannot meet?

Discussion Topic	Feedback
Draft elements of a recycling and waste centre strategy	• Include an element on effective cost saving measures while still maintaining or improving the current level of diversion. • With regards to "describe future updates to facilities", suggest prioritizing AI and other structural/capital investments to ensure longevity. This is an area that private sector could collaborate. • Potential locations and reduction of GHG emissions are linked and important as the population increases throughout the region. Changes to zoning can negatively impact the potential and existing locations for recycling facilities. Important that municipalities set aside areas in their OCP to allow for these facilities to be built and operated. • Identify the type of waste that Metro Vancouver is targeting – who are the customers? • Include expansion of services in the draft elements.
Committee Function	**Feedback**
	• Suggestion to convene a working group outside of the IAC to give feedback on this topic – target users of the facilities. • Preference is to have consensus or a voting system when determining decisions regarding the solid waste management plan update.
	Additional comments / questions
	• Why are solid waste facilities owned and managed by Metro Vancouver instead of the private sector? • Is this strategy going to address the lack of infrastructure?

Joanne Gauci – Policy Coordinator, Metro Vancouver
Paul Henderson, General Manager, Solid Waste Services, Metro Vancouver
Allen Jensen – Senior Project Engineer, Metro Vancouver
Samantha Joy, Engagement Specialist, Metro Vancouver
Stephanie Liu, Manager, Solid Waste Community Engagement, Metro Vancouver
Zeenia Mizan – Program Assistant, Metro Vancouver
Nanette van Doorn – Communications Advisor, Metro Vancouver
Lynne Vidler, Lead Senior Engineer, Metro Vancouver

PREPARATION OF MINUTES: Sandra Moore, Raincoast Ventures Ltd.

METRO VANCOUVER REGIONAL DISTRICT
SOLID WASTE AND RECYCLING INDUSTRY ADVISORY COMMITTEE

Tuesday, June 10, 2025
2:00 pm – 4:00 pm
Zoom Teleconference

A G E N D A

1. AGENDA
1.1 June 10, 2025 Meeting Agenda

2. MINUTES
2.1 May 6, 2025 Meeting Minutes

3. REPORTS AND ITEMS FOR DISCUSSION
3.1 SWMP: Regulatory Strategy
For small group discussion
Designated speaker: Terry Fulton, Senior Project Engineer, Solid Waste Services

3.2 SWMP: Idea Generation Engagement Summary Report Back
For information/Q&A
Designated speaker: Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services

***4.* OTHER BUSINESS**
4.1 Zero Waste Committee and Other Updates
For information
Designated Speaker: Paul Henderson, General Manager, Solid Waste Services

4.2 September Facility Tour and Zero Waste Conference Registration
Designated Speaker: Samantha Joy, Engagement Specialist, Solid Waste Services

5. INFORMATION ITEMS
5.1 Concrete and Asphalt Recycling Opportunities Review
5.2 Regional Waste Flows
5.3 2025 IAC Work Plan

Co-Chair Craig Hodge, called the meeting to order at 2:01 p.m. and welcomed at endees to the Solid Waste and Recycling Industry Advisory Commit ee meeting. Housekeeping reminders were provided, including that the meeting was being live-streamed and would be posted to the Industry Advisory Commit ee webpage.

1. AGENDA

1.1 June 10, 2025, Meeting Agenda

Co-Chair Hodge reviewed the June 10, 2025, meeting agenda. No additions were made.

2. MINUTES

2.1 May 6, 2025, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the May 6, 2025, Industry Advisory Committee meeting and clarified that the minutes are prepared by an external notetaker as required by the committee Terms of Reference. It was further noted that meeting minutes are not taken during the breakout sessions, but key comments are captured by Metro Vancouver staff members. Summaries of the small group feedback are provided following the sessions, posted on the website, and, if relevant, included in the feedback log for the solid waste management plan update. It was suggested that the small group feedback summaries could be included as an attachment to the minutes moving forward.

Co-Chair Hodge noted that concerns that had been raised by a member through email regarding certain discussions not captured in the minutes.

The following remarks were offered by a committee member, with *responses* noted as follows:

- Concern regarding a discussion about the progress and process of the solid waste management plan update at the last meeting not being included in the minutes.
    - Specifically feedback on the draft hierarchy and disagreement on the inclusion of energy recovery being classified as recycling.
    - Further feedback that the committee wants meaningful opportunities to contribute to the solid waste management plan and requested a draft for comment at the earliest date possible.
- With regard to previous minutes being amended, concerns raised about not notifying members when amended minutes are published
- Concern about insufficient time to review meeting minutes prior to a meeting
    - *Agreement that the timing of the distribution of the minutes can be reviewed, to ensure members receive the minutes promptly*
    - *Clarification that following the discussion and feedback received at the previous meeting regarding the updated hierarchy and goals for the updated plan, Metro Vancouver staff are working on an updated version that incorporates feedback received from this committee and others and which will be circulated to the members*

for review and comment

- *Members were encouraged to review the minutes and identify if any key points are missing, and are provided an opportunity at each meeting to offer comments*
- *Confirmation that any previous updates requested to the minutes have been completed and amended minutes reposted to the web page. In future, members will be notified when revised minutes or feedback summaries are posted to the webpage.*

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 SWMP: Regulatory Strategy

Terry Fulton, Senior Project Engineer, Solid Waste Services, Metro Vancouver, shared a presentation titled "Solid Wate Management Plan Regulatory Strategy" and highlighted the purpose of the strategy, roles and responsibilities within and outside the GVS&DD Authority, existing Metro Vancouver Solid Waste bylaws, draft regulatory priorities, examples of potential future regulatory mechanisms, and next steps.

The members joined four breakout groups to consider the following question, "*Considering the draft regulatory priorities and example possible future regulatory mechanisms, is anything missing or that should be changed? Any other comments?*"

The group reconvened, and members were invited to highlight important discussions from their groups to share with the larger group.

A summary of the feedback from the small group discussions will be provided to the committee, posted to the Industry Advisory Committee webpage, and considered as input to the options analysis phase of engagement for the solid waste management plan update.

Co-Chair Hodge invited members to share additional questions and/or comments. The following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: With regards to the generator levy – can you share how many tonnes are currently reported to Metro Vancouver?

R: As far as we are aware, all the residential, commercial, and institutional garbage generated within the Metro Vancouver region is delivered to the Metro Vancouver and City of Vancouver solid waste facilities. We have no information at this point in time to suggest that garbage is being hauled elsewhere.

Q/C: If garbage is not currently leaving the region, why would we continue to introduce measures to further strengthen the generator levy?

R: The current situation suggests that the generator levy as a tool is working effectively. At this point, we do not see any gaps in the regulatory framework with respect to ensuring compliance with the generator levy.

Q/C: I guess that maybe down the road it may need to be looked at, but for now it looks like we do not have to do anything new.

R: Metro Vancouver does not see value in implementing regulatory measures that do not have a benefit or where the benefits would be outweighed by impacts. We can look at priorities to make sure that is clear as that would be a consideration in looking at any new regulatory mechanism.

It was noted that the GVS&DD Board makes the final decisions with respect to regulatory measures. If challenges are identified with respect to being able to ensure compliance with the generator levy provisions, then proposed amendments would be brought forward to the Board.

It was further noted that there are no specific plans to implement new regulatory measures throughout the term of the plan however if any new regulatory measures were proposed, there would be an engagement process related to the specific proposed measure. The updated solid waste management plan will not prescribe specific regulatory measures but will describe priorities to use when considering new regulatory measures in the future, along with potential example regulatory measures as described in the presentation.

3.2 SWMP: Idea Generation Engagement Summary Report Back

Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services shared a presentation titled "Idea Generation Engagement Summary: Solid Waste Management Plan Update" and highlighted the project timeline, idea generation feedback summary, options analysis engagement, and next steps.

Co-Chair Hodge invited members to share related questions and/or comments. The following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: When we get the draft solid waste management plan, how much time will we have to review the plan before it is submitted to the Ministry?

R: We will make sure everyone has sufficient time to review the drafts. To avoid trying to talk through the entire plan during one meeting, our approach will be to send out sections of the draft plan as we have them to provide the opportunity for early feedback. We are still considering the process for the Zero Waste Committee and the Board, but we will have more information on that soon.

Q/C: During this process of updating to the solid waste management plan, what plan have we be working under?

R: Solid waste management plans do not expire. The provincial guideline is that the process to update the plan should be initiated within 10 years of the plan being approved. The current plan stays in effect until the next plan is approved.

Q: If industry is not happy with the existing plan, but Metro Vancouver is – where is there incentive to get the plan moving forward, and completed in a timely fashion?

R: We are all committed to get to a new plan as fast as we can. We think the plan update is valuable and from the Metro Vancouver perspective, we are keen to get to a new plan as fast as we can.

R: We, as a region, are motivated to complete the draft plan. Once a draft plan is submitted to the Minister of Environment and Parks, the Minister will need time to review the draft and all the feedback received throughout the process.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson shared a presentation titled, "Zero Waste Committee and Other Updates", which highlighted reports that went to the Zero Waste Committee in June including: food scraps recycling campaign results, a solid waste management plan progress update, the completion of the Waste-to-Energy Facility Carbon Capture/Storage report, GVS&DD audited 2024 summary financial statements, and continued improvements at recycling and waste centres. A summary of a recent Home Demolition Waste Prevention Forum was also provided.

4.2 September Facility Tour and Zero Waste Conference Registration

Samantha Joy, Engagement Specialist, Metro Vancouver, highlighted the upcoming tour on September 18 at the Vancouver landfill. It was noted that a meeting invitation was sent to committee members, and any interested members could contact staff regarding attending. It was further noted that an Educational Resources and Tools workshop focusing on multi-family was coming up on June 23, and a registration link was included in the meeting agenda. Members were also invited to contact staff if they were interested in attending the Zero Waste Conference in November.

5. INFORMATION ITEMS

5.1 Concrete and Asphalt Recycling Opportunities Review

5.2 Regional Waste Flows

5.3 2025 IAC Work Plan

ADJOURNMENT

Co-Chair Hodge provided closing comments, thanking members for their comments and feedback and advised that the next Solid Waste and Recycling Industry Advisory Committee meeting would be held online on September 9, 2025.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 3:24 p.m.

Solid Waste and Recycling Industry Advisory Committee
Key Topic Discussion Feedback Summary – June 10, 2025

At the June 10, 2025, Solid Waste and Recycling Industry Advisory Committee meeting, committee members provided feedback on draft priorities and possible future regulatory mechanisms for the draft regulatory strategy to be included in the updated solid waste management plan. A summary of feedback received is presented below.

Discussion question	Feedback
Is there anything missing or that should be changed in the draft regulatory priorities and possible future regulatory mechanisms?	**Possible regulatory mechanisms** • Design for recyclability • Regulatory mechanisms should be in true response to priorities and be market driven • Include financial and other incentives for generators and haulers to promote reuse and recycling • Narrow down the mechanisms to just two or three actions that can achieve most broad reaching results • Include enforcement at the household level and on the tipping floor to reduce recyclables in residential garbage • Generator levy: o Processor/receiver perspective: not much needs to change o Hauler perspective: it is not effective, consistent, or equitable • Enhance the disposal ban program with better education and enforcement • Follow existing provincial programs and regulations, don't create anything new. **Regulatory priorities** • Increase reuse and recycling at the source – focus on solutions for multi-family • Encouragement and incentives will expand reuse and recycling – not licencing or further regulation. Less regulation will encourage industry to respond with innovation • Disposal ban enforcement • Keep administrative burden for haulers low • Set realistic goals • We need more monitoring, more enforcement of existing regulations, rather than introducing more regulations • Ensure Metro Vancouver is prepared to accept new extended producer program materials/products

	Existing Metro Vancouver Bylaws • Feel that both industry and Metro Vancouver is overextended with current levels of regulation (understaffed and under resourced) – can we look at incentivizing innovation? • Would appreciate greater clarity and transparency on how revenue from generator levy is allocated and how decisions are made with respect to spending priorities (infrastructure, facilities, etc.) • Generator levy is ineffective and needs to be changed – too much administrative burden o Data collection and admin drives up costs – concerns about administrative burden on haulers to comply **General Comments and Feedback** • What does it mean to "enhance the disposal ban"? • What is the measurement or performance metric for determining the "effectiveness" of the generator levy? • This feels like mission creep by local government • Possible that this is encroachment into existing regulatory programs – many of the suggested regulatory mechanisms fall under Provincial programs. • There is already too much regulation – look to Baltimore as example of a place where industry is not over-regulated • We have had this same conversation since 2013 – we need less regulation. Tired of giving the same feedback. • This is the fourth time this topic has been brought up – we do not want hauler licencing.
Additional comments	
	• The industry Advisory Committee is dysfunctional – we need more decisive action

MEMBERS PRESENT:

Craig Hodge, Director, Zero Waste Committee (Co-Chair)
Abrams, Izzie – Waste Connections of Canada
Furtado, Glen – Cement Association of Canada
Johnson, Gord – Northstar
Hankins, Grant – Canada Minibins.com Ltd.
Kaminski, Jamie – HSR Zero Waste
Kawakami, Sean – Convertus Canada Ltd.
Kheyrandish, Ataollah – Richmond Steel Recycling
Kiani, Aiden – Lock-Block Ltd
Lannin, Mike – Super Save Group
MacFarlane, Angus – Growing City
Mac Neil, Patrick – Wescan Disposal Ltd.
Millman, David – Waste Management of Canada Corp.
Moucachen, Maya – Merlin Plastics
Pantazopoulos, Dimitri – Waste Connections of Canada
Prasad, Shad – <Organization>
Punja, Rustam – Geocycle Canada Inc.
Sigmund, Sandy – Encorp Pacific Canada, Return-It
Skei, Dayton – Evergen Infrastructure Corp.
Stefenelli, Nicole – Urban Impact Recycling Ltd.

METRO VANCOUVER REGIONAL DISTRICT
SOLID WASTE AND RECYCLING INDUSTRY ADVISORY COMMITTEE

Tuesday, September 9, 2025
2:30 pm – 4:30 pm
Zoom Teleconference

A G E N D A

1. AGENDA

1.1 September 9, 2025, Meeting Agenda — 2:30 – 2:35 pm

2. MINUTES

2.1 June 10, 2025, Meeting Minutes — 2:35 – 2:40 pm

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Draft Solid Waste Management Plan Outline — 2:40 – 3:00 pm

For information

Designated speaker: Terry Fulton, Senior Project Engineer, Solid Waste Services

A brief presentation will accompany this item to introduce the contents of the outline and highlight key areas of focus. An in-depth discussion will take place at the October meeting – committee members are encouraged to review the outline in detail ahead of that meeting. This approach is intended to give members adequate time to consider the structure and direction of the plan before providing feedback.

3.2 SWMP Update: Residual Waste Management Options Study — 3:00 – 3:30 pm

For plenary discussion

Designated speakers: Paul Henderson, General Manager, Solid Waste Services
Nathalie Marble, Team Lead, Senior Solid Waste Engineer, Stantec

3.3 SWMP Update: Strategies and Rubric — 3:30 – 4:00 pm

For plenary discussion

Designated speaker: Karen Storry, Senior Engineer, Solid Waste Services and Stephanie Liu, Manager, Community Engagement

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates — 4:00 – 4:10 pm

For information

Designated speaker: Paul Henderson, General Manager, Solid Waste Services

5. NEXT STEPS

5.1 Vancouver Landfill Tour

4:10 – 4:20 pm

For information
Designated speaker: Director Hodge, IAC Co-Chair

5.2 Solid Waste Management Plan Update – October and November Meetings

For information
Designated speaker: Director Hodge, IAC Co-Chair

6. INFORMATION ITEMS

6.1 Regional Waste Flows
6.2 Correspondence with HSR Zero Waste
6.3 2025 IAC Work Plan

Proposed agenda timings are intended to support effective meeting facilitation. Items requiring further discussion that cannot be accommodated within the regular meeting time may be deferred to a future agenda or addressed in a specially scheduled meeting.

Committee Co-Chairs:
Director Craig Hodge, Zero Waste Committee Vice-Chair
Lori Bryan, Executive Director, Waste Management Association of BC

Membership:

Public Consultation and Engagement Summary Report | 1732

Co-Chair Craig Hodge, called the meeting to order at 2:01 p.m. and welcomed attendees to the Solid Waste and Recycling Industry Advisory Committee meeting. Housekeeping reminders were provided, including that the meeting was being live-streamed and would be posted to the Industry Advisory Committee webpage.

1. AGENDA

1.1 June 10, 2025, Meeting Agenda

Co-Chair Hodge reviewed the June 10, 2025, meeting agenda. No additions were made.

2. MINUTES

2.1 May 6, 2025, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the May 6, 2025, Industry Advisory Committee meeting and clarified that the minutes are prepared by an external notetaker as required by the committee Terms of Reference. It was further noted that meeting minutes are not taken during the breakout sessions, but key comments are captured by Metro Vancouver staff members. Summaries of the small group feedback are provided following the sessions, posted on the website, and, if relevant, included in the feedback log for the solid waste management plan update. It was suggested that the small group feedback summaries could be included as an attachment to the minutes moving forward.

Co-Chair Hodge noted that concerns that had been raised by a member through email regarding certain discussions not captured in the minutes.

The following remarks were offered by a committee member, with *responses* noted as follows:

- Concern regarding a discussion about the progress and process of the solid waste management plan update at the last meeting not being included in the minutes.
    - Specifically feedback on the draft hierarchy and disagreement on the inclusion of energy recovery being classified as recycling.
    - Further feedback that the committee wants meaningful opportunities to contribute to the solid waste management plan and requested a draft for comment at the earliest date possible.
- With regard to previous minutes being amended, concerns raised about not notifying members when amended minutes are published
- Concern about insufficient time to review meeting minutes prior to a meeting
    - *Agreement that the timing of the distribution of the minutes can be reviewed, to ensure members receive the minutes promptly*
    - *Clarification that following the discussion and feedback received at the previous meeting regarding the updated hierarchy and goals for the updated plan, Metro Vancouver staff are working on an updated version that incorporates feedback received from this committee and others and which will be circulated to the members*

for review and comment

- *Members were encouraged to review the minutes and identify if any key points are missing, and are provided an opportunity at each meeting to offer comments*
- *Confirmation that any previous updates requested to the minutes have been completed and amended minutes reposted to the web page. In future, members will be notified when revised minutes or feedback summaries are posted to the webpage.*

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 SWMP: Regulatory Strategy

Terry Fulton, Senior Project Engineer, Solid Waste Services, Metro Vancouver, shared a presentation titled "Solid Wate Management Plan Regulatory Strategy" and highlighted the purpose of the strategy, roles and responsibilities within and outside the GVS&DD Authority, existing Metro Vancouver Solid Waste bylaws, draft regulatory priorities, examples of potential future regulatory mechanisms, and next steps.

The members joined four breakout groups to consider the following question, "*Considering the draft regulatory priorities and example possible future regulatory mechanisms, is anything missing or that should be changed? Any other comments?*"

The group reconvened, and members were invited to highlight important discussions from their groups to share with the larger group.

A summary of the feedback from the small group discussions will be provided to the committee, posted to the Industry Advisory Committee webpage, and considered as input to the options analysis phase of engagement for the solid waste management plan update.

Co-Chair Hodge invited members to share additional questions and/or comments. The following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: With regards to the generator levy – can you share how many tonnes are currently reported to Metro Vancouver?

R: As far as we are aware, all the residential, commercial, and institutional garbage generated within the Metro Vancouver region is delivered to the Metro Vancouver and City of Vancouver solid waste facilities. We have no information at this point in time to suggest that garbage is being hauled elsewhere.

Q/C: If garbage is not currently leaving the region, why would we continue to introduce measures to further strengthen the generator levy?

R: The current situation suggests that the generator levy as a tool is working effectively. At this point, we do not see any gaps in the regulatory framework with respect to ensuring compliance with the generator levy.

Q/C: I guess that maybe down the road it may need to be looked at, but for now it looks like we do not have to do anything new.

R: Metro Vancouver does not see value in implementing regulatory measures that do not have a benefit or where the benefits would be outweighed by impacts. We can look at priorities to make sure that is clear as that would be a consideration in looking at any new regulatory mechanism.

It was noted that the GVS&DD Board makes the final decisions with respect to regulatory measures. If challenges are identified with respect to being able to ensure compliance with the generator levy provisions, then proposed amendments would be brought forward to the Board.

It was further noted that there are no specific plans to implement new regulatory measures throughout the term of the plan however if any new regulatory measures were proposed, there would be an engagement process related to the specific proposed measure. The updated solid waste management plan will not prescribe specific regulatory measures but will describe priorities to use when considering new regulatory measures in the future, along with potential example regulatory measures as described in the presentation.

3.2 SWMP: Idea Generation Engagement Summary Report Back

Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services shared a presentation titled "Idea Generation Engagement Summary: Solid Waste Management Plan Update" and highlighted the project timeline, idea generation feedback summary, options analysis engagement, and next steps.

Co-Chair Hodge invited members to share related questions and/or comments. The following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: When we get the draft solid waste management plan, how much time will we have to review the plan before it is submitted to the Ministry?

R: We will make sure everyone has sufficient time to review the drafts. To avoid trying to talk through the entire plan during one meeting, our approach will be to send out sections of the draft plan as we have them to provide the opportunity for early feedback. We are still considering the process for the Zero Waste Committee and the Board, but we will have more information on that soon.

Q/C: During this process of updating to the solid waste management plan, what plan have we be working under?

R: Solid waste management plans do not expire. The provincial guideline is that the process to update the plan should be initiated within 10 years of the plan being approved. The current plan stays in effect until the next plan is approved.

Q: If industry is not happy with the existing plan, but Metro Vancouver is – where is there incentive to get the plan moving forward, and completed in a timely fashion?

R: We are all committed to get to a new plan as fast as we can. We think the plan update is valuable and from the Metro Vancouver perspective, we are keen to get to a new plan as fast as we can.

R: We, as a region, are motivated to complete the draft plan. Once a draft plan is submitted to the Minister of Environment and Parks, the Minister will need time to review the draft and all the feedback received throughout the process.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson shared a presentation titled, "Zero Waste Committee and Other Updates", which highlighted reports that went to the Zero Waste Committee in June including: food scraps recycling campaign results, a solid waste management plan progress update, the completion of the Waste-to-Energy Facility Carbon Capture/Storage report, GVS&DD audited 2024 summary financial statements, and continued improvements at recycling and waste centres. A summary of a recent Home Demolition Waste Prevention Forum was also provided.

4.2 September Facility Tour and Zero Waste Conference Registration

Samantha Joy, Engagement Specialist, Metro Vancouver, highlighted the upcoming tour on September 18 at the Vancouver landfill. It was noted that a meeting invitation was sent to committee members, and any interested members could contact staff regarding attending. It was further noted that an Educational Resources and Tools workshop focusing on multi-family was coming up on June 23, and a registration link was included in the meeting agenda. Members were also invited to contact staff if they were interested in attending the Zero Waste Conference in November.

5. INFORMATION ITEMS

5.1 Concrete and Asphalt Recycling Opportunities Review

5.2 Regional Waste Flows

5.3 2025 IAC Work Plan

ADJOURNMENT

Co-Chair Hodge provided closing comments, thanking members for their comments and feedback and advised that the next Solid Waste and Recycling Industry Advisory Committee meeting would be held online on September 9, 2025.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 3:24 p.m.

Solid Waste Management Plan Options Analysis – Potential Strategies and Actions Review

October 7, 2025
Meeting Notes

A Solid Waste and Recycling Industry Advisory Committee meeting was scheduled for October 7, 2025, in person, at Metro Vancouver Offices (4515 Central Boulevard, Burnaby). The meeting did not have quorum so the meeting was considered a workshop with participation from members of the Solid Waste and Recycling Industry Advisory Commit ee (Industry Advisory Commit ee). Feedback from the workshop will be shared with the Industry Advisory Commit ee.

Two members of the Solid Waste Management Plan Consultation and Engagement Panel were observing the session: Celena Benndorf and Komal Fatima. The Engagement Panel was established to ensure the engagement process for the Solid Waste Management Plan was transparent, inclusive, and informed with diverse perspectives throughout all phases of the project.

MEMBERS PRESENT:

Craig Hodge, Director, Zero Waste Committee (Co-Chair)
Charles, Terry – Northstar Clean Technologies (alternate for Gord Johnson)
Crawford, Jeremy – Waste Control Services
Collins, James – Tymac Launch Service Ltd.
Janzen, Tessa – Recycle BC
Kaminski, Jamie – HSR Zero Waste
Kiani, Aiden – Lock-Block Ltd
Lannin, Mike – Super Save Group
MacFarlane, Angus – Growing City
Mallari, Achilles – Sierra Waste Services Ltd.
Pantazopoulos, Dimitri – Waste Connections of Canada
Prasad, Shad – Cascades Recovery +
Punja, Rustam – Geocycle Canada Inc.
Vargas, Pinky – Republic Services

METRO VANCOUVER STAFF:

Brooke Atkinson, Senior Engagement Specialist, Metro Vancouver
Terry Fulton, Senior Project Engineer, Metro Vancouver
Allen Jensen, Senior Project Engineer, Metro Vancouver
Stephanie Liu, Manager, Community Engagement, Metro Vancouver
Zeenia Mizan, Program Assistant, Metro Vancouver
Paul Henderson, General Manager, Metro Vancouver
Karen Storry, Senior Project Engineer, Metro Vancouver
Chris Underwood, Division Manger SW Planning, Metro Vancouver
Lynne Vidler, Lead Senior Engineer, Metro Vancouver

GUESTS:

Celen Benndorf, Panel Member
Komal Fatima, Panel Member
Corey Magee, Republic Services, Observer

PREPARATION OF NOTES:

Priya Kullar, Raincoast Ventures Ltd.

PLENARY DISCUSSION ON ACTIONS UNDER RECOVER, AND IDEAS STAFF CONSIDER UNADVISABLE

Paul Henderson, General Manager, Metro Vancouver, shared information about actions under 'Recover', as well as the draft summary of ideas that staff consider unadvisable.

Paul Henderson invited members to share related questions and/or comments. The following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: Clarity is needed on what wood is considered "unsuitable" for reuse or recycling/composting. Are we only talking about painted or treated materials that cannot be composted?

R: *Manufactured wood products and dimensional lumber, if not recycled, are currently being used as a fuel source. Clean wood (untreated) may be used as fuel if there is insufficient processing capacity for composting.*

Q/C: The text on the slide refers to "unsuitable for reuse or recycling" and dimensional lumber could technically be composted. We should clarify the language if we are actually talking about wood that is beyond what can be managed at processing facilities.

R: Agree that a clarification would make sense.

Q/C: Consideration should be given to how we can build composting capacity.

Q/C: A significant amount of laminate flooring has glue, and that should not be burned because it can become toxic.

Q/C: Metro Vancouver has not shared provided sufficient detailed information sufficient to understand the costs of various disposal options.

R: *At the last Zero Waste Committee meeting, a report contained a summary of costs related to the Waste-to-Energy Facility, Vancouver Landfill, and contingency disposal at remote landfills. The next Zero Waste Committee meeting is Thursday, October 9, 2025, and the agenda contains additional information with more detail on the breakdown of the costs. This information can be shared with the Industry Advisory Committee afterwards.*

Q/C: There were a number of ideas that have been identified as considered unadvisable by staff, but it was not discussed with the Industry Advisory Committee. For example: "replace source separation programs with mixed-waste collection and sorting programs" was marked as unadvisable, but we have not seen fulsome information shared with the Industry Advisory Committee comparing mixed waste processing with source separation programs.

R: *We have observed over the years the challenges associated with mixed waste processing facilities. There is additional information in the Residuals Management Options Review report that was provided to the committee.*

Q/C: The ideas considered unadvisable by staff – this is ideological and irrational, specifically around privatization. There are no activities that cannot be performed privately, and everyone is being told this is not an option to explore, simply because Metro Vancouver exists. The private sector could provide services with appropriate regulation in place.

R: *Metro Vancouver has repeated requested that committee members share information demonstrating other systems / models that have performed well compared to our region and achieved higher recycling rates.*

Q/C: Performance is a subjective measure. The reality is that the private sector can achieve the same performance, particularly with regulation in place that imposes the same rules, and the private sector would assume all associated risks, but Metro Vancouver is not letting this happen. The system would be more robust if run by the private sector compared to the public sector. Metro Vancouver should have considered and researched privately run systems, and not suggest that it is up to committee members who participate on a volunteer basis to provide that information.

POTENTIAL STRATEGIES AND ACTIONS FEEDBACK SESSION

Terry Fulton, Senior Project Engineer, Solid Waste Services, Metro Vancouver, shared a presentation titled "Potential Strategies and Actions" and informed that the ideas generated in the Idea Phase were reviewed and consolidated, noting that some ideas are considered inadvisable by staff. The purpose of the small group discussion is to help identify what strategies and actions should be prioritized for inclusion in the solid waste management plan.

It was noted that the full list of potential strategies and actions is published on the website, and a feedback form is available for comments until October 31, 2025.

Stephanie Liu, Program Manager, Solid Waste Community Engagement, provided instructions for the small group breakout activity. Industry Advisory Committee members were invited to select topics they wanted to discuss and provide feedback on. A Metro Vancouver staff member facilitated discussions at each table and took notes. It was noted that the activity would help prioritize the different potential strategies and actions, and if elements were missing, members were encouraged to highlight these to the facilitators.

After the small group discussion, participants were encouraged to share any information that was highlighted during the breakout activity. No comments were shared.

Notes from the small group discussion are included as **Attachment 1**. All feedback will be tracked and considered as the strategies and actions are further refined before the solid waste management plan is drafted. Some highlights from the feedback are presented below.

Topic	Industry Advisory Committee Comments
Regulation and Incentives	• Incentives are preferred as opposed to regulations • Regulations should consider impact on businesses and affordability overall • Caution related to a potential hauler incentive program to help their customers reduce waste – there are limitations to the tools available to haulers to be able to participate. • Emphasis on ensuring markets exist before introducing new disposal bans, and the need for clear criteria and rationale
Recycling / Composting	• Include zoning and permitting considerations in the action about facilitating siting of private sector recycling activities • Metro Vancouver to support recycling markets through procurement policies and potential regulatory requirements for recycled content (e.g. concrete, compost) • Support for expanding Extended Producer Responsibility programs, with a focus on low-impact packaging and direct collection of materials like flexible plastic and foam, while acknowledging implementation challenges
Implementation, Education, and Outreach	• Support for education for strata corporations. • Identified where efficiencies could be realized, such as strategic use of AI to provide information to residents. • Identified practical challenges related to some of the potential actions such as collecting data on residential waste reduction efforts, in person education for residents, or improving recyclability of paper products like coffee cups. • More examples and guidance are needed to support commercial and institutional reuse/refill initiatives • Industry would benefit from Metro Vancouver produced resources showing waste destinations and processing methods, which could also enhance resident participation • Recommendations to streamline recycling databases and improve existing digital tools rather than creating new ones • Litter and clean-up efforts are too focused on disposal – need to focus more upstream
General	• Suggestions to combine certain actions that are related to avoid repetition • Actions should be more specific and actionable

IAC Discussion/Feedback on SWMP Draft Outline and Residual Waste Management Options Review

Information on the solid waste management plan draft outline and residual waste management options review was included in the September 9, 2025, Industry Advisory Committee meeting package. Participants were invited to provide additional feedback regarding these two items. No comments were shared.

Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Solid Waste Services, shared a presentation titled, "Zero Waste Committee and Other Updates," which highlighted the following:

- Upcoming October 9, 2025, Zero Waste Committee agenda items, including 5-year Financial Plan and 2026 Tipping Fees (increasing by $7 per tonne)
- Proposed tipping fee of $7 per tonne (aligns with last year's projection)
- Two proceedings are ongoing related to the British Columbia Utilities Commission including the Waste-to-Energy Facility Electricity Purchase Agreement renewal and the Waste-to-Energy Facility District Energy System.
- In September 2025, the Ministry of Environment and Parks issued an updated Operational Certificate for the Waste-to-Energy Facility, including requirement for a series of studies and proposed draft revised discharge limits by September 2026.

1. Small Group Discussion Notes – Potential Strategies and Actions Feedback Session

SOLID WASTE AND RECYCLING INDUSTRY ADVISORY COMMITTEE

Potential Strategies and Actions Feedback Session

October 7, 2025 – 1:00 pm to 4:00 pm

In-Person Meeting

Metro Vancouver Head Office
28 Floor, 2809 Conference Room

Feedback Summary

6 Table Groups:

- Rethink
- Reduce
- Reuse (food and built environment)
- Reuse (reuse, refill, repair)
- Recycle (education)
- Recycle (infrastructure and programs)

RETHINK

Round 1

Number of Participants: 3

Fist of 5

Action ID	Total Score
ID001	13
ID003	12
ID090	12
ID002	10

Action ID	Total Score
ID005	8

Discussion

Action ID and brief description	Comments / Feedback
ID001	• What is considered compostable is a key policy piece to work on • Consistent regulation for recycled material is important
ID090	• Eliminate food waste would be positive • Need to make sure there are no liability implications with respect to donating food. • Making it a requirement to donate food could help. • Need to paint a picture of what this looks like as it is unclear what this means.

	• The implementation of regulation is key. The approach needs to keep the cost for government and business down.
ID003	• No comments
ID004	• No comments
ID005	• Concern that the administration cost would result in a need to increase taxes. • This could have the biggest impact if done correctly without increasing cost for government and business. • Prefer incentives instead of regulations. • If we want to put in regulations, we need to make sure they allow the industry to make money, or a least not lose money. • Concerns about the impact of regulation on the cost of housing. • Suggestion that it would better to increase the cost of C&D disposal to encourage diversion of construction and demolition waste.

REDUCE

Round 1

Number of Participants: 5

Strategy: 2.2 Support residents adopting waste prevention habits

Fist of 5

Action ID	Total Score
ID104	17
ID080	11
ID081	11

Discussion

Action ID and brief description	Comments / Feedback
ID080	• Comment that the practicality is difficult – how do you gather the data to then get a scorecard for people? • Hard to do on a personal level where it's the most beneficial. Easy to get data collectively but that's not as effective.
ID104	• Important for strata's to know what they're supposed to be doing.

ID081	• Good idea but not sure how many people would show up. • Should go to schools – especially upper high school to show them what to do. Grade 10-12. • Hard to tell a 30-year-old what to recycle. Start them young. • Make it more targeted – not general but more targeted like schools. • Could create AI strategies for answering questions firsthand instead of hiring people to do this. • Must be intuitive. We don't have to use people / do in -person. Use other methods. • We can have this action, but it shouldn't be in person.

Round 2

Number of Participants: 5

Strategy: 2.4 Disposal Bans

Fist of 5

Action ID	Total Score
ID107	4
ID106	13
ID105	18

Discussion

Action ID and brief description	Comments / Feedback
ID107	• Does the fine actually help to divert waste or does it just increase revenue to Metro Vancouver? • It's not going to change behaviour because you have several customers and buildings in one load – it will be impossible to find out where the one clear bag came from. • What happens after the fine – do we then remove the recyclable item and divert it? • The disposal bans are most effective for small customers who are bringing in their own materials. However, those customers are a large percentage of customers but a small percentage of the waste.
ID106	• Good idea but depends on implementation and what those incentives look like. • There are limitations in technologies that would assist haulers to participate. • For example: cameras – way to scan baled cardboard and plastics to see moisture content, density, etc. • I don't need Metro Vancouver to give incentives to me to have a broader list of services to provide to customers. I do that on my own as that is good for business.

	• Who could be against incentives.
ID105	• Low support for this action. • It only works if there is somewhere to recycle these materials • If there's a market for it, I'm 100% for this. • We can't create a ban just because we don't think it should go in a landfill – but it needs to be able to go to higher and better use, or it's hazardous in the waste. Don't ban just for the sake of banning it. We need a rationale. Need to include these criteria in the action – i.e. at what point would you introduce a disposal ban (currently the action doesn't specify) • Also consider whether materials are problematic in landfill or not. Materials that are not as problematic should be lower priority for adding as a ban. • Add "Continue to" at the front of the action, to say that it's something that is already happening now.

REUSE
(food and built environment)

Round 1 and 2
Number of Participants: 0

- No participants at this table during small groups on both rounds

REUSE
(reuse, refill, repair)

Round 1
Number of Participants: 2

Strategy: 4.5 Make recycling easier and more effective by reducing confusion and improving convenience

Fist of 5

Action ID	Total Score
ID051	3
ID084	0
ID054	4
ID050	4

Action ID	Total Score
ID053	4
ID056	2
ID055	3
ID165	4

Discussion

Action ID and brief description	Comments / Feedback
In general – Strategy 3.4	• What kind of success are third party reuse agencies having? What examples can you point to make it easy to understand the programs and approach. • Need more public education about reuse opportunities.
ID084	• Not clear what it means – need more information. • Provide examples, how would this actually work?
ID056	• Has it been successful, is it gaining any traction? Would like to see the metrics about how the existing program has worked. • Having the opportunity to salvage on site may increase uptake (e.g. success of city-wide garage sale events– community has the opportunity to pick up used items from their neighbours before the city comes to pick it up.) • Clearer messaging and promotion of the existing reuse days needed. • Make sure there are easy places to take materials they are no longer using.
ID053	• Really interesting concept – longer life model (like reusable glass bottles) is desirable. • Could be tied to ID050 – schools and universities would be a good place to launch pilot programs. Youth might be more enthusiastic about a pilot, passionate sustainability advocates. • Control is important to ensure a successful program.
ID054	• Having one spot with re-use businesses together might help with uptake – communal collection place.

RECYCLE
(education)

Round 1

Number of Participants: 2

Strategy: 4.7 Increase transparency of what happens to materials from recycling and green bin programs

Fist of 5

Action ID	Total Score
ID159	12
ID156	9
ID157	7
ID158	5

Discussion

Action ID and brief description	Comments / Feedback
ID 159	• Specify what materials this action is referring to (compostable vs. bottles) • Educate the residents and customers on what efforts are being made to divert materials from landfills • Currently industry businesses spend a lot of time researching materials and where they go so that they can create communications for their customers to build confidence • Would be nice for Metro to put this together for industry to use • Consider including items like cooking oil and parmesan cheese (products that come off cruise ships) • Fibre disposal industry – gets the wrong materials all the time (e.g. raw meat) • Consumers seem to think it's just easier to pass on the responsibility to industry rather than doing their own diligence to find out where to properly dispose of materials • Education could be helpful to reduce the confusion and reduce the mentality that it is easier to just put on the industry to deal with, which ends up being costly for industry
ID156	• Change language to specify if it's "which" organizations or "how" organizations are handling materials • Would this action call out each organization? Or just in general have a type of material and how it is generally handled in the system? • Could include "which" and "how" to expand on this action
ID157	• This action is only for very specific audiences like school tours or NGO's – not as applicable for industry
ID158	• Focus more on making the current databases less confusing for the users • There is a lot of redundancy and deficiencies in the current databases (Waste Wizard and Recyclepedia) • Would be best to focus on making ONE app that does it all and has all materials where they go and what happens to them after (lifecycle process)

Round 2

Number of Participants: 2

Strategy: 4.5 Make recycling easier and more effective by reducing confusion and improving convenience

Fist of 5

Action ID	Total Score
ID136	5
ID135	5
ID142	5
ID134	5

Action ID	Total Score
ID132	4
ID138	4.5
ID131	3
ID140	3

Action ID	Total Score
ID137	3

Discussion

Action ID and brief description	Comments / Feedback
ID136	• Standardizing materials will make it easier, but does this action mean doing this by collaborating with EPR programs with signage for accepted materials and education? • Consider creating a potential working group for EPR program leads and Metro Vancouver to collaborate on to ensure consistency o Does something like this working group already exist? Is there a working group for the Regional Districts that exists to discuss EPR programs?
ID135	• This feels like a very high-level action, whereas action ID 142/131/135 seem to be the actual actions to take to make this action happen of providing clear, consistent guidelines on what can and cannot be recycled • Consider combining into one action that encapsulates the objective (clear and consistent guidelines, and the tangible ways to do that)
ID142	• Integrate this action with the Waste Wizard if possible, should be easy enough to add these layers of accessibility to the existing Waste Wizard to improve it • Encourage all existing apps to include accessibility options and multilingual instructions in QR Codes rather than creating a new app which could get lost in how many currently exists
ID134	• Combine this action with 135/136 to bundle the objective of providing clear guidelines and centralizing information sources
ID132	• This action could include multi-family residents easily by having a recycling champion on each building, or working with property managers to include the encouragement through signage in the building • The success of each multi-family building being a champion could build community around being a green conscious building • How do we tackle this in single family homes? How could a reward system work for them?

ID138	• Make this action most effective by having the residents in the building be the ones to educate others on how to use the recycling room correctly • Added space will be very valuable in the future as more bins are potentially added to some municipalities (i.e. flexible plastics in Vancouver) – will need more room
ID131	• Consider having more EPR programs in place before this action can exist and be effective in the system • Accessibility to textile recycling will increase if there are end markets for the materials and EPR programs that help with this
ID140	• Update action to have more clear language around what access requirements mean in this action • Specify what type of knowledge sharing, or how to best implement knowledge sharing between Metro Vancouver, members, and industry
ID133	• Combine this action with 135 so it outlines the objective of this action better and the customizable tools to be the way to achieve it • Could shorten the list of actions by doing this

RECYCLE
(infrastructure and programs)

Round 1

Number of Participants: 5

Strategy: 4.1 Promote design for recyclability and the use of recycled content in products and packaging

Fist of 5

Action ID	Total Score
ID109	11/25
ID110	13/20
ID111	23/25
ID112	12/20
ID113	9/25

Discussion

Action ID and brief description	Comments / Feedback
ID109	• There is a lot of industry greenwashing and this action would help address this.

	• Why just coffee cups -- e.g. Tetra Pak and milk containers are missing • Very difficult to implement. • No clear definition of recycling. • Consumers have a difficult time properly grading plastics.
ID111	• Lead by example. • Should include concrete and others, don't limit to compost. • Should include supporting regulation for the purpose of incrementally increasing the amount of recycled material, based on a percentage.
ID113	• How effective can Metro Vancouver be with this given the broad market. • Should be more focus on education. • This is beyond the scope of Metro Vancouver's responsibility. But should focus on advocacy. • Should focus more on regulation. e.g. a minimum percentage recycled content • Advocate senior government for supporting regulation. • Be realistic – Metro Vancouver is only one player.

Strategy: **4.2** Enhance EPR programs

Fist of 5

Action ID	Total Score
ID117	19/25
ID119	13/25
ID120	20/25
ID121	23/25

Discussion

Action ID and brief description	Comments / Feedback
ID119	• It's challenging. • Only worthwhile if there is market demand. • Should focus on alternatives to foam and plastic packing materials instead. e.g. shredded cardboard
ID120	• An inherent problem with EPR programs is that they are too downstream.
ID125	• Worthwhile to ensure these materials stay out of municipal solid waste.

Round 2

Number of Participants: 4

Strategy: 4.3 Encourage the development of new recycling infrastructure

Fist of 5

Action ID	Total Score
ID044	10/20
ID122	17/20
ID123	18/20
ID124	14/20

Discussion

Action ID and brief description	Comments / Feedback
ID044	• New industry needs support to catch up to existing established industries. • Need to strengthen definition of recycling. • Not an issue of government funding, issue of establishing the right priorities. i.e. where money is being spent is the issue • Need government funding to support the private sector's advertising and promotion of their initiatives. i.e. shift existing government funding to private sector • Should not rely on government funding. • This is a low priority.
ID123	• Should consider zoning and permitting.

Strategy: 4.8 Prevent litter and illegal dumping through public space recycling initiatives

Fist of 5

Action ID	Total Score
ID174	17/20
ID175	19/20
ID176	10/20
ID177	3/20
ID178	14/20

Discussion

Action ID and brief description	Comments / Feedback
ID175	• Don't include waste collection in these events. • "Significantly increase" • Based on performance metrics. • Continuous improvement. • "Explore" is vague, can this be more specific and actionable. • Missing actions: household hazardous waste and bulky items pickup days.
ID176	• What does "support" mean? e.g. funding? • Ineffective. • Too back end, need to focus on upstream.

- **5.6 *Solid Waste Management Plan Update Draft Recycling and Waste Centre Strategic Approach***
- **5.7 *Solid Waste Management Plan Update Draft Regulatory Strategic Approach***

MEETING MINUTES

Co-Chair Craig Hodge, called the meeting to order at 2:32 p.m. and welcomed at endees to the Solid Waste and Recycling Industry Advisory Commit ee meeting. Members were reminded that the meeting was being livestreamed and recorded and will be posted to the Industry Advisory Commit ee webpage.

It was noted that there were four members from the Consultation Engagement Panel in at endance: Komal Fatima, Veronika Byliciki, Andrea Reimer, and Peter Fassbender. The intention behind the Consultation and Engagement Panel is to provide advice to Metro Vancouver staff on engagement practices for the solid waste management plan update and to help ensure transparent engagement and reporting of feedback.

1. AGENDA

1.1 November 4, 2025, Meeting Agenda

Co-Chair Hodge reviewed the November 4, 2025, meeting agenda. No additions were made.

2. MINUTES

2.1 September 9, 2025, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the September 9, 2025, Industry Advisory Committee meeting. No additions or changes were made.

2.2 October 7, 2025, Meeting Minutes

Co-Chair Hodge noted that the in-person meeting held on October 7, 2025 meeting was treated as a workshop because quorum was not reached. Highlights from the discussion were included in the agenda as workshop notes and not as official meeting minutes.

Co-Chair Hodge invited members to share related questions and/or comments. The following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: Were there any agenda items that need to be carried forward to a future meeting?

R: An information item related to greenhouse gas emissions and the adoption of the September 9, 2025, meeting minutes were carried forward to the November 4, 2025, meeting.

Q/C: The summary of reports that was shared in the October 2025 workshop was important information that should be presented to the Industry Advisory Committee. Usual practice when there is no quorum is to cancel or postpone the meeting.

R: The two agenda items that were discussed at the October meeting were about potential actions for recovery and actions that were considered unadvisable by staff. The presentation portion of these agenda items was included in the October agenda package, and Industry Advisory Committee members are encouraged to refer to those materials and provide feedback to Metro Vancouver staff.

Q/C: The targets presented in the November agenda package are unrealistic and should not be made public. Members want an achievable plan where metrics are not illusory.

Q/C: Recycling and tipping fees continue to rise. Cost effectiveness should be embedded into the plan.

Q/C: This plan needs to be understandable and achievable. Focusing on four to five goals is a better strategy, rather than including too many goals and not being able to meet any of them.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 SWMP: Metrics and Targets

Terry Fulton, Senior Project Engineer, Solid Waste Services, Metro Vancouver, shared a presentation titled "Selecting Targets and Metrics for an Updated Plan." Highlights included:

- Explanation of how strategies and actions were used to inform draft metrics and targets
- How the performance metrics review study informed development of draft metrics and targets
- Overview of draft primary metrics and targets
- Overview of example secondary metrics and the importance of using both primary and secondary to offer a suite of metrics to gauge progress

Paul Henderson, General Manager, Metro Vancouver, noted that there is an overarching lens of affordability that applies to all of Metro Vancouver's work. The affordability lens will be considered with respect to all aspects of the plan implementation and the draft plan will reflect this.

Plenary discussion ensued, and the following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: A recommendation to be accountable and transparent. Construction and demolition waste should be considered separately from residential and commercial waste when calculating diversion rates. There should also be separate targets. The targets being set could reflect how well the program is performing – focus should be placed on source-separated recyclables and organics, rather than recovery (especially energy recovery).

R: Individual targets will be considered once there is an overarching target.

Q/C: There is a high possibility of skewing numbers if construction and demolition are not in their own sector.

R: Metro Vancouver is tracking and reporting by sector.

Q/C: What scientific justification led to the determined targets and metrics?

R: Various considerations included waste composition studies, current data from annual reports, and the draft strategies and actions (i.e. what targets could be achieved if the draft actions were implemented). Waste composition studies are available on the Metro Vancouver website

Q/C: There does not seem to be any scientific justification based on the information shared.

R: Metro Vancouver can share high level calculations and how the targets relate to the materials in question.

Q/C: There is not much value left in the recycling stream beyond metals and concrete. There is little value in wood waste and plastics – a very low percentage is recyclable, and it is down-cycled. Trying to divert those materials to reach our goals is unrealistic if the materials do not have value.

Q/C: Only 7-10% of plastics are currently recyclable, and more production of plastics will take place over the next 25 years. There is currently no effective way to turn these plastics into anything.

Q/C: Disposal capacity analysis should be a key element of the plan.

Terry Fulton stated that secondary metrics are a suite of metrics that provide additional context beyond high-level targets, helping to demonstrate progress in specific areas. An image of the waste hierarchy was shared. Within each goal, examples of secondary metrics were noted.

The Industry Advisory Committee was invited to join breakout rooms to further discuss the suggested secondary metrics and to identify new ones for consideration.

Members were asked to select a discussion room and focus on secondary metrics for the following levels of the hierarchy:

- Rethink/Reduce
- Reuse/Recycle
- Recover/Dispose

The Industry Advisory Committee moved into small group discussions at 3:21 p.m. and reconvened at 3:41 p.m.

Members were encouraged to share feedback on the discussions, and the following comments were offered:

- There are many goals embedded into the plan, with no consideration of costs
- Metro Vancouver is committed to spending millions of dollars on projects, and tipping fees are set to be increased
- There seems to be no consideration for taxpayers and how this will impact them
- Concrete and asphalt management should not be an element of the plan as very little of these materials originate from single family homes and Metro Vancouver does not license the facilities that process this material.
- There are significant issues with the two primary disposal options (Vancouver Landfill and Ecowaste), and it is unknown whether those facilities will be available long term
- There needs to be contingency planning to identify where materials will be going and the cost.

It was noted that Metro Vancouver staff were in the breakout rooms taking notes, and feedback will be considered as the solid waste management plan is drafted. A summary of the notes from the breakout rooms is attached to these minutes.

3.2 2026 IAC Draft Work Plan Development

Co-Chair Lori Bryan, Waste Management Association of BC, led a review of the 2025 Work Plan topics that were discussed and noted that the following topics were not addressed in 2025:

- Public education – role of public and private entities
- Soil management
- Source reduction incentive program
- Vancouver landfill/long-term disposal planning options.

Members suggested the following topics could be included in the 2026 Work Plan:

- The two topics that were discussed in the October 7, 2025, meeting:
  - Actions related to recovery of materials and energy from non-recyclable materials
  - Actions considered unadvisable by Metro Vancouver staff
- Infrastructure over the next 15 years
- Utilizing Metro Vancouver's infrastructure to maximize benefit.

Paul Henderson noted that a key action for discussion will be the updated solid waste management plan.

The Industry Advisory Committee were advised that a draft Work Plan will be presented discussed in January 2026. Members will vote on the Work Plan in early 2026.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson shared a presentation titled, "Zero Waste Committee and Other Updates," and highlighted:

- The next Zero Waste Committee meeting is scheduled for Thursday, November 6, 2025
- The 2026 tipping and recycling fees have been approved
- Report on waste reduction and recycling – materials collected and investments:
  - Described recycling activities are taking place at the recycling and waste centres
  - 88,000 tonnes which goes to recycling from Metro Vancouver solid waste facilities
  - Clean wood goes to recovery as an alternative fuel
  - Total annual investment is approximately $25 million
- Funding was provided for the Coffee Cup Revolution, which recovered 213,841 cups
- Options Analysis update report is included in the Information Items and refers to feedback specifically from the Industry Advisory Committee
- Metro Vancouver is hosting a Record Keeping and Tipping Fee Bylaw webinar in January 2026

The following questions and comments (Q/C) and *responses* (*R*) were captured after the report-out:

Q/C: Member asked what happened to the coffee cups from the Binners event once they were recovered?

R: *The cups were sent to the Waste-to-Energy Facility due to the number of coffee cups collected. There have been ongoing efforts to identify recycling opportunities for coffee cups, without success so far.*

4.2 IAC 2026 Draft Meeting Dates

Samantha Joy, Engagement Specialist, Metro Vancouver, shared the proposed 2026 meeting schedule. It was noted that the invitations for the January 2026 and February 2026 meetings will be sent soon.

Co-Chair Hodge advised that Industry Advisory Committee Membership submissions will take place in early February 2026. As stated in the committee Terms of Reference, existing members must resubmit their interest if they wish to continue serving on the Industry Advisory Committee.

5. INFORMATION ITEMS

5.1 Regional Waste Flows

5.2 2025 IAC Work Plan

5.3 Greenhouse Gas Emissions from Disposal

5.4 Solid Waste Management Plan - Options Analysis Update (November 6, 2025 Zero Waste Committee report)

5.5 Disposal Cost Comparison Details (October Manager's Report excerpt)

5.6 Solid Waste Management Plan Update Draft Recycling and Waste Centre Strategic Approach

5.7 Solid Waste Management Plan Update Draft Regulatory Strategic Approach

Regarding Item 5.5, Disposal Cost Comparison Detail, a suggestion was made to keep transfer costs separate from the incinerator costs to support transparency. Paul Henderson advised that information is presented in a specific way in the tables, and a conclusion will also be provided.

6. ADJOURNMENT

It was noted that the next meeting was scheduled for January 13, 2026. Industry Advisory Committee members were thanked for their contributions and feedback for the year.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 4:13 p.m.

Solid Waste and Recycling Industry Advisory Committee
Key Topic Discussion Feedback Summary – November 4, 2025

At the November 4, 2025, Solid Waste and Recycling Industry Advisory Committee meeting, committee members provided feedback on proposed metrics and targets for the updated solid waste management plan. There was a plenary discussion on primary metrics and targets. Following this, members were given the choice of joining small groups on secondary metrics related to Rethink/Reuse, Reduce/Recycle, and Recover/Dispose groups. Members participated in the Reduce/Recycle and Recover/Dispose groups only. A summary of feedback received is presented below and will be included as an attachment to the November 4, 2025 meeting minutes.

Discussion Topic	Feedback

Potential metrics and targets for the solid waste management plan	**Transparency and clarity**
	• Metrics need detailed breakdowns to enable informed discussion and evaluation.
	• One-sentence summaries are insufficient; targets must be clearly calculated and justified.
	
	Recycling rates and data integrity
	• Inaccurate numbers can mislead the public and impact realistic planning.
	  o Current reported recycling rates are inaccurate; suggestion that actual rates are lower (closer to 30%).
	• Concrete and asphalt skew recycling stats and should be excluded from municipal solid waste recycling rates.
	• C&D waste should be tracked separately from industrial, commercial, and institutional (e.g. hospital) and residential municipal waste with individual targets.
	• Recovery (especially energy recovery) should not be included in diversion targets.
	• Recycling metrics – more information needed:
	  o How much recyclable material is used to produce new items?
	  o Are current recycling collection systems effectively reducing plastic production?
	
	Climate considerations
	• Public awareness of climate and GHG issues has evolved.
	• Shipping waste outside the region increases emissions and costs.
	• Limited local disposal capacity exacerbates environmental and financial impacts.

	Scope
	• The current plan is too complex. Simplify to 4–5 clear, achievable goals.
	• Conditional support for secondary metrics:
	  o Need clarity and transparency in metric definitions and calculations.
	  o Reuse metrics (e.g., food rescue) need clearer definitions—human use vs. animal feed.
	  o Waste-to-Energy should be classified as "Dispose" if purpose-built, "Recover" if used as fuel substitute.
	• Suggested secondary metrics lack transparency. Cost transparency is essential (e.g. where do tipping fee revenues go?). Metrics should reflect realistic, cost-effective outcomes.
	• Waste composition studies should inform targets. Show clearly how targets relate to waste composition and key actions.
	
	Cost and infrastructure concerns
	• Tipping fees and C&D disposal costs have risen sharply
	• Vancouver Landfill and Ecowaste capacity are uncertain in the long-term.
	• Organics processing capacity has declined over the past decade.
	• Affordability and property tax implications must be considered.

Additional comments	**Feedback**

	Future engagement
	• More committee discussions are needed to refine goals and strategies:
	  o Focus should remain on materials and sectors within regulatory control.
	  o Emphasis should be on source-separated recyclables and organics, not recovery.
	  o Realistic goals must reflect material value and market viability (e.g., wood and plastics have low/no value).
	  o Cost transparency across disposal options should be included in presentations to IAC.

MEMBERS PRESENT:

Bryan, Lori, Executive Director, Waste Management Association of BC (Co-Chair)
Craig Hodge, Director, Zero Waste Committee (Co-Chair)
Abrams, Izzie – Waste Connections of Canada
Agassiz, Sam – West Coast Reduction Ltd.
Furtado, Glen – Cement Association of Canada
Hankins, Grant – Canada Minibins.com Ltd.
Johnson, Gord – Narthstar
Kaminski, Jamie – HSR Zero Waste
MacFarlane, Angus – Growing City
McRae, Ralph – Revolution Infrastructure Inc.
Mallari, Achilles – Sierra Waste Services Ltd.
Millman, David – Waste Management of Canada Corporation
Moucachen, Maya – Merlin Plastics
Muir, Wesley – Veolia North America (Canada)
Pantazopoulos, Dimitri – Waste Connections of Canada
Prasad, Shad – Cascade Recovery+
Punja, Rustam – Geocycle Canada Inc.
Sigmund, Sandy – Encorp, Return it
Skei, Dayton – EverGen Infrastructure Corp.
Skoropada, Lorne – Ridge Meadows Recycling Society

Public Consultation and Engagement Summary Report | 1774

Co-Chair Lori Bryan, called the meeting to order at 2:03 pm and welcomed at endees to the Solid Waste and Recycling Industry Advisory Commit ee meeting, noting the at endance of Solid Waste Management Plan Independent Consultation and Engagement Panel Members Komal Fatima and Andrea Reimer. General housekeeping reminders were provided, including that the meeting was being live-streamed and would be posted to the Industry Advisory Commit ee webpage.

1. AGENDA

1.1 January 13, 2026, Meeting Agenda

Co-Chair Bryan reviewed the January 13, 2026, meeting agenda. No additions were made.

2. MINUTES

2.1 November 4, 2025, Meeting Minutes

Co-Chair Bryan called for any additions or changes to the Minutes of the November 4, 2025, Industry Advisory Committee meeting. No additions or changes were made.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 2024 Solid Waste and Recycling Statistics and Biennial Report

Kelly Du, Project Engineer, Solid Waste Services, Metro Vancouver, provided a self-introduction and referred to slides #5-17, related to "2024 Solid Waste and Recycling Statistics". Highlights included:

- An updated performance and monitoring approach:
  - Terminology has been refined to differentiate between "recycling rate" which includes only recycled materials whereas "diversion rate" reflects both recycled and recovered materials. Statistics from 2023 and prior used "recycling rate" to describe what is now considered "diversion rate."
  - Asphalt is reported, but removed from the total recycling calculation
  - Updated concrete numbers based on recent reported recycling values
  - Assumptions for small load waste were updated to align with more recent survey data, showing a higher overall proportion of commercial/institutional to residential small loads than previously assumed
- Diversion rate over time generally shows an upward trend but has plateaued in recent years
- 2024 Summary:
  - Increased recycling and disposal in the commercial sector, which is partly due to updated small loads assumptions
- Recycled and Diverted Materials:
  - Increase in gypsum attributed to stockpiled materials
  - Decrease in wood correlated with lower housing starts and market challenges
- Aim to continue to improve methodology in 2026, will explore possibility of having a third party perform checks on concrete reported values.

Paul Henderson, General Manager, Metro Vancouver, advised that asphalt was historically reported in the recycling totals but has been removed because it mostly comes from street projects. The increase in the concrete number reflects a change in methodology from prior years, where concrete was set at 2021 levels due to uncertainty, and is now updated to report actual numbers. Reused materials, such as wood used as an alternative to fossil fuels, were included in diversion numbers rather than the recycling numbers.

During ensuing discussion, the following questions and comments (Q/C) and *responses (R)* were captured:

Q/C: What type of data is being received related to "unlicensed private facilities"?

R: These are the facilities processing concrete and asphalt. They are exempt from licensing under Bylaw 181. Licensed private facilities under "Garbage" refer to those managing construction/demolition waste.

Q/C: Suggestion that "Unlicensed Private Facilities" be relabeled to "Concrete and Asphalt Processing Facilities".

ACTION (01): Staff will update the chart on slide #8 of the presentation. "Unlicensed Private Facilities" is now labelled "Reported Concrete"

3.2 Next Steps for Draft Plan – January 28, 2026, meeting added to the schedule

Samantha Joy, Engagement Specialist, Metro Vancouver, reminded the meeting that presentation slides are available on the Industry Advisory Committee webpage.

ACTION (02): Metro Vancouver will include the presentation slides in the agenda package going forward.

Terry Fulton, Senior Project Engineer, Solid Waste Services, referred to slides titled, "Plan Timeline", and "Remaining Steps to Finalize the Plan", highlighting the draft solid waste management plan is under development, encompassing the feedback heard through all phases of engagement. The intent is for the initial draft plan to be made available online on January 22 and presented to advisory committees and other parties in the coming weeks. The Industry Advisory Committee will receive a presentation on the initial draft plan during the January 28, 2026, meeting and a second opportunity to discuss the initial draft in greater detail at the meeting on February 10. Feedback on the initial draft plan is welcome to February 20. Comments will also be welcome on the subsequent revised draft plan prior to submission to the Minister of Environment and Parks.

3.3 2026 IAC Draft Work Plan Development

Samantha Joy referred to slides (#22 - #28) related to, "IAC 2026 Work Plan Development", noting that a Draft Workplan was included in the Agenda, with opportunity to discuss

Public Consultation and Engagement Summary Report | 1776

additions/changes. While additional workplan topics may arise, the Draft Workplan represents the key topics for the year.

Co-Chair Bryan invited discussion on the following questions:

- Does this list represent the topics the committee is interested in focusing on in 2026?
- Is there anything missing or that could be removed?

During ensuing discussion, the following questions and comments (Q/C) and *responses (R)* were captured:

Q/C: Regarding the Quarter 2 Workplan – Key Topics and Priorities, are the topics for discussion to be reviewed again?

R: It is divided into quarters; these are things that we would likely be talking about in the April, May, and June 2026 meetings.

Q/C: Confirming that the draft solid waste management plan is being sent to the Zero Waste Committee in February?

R: The initial draft solid waste management plan will be reviewed in Quarter 1. A revised draft will then be provided to the Zero Waste Committee and Board. Following the Board meeting there will be an additional comment period on the revised draft plan. The revised draft plan, along with all feedback, will then be provided to the Minister. If there are significant updates to the draft plan as a result of feedback following the Board meeting, staff would bring the plan back to the Board for consideration.

Co-Chair Bryan noted that one member had expressed interest in an item being included in the workplan and wanted to confirm that it was. It was also noted that any additions could be emailed to staff or the Co-Chairs. The Workplan would be voted on/adopted at the February 10, 2026 meeting.

4. VOTING ITEM

4.1 Terms of Reference – Proposed Amendments

Co-Chair Bryan noted that a redline version of the proposed amendments to the Industry Advisory Committee Terms of Reference was included in the Agenda package. In response to a suggestion, it was displayed on-screen.

Paul Henderson noted that an addition regarding the absence of both Co-Chairs and the election of a temporary Chair was prompted by the October 2025 meeting, during which Co-Chair Craig Hodge could only attend a portion of the meeting, and Co-Chair Bryan was absent.

Samantha Joy reviewed proposed revisions including general grammar and language edits, inclusion of the implementation of the solid waste management plan as a committee point

of interest, updates to align with Board priorities with regards to in-person meetings and, and clarification that individuals can observe meetings by livestream rather than joining through Zoom.

The quorum requirement was proposed to be revised to apply specifically to meetings with voting items, noting that the October 2025 meeting did not have quorum, but was recorded and proceeded for discussion, without formal meeting minutes.

Paul Henderson noted that the proposed changes to the Terms of Reference require Industry Advisory Committee approval.

During discussion, a member expressed concern with meetings proceeding without quorum, noting that the Industry Advisory Committee's purpose is to provide input without quorum risk the potential for inadequate input and feedback. It was suggested that the revision be removed, in favour of the original clause.

In response, Paul Henderson noted there could be challenges with members attending in-person meetings and offered that continuing a meeting without quorum could still be considered on a case-by-case basis since it potentially benefits the attending members.

It was MOVED and Seconded
That the Metro Vancouver Regional District Solid Waste and Recycling Industry Advisory Committee approve the proposed amendments to the Terms of Reference, except for the changes related to quorum.

CARRIED

Following online voting and tallying, the Motion to accept the proposed updates to the Terms of Reference, except the changed related to quorum was passed. The first motion was not considered.

ACTION (03): Staff will finalize the revised Terms of Reference and post the updated version to the Solid Waste and Recycling Industry Advisory Committee's webpage.

5. OTHER BUSINESS

5.1 Zero Waste Committee and Other Updates

Paul Henderson referred to a slide titled, "Zero Waste Committee Updates", and offered comments regarding the agenda for the meeting scheduled January 15, 2026, items that are on both the Zero Waste Committee Work Plan and that of the Industry Advisory Committee, annual reports available on the website, the Disposal Ban Program, and the reusable coffee cup launch at Metro Vancouver (included in the Manager's Report).

An update regarding nitrous oxide cylinders was provided, noting challenges and work underway to accept all cylinders, including those that may not be fully empty. In December

2025 over 100 cylinders were brought to Metro Vancouver recycling depots. Information has been requested from Health Canada regarding cylinder recalls and the legality of sales.

It was noted that discussions are underway between Metro Vancouver, the City of Vancouver, and the City of Delta regarding the Vancouver Landfill's 1999 agreement and a potential revision of the total tonnage restriction. Additional information will be shared at the conclusion of those discussions.

5.2 2026 IAC Member Submissions

Samantha Joy reported that the submission period for 2026 Industry Advisory Committee applications will be between January 19 and February 15, 2026, noting that current members are required to reapply per the Terms of Reference.

Members were invited to communicate any questions to staff or Co-Chairs. Members were also informed of an upcoming opportunity to present to the Consultation and Engagement Panel on the engagement during the options analysis phase of the solid waste management plan update

ACTION (04): Samantha Joy, Engagement Specialist, Solid Waste Services, Metro Vancouver, to email Solid Waste and Recycling Industry Advisory Committee members links to 1) the 2026 member application and 2) to express interest in presenting to the Consultation and Engagement Panel.

It was noted that the opportunity to apply for committee membership is being encouraged through social media, emails to the Metro Vancouver industry mailing list, and networking.

6. INFORMATION ITEMS

6.1 Regional Waste Flows

6.2 2026 IAC Meeting Dates

6.3 Residual Waste Management Options Review (link)

Co-Chair Bryan noted that the Information Items were included in the agenda, along with a link, and were also available on the webpage.

It was noted that the purpose of the upcoming January 28, 2026, meeting is to receive a walkthrough of the initial draft solid waste management plan and to provide initial feedback. That meeting will be recorded and shared, with members able to access the presentation and connect with Metro Vancouver staff before the February 10, 2026, meeting. There will be a more fulsome opportunity for discussion during the February 10, 2026, meeting.

ADJOURNMENT

Co-Chair Bryan provided closing comments, thanking members for their participation and advised that the next regular Solid Waste and Recycling Industry Advisory Committee meetings would be on January 28, 2026, and February 10.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 2:55 p.m.

A G E N D A

1. AGENDA

1.1 January 28, 2026 Meeting Agenda

2. REPORTS AND ITEMS FOR DISCUSSION

2.1 Vancouver Landfill Update
For information
Designated speaker: Paul Henderson, General Manager, Solid Waste Services

2.2 Solid Waste Management Plan Update – Review of the Initial Draft Plan
For information and Q&A
Designated speaker: Terry Fulton, Senior Project Engineer, Solid Waste Services

3. OTHER BUSINESS

3.1 Public Presentations to the Independent Consultation and Engagement Panel – Options Analysis
For information
Designated Speaker: Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services

4. INFORMATION ITEMS

4.1 2026 IAC Meeting Dates

4.2 Updated IAC Terms of Reference

Co-Chair Craig Hodge, called the meeting to order at 2:02 p.m. and welcomed at endees to the Solid Waste and Recycling Industry Advisory Commit ee Meeting. The purpose of the meeting was to walk Industry Advisory Commit ee members through the initial draft solid waste management plan, obtain initial feedback from members, and identify areas of the draft plan that require further discussion at the Industry Advisory Commit ee Meeting on February 10, 2026. The draft plan was published on January 22 and is available on the Industry Advisory Commit ee website under the January 28, 2026, Industry Advisory Commit ee meeting header or on the solid waste management plan update page of the Metro Vancouver website.

Housekeeping reminders were provided, including that the meeting was being live-streamed and would be posted to the Industry Advisory Commit ee webpage.

A warm welcome was extended to Andrea Reimer and Veronica Bylicki, members of the Independent Consultation and Engagement Panel, who at ended as observers.

1. AGENDA

1.1 January 28, 2026, Meeting Agenda

Co-Chair Hodge reviewed the January 28, 2026, meeting agenda. The Co-Chair advised that quorum had not been reached; however, Industry Advisory Commit ee members were in agreement that the meeting continue with the information items and no formal business be conducted.

2. REPORTS AND ITEMS FOR DISCUSSION

2.1 Vancouver Landfill Update

Paul Henderson, General Manager, Solid Waste Services, advised that an agreement had been reached with respect to the Vancouver Landfill. Metro Vancouver recently issued a media release announcing the agreement, which would allow the Vancouver Landfill to continue its operations up until approximately 2050 with no change to the previously agreed landfill height and area. There was no indication that the extension of the life of the landfill would have any significant additional environmental impacts.

During ensuing discussion and in response to questions, comments were offered regarding:

- Agreement term defined by the earlier of the following:
  - 2050
  - The landfill filled to a post settlement height of 39 metres

2.2 Solid Waste Management Plan Update – Review of the Initial Draft Plan

Terry Fulton, Senior Project Engineer, Solid Waste Services, reviewed a presentation titled, “Initial Draft Solid Waste Management Plan Walkthrough” and highlighted:

- Draft 2050 targets:
  - 20% reduction in waste generation per capita by 2050

    - 80% diversion and 75% recycling by 2050
    - 50% reduction in disposal per capita by 2050
    - Carbon neutrality by 2050
    - Targets have interim 2040 targets
- Draft plan contains:
    - Secondary metrics related to goals
    - Roles and responsibilities of Metro Vancouver, other levels of government, member jurisdictions, private sector, non-profit, and private residents
    - Strategies and actions:
        - Specific initiatives to achieve plan goals and targets
        - Organized according to waste hierarchy
        - 117 actions - many revised and consolidated for clarity from the initial list of 200 action options
        - New items include member jurisdiction actions and disposal actions
- Reflection of circular economy and waste prevention in the plan
- Alignment and linkages between the solid waste management plan and other Metro Vancouver strategic plans, such as the Clean Air Plan and Metro 2050
- Member actions intended as potential areas of focus for member jurisdictions to consider, but are not requirements
- Regulatory strategic approach, including examples of future regulation
- Recycling and waste centre strategic approach including drive time analysis:
    - Map of drive time to regional facilities and potential areas for future facility development
- Residual management strategic approach, including residual management options technical criteria
- Education and outreach:
    - Plan emphasis on the value of behavioural change campaigns
- Accessibility and inclusion section reflecting feedback from engagement
- Financial overview:
    - Affordability guides all actions in the draft plan
    - Prioritizing of actions with the highest potential to advance progress toward plan targets
- A plan monitoring committee will provide feedback on plan progress
- Glossary of definitions for solid waste terms based on existing provincial or industry definitions (where available)
- Appendices:
    - Dispute resolution process
    - 2026-2030 Solid Waste Operating and Capital Plans
- Next steps:
    - Additional discussion at the Industry Advisory Commit ee Meeting scheduled February 10, 2026
    - Deadline for feedback on the initial draft plan is February 20, 2026

- Revised draft to the Zero Waste Committee and Greater Vancouver Sewerage and Drainage District (GVS&DD) Board
- Additional opportunity to provide comment on the revised draft prior to submission to the Minister of Environment and Parks for review and approval.

Industry Advisory Commit ee members were asked to provide initial thoughts on the initial draft solid waste management plan and identify areas that might require further review. Comments were offered regarding:

- Targets and metrics for the plan not ambitious enough
- Plan scope and planning horizon should be more detailed
- Financial planning and feasibility of the plan actions needs to be included in the plan
- Requests for further clarification or strengthening of certain actions
- General feedback related to infrastructure, hauler and industry licensing, and interdependencies of the solid waste management plan with other regional, provincial, and federal plans

A separate feedback summary of comments received is attached to the minutes and will be considered in developing the revised draft solid waste management plan.

In response to a question on the current height of the Vancouver Landfill, it was confirmed that the agreement would allow for the landfill to be filled to the previously agreed upon height of 39 m and within the previously agreed-upon footprint. The actual height of the landfill varies depending on settlement and how recently garbage was put into the area being filled. The Vancouver Landfill is owned by the City of Vancouver, and it conducts surveys of the landfill; Metro Vancouver does not.

Action: Metro Vancouver staff will request more information from the City of Vancouver on specifics of the Vancouver Landfill height and footprint and report back to the Industry Advisory Commit ee.

Co-Chair Hodge thanked Industry Advisory Commit ee members for their input and looked forward to further discussion on the initial draft solid waste management plan at the Industry Advisory Commit ee's meeting on February 10, 2026.

3. OTHER BUSINESS

3.1 Public Presentations to the Independent Consultation and Engagement Panel – Options Analysis

Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services, advised of:

- An opportunity for any member of the public to present to the Independent Consultation and Engagement Panel on February 11, 2026, from 1:00 p.m. – 3:00 p.m., to provide feedback on the solid waste management plan engagement process:
  - The session will be livestreamed and recorded
  - Information can be found on the solid waste management plan webpage.

- The February 20, 2026 deadline for submission of interest for members wishing to continue participating on the Industry Advisory Commit ee.

4. INFORMATION ITEMS

4.1 2026 IAC Meeting Dates

4.2 Updated IAC Terms of Reference

Co-Chair Hodge referred to the documents provided and welcomed any questions or comments. No additional comments were put forward.

ADJOURNMENT

Co-Chair Hodge thanked members for their participation. The next regular Solid Waste and Recycling Industry Advisory Committee meeting would be held on February 10, 2026, and would include an in-depth discussion on the initial draft solid waste management plan.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 3:03 p.m.

For information
Designated Speaker: Paul Henderson, General Manager, Solid Waste Services

6. INFORMATION ITEMS
6.1 Vancouver Landfill Cross Section Fill Heights
6.2 Regional Waste Flows

Co-Chair Craig Hodge, called the meeting to order at 2:04 p.m. and welcomed at endees to the Solid Waste and Recycling Industry Advisory Commit ee Meeting. The purpose of the meeting was to hear feedback on the initial draft solid waste management plan and to vote on the Industry Advisory Commit ee 2026 Work Plan.

A welcome was extended to Celena Benndorf and Ryan Willams, members of the Independent Consultation and Engagement Panel, who were at ending as observers.

Housekeeping reminders were provided, including that the meeting was being live-streamed and the recording would be posted to the Industry Advisory Commit ee webpage.

Members were advised that the meeting would begin by inviting each member to provide individual feedback on the initial draft solid waste management plan. There would then be two rounds of discussion in self-selected breakout rooms focussing on four topics selected from the survey sent out the prior week. An opportunity to provide additional feedback in plenary after the breakout room sessions would be provided.

1. AGENDA

1.1 February 10, 2026, Meeting Agenda

Co-Chair Hodge reviewed the February 10, 2026, meeting agenda and opened the floor for comments or additions.

A question was raised regarding whether the Vancouver Landfill map and cross-section provided in the meeting package was in response to a request for additional information at the last meeting. It was confirmed this topic was an information item and could be discussed later in the agenda.

2. MINUTES

2.1 January 13, 2026, Meeting Minutes

Co-Chair Hodge reviewed the January 13, 2026, meeting minutes, included in meeting package and posted to the Industry Advisory Commit ee web page.

It was noted that the comments on the inaccuracies of the recycling statistics, the cost of meeting the net zero 2050 climate agenda, and the request that information on the landfill be provided, were not included in the minutes.

Co-Chair Hodge affirmed that the minutes would be amended to reflect those comments.

During discussion on the use of an external professional minute-taking company and the accuracy of the meeting minutes, it was confirmed that the meeting minutes are reviewed by

Metro Vancouver staff prior to inclusion in the meeting packages; however Industry Advisory Committee members are also able to review and provide comment.

Co-Chair Hodge noted that the amended minutes would be brought forward to the next meeting.

Action: Metro Vancouver staff will review the recording of the January 13, 2026, Industry Advisory Committee meeting and amend the minutes as noted.

Addendum:
Following the meeting, staff confirmed that the concerns raised regarding missing items in the previous minutes were the result of a misunderstanding. The items referenced by members related to the January 28, 2026 meeting instead of the minutes under review. The applicable minutes are still in development. No revisions to the reviewed minutes are required.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Initial Draft Solid Waste Management Plan – Round-robin session

Industry Advisory Commit ee members were individually invited to provide their feedback on the initial draft solid waste management plan. Comments were offered regarding:

- Plan scope and clarity
- Data, metrics, and targets
- Financial transparency and cost implications
- Disposal capacity and long-term planning
- C&D waste management
- Industry engagement
- Waste-to-Energy Facility and recycling and waste infrastructure

A separate feedback summary of comments received is attached to the minutes (Attachment 1) and will be considered in developing the revised draft solid waste management plan.

Terry Fulton, Senior Project Engineer, Solid Waste Services, reviewed a slide titled, "Initial Draft Solid Waste Management Plan", and gave an overview of the development of the plan and proposed topics of discussion for the breakout groups, highlighting:

- Development of the plan over several years of engagement including the vision and guiding principles, idea generation, and options analysis.
- An overview of the plan structure including six goals associated with the waste hierarchy: Rethink, Reduce, Reuse, Recycle, Recover, Dispose
  - 30 strategies and 117 actions organized under the six goals
- Breakout room topic options:
  - Targets and the associated metrics that will be used to track progress of the plan
  - Regulatory strategy that outlines priorities and examples related to future regulation

- Recycling and waste centre strategy which contains priorities for further developing the system of recycling and waste centres, drive times analysis, and best practices for facility upgrades
- Residual management which includes current approaches and technical considerations should further capacity be needed.

Samantha Joy, Engagement Specialist, Solid Waste Services, reviewed a slide title, "Select your Breakout Room." Breakout rooms were determined by topic and members were to select and rotate through the topics they are interested in. Two Metro Vancouver staff would be in each session to take notes and answer questions. Two rounds of the small group discussions would be held.

Prior to the meeting, Metro Vancouver polled members to identify priority parts of the plan for small group discussion. Final small group topics were:

- Targets and Metrics
- Regulatory Strategy
- Residual Waste Management Strategy
- Recycling and Waste Centre Strategy

The meeting transitioned into breakout sessions at 3:00 p.m. and reconvened in plenary at 3:33 p.m.

No comments were provided to the invitation for members to share takeaways from the breakout session discussions.

Samantha Joy advised that a summary of the feedback taken by the notetakers in each breakout session would be circulated in draft to the Industry Advisory Committee and kept as recorded feedback toward the draft plan.

The small group feedback summary is also attached to the meeting minutes (Attachment 1).

Terry Fulton advised that a revised draft plan would be provided to the Zero Waste Committee, showing the changes from the version discussed today.

Stephanie Liu, Program Manager, Community Engagement, Solid Waste Services, outlined the next steps in the process for feedback options:

- Comments are open until February 20, 2026, via email, online discussion board or meeting by request
- Presentation of the revised draft to the Zero Waste Committee and GVS&DD Board
- Additional opportunity to provide comments on the revised draft after presentation to the Zero Waste Committee and Greater Vancouver Sewerage and Drainage District Board and prior to submission to the Province of British Columbia.

4. VOTING ITEM

4.1 IAC 2026 Work Plan

Co-Chair Hodge provided a brief background on the development of the workplan, , opened the floor for comments, and called for a motion to approve the draft 2026 Industry Advisory Commit ee Work Plan.

It was MOVED and SECONDED
That the Solid Waste Management 2026 Work Plan be approved as presented.

CARRIED

The agenda varied to reconsider the feedback from the breakout sessions, during which the following comments were offered:

- The landfill and incineration are grouped together under the residual management category
  - One is a Metro Vancouver-owned asset and the other is an external asset that is not owned by Metro Vancouver
  - There is no apparent reasonable argument or incentive to include incineration as disposal
  - Questions about liability of the Waste-to-Energy facility and controlling the pollution it creates, aging infrastructure, how to manage that going forward
  - The Waste-to-Energy Facility is a liability within the plan and has not been proven to be a necessary inclusion, considering the extra capacity in the landfill and the available contingency options
- Confirmation that the notes taken in the breakout session will be aggregated and will be attached to the minutes.

It was confirmed that the next version of the plan would be a redlined version from the initial draft.

5. OTHER BUSINESS

5.1 Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Solid Waste Services, reviewed a slide titled, "Zero Waste Committee and Other Updates," and highlighted:

- Update on capital program across all utilities
- 500 attendees at the Zero Waste Conference
- Update on Vancouver Landfill agreement
- Industry Advisory Committee call for membership
- Update on Collaborative Engagement program
- Nitrous oxide cylinder recycling
- Request for Proposal for reuse services at the United Boulevard Recycling and Waste Centre.

6. INFORMATION ITEMS

6.1 Vancouver Landfill Cross Section Fill Heights

Paul Henderson referenced the current cross section elevations for the Vancouver landfill included in the meeting package and highlighted:

- Variations in elevation across the site
- The new agreement allows for 39 metres elevation at post settlement height, which factors in approximately 10 metres of estimated settlement
- Significant areas of the site have never been filled or have not been filled in the last couple of decades
- There is some potential for refilling of the site, restricted to east of the western 40 hectares which had been restricted to construction and demolition material.
- Additional capacity available at the landfill will take the region to about 2050
- The agreement is based on "the earlier of"; if the landfill reaches capacity prior to 2050 the agreement ends then, or could go to as late as 2050
- Remaining landfill capacity will be reported as part of the solid waste management plan monitoring.

In response to a question if the 10-metre settlement modeling is based on arial surveys or historical settlement, it was noted that the modeling is based on what has been historically seen for settlement. The City of Vancouver regularly surveys the elevations of the landfill. The City of Vancouver is best to ask about specific compaction data; however, it is understood to be approximately one tonne per cubic metre of initial volume, then subsequent settlement after that.

Action: Metro Vancouver staff will request City of Vancouver compaction data and circulate to the Industry Advisory Committee.

In response to question about slide slope ratios, the City of Vancouver fills to a 3:1 slope, the maximum slope allowed. Due to varying characteristics at the site, there are some areas where they do intend to fill over existing side slopes but that would be to the specified maximums.

Action: Metro Vancouver staff will invite a City of Vancouver staff person to present to the Industry Advisory Committee.

Co-Chair Hodge thanked members for their participation and left the meeting at 3:58 p.m. Co-Chair Lori Bryan, assumed chairing duties.

In response to considerations for the costs of managing leachate and methane gas for the expected 10 million additional landfilled, it was noted that the estimate is based on current fill rates of 750,000 tonnes per year. The City of Vancouver produces a report on its website that outlines environment protection systems.

6.2 Regional Waste Flows

This item was not considered.

ADJOURNMENT

Co-Chair Bryan thanked members for their participation including the observers from the Consultation and Engagement Panel. The next regular Solid Waste and Recycling Industry Advisory Committee meeting would be held on March 10, 2026.

Industry Advisory Committee members were reminded that:

- Industry Advisory Committee membership applications due on February 20
- The Waste Management Association of BC annual conference is on February 26.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 4:01 p.m.

Attachments:

1) February 10, 2026 – Solid Waste and Management Plan: Initial Draft Feedback Session Summary.

Solid Waste Management Plan Update: Initial Draft
Solid Waste and Recycling Industry Advisory Committee Feedback Session

Tuesday, February 10, 2026
Virtual / Hybrid

Metro Vancouver is updating its regional solid waste management plan, building on the strengths of the current plan and identifying ways to accelerate waste prevention and recycling, reduce greenhouse gas emissions, and advance a circular economy. Metro Vancouver is currently receiving feedback on the initial draft solid waste management plan.

On February 10, 2026, Metro Vancouver held a feedback session on the initial draft plan at a Solid Waste and Recycling Industry Advisory Commit ee meeting. The session included two components – a round-robin opportunity for each member to provide comments summarizing their main feedback on the initial draft plan, followed by small-group discussions.

Prior to the meeting, Metro Vancouver polled members to identify priority parts of the plan for small group discussion. Final small group topics were:

- Targets and Metrics
- Regulatory Strategy
- Residual Waste Management Strategy
- Recycling and Waste Centre Strategy

Round-Robin Individual Feedback Summary

Below are the results of the round robin individual feedback, grouped by themes and topics. Verbatim notes are retained as part of the feedback records for the solid waste management plan update. Feedback will be considered as the draft is revised in preparation for providing to the Zero Waste Commit ee and GVS&DD Board. Following Board consideration, there will be an additional opportunity for comment prior to submission of the draft to the Ministry of Environment and Parks for approval.

Need for clarity and specificity

Commit ee members consistently felt the draft plan lacked sufficient detail to understand how goals will be achieved, what they will cost, and what assumptions back them. Many comments described the plan as “a plan to make a plan,” with unclear metrics, blended diversion rates, and limited supporting data. Targets around diversion, carbon neutrality, recycling infrastructure, and financial projections were viewed as unrealistic or inadequately justified.

Financial transparency and cost implications

Members raised concerns regarding rising costs, debt projections, unclear financial assumptions, lack of cost allocation by activity, and the potential burden on taxpayers especially in the context of affordability

and cost-of-living pressures. Feedback focused on improving transparency, inclusion of year-over-year cost-per-tonne schedules, and realistic accounting of capital costs and financing.

Disposal capacity and long-term planning

Commit ee members highlighted uncertainties surrounding long-term disposal capacity, processing and infrastructure needs for a rapidly growing population, and the relationship between waste-to-energy and landfill operations. They want clear long-term planning horizons (30+ years) and detailed contingency strategies.

General Feeback

Plan clarity and specificity

- Wording lacks clear expectations and actions.
- Many goals appear aspirational without actionable pathways or costed implementation steps.
- Lack of concrete actions for upstream waste reduction, disposal bans, or for meeting diversion targets.
- Unclear metrics and blended diversion rates that inflate performance.
- “Plan to make a plan” sentiment – insufficient detail on how targets will be achieved.
- Need for realistic, fact-based analysis.
- Statistics included were viewed as incorrect or misleading.
- Need for clarity on linkages to other Metro Vancouver strategies and plans (climate action, net-zero, etc.).
- Low incorporation of specific Industry Advisory Commit ee feedback to date.
- Request for clarification on recycling facility roles, pilot projects for organics, and technology improvements.

Financial transparency and assumptions

- Concerns about Metro Vancouver taking on excessive new debt within five years.
- Rising waste disposal revenues imply high rate increases for taxpayers.
- Perception that budget increases exceed what is reasonable for current inflation rates.
- Need for year-by-year cost-per-tonne schedule in the appendix.
- Insufficient allocation of costs to activities or targets; no “true cost accounting.”
- Lack of clarity about financial incentives for municipalities to participate in Extended Producer Responsibility (EPR) programs.

- Concern about taxpayer burden and consequences of these plan decisions lasting decades.

Disposal capacity, Waste-to-Energy, and District Energy

- Need to clarify and detail Vancouver Landfill's projected 2050 closure date within the plan.
    - Include conditions that could extend landfill life beyond 2050 (e.g. how might increasing diversion impact the anticipated closure date).
- Need for clarification on the District Energy System's claim of tripling energy recovery.
- Mixed views on continued use of the Waste-to-Energy Facility; some believe it should be phased out and some support incineration over landfilling.
- Concern that the long term District Energy commitment is a way of Metro Vancouver trying to fund new waste-to-energy capacity.
- Waste-to-energy and landfill should be separated in the plan since only one is a Metro Vancouver-owned asset.
- Need to distinguish between materials recovery vs. energy recovery to avoid conflating diversion with fuel-burning.
- Importance of ensuring low-cost disposal options in-region and in-province.

Diversion rates, recycling, and EPR

- Need for municipal-level breakdowns of recycling numbers for comparison.
- Diversion targets seen as overly optimistic or padded.
- Distinguish between diversion via materials recovery and recovery through incineration.
- Need more transparency on EPR reporting about collected products.
- Clarification requested on pathway to improving processing infrastructure for a growing population, especially multi-family.

Enforcement, hauler licensing, and source control

- Strong emphasis on shifting enforcement upstream rather than at recovery sites.
- Support for rewarding generators who "do the right thing."
- Need for more enforcement and facilitation of waste audits including support for clear waste bags.
- Comment that more information is needed about scope of hauler licencing for the commit ee to meaningfully comment on it – what would this look like? Regulatory mechanisms should be described in more detail if included in the plan.

Developing markets

- Support for research and technology to improve diversion and reduce contamination.
- Need to ensure recycling is focused to where end markets exist.
- Plan does not sufficiently facilitate development of end-market capacity.

General feedback

- Positive feedback on plan organization by hierarchy.
- Recognized as a useful reference for municipalities to stay aligned.
- Formatting issue noted in Appendix B (line misalignment).
- Concern that legal or structural complexities (e.g., First Nations jurisdiction) could affect disposal capacity projections.

Summary of Small Group Discussion Feedback

Below are notes from the small group discussion, categorized by the small group topics. Feedback will be considered as the draft is revised in preparation for providing to the Zero Waste Commit ee and GVS&DD Board. Following Board consideration, there will be an additional opportunity for comment prior to submission of the draft to the Ministry of Environment and Parks for approval.

Topic: Targets and Metrics

Most important topics in this area:

- Current diversion numbers do not reflect actual recycling and rely heavily on unregulated materials (e.g., concrete, asphalt) that inflate performance.
- True residuals and recovery rates are not being measured, resulting in inaccurate reporting and unrealistic targets.
- Metrics and targets are not grounded in operational or market reality, creating credibility issues.

What needs to be strengthened:

- Accuracy and transparency of measurements – track what is actually recycled, including residuals leaving facilities and material shipped overseas.
- Evidence-based target setting to align targets with physical limits of recyclability and market conditions; acknowledge that realistic diversion rates are in the 20–30% range.
- Cost transparency that outlines the cost per tonne or per unit of diversion for proposed initiatives and provide cost–benefit analysis for major actions.
- Differentiation between diversion and recovery. Track recovery separately, do not count recovery as success.

What's missing:

- A clear explanation of how targets will be achieved (e.g. sequencing, strategies, or implementation plan)
- Tracking and reporting of facility-level residuals, including organics and construction and demolition materials processing.
- Analysis of downstream environmental impacts such as organic residual contamination of farmland.
- Consideration of affordability impacts, especially on multi-family building residents.
- A plan for addressing declining or stagnant recycling markets for plastics, wood waste, and cardboard.
- A new baseline methodology that reflects actual conditions rather than aspirational metrics.

Other comments:

- Some participants expressed frustration with having the same conversation about numbers.
- Stakeholders voiced concerns that current reporting mimics other jurisdictions but is not ideal for the Metro Vancouver region.
- Zero waste is seen as unat ainable, and municipal responsibility should focus on efficiency and affordability rather than aspirational targets.

Topic: Recycling and Waste Centre Strategy

Most important topics in this area:

- Recognizing and duplicating the United Boulevard model, which is viewed as the regional standard for service quality.
- Ensuring recycling and waste centres support extended producer responsibility integration, reuse opportunities, and access for all residents, including those in high-density areas.

What needs to be strengthened:

- Clear direction on the role of organics at recycling and waste centres and how to integrate commercial organics handling without displacing private sector operators.
- Improved planning for equitable access, particularly for dense urban areas where residents cannot drive 30+ minutes to a site.
- A more transparent approach to mixed waste processing (is it being considered, what studies exist, and what feasibility looks like, etc)
- Standardization or simplification for extended producer responsibility product handling, including disposal ban enforcement and reducing the burden on haulers.

What's missing:

- A clear articulation of the capacity of existing processors in the region.
- A stronger plan for active transportation access to sites, beyond conceptual statements.
- Structural barriers to reuse (e.g., scavenging policies) that may need policy adjustments.
- A clear regional approach to managing extended producer responsibility materials entering the residual waste stream.

Other comments:

- Want more clarity on how transfer stations fit within the broader system.
- Some noted that disposal ban inspectors often put responsibility on haulers, which should shift upstream to generators.
- Suggestions were raised about exploring a municipal bylaw to improve enforcement of sorting at source.

Topic: Residual Waste Management Strategy

Most important topics in this area:

- Residual waste management is the largest cost driver in the system and must be managed strategically.
- Increasing amount of residuals, especially from multi-family housing, require new approaches to measurement, material separation, and long-term disposal planning.
- Ensure that environmental impacts (air emissions, pollutants, hazardous waste) are minimized and controlled.

What needs to be strengthened:

- A clear framework for measuring residuals from all streams {curbside, transfer stations, recycling facilities, and organics processing).
- Transparent information about future landfill capacity, including Vancouver Landfill timelines, renegotiation requirements, and how diversion affects landfill lifespan.
- A financial outline of disposal approaches including projected cost per tonne and long-term financial implications.
- Stronger emphasis on resilience, such as managing more residuals within the region to avoid dependence on external jurisdictions.

What’s missing:

- The Waste-to-Energy Facility should not be in the plan long-term – the plan does not present a clear business case for continuing to use the Waste-to-Energy facility: why it is included, what purpose it serves, and whether its costs and risks are justified.

- Details on hazardous waste management where no extended producer responsibility options exist.
- A detailed understanding of the constraints on Vancouver Landfill, including:
    - level of accuracy of the 2050 estimated lifespan
    - post-set lement height limits
    - tonnage thresholds (e.g., 750,000 tonnes)
- Explicit listing of contingency landfill options instead of general references to “contingency sources.”

Other comments:

- Members want more focus on upstream solutions, such as product design changes informed by waste composition.
- Some requested that mixed waste processing be reconsidered given the increasing multi-family waste stream.
- Recognition that residuals from organics processing facilities must be accounted for.

Topic: Regulatory Strategy

Most important topic in this area:

- The regulatory strategy lacks operational detail, does not reflect industry realities, and may introduce regulation without solving root problems (contamination, system complexity, lack of infrastructure).

What needs to be strengthened:

- Clear explanation of what new regulations would do, how they would improve outcomes, and how benefits outweigh costs.
- Greater integration of private sector expertise and clarity on the role of industry in implementing the plan.
- Stability and predictability in regulation so private operators can plan investments confidently.
- A more realistic understanding of system complexity and how it affects both residents and haulers.

What’s missing:

- An appendix or outline of potential regulatory actions being considered.
- Consideration of why some residents cannot participate, and how regulatory design could address those barriers.
- Explanation of how mandatory source separation or hauler licensing would actually increase diversion.

- A realistic acknowledgement of system limitations, including lack of infrastructure for post-collection separation.

Other comments:

- Some felt the strategy appears to reflect input from people who don't understand how waste flows or are not as aware of how the system works
- Industry participants felt unheard and that past input was not reflected.
- Concerns raised about "mission creep" and excessive red tape.
- Emphasis that more regulation will increase system costs, which are already high.
- Members noted the need for opportunities for the private sector to innovate, own infrastructure, and deploy technology.

7.4 Options Analysis Engagement Summary Report
7.5 Options Analysis Feedback Log
7.6 Nitrous Oxide Cylinders Recycling Handout
7.7 Industry Advisory Committee – Feedback Summary – January 28, 2026
7.8 Industry Advisory Committee – Feedback Summary – February 10, 2026

Co-Chair Craig Hodge, called the meeting to order at 2:03 p.m. and welcomed attendees to the Solid Waste and Recycling Industry Advisory Committee Meeting.

Housekeeping reminders were provided, including that the meeting was being live-streamed and the recording would be posted to the Industry Advisory Committee webpage.

A warm welcome was extended to Veronika Bylicki and Peter Fassbender, members of the Solid Waste management Plan Independent Consultation and Engagement Panel, who attended as observers.

1. AGENDA

1.1 February 10, 2026, Meeting Agenda

Co-Chair Hodge reviewed the March 10, 2026, meeting agenda. No additions were made.

2. MINUTES

2.1 January 28, 2026, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the January 28, 2026, Industry Advisory Committee meeting.

Concern was expressed that the "Solid Waste Management Plan Update: Initial Draft Feedback Summary" contained an inaccuracy regarding hauler licensing; it was noted that hauler licensing and flow control have been discussed in past meetings and raised by committee members as an important and relevant topic where more information and discussion is required. Director Hodge suggested continuing this conversation with the discussion on feedback summaries in item 7: Information Items

2.2 February 10, 2026, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the February 10, 2026, Industry Advisory Committee meeting.

Members commented that feedback provided during the Round-Robin Individual Feedback Summary was not included in the Meeting Minutes. It was noted by staff that:

- Meeting Minutes indicate that a separate feedback summary of comments received is attached and will be considered in developing the revised draft Solid Waste Management Plan
- Feedback from the Round-Robin is included in the agenda package in a document titled, "Solid Waste Management Plan Update: Initial Draft – Solid Waste and Recycling Industry Advisory Committee Feedback Session"
- Some members expressed that, in general, meeting minutes do not always represent member feedback.

3. 2026 IAC MEMBER INTRODUCTIONS

Co-Chair Hodge led a round of introductions of the incoming 2026 committee and welcomed new Industry Advisory Committee members.

Co-Chair Hodge reviewed the Industry Advisory Committee Terms of Reference and Code of Conduct.

The following 2026 Industry Advisory Committee meeting dates were noted:

- March 10, 2026
- April 7, 2026
- May 12, 2026
- June 9, 2026
- September 15, 2026
- October 6, 2026
- November 10, 2026.

4. REPORTS AND ITEMS FOR DISCUSSION

4.1 Draft Solid Waste Management Plan – Timeline Update

Terry Fulton, Senior Project Engineer, Solid Waste Services, Metro Vancouver, shared a presentation titled, "Revised Draft Solid Waste Management Plan" and highlighted:

- The phases of the solid waste management plan update process
- The revised draft plan includes six goals, 30 strategies, and over 100 actions
- Upcoming solid waste management plan reports to the Zero Waste Committee:
  - Draft Solid Waste Management Plan
  - Engagement Summary Report
  - Independent Consultation and Engagement Panel Report.

Co-Chair Hodge opened the floor for members to respond to the information presented. The following question and/or comment (Q/C) and response (*R*) were captured:

Q/C: Hauler licensing, flow controls, and privatization of the waste system have been tabled multiple times throughout this plan update process. Some folks have been advocating for this going on 40 years. Seems like this issue has not been addressed or considered in the plan.

R: *There are multiple points of view, on this issue. The plan has been developed in consideration of feedback from multiple audiences and considers the priorities of the Board. Metro Vancouver staff has reported on the feedback about privatization of the waste system being of interest to some parties as well as on feedback that calls for more regulation and oversight of the system.*

4.2 Operational Challenges of Daylight Savings Time Permanent Adoption

Co-Chair Lori Bryan reviewed a slide titled, "Daylight Savings Permanent Adoption – Potential Operational Considerations," and highlighted:

- General operational readiness
- Safety considerations/impacts
- Customer and service coordination
- Additional considerations.

Co-Chair Hodge opened the floor for members to respond to the information presented. The following question and/or comment (Q/C) was captured:

Q/C: From an operational perspective, there are general safety concerns from operating in the dark.

5. IAC CO-CHAIR NOMINATIONS

Co-Chair Hodge informed that, as per the Terms of Reference, one member Co-Chair is elected annually for a term of one year, and informed that Lori Bryan was nominated at the March 2025 Industry Advisory Committee meeting.

Nominations were called by Co-Chair Hodge three times; Lori Bryan was the only nominee. Nominations will be accepted up until the Election meeting on April 7, 2026.

6. OTHER BUSINESS

6.1 Zero Waste Committee and Other Updates

Chris Underwood, Division Manager, Solid Waste Planning, and Chris Allan, Director, Solid Waste Operations, provided the following updates on reports presented to the Zero Waste Committee on March 5, 2026:

- Link to "Options Analysis Engagement Summary Report" is included in the agenda package
- The final meeting of the Public/Technical Advisory Committee is on April 2, 2026
- Update on the potential use of reclaimed lumber in the design of the Waste-to-Energy Facility District Energy centre
- Working with the University of British Columbia Sustainability Scholar on market development for reclaimed wood
- Update to two campaigns, including:
  - Low-waste gift ideas; target audience includes environmentally conscious individuals between 18 and mid-30s
  - Reduction of textile waste; target audience includes women between 35 and 65 who are motivated to repair clothing
- Proposed ban on the import and sale of nitrous oxide cylinders:
  - Concerns include explosions at waste-to-energy facilities due to inappropriate disposal of nitrous oxide cylinders
  - Implications of nitrous oxide in the waste stream include:
    - Worker safety
    - Equipment damage
    - Lost electricity revenue and reduced garbage throughput from downtime

    - Potential impacts on Waste-to-Energy Facility emissions
    - Greenhouse gas emissions
- Cylinder drop-off at recycling and waste centres:
    - Currently receiving approximately 700 cylinders per month
    - Updating the program to communicate receipt of partially full cylinders
    - Working to receive cylinders from municipal crews and municipal recycling depots

Co-Chair Hodge opened the floor for members to respond to the information presented. The following question and/or comment (Q/C) was captured:

Q/C: Need a better delineation or roles between the private sector and public sector; responsibilities need to be made clear.

6.2 Tipping Fee Bylaw Generator Levy Provisions: Record Keeping Webinar

Nicole MacDonald, Program Manager, Regulation and Enforcement, Solid Waste, shared a presentation titled, "Record Keeping Webinar," and highlighted:

- April 2, 2026, upcoming webinar for waste haulers titled, "Tipping Fee Bylaw Generator Levy Provisions: Record Keeping Requirements"
- Objective of webinar to reduce non-compliance
- Offering voluntary record reviews prior to inspections
- Website includes new webpage that highlights recordkeeping processes.

Co-Chair Hodge opened the floor for members to respond to the information presented. The following question and/or comment (Q/C) and response (*R*) were captured:

Q/C: Can the webinar be recorded for anyone unable to attend?

R: Currently, there are no plans to record, but will take the request under consideration.

7. OTHER BUSINESS

7.1 Regional Waste Flows

7.2 IAC 2026 Work Plan

7.3 IAC Meeting Action Tracker

7.4 Options Analysis Engagement Summary Report

7.5 Options Analysis Feedback Log

7.6 Nitrous Oxide Cylinders Recycling Handout

7.7 Industry Advisory Committee – Feedback Summary – January 28, 2026

7.8 Industry Advisory Committee – Feedback Summary – February 10, 2026

ADJOURNMENT

Co-Chair Bryan thanked members for their participation, including the observers from the Consultation and Engagement Panel. The next regular Solid Waste and Recycling Industry Advisory Committee meeting would be held on April 7, 2026.

Industry Advisory Committee members were reminded that:

- Industry Advisory Committee conflict statements must be submitted to participate in the April 7, 2026, meeting
- Nominations will be accepted up until the Election meeting on April 7, 2026.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 3:05 p.m.

SOLID WASTE AND RECYCLING INDUSTRY ADVISORY COMMITTEE

Tuesday, April 7, 2026
2:00 p.m. to 4:00 p.m.
Zoom Teleconference

A G E N D A

1. AGENDA
1.1 April 7, 2026 Meeting Agenda

2. MINUTES
2.1 March 10, 2026 Meeting Minutes

3. REPORTS AND ITEMS FOR DISCUSSION
3.1 Revised Draft Plan
For information
Designated speaker: Terry Fulton, Senior Project Engineer, Solid Waste Services

3.2 Plan Implementation and Reporting
For information and Q&A
Designated speaker: Terry Fulton, Senior Project Engineer, Solid Waste Services

***4.* OTHER BUSINESS**
4.1 Zero Waste Committee and Other Updates
For information
Designated Speaker: Paul Henderson, General Manager, Solid Waste Services

4.2 Tipping Fee Updates
For information
Designated Speaker: Paul Henderson, General Manager, Solid Waste Services

5. IAC Member Co-Chair Election

6. INFORMATION ITEMS
6.1 Regional Waste Flows
6.2 IAC 2026 Work Plan
6.3 IAC Meeting Action Tracker
6.4 Zero Waste Committee – April 2, 2026 Meeting Agenda Package (Revised Draft Solid Waste Management Plan)

Co-Chair Craig Hodge, called the meeting to order at 2:04 p.m. and welcomed attendees to the Solid Waste and Recycling Industry Advisory Committee Meeting.

Housekeeping reminders were provided, including that the meeting was being live-streamed and the recording would be posted to the Industry Advisory Committee webpage.

1. AGENDA

1.1 April 7, 2026, Meeting Agenda

Co-Chair Hodge reviewed the April 7, 2026, meeting agenda. No additions were made.

2. MINUTES

2.1 March 10, 2026, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the March 10, 2026, Industry Advisory Committee meeting. No additions or changes were made.

Co-Chair Hodge advised that the February 2026 meeting minutes and feedback summary were updated to reflect the amendments requested by members in relation to the round-robin feedback.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Revised Draft Plan

Terry Fulton, Senior Project Engineer, Solid Waste Services, Metro Vancouver, shared a presentation titled "Revised Draft Solid Waste Management Plan and Initial Draft Plan Feedback Summary." Highlights included:

- Engagement statistics
- Initial draft plan feedback provided by the Industry Advisory Committee
- Highlight of some revisions made to the initial draft plan based on feedback:
  - Added a strategic principle of prioritizing local solid waste management solutions:
    - Bundles together actions that work toward local solutions for managing waste.
    - Local solutions increase resilience, reduce transportation greenhouse gas (GHG) emissions, and create local employment and economic benefit
  - 2036 targets added, including by sector
  - Focus areas added to highlight key strategies and actions (including multi-family and construction and demolition sectors)
  - Strengthened the language used in the strategies and actions
  - Enhanced actions related to education
  - Expanded financial section and added plan implementation schedule
- Next steps include consideration by the Greater Vancouver Sewage and Drainage District Board, a public comment period on the revised plan, and submission of the draft plan to the Ministry of Environment and Parks for approval.

Discussion ensued, and the following questions and comments (Q/C) and *responses (R)* were captured:

Q/C: It doesn't feel like the feedback received from Industry Advisory Committee members is being reflected in the work Metro Vancouver is doing. The concerns being raised seem to be optimistically phrased in the minutes and feedback summaries and don't highlight the significance of the issues being shared. Metro Vancouver often communicates in a way that seems positive, but it is misleading.

Q/C: Metro Vancouver's statistics are inaccurate, for example, the diversion/recycling rate is quoted at 65%, but is closer to 30% depending on how materials are measured.

Q/C: Is there a mandate to mirror the GHG emissions targets?

R: Reducing GHG emissions was a theme throughout engagement on the draft solid waste management plan. The GHG emissions targets reflect engagement feedback and align with Metro Vancouver's Climate 2050 Strategic Framework.

Q/C: If Metro Vancouver adopts the strategies being presented to reduce GHG emissions, it could impact the public financially, and families will be required to pay a lot of money. This is not being communicated to the public, and transparency is needed.

Q/C: Are the members of the Public/Technical Advisory Committee privy to the information being shared by the Industry Advisory Committee members? Surprisingly, the Public/Technical Advisory Committee thinks the rates and projections being presented are good. It would be beneficial to see how communication with other committees is done to ensure the Industry Advisory Committee feedback is being properly reiterated.

R: All feedback received during the draft plan engagement phase is being shared to provide clarity on the draft plan. There were three reports submitted to the Zero Waste Committee, which are available on Metro Vancouver's website, along with the livestream recording.

3.2 Plan Implementation and Reporting

Terry Fulton shared a presentation titled "Plan Implementation and Reporting" and highlighted:

- The Province recommends forming a Plan Monitoring Advisory Committee after the draft plan is approved
- The monitoring committee is intended to represent a variety of interests, experiences, and expertise; details are in development.
- Members would likely receive updates on the plan's progress in conjunction with annual summary statistics.

- For this type of committee, a Terms of Reference would be created and approved by the Zero Waste Committee and the Greater Vancouver Sewerage and Drainage District Board, prior to moving ahead with a call for Committee members.

Discussion ensued, and the following question and comment (Q/C) was captured:

Q/C: There is a digester in Surrey that takes in 100,000 tonnes of materials from a variety of sources in a year. The minute you put food scraps into commercial organics, the material is contaminated with plastic. It is virtually impossible to remove any foreign matter, resulting in 30-40% of waste material. This material should be going to a landfill or be processed multiple times to reduce the plastic fines in the process.

However, another suggestion would be to revisit historical decisions to include plastics in the residential organics stream. This would be more constructive and lead to a positive outcome at a lower cost.

If a committee or panel is formed to support moderating the plan, Metro Vancouver needs to be mindful that there are industry members who can provide constructive feedback to help drive positive results. We need people in the room who can make a difference.

Terry Fulton shared that the current annual and biennial reporting process will be updated to include the primary and secondary metrics included in the draft plan as well as plan related expenditures.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Metro Vancouver, provided the following Zero Waste Committee and other updates:

- A Zero Waste Committee meeting occurred on April 2, 2026, with three reports related to the solid waste management plan update.
- The draft plan was endorsed by the Zero Waste Committee and will be considered by the GVS&DD Board at the April 24, 2026, meeting
- If the draft Solid Waste Management Plan is supported by the Board, there will be an additional opportunity to provide comments on the draft Plan before being submitted to the Ministry of Environment and Parks
- Also presented at the April 2 Zero Waste Committee meeting was a report related to organics at North Shore Recycling and Waste Centre, Maple Ridge Recycling and Waste Centre, and Langley Recycling and Waste Centre.
  - A recommendation was made for a contract to be awarded to Arrow for receiving, processing, and transporting material following a competitive procurement process
  - A key change since the last procurement process for these services is the addition of organics collected multifamily and commercial/institutional sources

- This material started to be received at North Shore Recycling and Waste Center in 2021 and makes up approximately 40% of all the organic materials going into the facility, which is an excess of 20,000 tonnes per year
- Observed significant price increases compared to the current contract

4.2 Tipping Fees

Paul Henderson provided an update on changes to tipping fees, which included:

- The Zero Waste Committee received a report related to changes in tipping fees, effective July 1, 2026, which proposes an increase to rates for municipal organics, collected by the five municipalities on the North Shore, and an increase in the commercial organics rate from $150/tonne to $175/tonne:
  - This change will effectively cover the unit rate for each additional tonne of commercial organics
  - The overall cost of that contact in addition to this, in order to fund the cost of that contract, an additional proposal for $2/tonne increase in the medium and large loads across the system for garbage
  - The $175/tonne is already over the cost of garbage disposals, and if Metro Vancouver layered in the full cost, it would be over $200/tonne
- If the Board approves this proposal, all customers would be notified of these increases, which will be effective July 2026.

Discussion ensued regarding both Item 4.1 Zero Waste Committee Updates and Item 4.2 Tipping Fees, and the following questions and comments (Q/C) and *responses (R)* were captured:

Q/C: How does the Extended Producer Reliability program and Recycle BC fit into this?

R: The producers of packaging and paper materials from residential sources are responsible for funding recycling of those materials. Information from Recycle BC and other data points from various sources is used for the calculations that are reported, which is why it takes time to assemble diversion statistics each year.

R: Regional districts are responsible for developing solid waste management plans that apply to all municipal solid waste, not just the materials collected at Metro Vancouver facilities.

Q/C: Where is Metro Vancouver at with respect to the allowable level of organics in waste dump transfer stations? Is it still 25%?

R: There are no changes to the tipping fee by-law with respect to the disposal ban limits.

Q/C: If Metro Vancouver moved the current 25% back down to 5%, there would be a significant increase in the amount of organics diverted. Currently, waste containers and organic containers are being dumped into the same truck. There is less motivation

to separate commercial organics. By increasing this to 25%, Metro Vancouver drove many organics collection services out of the market.

Q/C: What is the status of The Southern Star facility and how is the issue going to be resolved?

R: No current update has been received, but it is believed that the materials are still on-site pending action by the Vancouver Port Authority.

Q/C: Despite many complaints about the materials on that site, nothing has been actioned, and this is a major concern that should be addressed. The amount of materials is over the licensed allowable amount. The reason the materials have been piled onsite is because they could not be recycled. There is concern that this type of situation could be replicated by the actions contained in the draft plan. At this point in time, not all materials can be recycled. Request that Metro Vancouver recalculate recycling and diversion rates.

Q/C: The report that was published in the Zero Waste Committee agenda cited a total cost contract value of $80.5 million, but the Request for Proposals cited $10.75 million. Can more information be shared about the discrepancy in the procurement process?

R: Our procurement process typically requests proposals based on one year of operations. The report presents the total proposal value by combining material rates and estimated quantities with fixed operating costs. However, calculating the full contract value for the maximum 5.5-year term requires accounting for inflation, projected quantities, and other assumptions. Actual material volumes, and total contract value, may fluctuate, particularly due to uncertainty around potential increases in commercial organics.

Q/C: There was a note stating that staff continue to look at more local processing. What is the objective of developing processing infrastructure?

R: The Board has directed to provide support with additional local processing. This is still being worked on, but the report notes that there is a request to consider this, and next steps need to be determined.

Q/C: Can the rationale be expanded regarding the medium and heavy loads that will be subsidized? The cost of living in the Lower Mainland is very expensive, and not all customers are generating these loads. A cost model and mapping should be done, as cross-subsidization may cause problems. A strong rationale needs to be shared, and how the market should be approached.

R: When Metro Vancouver received pricing, it was evident that organics processing rates would significantly increase, and it was determined that the best solution would be to

fund the additional costs of the contract with increases to tipping fees. From Metro Vancouver's perspective, the commercial and institutional sectors are contributing to these organics, so this was the most appropriate strategy.

Q/C: The challenging decision is appreciated, but Metro Vancouver is encouraged to think of other strategies. Cross-pollination when subsidizing is masking the problem and not addressing the actual issue. The open market might have better solutions, and Metro Vancouver should consider this.

Q/C: Organics need to be removed from the waste stream – Metro Vancouver should charge what it actually costs to deal with them.

Q/C: The cost of stripping plastics away is also a time-consuming process. It is suggested to go back to how things were handled in 2015 because it made more sense. The organics stream is the most problematic waste stream because it costs more to deal with it, but it is worth doing.

Q/C: There was a scenario where local organic processers were heavily regulated and felt they had to leave the region to be successful. Our governance is very strict, especially if more regulations are introduced. Recycle BC has been unable to share information related to their requirements. If bigger companies are meeting expectations, then the information on how to be successful should be shared with others.

5. IAC Member Co-Chair Election

Co-Chair Hodge stated that a Co-Chair will be elected for a term of one year by a 50%+1 majority vote of voting members present, noting that voting members are defined as Industry Advisory Committee members who have held membership for at least one month prior to the day of the vote.

Lori Bryan, Waste Management Association of BC, was nominated during the March 2026 meeting. Nominations were called by Co-Chair Hodge three times; Lori Bryan was the only nominee.

Lori Bryan was congratulated for being elected to the role of Co-Chair, and she shared sentiments, including a commitment to continue to raise concerns, lead fulsome discussions, and bring forward solutions to the industry. Co-Chair Bryan stated her commitment to the Industry Advisory Committee members and ensuring their voices and concerns will be addressed appropriately.

6. INFORMATION ITEMS

5.3 IAC Meeting Action Tracker
5.4 Draft IAC Member Biographies

Co-Chair Lori Bryan, called the meeting to order at 2:05 p.m. and welcomed attendees to the Solid Waste and Recycling Industry Advisory Committee meeting.

Housekeeping reminders were provided, including that the meeting was being live-streamed and the recording would be posted to the Industry Advisory Committee webpage. It was emphasized that while diverse perspectives are valued, all committee members share the responsibility of maintaining professional conduct; respectful dialogue and engagement are appreciated.

1. AGENDA

1.1 May 12, 2026, Meeting Agenda

Co-Chair Bryan reviewed the May 12, 2026, meeting agenda. No additions were made.

2. MINUTES

2.1 April 7, 2026, Meeting Minutes

Co-Chair Bryan called for any additions or changes to the Minutes of the April 7, 2026, Industry Advisory Committee meeting. No additions or changes were made.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Source Reduction Hauler Incentive Program

Paul Henderson, General Manager, Metro Vancouver,
introduced a potential hauler incentive program, to work collaboratively with haulers by incentivizing actions to encourage waste reduction and recycling among their customers. Dillon Consulting presented preliminary concepts for how the program could use incentives to improve outcomes, especially in multi-family homes, including increasing access to recycling systems, reducing electronics in the waste stream, and addressing illegal dumping through bulky item collection. These concepts are in the early stages and are being shared to generate discussion. Feedback and discussion is welcome.

Veronica Bartlett, Senior Solid Waste Planner, Dillon Consulting, shared a presentation titled, "Metro Vancouver Hauler Incentive Program." Highlights of the presentation included:

- The key objectives for a hauler incentive program include:
  - Reduce disposal of banned materials
  - Increase recycling of waste from disposal
  - Improve equity through increasing accessibility for multi-family residents to available recycling programs
  - Reduce illegal dumping of bulky waste
- Two tiers are being considered for a hauler incentive program:
  - Tier 1: Recycling and organics collection:
    - Would exempt haulers or processors from tipping fee surcharges for banned recyclable material in the garbage stream on residential and commercial waste disposed of at Metro Vancouver facilities

        - Would be open to account holders at Metro Vancouver waste facilities, including member municipalities using staff or contractors to service residential dwellings, or private haulers for whom at least one-third of their serviced accounts are from the multi-family sector
        - Propose that haulers would submit an attestation annually confirming, to the best of the hauler's knowledge, that their multi-family customers have recycling and organics collection in place where the hauler provides garbage collection, and that materials collected for recycling were not subsequently commingled with garbage and disposed of
    - Tier 2: Bulky items and electronic collections:
        - Would provide incentives through a tipping fee rebate to haulers who offer bulky item and electronics collection services to multi-family buildings for which they provide waste collection services
        - Eligibility would include being an account holder at Metro Vancouver's solid waste disposal facilities, meeting the Tier 1 program criteria, and meeting service level requirements for the Tier 2 program
        - Possible service level requirements
        - Suggested monthly reporting requirements
        - Haulers may be required to submit independent third-party audit reports to Metro Vancouver to verify program compliance and the accuracy of reported data
        - False attestations, or misrepresentations of items collected or end-of-life management, may result in removal from the program
- Program engagement included hauler interviews (small, medium, large, clean-out haulers, and charity), product stewards, and property management organizations
- Future engagement planned with the Solid Waste and Recycling Industry Advisory Committee and the Regional Engineers Advisory Committee Solid Waste Subcommittee

It was noted that if there is interest in pursuing a hauler incentive program, possible next steps may include establishing a working group to help inform the program. All members were encouraged to provide feedback or comments to Metro Vancouver at the meeting or by emailing solidwasteoperations@metrovancouver.org.

Discussion ensued, and the following questions and comments (Q/C) and *responses (R)* were captured:

Q/C: Has Metro Vancouver or Dillon Consulting evaluated potential approaches to address feedback from small and medium haulers who expressed concern that the incentive program may disproportionately benefit larger companies?

R: There is an interest in hearing more from industry representatives to explore ideas on how to address this concern.

Q/C: The intention is to offer up to 12 junk removal pick-ups for residential properties, but the volume is unknown. Do we know the estimated cost for Metro Vancouver?

R: It is suggested to pick up a maximum of four large items per household; however, members are encouraged to provide feedback on this suggestion.

R: Some municipal cost data was collected, but more research is required.

Q/C: There should be a balanced approach for all haulers to ensure the small and medium businesses are able to participate fairly.

R: The intention of this presentation was to show the potential opportunity and have the Industry Advisory Committee provide feedback.

Q/C: Which haulers were approached during the initial engagement, and why were others excluded?

R: We are unable to confirm during this meeting who was approached in the initial engagement, but there is an interest in speaking with any hauler who is interested.

Q/C: Members continually express concerns that the Industry Advisory Committee is consistently informed of ongoing work only after key decisions have been initiated. Funding has already been allocated to a consultant to develop a plan, and it is important to have discussions before external consultations begin.

R: This program is very much in the conceptual stages. There is a desire to continue discussions with the Industry Advisory Committee and others in the waste industry.

Q/C: A lot of work was put into this, and a detailed plan was presented. Additionally, selectively approaching specific groups and not being inclusive is not the right way to move forward.

R: This is not a fully developed plan, and Dillon Consulting would be available to interview anyone interested.

Q/C: What is the intention of the plan, and what do we want to accomplish?

R: The purpose of the program would be to encourage proper management of challenging materials, such as bulky items and electronics.

Q/C: Government subsidies or incentives are not always the best approach, and haulers should be allowed to compete in the market. There has been no mention of this program increasing recycling rates. The focus should be on de-incentivizing companies or penalizing them to help keep items out of the disposal stream.

Q/C: As a mid-sized company, this excludes us from this program, but there is a strong belief that we can support this work.

Q/C: Rather than complicating processes, improvements should be made to the facilities. It is hard to support this approach because there are clear gaps and a lack of transparency.

Q/C: Have we heard how it's been going in CRD, and what achievements have there been since implementation?

R: Dillon Consulting has connected with others who have similar programs, and they are currently reviewing their data and performance metrics to gain a clear understanding of their current state. An update can be provided to the Industry Advisory Committee.

Q/C: A provincial standard should be developed and implemented.

Q/C: Previously, drivers were allowed to pull things out of the load that did not belong in there.

R: This is still permitted currently, as long as it is able to be done safely. Often removal of materials from large loads cannot be accomplished in a safe manner.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Metro Vancouver, provided the following Zero Waste Committee and other updates:

- The Zero Waste Committee did not meet in May 2026
- On April 24, the Greater Vancouver Sewerage and Drainage District (GVS&DD) Board endorsed the draft Solid Waste Management Plan, and additional comments are being received before submission to the Ministry of Environment and Parks
- The GVS&DD Board approved tipping fee increases, and Metro Vancouver is drafting a letter that the industry can share with customers to communicate the upcoming changes that will be in effect July 1, 2026
- A letter titled "Request for Ban on the Import and Sale of Single Use Nitrous Oxide Cylinders" was sent to Canada's Minister of Health and Minister of Environment, Climate Change and Nature, requesting the prohibition of the import and sale of single-use valved nitrous oxide cylinders
    - Metro Vancouver staff are contacting other entities, such as local health authorities, the Retail Council of Canada, and the Federation of Canadian Municipalities, to gather support for requesting a prohibition of the import and sale of single-use valved nitrous oxide cylinders.

In response to a request for a draft hauler license to be shared with the Industry Advisory Committee, Paul Henderson stated that there is no work underway on a hauler licensing program and previous drafts were not approved. Co-Chair Craig Hodge noted that extensive engagement and consultation would be needed before producing a draft agreement.

4.2 Committee Coordination Updates

Samantha Joy, Engagement Specialist, Solid Waste Services, requested that members review the draft Industry Advisory Committee member biographies that were included in the agenda package and noted that the document will be posted to the Industry Advisory Committee webpage. A follow-up email will be sent to members who still need to submit their existing or potential conflict statements.

Kaminski, Jamie – HSR Zero Waste
Kawakami, Sean – Convertus Group
Kheyrandish, Ata – Richmond Steel Recycling
Kiani, Aiden – Lock-Block Ltd.
Lannin, Mike – Super Save Group
L'Heureux, Lindsay – Recycle BC
Ligumksy, Alan – Peak Disposal Services Inc
Lotzkar, Jacqueline – Canadian Association of Recycling Industries (CARI)
Mac Neil, Patrick – Wescan Disposal Ltd.
MacFarlane, Angus – Growing City
Mallari, Achilles – Sierra Waste Services Ltd.
McRae, Ralph – Revolution
Millman, David – WM
Muir, Wesley – Veolia Canada
Pantazopoulos, Dimitri – Waste Connections of Canada
Punja, Rustam – Geocycle Canada Inc.
Sigmund, Sandy – Encorp, Return-It
Skei, Dayton – EverGen Infrastructure Corp.
Hoffman, David – Republic Services
Von Stefenelli, Nicole – Urban Impact Recycling Ltd
Watson, Jason – JW Recycle-IT Inc.
Zarbl, Michael – Major Appliance Recycling Roundtable

METRO VANCOUVER REGIONAL DISTRICT
SOLID WASTE AND RECYCLING INDUSTRY ADVISORY COMMITTEE MEETING

Minutes of the Regular Meeting of the Solid Waste and Recycling Industry Advisory Committee Meeting held via Zoom teleconference from 2:00 p.m. to 4:00 p.m. on Tuesday, June 9, 2026.

MEMBERS PRESENT:

Craig Hodge, Director, Zero Waste Committee (Co-Chair)
Bryan, Lori, Executive Director, Waste Management Association of BC (Co-Chair)
Baker, Todd – Ecowaste Industries Inc.
Charles, Terry – Empower/ Northstar
Collins, James – Tymac Launch Service Ltd.
Drissi El-Bouzaidi, Nabil – Ecowaste Industries Ltd.
Hankins, Grant – Canada Minibins.com Ltd.
Hoffman, David – Republic Services
Kheyrandish, Ataollah – Richmond Steel Recycling
Kiani, Aiden – Lock-Block Ltd
L'Heureux, Lindsay – Recycle BC
Ligumsky, Alan – Peak Disposal Services Inc.
Mac Neil, Patrick – Wescan Disposal Ltd. Canada Corp.
MacFarlane, Angus – Growing City
Millman, David – Waste Management of Canada Corporation
Pantazopoulos, Dimitri – Waste Connections of Canada
Skei, Dayton – Evergen Infrastructure Corp.

MEMBERS ABSENT:

Abrams, Izzie – Waste Connections of Canada
Hakimé, Maya – Merlin Plastics
Johnson, Gord – Empower/ Northstar
Kaminski, Jamie – HSR Zero Waste
Kawakami, Sean – Convertus Group
Lannin, Mike – Super Save Group
Lotzkar, Jacqueline – Canadian Association of Recycling Industries (CARI)
Mallari, Achilles – Sierra Waste Services Ltd.
McRae, Ralph – Revolution Infrastructure Inc.
Muir, Wesley – Veolia North America (Canada)
Punja, Rustam – Geocycle Canada Inc.
Sigmund, Sandy – Encorp Pacific Canada, Return-It
Stefenelli, Nicole – Urban Impact Recycling Ltd.
Watson, Jason – JW Recycle-IT Inc.
Zarbl, Micheal – Coast Waste Management, Board member

METRO VANCOUVER STAFF:

Henderson, Paul – General Manager, Solid Waste Services
Chong, Chris – Multimedia
Du, Kelly – Project Engineer, Solid Waste Planning
Fulton, Fulton – Senior Project Engineer, Solid Waste Planning
Joy, Samantha – Engagement Specialist, Solid Waste Community Engagement
Liu, Stephanie – Program Manager, Solid Waste Community Engagement
Mizan, Zeenia – Program Assistant I, Solid Waste Community Engagement
Storry, Karen – Senior Project Engineer, Solid Waste Planning
Underwood, Chris – Division Manager, Solid Waste Planning
Vidler, Lynne – Lead Senior Engineer, Solid Waste Operations

PREPARATION OF MINUTES: Priya Kullar, Raincoast Ventures Ltd.

METRO VANCOUVER REGIONAL DISTRICT
SOLID WASTE AND RECYCLING INDUSTRY ADVISORY COMMITTEE

Tuesday, June 9, 2026
2:00 p.m. to 4:00 p.m.
Zoom Teleconference

A G E N D A

1. AGENDA
1.1 June 9, 2026 Meeting Agenda

2. MINUTES
2.1 May 12, 2026 Meeting Minutes

3. REPORTS AND ITEMS FOR DISCUSSION
3.1 Waste Composition Study
For information and Q&A
Designated Speakers: Kelly Du, Project Engineer, Metro Vancouver

3.2 Solid Waste Management Plan: Detailed Items
For discussion
Designated Speakers: Terry Fulton, Senior Project Engineer, Metro Vancouver

4. **OTHER BUSINESS**
4.1 Zero Waste Committee and Other Updates
For information
Designated Speaker: Paul Henderson, General Manager, Solid Waste Services

5. INFORMATION ITEMS
5.1 Regional Waste Flows
5.2 IAC 2026 Work Plan
5.3 IAC Meeting Action Tracker

Co-Chair Director Craig Hodge, called the meeting to order at 2:04 p.m. and welcomed attendees to the Solid Waste and Recycling Industry Advisory Committee Meeting.

Housekeeping reminders were provided, including that the meeting was being live-streamed and the recording would be posted to the Industry Advisory Committee webpage.

Co-Chair Hodge announced that Michael Zarbl, will continue as an Industry Advisory Committee member, now representing Coast Waste Management Association, noting that the Terms of Reference state reapplication is not required when a previous Industry Advisory Committee member joins a new organization.

1. AGENDA

1.1 June 9, 2026, Meeting Agenda

Co-Chair Hodge reviewed the June 9, 2026, meeting agenda. No additions were made.

2. MINUTES

2.1 May 12, 2026, Meeting Minutes

Co-Chair Hodge called for any additions or changes to the Minutes of the May 12, 2026, Industry Advisory Committee meeting. No additions or changes were made.

3. REPORTS AND ITEMS FOR DISCUSSION

3.1 Waste Composition Study

Kelly Du, Project Engineer, Metro Vancouver, shared a presentation titled, "2025 Full-Scale Waste Composition Study Results". Highlights of the presentation included:

- Despite an overall downward trend in compostable organics since 2021, there has been a slight increase since 2025
- Plastics have shown a consistent upward trend since 2022, and paper has seen a slight increase since 2023
- For items with a low proportion in the waste stream, such as single-use items, sample data from a small number of loads can have a significant impact on the overall calculations
- Single-use disposal is 3.3% of the waste stream by weight
- Plastic checkout bags, foam takeout containers, and foam cups are declining, while paper and plastic cups and plastic takeout containers are increasing
- In 2024, there was a methodology change as it was apparent that high counts needed to be included in the commercial sector, as they may reflect a genuine waste generation pattern
- Trends for straws and utensils influenced by the commercial/institutional sector cannot be clearly determined at this time.

Discussion ensued, and the following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: What is the percentage of single-use items in the overall waste stream?

R: Single-use items make up 3.3% of the waste stream by weight.

Q/C: What is the action from this study? There was an assumption that moving towards reusable bags and compostable straws was the direction, and it is unclear what we are supposed to do with these findings. It's also unclear what this data has to do with regional waste planning in general.

R: This study and the resulting data shows trends over time and areas where we could focus. Specifically, it's looking at where large quantities of material in the waste stream might align with actions identified in the Solid Waste Management Plan. The study gives us data that supports our approach in the programs and initiatives we develop. The study is also important because we rely on consistent data to understand the challenges of our system and to see areas where we can make the most significant impact.

3.2 Solid Waste Management Plan: Detailed Items

Terry Fulton, Senior Project Engineer, Metro Vancouver, shared a presentation titled, "Draft Solid Waste Management Plan Detailed Items". Highlights of the presentation included:

- The draft Solid Waste Management Plan is published, and the additional comment period is open as of June 1, 2026. All additional comments will be received until August 1, 2026
- Comments collected during this time will be submitted to the Minister of Environment and Parks along with the draft plan.
- There were revisions made to the focus areas related to increasing access to organics and recycling services for multi-family residents, businesses, and institutions, as well as expanding efforts to prevent the disposal of valuable food in organics
- The regulatory and strategic approach does not specify what regulatory initiatives would go ahead, and emphasizes that any initiative being considered in future would be accompanied by a transparent and meaningful engagement process
- Strategies for different topics related to encouraging the development of new recycling infrastructure, enhancing approaches to Metro Vancouver's disposal ban program, and exploring additional long-term disposal capacity if required were shared
- Additional comments on the draft plan can be provided in the following ways: completing the online feedback form, emailing comments to zerowaste@metrovancvouer.org, or scheduling a meeting with Metro Vancouver staff.

Co-Chair Hodge reiterated that all feedback received during the various stages of the Solid Waste Management Plan's development will be included in the submission package, including feedback received during this additional comment period.

Discussion ensued, and the following questions and comments (Q/C) and *responses* (*R*) were captured:

Q/C: Specific words in the draft Solid Waste Management Plan, such as advocate, participate, collaborate, and facilitate, these don't seem like actionable items.

R: *We heard feedback from this committee after in initial draft plan was published that the language around the actions in the plan needed to be stronger and more specific. For this draft we revised the wording wherever possible to be more action oriented. The challenge is that Metro Vancouver does not have regulatory authority over all activities. In areas where we would need to rely on others, we have used wording that allows us to prioritize collaboration and advocacy.*

Q/C: Page 32 of the Solid Waste Management Plan mentions the Federal Sustainable Development Strategy and speaks to reducing waste and transitioning to zero-emission vehicles. How is that connected to the Solid Waste Management Plan?

R: *The draft Solid Waste Management Plan notes how our regional goals align with other levels of government. The Federal government has a Sustainable Development Strategy that identifies the goal of reducing waste and zero-emission vehicles. Although the draft Solid Waste Management Plan doesn't contain actions specifically related to zero-emission vehicles, the draft plan aligns with goals related to reducing waste.*

Q/C: The Industry Advisory Committee would like an update on the waste tracking program that was mentioned previously and would like to hear if there were any significant impacts or findings that impact the plan.

R: *The Smart Waste Program has been in place for a couple of years, and two annual reports are available online. The annual testing program involves placing 20 devices into residential and commercial/institutional garbage containers to observe the movement of waste around the region. Company or organization names on garbage containers are not recrded as part of the annual device testing program. The most recent report showed that all units deployed ended up at a Metro Vancouver facility. The intent of the annual testing program is to provide information on technical capability of the devices.*

There are processes that can be implemented if Metro Vancouver believes a particular company is disposing of garbage at a facility other than a Metro Vancouver or City of Vancouver facility.

Q/C: What is the purpose of hauler licensing and what kind of conditions would be imposed?

R: *Hauler licensing is not being considered at this time, but is listed in the plan as a potential future activity. If it is determined that hauler licensing could be considered (or other potential regulatory mechanisms), extensive engagement would take place before implementation. There is currently no work happening on the development of hauler licensing.*

Q/C: Having the mention of a hauler licensing program in the plan without any specific details creates some uncertainty. More information on this would be appreciated.

Q/C: Metro Vancouver's engagement process could benefit from improvements.

4. OTHER BUSINESS

4.1 Zero Waste Committee and Other Updates

Paul Henderson, General Manager, Metro Vancouver, provided the following Zero Waste Committee and other updates:

- The next Zero Waste Committee meeting is on Thursday, June 11, 2026, and the following reports will be shared:
  - Biennial Report, which is a requirement under the 2011 Solid Waste Management Plan and will provide a two-year update on the progress of the plan
  - Full-Scale Waste Composition Study
  - A series of Manager's Report items including
    - The British Columbia Utilities Commission granted an exemption between the City of Burnaby and Metro Vancouver on the sale of energy for the District Energy System
    - A Waste-to-Energy Facility particulate study concluded that particulate accumulation on a neighbouring warehouse roof is not the result of air emissions from the Waste-to-Energy Facility, and that metal and dioxin and furan concentrations in nearby environmental media are not significantly influenced by the facility's air emissions.
    - As part of a pilot initiative, the Langley Recycling and Waste Centre is now accepting pane glass, windows, and mirrors.

5. INFORMATION ITEMS

5.1 Regional Waste Flows

5.2 IAC 2026 Work Plan

5.3 IAC Meeting Action Tracker

Co-Chair Hodge noted that this was the final meeting before the summer break. Steady progress has been made on the items identified for the first quarter, and some timelines were shifted to ensure appropriate attention is given to all areas of work. It was noted that the group will shift to more operational topics once reconvened in the fall of 2026.

Industry Advisory Committee members were encouraged to submit issues or topics of interest to the Co-Chairs for future discussions.

6. ADJOURNMENT

The next regular Solid Waste and Recycling Industry Advisory Committee meeting will be held on September 15, 2026.

Co-Chair, Lori Bryan, confirmed that all feedback on the draft Solid Waste Management Plan from the Industry Advisory Committee will be included in the submission to the Province and encouraged members to provide additional feedback before August 1, 2026. They expressed their appreciation for members and wished everyone a good summer.

The Solid Waste and Recycling Industry Advisory Committee meeting adjourned at 2:54 p.m.

Member Jurisdiction Workshop Summary – Initial Draft

SOLID WASTE MANAGEMENT UPDATE VISION AND GUIDING PRINCIPLES
Member Jurisdiction Staff Advisory Committees Workshop
March 30, 2023

On March 30, 2023, Metro Vancouver held a workshop with members of the Regional Engineers Advisory Committee-Solid Waste Sub-Committee, Municipal Waste Reduction Coordinators' Committee, and Regional Engineers Advisory Committee (optional) to discuss vision and guiding principles for the updated regional solid waste management plan. Twenty-four member jurisdiction staff, representing 13 member jurisdictions, participated in the workshop.

The vision and guiding principles phase of engagement sets the foundation and direction for the plan development process, by gathering feedback on values, priorities, interests, and key solid waste management considerations now and into the future.

At the March 30, 2023 member jurisdiction workshop, four key questions were presented to members:

1. What waste reduction, recycling and garbage disposal topics are most important, now and into the future?
2. List words or phrases that describe what matters, when deciding what to do with products, packaging and materials that are no longer needed.
3. The updated solid waste management plan is intended to reflect the values of everyone in the region. What values, interests, and priorities can be considered?
4. Thinking of how we purchase, use, reuse, repurpose, recycle and throw things away in the Metro Vancouver region, what could be better in the future than it is today?

A summary of themes that emerged at the workshop is presented in the What We Heard section below.

Next steps include providing an update report to the Zero Waste Committee on what we have heard so far through engagement with First Nations, member jurisdiction staff, and advisory committees, followed by the launch of public engagement on vision and guiding principles. Following public engagement, Metro Vancouver will produce an engagement summary report for this phase of engagement and provide a draft vision statement and guiding principles to the Zero Waste Committee and Board for consideration.

Members are encouraged to submit any additional feedback to zerowaste@metrovancouver.org before May 31, 2023.

WHAT WE HEARD

The table below summarizes themes that emerged through the discussion, which will be taken into consideration as Metro Vancouver continues to engage on the vision and guiding principles for the updated plan.

Priority	What We Heard
Accessibility and inclusivity	Ensure all have access to waste and recycling services, including First Nations, rural residents, and all demographics, e.g. non-English language speakers, those without internet access, and all ages. Provide accessible communications to facilitate access (e.g. multiple languages or using images).
Accountability	Emphasize accountability, and ownership of responsibility from both producers, consumers and businesses to reduce waste. Empower residents to be able to make those choices.
Affordability	Understand and provide solutions to how affordability influences a person's ability to purchase durable goods that last, access reuse markets, and travel to recycling facilities.
Circular economy	Increase repair, reuse and thrifting, rental economy, and building public understanding of circular economy. Foster a cultural shift to view waste as a resource and valuing high quality of pre-owned goods and reducing single-use items.
Climate action	Assess what systems and options have the lowest climate impact.
Collaboration	Foster collaboration and partnerships between residents, multiple levels of government, industry, academia, and school districts.
Convenience and consistency	Increase convenience and harmonize services across the region, and across sectors (e.g. multi-family vs single-family).
Cost incentives	Comment on using fees and taxes to incentivize recycling over disposal.
Education	Communicate with residents about their role in waste reduction, and increasing understanding of services available. Clear and consistent messaging. Encourage sustainable purchasing practices and a cultural shift with respect to consumption. Counteract greenwashing to ensure the actions residents take are effective.
Equity	Invest in people and improve lives while pursuing a zero waste future. For example, increase equity by welcoming and recognizing the role of binners into the solid waste system. Invest in people.
Indigenous values and principles	Embed Indigenous values, such as environmental stewardship and protection.
Innovation and Technology	Transition to a green collection fleet, use clean technology, data analytics and AI to provide information on contamination, and use technology for education (e.g. mobile apps). Allow for innovation.
Product and packaging design	Advocate for quality product designs that are longer-lasting, and more circular and regenerative, allowing for easier recycling, reuse and repair and reducing barriers such as liability concerns. E.g. right to repair legislation Reduce excess packaging, often due to surge in convenient delivery practices. Allowing residents to have a choice in the amount of packaging received.

Member jurisdiction staff workshop activity: "What waste reduction, recycling and garbage disposal topics are most important, now and into the future?"

WORKSHOP ATTENDEES:

Zac Dér, City of Burnaby
Danielle Dontchev, City of Coquitlam
Shannon Hadley, City of Coquitlam
Tess Rouse, Township of Langley
Kwaku Agyare-Manu, City of New Westminster
Meghan Doyle, City of New Westminster,
Stacy Neves, City of New Westminster
Annie Dempster, City of North Vancouver
Lianne Shyry, City of North Vancouver
Caroline Jackson, District of North Vancouver
Michael Toland, District of North Vancouver
Nicola Chevallier, District of North Vancouver
Aubrey McIlwraith-Black, City of Vancouver
Charisse Metcalfe, City of Port Coquitlam
Joshua Frederick, City of Port Coquitlam
Cristy Houston, City of Richmond
Kristina Nishi, City of Richmond
Harry Janda, City of Surrey
Jeffrey Martel, City of Surrey
Christopher Combe, Township of Langley
Emily Willobee, District of West Vancouver
Kristeen DeGobbi, District of West Vancouver
Trevor Doré, District of West Vancouver
Kristian Davis, City of White Rock

Solid Waste Management Plan Update: Idea Generation
Member Jurisdiction Workshop
Friday, November 15, 2024
Anvil Centre, New Westminster

Attendees:
Andrea McKenzie, City of Vancouver
Brynn Doeleman, City of Chilliwack
Caroline Jackson, District of North Vancouver
Cathy Shu, City of Chilliwack
Chris Combe, Township of Langley
Cristy Houston, City of Richmond
David Lee, City of New Westminster
Emily Willobee, District of West Vancouver
Erik Schmidt, City of Burnaby
Harry Janda, City of Surrey
Jeffrey Martel, City of Surrey
Kristeen DeGobbi, District of West Vancouver
Kristina Nishi, City of Richmond
Lianne Shyry, City of North Vancouver
Linh Huynh, City of Richmond
Mallory Palliyaguru, Township of Langley
Megan Jones, City of New Westminster
Melanie Mewhort, District of West Vancouver
Michelle Harris, City of Vancouver
Monica Kosmak, City of Vancouver
Nichelle Cameron, City of Coquitlam
Nicola Chevallier, District of North Vancouver
Noel Reck, City of Coquitlam
Ryan Biehl, City of Delta
Sarah Gleboff, City of Surrey
Shannon Hadley, City of Coquitlam
Sophie Goodman, District of North Vancouver
Wes Mason, City of North Vancouver
Zac Der, City of Burnaby

Metro Vancouver is updating its regional solid waste management plan, building on the strengths of the current plan and identifying ways to accelerate waste reduction and recycling, reduce greenhouse gas emissions, and advance a circular economy. Metro Vancouver is currently in the idea generation phase of engagement. On November 15, 2024 Metro Vancouver held a workshop with member jurisdiction staff. Members of REAC, REAC Solid Waste Sub-Committee, and the Regional Waste Reduction Coordinators Committee were invited. In addition, some member staff not represented on the committees attended the workshop.

Discussions were facilitated at table groups on each of seven key topics. Members chose their topic of interest and engage in three rounds of discussion. Responses and feedback received at the workshop are summarized below. Overall, there was much support for developing consistent approaches across the region, in priority sectors such as multi-family residences. Education and communication were priority actions, particularly using innovative methods like artificial intelligence. Ideas for increasing convenience included introducing flexible plastic collection for recycling, and increasing mobile recycling depots. Systemic issues were discussed such as expansion of extended producer responsibility programs to include new materials, cultural shifts in behaviour, additional regulations for producers of packaging, and advocacy at the provincial and federal levels. Feedback received during the idea generation phase will be assessed in the subsequent phase: options analysis.

SUMMARY OF FEEDBACK:

Discussion topic 1: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **rethink and prevent waste in the first place**?

Education

- Education for public, including youth and businesses, to encourage repair and reuse first, and purchasing durable, long-lasting products. Tailor education by learning where people struggle
- Leverage affordability concerns to motivate the movement away from a disposable culture
- More education particularly for multi-family residences; toolkit and workshops
- Clarity on recycling streams, particularly plastics; complicated system is too overwhelming

Waste Prevention

- Focus on waste prevention in the commercial/institutional sectors
- Design new buildings with deconstruction in mind
- Equity: address the current trade-offs related to affordability and consumption

Reuse and Repair

- Increase opportunities for residents such as repair cafes
- Large-item pick-up programs to address limited reuse options for items like furniture recycling
- Address over consumption of reusable bags, now that plastic bags are banned
- Encourage more residents, businesses, and NGOs to consider reuse and repair
- Reuse markets for wood – discuss role of local government

Regulatory

- Regulations on low quality/durability products, while maintaining affordability
- Regulations to reduce hard to recycle products and excessive packaging (such as delivery boxes)
- Advocate for reuse regulations, right-to-repair legislation, and reuse standards for products

Incentives

- Rewards or recognition for reducing waste
- Increase consumer confidence in cup share programs through reuse certifications
- Incentives for haulers to work with customers to recycle and reduce
- Pay-as-you-throw, without causing an unintended increase in illegal dumping

Research and data

- More research to make the case for reuse and repair, such as quantifying climate benefits, identifying additional benefits like community-buy in, etc.
- Bet er data on reuse and repair progress, as well as mapping of reuse and repair services
- Life cycle analysis to understand the persistence of materials like plastics in the environment
- More transparency from junk removal companies (where do products go)

Other

- EPR program for textiles
- Collect flexible plastics at the curb
- Use clear plastic bags to discourage recyclables in the garbage

Discussion topic 2: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **enhance accountability for eliminating waste**?
What we heard

Reduce

- Reduce overall garbage collected by reducing number or size of garbage carts
- Goal: reduce total overall waste rather than per capita; incorporate climate targets such as scope 3 consumption-based GHG emissions for food, building waste
- Education and promotion of waste reduction and reuse in the construction industry by fostering innovative designs

Reuse

- Update regulations to require QR codes on products that lead to information about how to recycle or repair the product
- Create framework for building disassembly and reuse
- Standardized labelling that shows climate impact of a product and ways to recycle or reuse when the product life is over

Recycle

- Incentivize organics and recycling programs, such as through discounted municipal rates for recycling v.s. garbage; bundle recycling/garbage services together
- Collaborate with industry to educate multi-family residences to reduce contamination
- Engage with housing and development entities
- Increase accessibility to drop-off locations – increased convenience will change behaviour
- EPR programs can collaborate with industry to create opportunities to drop-off recycling at the same location as point of purchase
- ECO fees embedded into the cost of products instead of shown as an additional fee
- Recycle BC provide more transparent data and work closely with municipalities to achieve waste reduction in multi-family residences
    - Recycle BC direct service to multi-family buildings has been a success, but jurisdictions have no access to information about how these programs are performing

Other

- Increase frequency of waste audits – this will help increase accountability
- Enhance public education and promotion of need for accountability

Discussion topic 3: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **leverage knowledge and expertise through collaboration**?
What we heard
Key collaborators • Collaboration with non-profit organizations, schools, and youth organizations to help implement the solid waste management plan • Focus discussions among municipalities to advance specific priority areas (e.g. multi-family sector waste reduction, construction and demolition) • Collaboration with academia on climate issues and consumer behaviour change *Research and data* • Platform for data sharing and reporting between member jurisdictions to improve coordination; library of case studies; dedicated working sessions; guest speakers from outside of the region. • Explore how to measure the success of collaborations (e.g. reuse days tonnages, number of items repaired at repair cafes) • Research and keep up to date with emerging non-profits that bring new technology, programs, or capacity for collaborations *Other* • Respond to impacts of housing densification • Provide language support/translation for programs, bylaws, etc. • Metro Vancouver take the lead on advocating for policy change with senior levels of government, with support from member jurisdictions

Discussion topic 4: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **increase participation and reduce contamination in organics and recycling programs**?
What we heard
Depots • Eliminate barriers to accessing depots (e.g. a vehicle is often required to access) • Expand the return-to-retail drop-off network, to improve accessibility and convenience (collaborate with businesses) *Multi-family Residences* • Leverage artificial intelligence to increase accountability at multi-family residences by installing cameras on container lids or in recycling rooms; address potential privacy concerns; streamline practices for multi-family across the region • Incentives are preferred over penalties – financial incentives, rebate, grant programs specifically for multi-family • Provide hands on education/presentations to multi-family property managers and strata • Set guidelines for garbage/recycling rooms • Develop a best practices guide for multi-family; work with property managers

Contamination

- Ensure frequency of recycling pick up is sufficient, to reduce contamination in bins
- Reduce garbage collection frequency to increase participation in other streams
- Increase enforcement for businesses
- Enforcement at point of collection; introduce penalties as a financial disincentive; consider region-wide penalties for consistency
- Lack of understanding, constant changes in programs, accessibility, and other factors contribute to contamination
- Use artificial intelligence to monitor contamination
- Bet er metrics required to enable incentive programs
- Simplify recycling. Recycle BC to provide clear information on materials accepted province-wide

Organics

- Allow one type of compostable plastic, to increase organics recycling participation while addressing the issue of plastic contamination in the organics stream
- Bet er regulate labelling of compostable plastics
- Leverage social media for positive messaging; create reels about the journey of organics from the bin to the finished compost product
- Restrict the sale of compostable plastic

Discussion topic 5: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **promote confidence in recycling systems**?

What we heard

Education/Messaging

- Support schools to provide education on where materials end up
- Amplify messages on what happens to recyclables; example is collaborating with C&D and recycling processing facilities to produce videos or organize tours for the public
- Provide resources for small businesses
- Expand the types of platforms used for education through social media – to counteract messaging promoting skepticism on platforms that governments currently aren't using (e.g. Tiktok)
- Educate on roles of different levels of government – as residents don't understand who is responsible for what
- Demonstrate what happens to recycling – this has worked with compost giveaways that tell the story of where compost comes from

Extended Producer Responsibility

- Collaborate with Recycle BC to more effectively share data, thus increasing transparency and promoting confidence

- Educate about extended producer responsibility as not everyone understands it
- Advocate to provincial government to require extended producer responsibility organizations to budget for education on confidence/awareness of their programs
- Advocate for a simpler system where a single EPR agency is responsible for recycling; complexities of the system make it difficult to explain

Discussion topic 6: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **expand inclusive programs and services**?

What we heard

Education

- Translations and diagrams on educational materials and curbside calendars
- Physical brochures rather than QR codes to overcome technological barriers
- Workshops for newcomers, those who speak a different language, and different age groups including children. Promote where people already are, such as places of worship, community centres, community events, schools, etc.
- Artificial intelligence or chatbots to educate on identifying and sorting materials
- Library programs to educate on sorting waste

System

- Enhance large item pick-up, special collection services – to overcome barrier of needing to transport materials to facilities
- Harmonization of how waste/recycling is collected in the region
- Identify gaps in service across the region for accessibility
- Identify industrial lands available to support new facility/depot development
- Improve access by introducing mobile recycling centres in multi-family neighbourhoods; Distributed drop off locations in hubs, such as Drop-off events; collect in places where people are already gathering
- Permanent repair cafes
- Requirements on the type and amount of bins for construction sites; focus on wood

Research

- Investigate how to maximize low-barrier employment opportunities in roles that support waste reduction
- Research barriers for people to access programs, such as newcomers; work with organizations already working with these demographics to conduct this research

Discussion topic 7: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **plan for future infrastructure and systems for waste management across the region**?
What we heard

Reuse

- Expand reuse across the region, for example making space available for reuse operations/organizations on-site.

Facility technology and setup

- Secondary screening/separation at the tipping floor to remove recyclables.
- Incorporate new technology where possible throughout the facility to enhance customer experience and operational performance, such as artificial intelligence in recycling depots – to help improve data transparency and visibility on contamination.
- There are limited options for recovering C&D waste -- either take an enhanced role at receiving additional C&D waste for recycling at facilities or investigate where the private sector can help fill in the gaps in the system.
- Expand capacity at recycling depots to receive more recyclables from businesses and municipalities (allowing larger loads and higher limits).
- Mobile or satellite recycling depots for small-scale multi-unit housing (i.e., helping system adapt to recent provincial legislative changes re: housing density).

Ownership of facilities

- Benefit of Metro Vancouver solid waste facilities includes disposal ban program, important that Metro Vancouver maintain ownership of the facilities.
- Private facilities – complaints about inconsistencies of levels of services offered at private recycling (e.g. EPR supported depots) and disposal facilities – difficult/inconvenient for customers to travel to various facilities with variable operating hours and acceptance of materials in order to drop off all recyclables.
- Continue to upgrade or replace existing facilities and build new facilities where/when warranted.
- Review procurement best practices, e.g. reclaimed materials in new construction of facilities.

Facility availability and accessibility

- Affordability concerns with residents cost of transporting and delivering waste; Local recycling and disposal options can help with rising costs
- "Free waste drop-off" events to help reduce illegal dumping and promote awareness of drop-off options.
- Increase accessibility to services for those who face transportation barriers.
- Map out regional locations of facilities to identify where to plan future facilities based on demographics and zoning.

Land Use

- Preserve light industrial land supply or plan ahead to acquire lands for future facilities.
- Protect industrial zoning designations, to facilitate investment and encourage recycling start ups.

Solid Waste Management Plan Update: Options Analysis
Member Jurisdiction Workshop

Monday, October 6, 2025
Metro Vancouver – 4515 Central Boulevard, Burnaby
23 Floor, 2809 Conference Room

Attendees:

Metro Vancouver is updating its regional solid waste management plan, building on the strengths of the current plan and identifying ways to accelerate waste reduction and recycling, reduce greenhouse gas emissions, and advance a circular economy. Metro Vancouver is currently in the options analysis phase of engagement. The objective of this phase is to help determine what strategies and actions to include in the draft solid waste management plan.

On October 6, 2025, Metro Vancouver held a workshop with member jurisdiction staff. Members of REAC, REAC Solid Waste Sub-Committee, and the Regional Waste Reduction Coordinators' Committee were invited. The purpose of the meeting was to provide an opportunity for engagement on potential strategies and actions for the updated plan. Discussions took place at six table groups on potential strategies and actions falling under each of the first four 'R's' (Rethink, Reduce, Reuse, Recycle):

- Rethink
- Reduce
- Reuse (Reuse, Refill, Repair)
- Reuse (Built Environment and Food)
- Recycle (Infrastructure and Programs)
- Recycle (Education)

A plenary discussion took place on actions under Recover, as well as a list of ideas from the previous phase that staff consider unadvisable.

SUMMARY OF FEEDBACK

Below are highlights from feedback at the workshop, categorized by the small group topics at the workshop. Detailed notes were recorded to capture all feedback related to the actions and Metro Vancouver will consider each comment as the actions are further revised and updated.

In addition to general discussion, small groups participated in a scoring exercise to prioritize actions for inclusion in the updated solid waste management plan. The scoring, while not considered as a vote or a final decision-making tool, reflected participants' initial thoughts around prioritization and the results are presented below.

General comments
• Request that member jurisdiction actions do not commit member jurisdictions but rather include some degree of flexibility for members to implement where appropriate. Suggest similar wording on all member actions to ensure this is clear. • Appreciation for engagement with member jurisdictions on each aspect of the plan update • Member jurisdictions have a role in actions beyond just the specific member jurisdiction actions. Sometimes it is unclear why only certain actions were identified as 'member actions' • Actions can be edited to be more specific, less wordy, and in some cases combined/consolidated (e.g. similar actions for different sectors) • Suggestion to organize the plan by sector • Emphasize regulation and enforcement • Consider each action as its own mini project: it should have a defined start and finish with a measurable outcome

RETHINK
• Important to emphasize we are leading by example and will share learnings from corporate waste prevention policies and programs broadly. • Identify how the actions are different from current practice. Note actions already taking place. • Do not focus on only one sector when sharing success stories to promote waste prevention • For advocacy be clear and specific what we are advocating for and who we would be advocating to

- Support for ID091 (methods for reporting environmental benefits for waste prevention actions) and ID097 (reporting by material type on all levels of the hierarchy)
- Need to emphasize more regulation as opposed to voluntary measures. Education is important but needs to be accompanied by incentives and regulations.
- Need more focus on supporting businesses, including construction and demolition sector
- When referring to collaborative research projects, identify examples of who would be involved
- Consider keeping actions focused on circular economy as opposed to referencing specific sectors.
- Consider how to be bolder and more measurable with circular economy actions and commitments.
- Consider how to build more of an economic development lens or focus to the actions.

Scoring for Strategy 1.2 Support the transition to a more circular regional economy through waste prevention

Action ID	Score (priority for inclusion in plan)	Action ID	Score (priority for inclusion in plan)
ID088	15	ID011	8
ID016	12	ID012	0
ID079	12	ID070	0
ID007	11		
ID014	11		

REDUCE

- Related to facilitating locations for waste reduction businesses, there needs to be more clarity on what the municipality would be doing – participating v.s. providing the space
- Related to zoning and development bylaws: suggest stronger language on what the expectation is, while ensuring members can choose whether they can implement the action.
- Municipalities can host workshops (in addition to Metro Vancouver)
- Several actions related to construction and demolition can be combined, as well as actions all related to convening sectors and sharing information.
- Construction and demolition action should have a corresponding municipal action to support
- Refrain from using examples – ID161 don't single out business licences as an example.
- Including requirements on business licence applications is challenging and not practical
- Pursue EPR for ICI sector. Local governments can facilitate and educate, not enforce
- Consider mandatory source separation as a solution for businesses
- Instead of in-person education, create resources like videos and toolkits, or attend existing events
- Developing tools for business would be much easier if rules and systems were harmonized across municipalities. The first step is to align/harmonize.

- Barrier for business is not education – regulation is required as businesses make changes if there is a requirement or if there is a financial incentive.
- Consider inspections at the business level, rather than only at disposal facilities.
- Technology to enhance disposal bans makes sense, but remove reference to clear bags.
- Include the criteria that would be used prior to expanding the types of materials included in disposal bans. Remove textiles as an example
- Rather than Metro Vancouver providing incentives to haulers to provide recycling services, perhaps we can collaborate with EPR organizations
- Review and refresh existing behaviour change campaigns such as Food isn't Garbage.
- In addition to multi-family residents, reach out to property managers, stratas, and haulers.

Scoring for Strategy 2.1 Collaborate with businesses and institutions to reduce waste at the source

Action ID	**Score (priority for inclusion in plan)**	**Action ID**	**Score (priority for inclusion in plan)**
ID043	38	ID008	33
ID062	38	ID002	28
ID040	38	ID100	22
ID161	35	ID006	13
ID162	33	ID101	11

Scoring for Strategy 2.4 Enhance approaches to Metro Vancouver's disposal ban program

Action ID	**Score (priority for inclusion in plan)**
ID105	17
ID108	14
ID106	10
ID107	4

REUSE (Reuse, Refill, Repair)

- Prompt action on including reuse requirements to the regionally harmonized approach for single-use item reduction bylaws – things can be done now already
- Focus less on the 'how' (e.g. workshops) and more on the 'what' (e.g. develop home relocating and deconstruction bylaws)
- Emphasize collaboration in the actions
- Municipalities require support from Metro Vancouver to implement reusable food service ware guidelines at public events and facilities (particularly with data from waste composition).
- Not all civic facilities are directly serviced by the city which adds challenges to implementing reuse.
- Support for expanding reuse options at recycling and waste centres; and also encourage reuse drop-off at municipal depots.
- Unsure of feasibility of a regional-scale reusable food service ware system. Efforts may be better directed to other reuse projects.
- Support for working with libraries to donate and recycle books.
- Provide more details on what incentives could be provided to the ICI sector to implement refill/reuse systems
- Low support for 'reuse mall' idea as online marketplace is more successful
- General support for 'library of things', but note that not all libraries are run by municipalities
- For mapping repair, lean on existing tools/maps/databases currently run by others

Scoring Group 1 (across multiple strategies)

Action ID	Score (priority for inclusion in plan)	Action ID	Score (priority for inclusion in plan)
ID034	15	ID057	15
ID063	15	ID082	13
ID163	15	ID032	11
ID056	15	ID033	10
ID166	15		

Scoring Group 2 (across multiple strategies)

Action ID	Score (priority for inclusion in plan)	Action ID	Score (priority for inclusion in plan)
ID034	15	ID066	10
ID063	15	ID055	10
ID163	14		
ID082	13		
ID033	10		

REUSE (Built Environment and Food)

- Actions need to be more tangible and measurable, but not so specific as to become irrelevant due to changes in the sector
- Several actions re: reuse in the built environment can be combined, examples can be listed to provide necessary context
- There are issues with what is currently practical in this sector; a lot of work needs to be done to lay the groundwork before encouraging residents to use reused building material
- Consider regular meetings with construction and demolition sector representatives to move forward collaborative actions

Scoring for Strategy 3.2 Increase reuse of used building materials

Action ID	Score (priority for inclusion in plan)	Action ID	Score (priority for inclusion in plan)
ID037	23	ID035	N/A
ID046	23	ID036	N/A
ID039	N/A		
ID045	N/A		
ID038	N/A		

RECYCLE (Infrastructure and Programs)

- Consider a broader action related to research on improving recyclability, rather than specifically on plastic-lined paper products
- High support for advocating for additional materials to be added to EPR
- Some EPR related actions can be combined/consolidated
- Suggest a separate section for actions that help reduce barriers and increase accessibility
- Consider use of AI for better analysis of litter and illegal dumping data

Scoring for Strategy 4.1 Promote design for recyclability and the use of recycled content in products and packaging

Action ID	Score (priority for inclusion in plan)	Action ID	Score (priority for inclusion in plan)
ID110	13	ID113	5
ID112	12	ID109	0
ID114	12 *adjusted to normalize for one additional participant		
ID111	9		

ID115	9		

Scoring for Strategy 4.2 Enhance EPR programs

Action ID	Score (priority for inclusion in plan)	Action ID	Score (priority for inclusion in plan)
ID116	15	ID120	3
ID118	15		
ID064	12		
ID117	12		
ID121	11		

Scoring for Strategy 4.3 Encourage the development of new recycling infrastructure

Action ID	Score (priority for inclusion in plan)
ID122	12
ID124	12
ID044	11
ID123	3

Scoring for Strategy 4.8 Prevent litter and illegal dumping through public space recycling initiatives

Action ID	Score (priority for inclusion in plan)
ID175	20
ID176	16
ID174	10
ID178	Low priority
ID177	Low priority

RECYCLE (Education)

- Consistency in materials accepted across the region makes sense, but who would be streamlining contracts for all member jurisdictions – i.e. how can this action be implemented
- Support for standardized signage
- Centralized information sources can be challenging as information may differ between jurisdictions – because of this, a centralized information source may add confusion
- Metro Vancouver setting clear multi-family space guidelines would help with consistency across the region. RecycleBC should be involved in this conversation.

- Digital tools for communication are important but budget is often a barrier. It would be helpful for Metro Vancouver to lead this; however, also consider that there are differences in programs across municipalities so this may not be practical.
- Recycle BC should be involved in the conversation on streetscape interventions
- Standardization in public spaces is an important role for Metro Vancouver
- Actions that don't describe 'how' are too vague – for example providing clear guidelines on what can and cannot be recycled (this needs to be more specific)
- Need more clarity on how those who recycle well would be 'rewarded' (ID132)
- Several actions under strategy 4.5 are similar and may be combined
- Consider role of property managers in the actions related to multi-family and commercial sectors
- Adjust language to put more responsibility on producer responsibility organizations
- Review data on current use of backyard and worm composting bins to assess whether this is still relevant to include, as most homes in the region have access to curbside organics collection
- Related to gamification: there could be a benefit in a central resource rather than multiple organizations developing their own; research effectiveness of gamification first
- Consider Recycle BC's role where relevant, in actions related to residential recycling education
- Actions related to piloting technologies and AI can be combined

Scoring for Strategy 4.5 Make recycling easier and more effective by reducing confusion and improving convenience

Action ID	Score (priority for inclusion in plan)	Action ID	Score (priority for inclusion in plan)
ID142	17	ID131	11
ID141/138	17	ID133	11
ID139/137	16	ID140	10
ID132	14	ID135	10
ID134	11	ID136	6

Scoring for Strategy 4.6 Target recycling education

Solid Waste Management Plan Update: Initial Draft Member Jurisdiction Workshop

Monday, February 9, 2026
Metro Vancouver – 4515 Central Boulevard, Burnaby
28 Floor, 2809 Conference Room

Attendees:

Alexandra Wiens, City of Delta
Bo Ocampo, District of North Vancouver
Caroline Jackson, District of North Vancouver
Cristy Houston, City of Richmond
David G Lee, City of New Westminster
Emily Willobee, District of West Vancouver
Erik Schmidt, City of Burnaby
Erin Blaney, City of Langley
Jeffrey Martel, City of Surrey
Kristina Nishi, City of Richmond
Kyle Simpson, City of Port Coquitlam
Linh Huynh, City of Richmond
Lucas Kelsch, City of North Vancouver
Michelle Harris, City of Vancouver
Nichelle Cameron, City of Coquitlam
Queenie Wong, City of Delta
Shannon Hadley, Township of Langley
Stacey Neves, City of New Westminster
Tom Madigan, District of North Vancouver
Trevor Doré, District of West Vancouver

Metro Vancouver is updating its regional solid waste management plan, building on the strengths of the current plan and identifying ways to further reduce waste, increase recycling, reduce greenhouse gas emissions, and advance a circular economy.

On February 9, 2026, Metro Vancouver held a workshop with member jurisdiction staff to receive feedback on the initial draft solid waste management plan. Members of REAC, REAC Solid Waste Sub-Commit ee, and the Regional Waste Reduction Coordinators' Commit ee were invited. Prior to the meeting, Metro Vancouver polled members to identify priority parts of the plan for small group discussion. Final small group topics were:

- Member actions
- Strategic approaches
- Targets and metrics
- Dispose actions

SUMMARY OF FEEDBACK

Below are highlights from feedback at the workshop, categorized by the small group topics at the workshop. Detailed notes were recorded to capture all feedback related to the initial draft plan and Metro Vancouver will consider each comment as the draft is revised in preparation for providing to the Zero Waste Commit ee and GVS&DD Board. Following Board approval, there will be an additional opportunity for comment prior to submission of the draft to the Minister of Environment and Parks for approval.

MEMBER ACTIONS
Member feedback: • Inconsistency in how member actions are displayed. Preference for member actions to be separated so they are visually distinct from the other actions in the plan and easy to find, and note what type of intervention is represented (e.g. regulation, education, business change) • Some supported current wording in the plan whereas others felt member jurisdiction roles are too voluntary, and that language could be strengthened. Discussion that a balance must be struck so that the actions are not prescribing actions but serve as a guide. • Question whether there is a municipal action related to food waste • Note that member action on recycled concrete (4.1.2) could be broader to include other materials • Actions should drive collaborative work and sharing between members, to help increase consistency across the region • Support for Action 2.1.7 as commercial and institutional waste is the biggest opportunity, but also flagged as difficult to measure at a local level • Support for Strategy 4.4 and 4.5 on improving recycling convenience and education • Support for maintaining and enhancing behaviour change campaigns, developed by Metro Vancouver and amplified by member jurisdictions • Comment to expand the actions around reuse, beyond just reuse at recycling and waste centres. For example, one municipality is collecting furniture for reuse • Could we relate member actions to targets, noting potential impact? • Request for breakdown of what will make the biggest impact and relate to cost (aim for maximum impact and low investment first) • After plan is approved, develop a summary table to aid with implementation

STRATEGIC APPROACHES
(Regulatory, Recycling and Waste Centre, Residual Management)

Member feedback:

- Need for clearer regulatory strategies
- Importance of managing construction and demolition materials, including recycled aggregates
- Municipalities need to be able to leverage plan actions to drive local progress
- Working well: inclusion of regulatory strategy, education actions related to recycling including multi-family, alignment of the approaches with regional district authority, and innovation strategies are appreciated
- What's missing:
    - Clear timelines for implementation, especially for mandatory source separation
    - Stronger regulatory strategy overall, including more explicit regulatory tools (e.g. Hauler licensing, generator-level requirements)
    - Clear connection between regional actions and other government level responsibilities
    - Mechanisms for benchmarking and tracking progress that can be adopted by members
    - More discussion of advocacy in the strategies and actions
- What needs to be strengthened:
    - Collaboration with and reliance on other regulatory bodies
    - Clearer articulation of actions that fall within regional authority
    - Stronger regulatory tools
    - More emphasis on high-impact actions and quick wins
    - Clarity on regional processing capacity for organics and construction and demolition
    - Stronger language in general for firmer commitments
    - Educational components to accompany regulatory changes
- Desire for regulatory options that put pressure on manufacturers
- Interest in replicating successes similar to the organics disposal ban
- Accessibility concerns need to be considered, such as placement of bins
- Suggestion to highlight where readers can find actions by other levels of government

TARGETS & METRICS

Member feedback:

- Interest in aligning with municipal metrics and targets where they exist
- Many municipalities rely on regional targets and metrics as they do not have local versions
- Agreement that the targets feel ambitious but achievable, and even if targets are aspirational, they help the region to progress

TARGETS & METRICS

- Support for per-capita targets
- Request for more information on specific pathways (e.g. actions) to achieve targets. How were targets calculated, and describe supporting analysis
- Suggest a visual tool or dashboard to track progress towards targets
- Responsibility cannot rest solely on consumers or education efforts
- Suggest having specific by-sector targets, such as single-family, multi-family, commercial, to help municipalities understand where to focus efforts
- Measuring progress is challenging as municipalities do not have access to the necessary data locally
- Need to determine who will be supplying data for secondary metrics, and what the responsibility of municipalities will be in collecting that data. Concern about workload and added costs for municipalities to track new metrics.
- Suggested modifying the secondary metrics on single use items and food waste to include metrics on the amount found in recycling/organics, to continue to push up the waste hierarchy to waste prevention rather than simply recycling.
- Suggestion that secondary metrics should clarify whether it is the number of buildings or number of units (for construction and demolition materials reuse)
- Interest in exploring technology such as AI to improve data collection, as measuring performance remains a major challenge

DISPOSE ACTIONS

Member feedback:

- In Action 6.1.1 remove reference to greenhouse gas emission offsets, focus on maximizing landfill gas utilization
- Consider enhanced actions to address illegal dumping, particularly in relation to it as a member jurisdiction action/role
- Support for high level actions under dispose
- Action 6.4.4 – Remove reference to City of Vancouver as that appears to have been included in error
- Suggest an action to ensure there are easily accessible options for residents to dispose or recycle challenging materials such as drywall
- Suggest member action to expand large item pick up programs
- Amend Action 6.6.5 to include illegal dumping of construction and demolition waste
- Include definition of international waste in the glossary
- Need more specifics about the education component for residents to recycle large items as illegal dumping often becomes the alternative. Touched on in 3.2.5 but not specific to education.
- It is confusing that some member actions are separated out while other actions that are not designated member actions still involve collaboration with members

Neighbouring Regional District Meeting Notes – Options Analysis

SOLID WASTE MANAGEMENT UPDATE VISION AND GUIDING PRINCIPLES

Neighbouring Regional Districts Meeting

July 26, 2023

On July 26, 2023, Metro Vancouver held a meeting with staff members of adjacent regional districts to discuss vision and guiding principles for the updated regional solid waste management plan. There were representatives from four regional districts in attendance including the Fraser Valley Regional District, Squamish-Lillooet Regional District, Sunshine Coast Regional District, and Okanagan-Similkameen Regional District.

The vision and guiding principles phase of engagement sets the foundation and direction for the plan development process, by gathering feedback on values, priorities, interests, and key solid waste management considerations now and into the future.

At the July 26 meeting, four key questions were presented to regional district representatives:

1. What waste reduction, recycling and garbage disposal topics are most important, now and into the future?
2. List words or phrases that describe what matters, when deciding what to do with products, packaging and materials that are no longer needed.
3. The updated solid waste management plan is intended to reflect the values of everyone in the region. What values, interests, and priorities can be considered?
4. Thinking of how we purchase, use, reuse, repurpose, recycle and throw things away in the Metro Vancouver region, what could be better in the future than it is today?

A summary of themes heard at the meeting is presented in the What We Heard section below. Note that the feedback presented here is meant to highlight key themes from the discussion. Detailed discussion notes are being retained as part of the full engagement record, and comments will be included in feedback logs as part of an engagement report at the end of this phase on vision and guiding principles. Comments will not be attributed to specific individuals.

Next steps include the launch of public engagement on vision and guiding principles. Following public engagement, Metro Vancouver will produce an engagement summary report that will include feedback from member jurisdiction staff, advisory committees, regional districts, interested parties, and the public. This feedback, along with input from First Nations, will help inform a draft vision and guiding principles statement to be presented to the Zero Waste Committee and Board for consideration.

Regional District representatives are encouraged to submit any additional feedback to zerowaste@metrovancouver.org.

WHAT WE HEARD

The table below summarizes themes that emerged through the group discussion, which will be taken into consideration as Metro Vancouver continues to engage on the vision and guiding principles for the updated plan.

Priority	What We Heard
Accessibility, inclusivity, equity	• Standardize services across large geographic regions, including providing equal services to areas with fewer residents • Solutions for construction waste (drywall, asphalt shingles, gypsum) in smaller communities
Circular economy	• Partner with and support organizations that encourage and facilitate circularity
Collaboration	• Explore opportunities to collaborate between districts to manage with construction waste • Share campaign materials, collaborate on public education
Data and metrics	• Metrics are important – agreement on how to measure and data collection between districts would be useful • Stop counting use of alternative fuel at cement plants in recycling data
Disposal Options	• Move away from the incineration of waste • Plan ahead for landfill capacity issues • Solutions for mattress and bulky item recycling/disposal
Education and Behaviour Change	• Strategies for education and signage to reduce contamination of recyclable materials • Streetscape bins – better design and management, and education on use • Consistent definitions of what is recycling vs. disposal • Education campaigns aimed at businesses, tourists, and residents not familiar with waste diversion programs • Shift public perspective on what is considered waste
Environmental stewardship	• Environmental protection should be top of mind in everything we do
Forward Planning	• Ensure we're not replacing one problem with another – research alternatives to ensure no adverse results (e.g. alternatives to plastics may also introduce harmful chemicals into the environment)
Regulation and Policy	• Expand EPR programs to reduce costs of waste disposal and recycling (e.g. mattresses, furniture, drywall) • Empower communities with rights to clean up illegal dumping on sites that are federally or provincially managed • Federal input into what is being used as replacements for single use items
Waste Reduction	• Food waste program expansion is a priority for some regional districts

MEETING ATTENDEES

Andrea Patrao, Sunshine Coast Regional District
Andrew Reeder, Regional District of Okanagan-Similkameen
Dustin Zahara, Regional District of Okanagan-Similkameen
Lance Lilley, Fraser Valley Regional District
Marc Sole, Sunshine Coast Regional District
Marie-Lou Leblanc, Squamish-Lillooet Regional District

Solid Waste Management Plan Update: Idea Generation
Neighbouring Regional Districts Discussion Session
Wednesday, November 13, 2024
Virtual Meeting

Meeting Attendees:

Lance Lilley, Fraser Valley Regional District
Carolynn Lane, Fraser Valley Regional District
Marc Sole, Sunshine Coast Regional District
Vanessa Lafontaine, Squamish-Lillooet Regional District
Adriana Mailloux, Thompson-Nicola Regional District
Emily Branch, Thompson-Nicola Regional District
Venus Atienza, Regional District Okanagan-Similkameen Regional District

OBJECTIVE: To share information about Metro Vancouver's solid waste management plan update process and provide an opportunity for input.

Metro Vancouver is updating its regional solid waste management plan, building on the strengths of the current plan and identifying ways to accelerate waste reduction and recycling, reduce greenhouse gas emissions, and advance a circular economy. Metro Vancouver is currently at the idea generation phase of engagement. On November 13, 2024 Metro Vancouver met with staff from three adjacent regional districts, in addition to two regional districts with facilities that receive waste or organics from Metro Vancouver. Seven key topics or areas of discussion were established to frame discussion during the idea generation phase of engagement. All seven topics were presented at the meeting, and a focused discussion was facilitated on two of the topics that were most related to previous feedback from regional districts. The following is a summary of the responses and feedback received at the meeting. Overall, there was much support for coordinating between regional districts to develop consistent approaches to construction and demolition material management, reuse and repair initiatives, educational material development, policy development, and advocacy. There was also interest among participants in establishing a platform for regional district staff to meet and share information on a regular basis.

Feedback received during the idea generation phase will be considered and evaluated in the subsequent phase: options analysis.

SUMMARY OF FEEDBACK:

Discussion topic 1: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **rethink and prevent waste in the first place**?	
What we heard	How we're responding
• Regional districts should work together when it comes to advocacy at provincial and federal levels	• Metro Vancouver would be happy to collaborate in whatever ways make sense on advocacy at a provincial and federal level.
• When Metro Vancouver is planning an initiative or program, should reach out to other regional districts to explore coordinating and ensuring consistency	• Where initiatives and programs have implications for other regional districts or there is a potential for benefits in working together, Metro Vancouver also sees benefit in coordinating.
• Regional Districts look to Metro Vancouver as leader – information sharing is very important, for example initiatives, programs, educational campaigns, and technical study reports • Interest in collaborating on developing policy and educational material	• Metro Vancouver highlighted that behaviour change campaign materials are available online and regional districts are welcome to use and adapt the material, or reach out to zerowaste@metrovancouver.org with any specific requests
• Interest in collaborating on a centralized hub for sharing salvaged building materials, and coordinating a cross-regional district repair café network	• Metro Vancouver to provide regional districts' current information on repair café program that Metro Vancouver runs
• Construction & Demolition waste is a key sector to work together on, as businesses and materials move between our regional districts	• Work is underway to organize a construction and demolition waste reduction forum in spring 2025

Discussion topic 2: As Metro Vancouver updates the plan, what ideas and actions can build on our success to **plan for future infrastructure and systems for waste management across the region**?	
What we heard	How we're responding
• Would be helpful to have an overall provincial plan to address disposal capacity, particularly when local landfills close. This is a challenge shared by regional districts	• Agree that provincial discussion would beneficial

• Comment that incineration is not supported by some participants, but would support working together to identify how to work together on increasing processing capacity (e.g. mixed waste material recovery facility or other solutions) • Question whether Metro Vancouver considers Waste-to-Energy as recycling or disposal	• Metro Vancouver clarified that Waste-to-Energy use in the region is counted as disposal and not recycling
• Support for consistent definitions of 'recycling' being used between regions	• More consistency on definitions for recycling would be beneficial
• Support for sharing of data to be able to identify waste moving across regional district borders, for the purpose of accurate metrics/reporting. For example, waste companies operate in multiple regional districts, and move material between regions.	• Metro Vancouver detailed solid waste data is available on the Metro Vancouver website • If there is other data that is available to Metro Vancouver and could be shared, Metro Vancouver staff would be happy to discuss
• Suggestion to collaborate on responses to RecycleBC engagement on non-residential packaging and printed paper – presenting comments in coordination to advocate for continuous improvement	• Feedback on collaborating on advocacy has been noted
• Suggestion to establish a platform for regional district staff to meet on a regular basis to share information and collaborate on projects. Currently, some regional district staff attend the Regional Waste Reduction Coordinators Committee, but that committee is more geared towards Metro Vancouver member jurisdictions. A dedicated platform for regional districts would help focus the conversation around advancing issues shared by neighbouring regional districts	• Metro Vancouver would be happy to participate in meetings with other regional district staff

• Possibility of including provincial staff to hear feedback directly from and engage in discussions with regional districts; or alternatively, meet at the regional district staff level first and bring coordinated feedback/recommendations to the Province	
• These is a need and opportunity to better collaborate and coordinate with multi-family property managers and haulers that work across regional districts. Can streamline processes and communications/education in multi-family buildings. Currently consistency is lacking as often they are serviced by different haulers – no consistent guidelines or resources. • Increased education on food waste and organics is needed for multi-family buildings since many municipalities do not serve them	• Improving waste reduction and recycling in the multi-family sector has been noted as potential action in an updated solid waste management plan • Metro Vancouver is currently reviewing resources previously developed for multi-family buildings, and will work with haulers and member jurisdictions to identify materials that remain most helpful and require updating. There is a potential for neighbouring regional district staff to be involved in this process. Metro Vancouver can also share the outcome of this work with regional districts • Metro Vancouver is developing a pilot for a source reduction incentive program to provide waste haulers and processors incentives for taking actions to encourage waste reduction and recycling among customers

Solid Waste Management Plan Update: Options Analysis
Neighbouring Regional Districts Discussion Session

Thursday, October 23, 2025
Virtual Meeting – Microsoft Teams

Meeting Attendees:
David Urban, Fraser Valley Regional District
Lance Lilley, Fraser Valley Regional District
Carolynn Pegura, Fraser Valley Regional District
Ashley Zhu, Fraser Valley Regional District
Andrea Patrao, Sunshine Coast Regional District
Vanessa Lafontaine, Squamish-Lillooet Regional District
Marie-Lou Leblanc, Squamish-Lillooet Regional District
Andrew Tucker, Resort Municipality of Whistler
Shannon White, District of Squamish
Emily Branch, Thompson-Nicola Regional District
Venus Moreno-Atienza, Regional District Okanagan-Similkameen Regional District

Metro Vancouver Staff: Paul Henderson, Chris Underwood, Terry Fulton, Stephanie Liu, Faith Sabourault

OBJECTIVE: To share information about Metro Vancouver's solid waste management plan update process and provide an opportunity for input. Metro Vancouver is currently at the options analysis phase of engagement, where ideas that were generated in the previous phase will be evaluated by applying decision-making criteria and engaging with audiences on the potential strategies and actions for inclusion in the draft plan.

SUMMARY OF FEEDBACK:

Meeting participants were presented with six draft strategies that are related to feedback previously provided by neighbouring regional districts. It was noted that a full list of strategies and actions are available on the website and Metro Vancouver welcomes feedback on any of the actions.

Participants were then asked the following questions about the six draft strategies, using Mentimeter followed by open discussion:

- Which of the six strategies most align with priorities in their regional districts? (Rank from highest to lowest)
- For the actions within each strategy, to indicate the level of priority or potential for collaboration across regional districts
- What should Metro Vancouver consider to support implementation of these actions or increase participation/involvement?

Mentimeter results are included as attachment 1.

Following the discussion on the draft strategies, there was a presentation and discussion on strategic approaches (regulatory, recycling and waste centres, and residual management options) in the updated plan.

Question: Which strategies most align with priorities in your regional district?	
What we heard	How we're responding
• Interest in aligning priorities around waste reduction in businesses and institutions, increasing reuse of building materials, advocating for circular economy policies and enhancing extended producer responsibility (EPR) programs. Top priorities included: (2.1) Collaborate with businesses and institutions to reduce waste; (3.2) Increase reuse of used building materials; (1.1) Advocate for circular economy policies; (4.2) Enhance EPR programs.	• Metro Vancouver noted these as priority areas. The feedback will be considered as the updated solid waste management plan is drafted.

Strategy 2.1: Collaborate with businesses and institutions to reduce waste	
What we heard	How we're responding
• Participants highlighted that joint educational workshops could be valuable but may be difficult to coordinate due to differences in local systems.	• Metro Vancouver can prioritize shareable education tools/resources that local regional districts can adapt, rather than one-size-fits-all resources.

Strategy 3.2: Increase reuse of used building materials	
What we heard	How we're responding
• High collaboration potential for developing second hand building material markets, online marketplaces, encouraging use of salvaged materials in renovations, and requirements/incentives to increase reuse.	• Metro Vancouver can explore regional market development options and policy tools; will consider combining closely related actions and identify where Metro Vancouver can practically lead vs. support.
• Metro Vancouver region has high influence over material markets, as a lot of diverted material generated in other regional districts ends up in Metro Vancouver	• Noted and will be considered as part of action ID 037 and ID038 (development of second-hand building material markets and online marketplace.
• Interest in central hubs and comment on the willingness of residents/contractors to travel for the most affordable option.	• Noted.
• Can consolidate some actions to reduce overlap (e.g. online marketplace and second-hand building material markets).	• Metro Vancouver will review suggested action consolidations and revise strategies/actions where appropriate.

Strategy 1.1: Advocate for circular economy policies	
What we heard	How we're responding
• Support for Metro Vancouver leading advocacy across BC/Canada; smaller regional districts will amplify where possible. Regional districts noted that capacity limitations are barriers to developing their own advocacy materials and circular economy policy work, and that they depend on Metro Vancouver's work.	• Metro Vancouver can continue to explore opportunities to lead/coordinate advocacy, share templates/letters, and leverage the National Zero Waste Council
• Request for definition and examples of circular economy policies.	• Metro Vancouver will reconsider the wording of ID004 and others within Strategy 1.1 to provide clarity on what types of regulations may be intended

Strategy 4.2: Enhance EPR Programs	
What we heard	How we're responding
• Interest in expanding eligible materials and extending residential EPR to small businesses.	• Noted, and this is addressed in ID118 (expansion of EPR to small businesses).
• Household hazardous waste collection is costly for many regional districts and funding	• Metro Vancouver will consider this feedback on action ID121 and notes this support for advocacy for household hazardous waste

or EPR coverage were raised as potential solutions.	solutions, particularly considering funding challenges.
• ID118 should also be clearer about whether this item refers to all EPR or just the Recycle BC program.	• Metro Vancouver to follow up with clarification on the intent/scope of that action.
• Suggestion to consolidate the two actions about challenging materials and large items (e.g., IDs 116 and 064), because large items are challenging in general.	• Metro Vancouver will review and merge where appropriate.

Strategic Approaches (Regulatory, Recycling and Waste Centres, Residual Management Options)	
What we heard	How we're responding
• Support for using the guiding principles of the Solid Waste Management Plan to help inform future regulation development.	• Metro Vancouver confirmed that regulatory priorities will be tied directly to guiding principles in the plan and shared for review. • Metro Vancouver will share the draft regulatory approach with regional districts. (Attachment 2)
• Fraser Valley Regional District raised concerns regarding continued operation of the Waste-to-Energy Facility in Burnaby, citing air quality and aging infrastructure; request for language in the plan on phasing out the facility and including of air quality as a technical criterion in the plan. • Question about waste-to-energy is a barrier to moving forward on collaborating in other areas.	• Metro Vancouver noted that emission monitoring demonstrates levels are below regulatory limits and stated that the facility is a safe and cost-effective disposal method. Emission levels are below regulatory levels. Ambient air monitoring has shown ambient levels of HCl and SO_2 below 3 per cent of ambient air objectives 97 per cent of the time and below 10 per cent of ambient air objectives 100 per cent of the time. A public health risk assessment showed that current emissions from the facility do not pose a health risk to people. All perspectives and feedback will be documented and communicated to the Metro Vancouver Board as part of the decision-making process on the updated solid waste management plan. • Metro Vancouver will engage with the public and adjacent regional districts regarding operational certificate updates, including proposed updated emission limits for several parameters.
• Interest in understanding how residual capacity options will be evaluated in future.	• Metro Vancouver outlined technical criteria to be included in the plan (policy context, land availability, logistics, energy prices,

	public perception, etc.), without committing to a specific technology/site at this stage.

Upcoming Engagement and Next Steps	
What we heard	How we're responding
• Interest was expressed in continued collaboration opportunities.	• Staff encouraged participation in the upcoming Zero Waste Conference on November 27, 2025, at the Vancouver Convention Centre.
• Participants requested clarity on how to submit feedback – via email or the online form.	• Metro Vancouver confirmed that feedback can be submitted either way but asked that respondents reference specific Action ID numbers to streamline analysis.

Solid Waste Management Plan Update - Draft Regulatory Strategic Approach

Purpose

The solid waste management plan regulatory strategic approach outlines the types of regulatory initiatives, such as bylaws, that Metro Vancouver may consider over the lifespan of the solid waste management plan, including how potential Metro Vancouver regulations are assessed, engaged on, and implemented. Recognizing that future changes to regulation require dedicated engagement beyond the scope of this solid waste management plan update, the regulatory strategic approach aims to clarify Metro Vancouver's outlook with respect to any future regulatory actions to further progress toward the solid waste management plan goals and targets. This approach identifies examples of initiatives that may be advanced through both direct action and advocacy with senior and local governments.

Background

Overview

The Greater Vancouver Sewerage and Drainage District (GVS&DD) Board enacts bylaws to better manage waste within our system and protect public health and the environment. This authority is delegated to the GVS&DD from the province under the *Environmental Management Act* S.B.C. 2003 c.53, and the *Greater Vancouver Sewerage and Drainage District Act* S.B.C. 1956 c.59, Section 7A and 7B.

The primary bylaws related to solid waste management in the region are the *GVS&DD Tipping Fee and Solid Waste Disposal Regulation Bylaw No.379,2024,* as amended (Tipping Fee Bylaw), which sets garbage and recycling fees at Metro Vancouver solid waste facilities, identifies recyclable and hazardous materials banned from disposal and specifies surcharges, and establishes the requirements of the generator levy; and the *GVS&DD Municipal Solid Waste and Recyclable Material Regulatory Bylaw No.181, 1996,* as amended (Bylaw 181), which specifies requirements for private solid waste facilities, including reporting, inspection, and enforcement provisions. The *GVS&DD Notice of Bylaw Violation Enforcement and Dispute Adjudication Bylaw No.378, 2024,* as amended, provides an additional compliance promotion tool, allowing the issuance of penalty amounts up to $500 per contravention of specified provisions of Bylaw 181 and the Tipping Fee Bylaw. It also establishes a process for dispute adjudication.

Existing Regulations

Bylaw	Key Components
GVS&DD Tipping Fee and Solid Waste Disposal Regulation Bylaw No.379, 2024	• Fees and surcharges

DRAFT

	• Recyclable and hazardous materials banned from disposal • Generator levy
GVS&DD Municipal Solid Waste and Recyclable Material Regulatory Bylaw No.181, 1996	• Facility licensing • Powers of Solid Waste Manager and Officers • Fees
GVS&DD Notice of Bylaw Violation Enforcement and Dispute Adjudication Bylaw No.278, 2024	• Bylaw violations and penalties • Dispute adjudication

Since approval of Metro Vancouver's 2011 solid waste management plan ,the generator levy was implemented and new bylaw enforcement tools have been added. The generator levy, added to the Tipping Fee Bylaw in 2018, encourages the use of Metro Vancouver and City of Vancouver solid waste facilities where disposal bans for recyclable materials are in place, and ensures all garbage generators contribute to funding the cost of the regional solid waste system – a system that provides reliable and resilient services that benefit and are available to all residents and businesses in the region. The generator levy is included in the garbage tipping fee charged at regional solid waste facilities; however, if garbage is delivered to other facilities, haulers must pay the per-tonne generator levy directly to Metro Vancouver. The generator levy is a key contributor to Metro Vancouver's continued success in advancing waste reduction and recycling.

Metro Vancouver's Role

At its facilities, Metro Vancouver is responsible for providing convenient drop-off for garbage for residents and businesses, determining the final disposal destination of that material, and providing both free and paid recycling opportunities primarily for materials delivered in small hand-unloaded vehicles. Recycling sorting and processing facilities are managed by the private sector under requirements set out in Bylaw 181. This system allows and encourages private sector innovation in recycling.

Metro Vancouver's regulatory authority does not currently include the ability to enforce bylaws at the generator or property level. Generally, that authority resides with municipalities. Also out of scope are extended producer responsibility programs and regulations impacting the sale or distribution of specific products, and eco fees or refundable deposit fees charged for some products, which may be implemented at the provincial or federal level. Any changes beyond Metro Vancouver's current regulatory authority, including compliance promotion mechanisms, require changes to provincial legislation and associated approval processes. Metro Vancouver also plans to advocate for continuous improvement of extended producer responsibility programs and regulations at the federal and provincial level that will help rethink waste and transition to a circular economy, including design for recyclability, the right to repair, and waste prevention legislation.

Compliance and Enforcement

Metro Vancouver's Environmental Regulation & Enforcement group is responsible for enforcing the provisions of Bylaw 181, including reviewing licence applications and ensuring compliance with licence terms and conditions. Officers appointed under Bylaw 181 have authority to issue notices of bylaw violation under the *GVS&DD Notice of Bylaw Violation Enforcement and Dispute Adjudication Bylaw No.378, 2024*, as amended, which includes penalties of up to $500 per contravention of specified provisions of the generator levy and Bylaw 181. Bylaw 181 also allows for penalties for each day an offence is committed under the Bylaw, as well as cancellation of a licence. All active solid waste licences are available on Metro Vancouver's website, as well as Notices of Bylaw Violation issued to corporate entities since March 13, 2024 that have been paid, upheld, or are no longer in a dispute process. The appointment of enforcement officers is reported publicly.

Reporting and Continuous Improvement

Metro Vancouver publicly reports annually on the top surcharges under the Tipping Fee Bylaw, as well as information to enhance Metro Vancouver's understanding of the movement of waste around the region through the Smart Waste Program. This information is used to assess the effectiveness of the disposal ban and generator levy programs, respectively, and helps inform decisions on how these programs can continue to be effective.

Strategic Approach

Regulatory Priorities

Metro Vancouver's regulatory priorities for the solid waste management plan align with the vision and guiding principles and can help to achieve the plan's strategies and actions. These priorities are summarized below.

- Improve data accuracy, transparency, and availability
- Increase reuse and recycling
- Reduce barriers to participation
- Support effectiveness of the facility licensing system
- Support effectiveness of the generator levy
- Support innovation, particularly for reuse and repair

Potential future regulatory approaches may include hauler licensing, source separation requirements, expanded licensed facility types, or updated facility licensing provisions in support of the above priorities.

Considerations

For any proposed regulations not identified in the solid waste management plan's strategies and actions, at a minimum the following will be considered:

- What is the objective of the proposed regulation, and are there other options for achieving the same objective?

- Does GVS&DD currently have authority to implement the proposed regulation, and if not, what is required for obtaining that authority?
- What are the resource requirements for developing the proposed regulation, and for administering and enforcing it once enacted?
- Which sectors, businesses or individuals would be subject to the proposed regulation, and what is the estimated impact on meeting solid waste management plan goals and targets that would be achieved by regulating the targeted sectors?
- If the proposed regulation targets a specific material type and impacts how that material is managed, what are the expected operational consequences to the solid waste system overall?
- What are the expected financial implications resulting from the proposed regulation, such as tipping fee changes or other costs borne by residents and businesses?
- At which level of government would this regulation be most effective?
- Are there any unintended consequences of implementing the proposed regulation?

Engagement

Any new regulations, including changes to existing bylaws or the creation of new bylaws, will be accompanied by a transparent engagement process. Engagement will follow Metro Vancouver's Public Engagement Board Policy and Public Engagement Guide. Metro Vancouver will also comply with any provincial requirements related to engagement.

1. Introduction

Metro Vancouver is updating its solid waste management plan, building on the strengths of the current plan, and identifying opportunities for accelerated waste reduction and recycling while reducing greenhouse gases and promoting a circular economy. Metro Vancouver's current plan, the *Integrated Solid Waste and Resource Management Plan*, approved by the BC Minister of Environment in July 2011, established goals and targets for waste reduction and the recovery of materials and energy from waste, and supporting strategies and actions for Metro Vancouver and its member jurisdictions.

An updated solid waste management plan will guide our region's policies and collective actions over the next decade and beyond and engagement is critical to its success. The plan update process is expected to take two to three years and will be supported by robust Indigenous and public engagement. Additional emphasis is put on increasing accessibility and engaging underrepresented and equity-denied communities. Metro Vancouver is committed to engaging audiences who may be impacted by or have an interest in the review and update of the solid waste management plan, and will seek input and feedback through a multi-phase engagement approach. This document, informed by a pre-engagement process (a summary of what we heard and what we're doing is included in appendix A), provides an overview of the public engagement program for the update of the solid waste management plan and contains the following elements:

- Guiding principles and objectives
- Phases, timeline and methods
- Key audiences
- Public/technical advisory committee
- Reporting

While Indigenous peoples[1] will be invited to participate in all public engagement activities, a separate draft Indigenous engagement strategy outlines a collaborative engagement approach. Metro Vancouver is guided by the principles of meaningful engagement laid out in the *Declaration on the Rights of Indigenous Peoples Act*, as well as its own policies and commitments towards reconciliation and engagement.

Developing an Updated Solid Waste Management Plan

The Greater Vancouver Sewerage and Drainage District (GVS&DD) is one of four separate corporate legal entities commonly referred to collectively as Metro Vancouver. For the purposes of this document, Metro Vancouver will be used to describe the GVS&DD.

Metro Vancouver is committed to environmental stewardship and the desire to keep waste management affordable. Metro Vancouver's role in regional solid waste management includes recycling and waste reduction regulation and planning and the operation of a regional network of solid waste facilities.

[1] Indigenous peoples for the purpose of this strategy include Indigenous (First Nations, Métis and Inuit) Nations and Indigenous communities (including urban Indigenous organizations, off-reserve and non-status First Nations, Métis and Inuit).

Responsibilities include ensuring an effective regional regulatory framework, promoting waste reduction, improving reuse and recycling systems, and managing residual waste.

The Metro Vancouver Board of Directors, advised by the Zero Waste Committee, approves policies, bylaws, plans, programs, budgets and issues related to solid waste management, including monitoring the implementation of the *Integrated Solid Waste and Resource Management Plan.* The Board will provide oversight of the plan update process, before considering, endorsing, and submitting it to the BC Minister of Environment and Climate Change Strategy for approval.

The current *Integrated Solid Waste and Resource Management Plan* was endorsed by the Board and member jurisdictions prior to receiving provincial approval, subject to Ministerial conditions, in July 2011. Provincial guidelines recommend initiating a plan review on or before the 10-year anniversary of the current plan's approval. In November 2019, the Metro Vancouver Board authorized initiating an update of the solid waste management plan and notifying the public and Indigenous Nations.

An updated solid waste management plan will draw on opportunities for accelerated waste reduction and diversion, while reducing greenhouse gases and promoting a circular economy. Themes of resiliency, equity, collaboration, climate action, regional growth, innovation, financial sustainability, and system stewardship will be central to the process. The updated solid waste management plan will align and seek linkages with other plans and initiatives including the Canada-wide Strategy on Zero Plastic Waste, the Government of BC's CleanBC and Plastics Action Plans, member municipalities' waste reduction initiatives, adjacent regional district solid waste management plans, and Metro Vancouver's *Board Strategic Plan, Resilient Region Strategic Framework, Metro 2050, Climate 2050,* and *Clean Air Plan.*

Governing Legislation

The provincial *Environmental Management Act* outlines local government responsibilities for solid waste management and requires regional districts to develop plans for the management of municipal solid waste and recyclable materials that are subject to approval by the BC Minister of Environment and Climate Change Strategy.

In parallel, municipal governments often have their own bylaws on solid waste, typically for municipally provided recycling and waste services, fees and charges, and proper management of waste in residential and/or commercial settings within the municipality.

The provincial *Greater Vancouver Sewerage and Drainage District Act* governs the disposal of garbage and recyclables in Metro Vancouver, including the purchase, construction, operation, maintenance, and administration of facilities for the disposal of all types of waste.

The provincial document *A Guide to Solid Waste Management Planning* provides guidance on amending and renewing solid waste management plans, including the planning and consultation processes, which have been incorporated into this public engagement program:

- Initiate the planning process
- Set the plan direction
- Evaluate options
- Prepare and adopt the plan

Before approving an updated plan, the BC Minister of Environment and Climate Change Strategy must be satisfied that there has been adequate public review and engagement during the development of the solid waste management plan. Following Board endorsement, Metro Vancouver will submit an engagement summary and draft updated solid waste management plan to the Minister for consideration.

2. Guiding Principles and Objectives of Engagement

Metro Vancouver is committed to a transparent and inclusive engagement for the update to a new solid waste management plan. To ensure such a process, stakeholders and communities of interest need to have equitable opportunities to participate and provide feedback into the engagement process. To deliver a robust engagement process that goes beyond Metro Vancouver's typical process, exceeds provincial requirements, and addresses previous industry concerns about engagement, a pre-engagement phase was introduced to help shape the engagement process. In addition, an Independent Consultation and Engagement Panel (Engagement Panel) was formed to guide development and implementation of engagement, and Metro Vancouver engaged on the development of a provincially-required public and technical advisory committee(s). A separate Indigenous engagement strategy will outline a separate, collaborative approach with Indigenous peoples, which will take place concurrent with public engagement.

Solid Waste Management Plan Independent Consultation and Engagement Panel

An Engagement Panel, made up of four independent, third-party engagement experts selected by the Metro Vancouver Board Chair, was formed in 2020 to provide advice and recommendations to staff and the Board on engagement. The Engagement Panel reviews and advises on the development and implementation of the public engagement program, and will report to the Board on engagement during all phases of the solid waste management plan development to ensure engagement is robust and adequately solicits feedback from a variety of communities of interest and stakeholders. The panel has played a key role in the development of this engagement plan. Throughout engagement on the solid waste management plan update, opportunities will be created for stakeholders and communities of interest to present to the Engagement Panel to provide feedback on the engagement process.

Guiding Principles of Engagement

The public engagement program will be informed by best practices and regulatory requirements, and will reflect the following guiding principles based upon and adapted from Metro Vancouver's Board Policy on Public Engagement.

Accountability

Metro Vancouver will uphold the commitments it makes to the public and demonstrate that the results and outcomes of the engagement process are consistent with the approved plans for engagement.

Equity and Diversity

Metro Vancouver will implement an accessible and inclusive engagement process that considers equity and diversity at its core and encourages participation by equity-denied groups[2].

[2] Equity is the fair distribution of opportunity, privilege and resources to meet the needs of all people, regardless of age, ability, gender, income, education level, culture, geographic location or background. Equity recognizes that services and resources can also be distributed based on need. Adopting an equity-centered approach ensures that

Inclusiveness
Metro Vancouver will make its best efforts to reach, involve and hear from those who are impacted. Plain language will be used in engagement materials and the public engagement program will be designed to promote personal connection, trust and active listening. The public engagement program will include components of education so that audiences have sufficient knowledge of the subject matter to provide meaningful feedback.

Transparency and Openness
Metro Vancouver will provide clear and timely information, and communicate decision-making processes, procedures and constraints clearly. The public engagement program will be open to the ideas of all Metro Vancouver residents and others, with consideration for perspectives and audiences that are not always engaged.

Commitment
Metro Vancouver, within its ability and work plans, allocates sufficient resources for effective engagement.

Responsiveness and Flexibility
Metro Vancouver seeks to understand and be receptive to the public's input. Throughout the engagement process, Metro Vancouver will be flexible to adapt and adjust engagement approaches as new information or perspectives are presented.

The guiding principles are foundational to the engagement approach and will be referenced at each phase and reflected upon following each engagement phase.

Engagement Objectives
Metro Vancouver engages at levels in a *spectrum of public participation* adapted from the International Association of Public Participation. For the solid waste management plan, Metro Vancouver is committed to the consult/involve levels of engagement to obtain input and feedback on analysis, issues, alternatives and decisions, and ensure aspirations and concerns are considered and understood during the plan development. Based on the consult/involve levels of engagement, the objectives of the engagement are to:

- Guide the development of an updated solid waste management plan for consideration by the Metro Vancouver Board and Minister of Environment and Climate Change Strategy
- Learn about a broad range of perspectives from residents, communities of interest, and stakeholders and actively consider how the plan can integrate and respond to the learnings
- Foster an environment where a wide range of voices and perspectives are shared
- Facilitate a process of reciprocal learning where stakeholders and communities of interest can share their knowledge and experiences and learn about the benefits and challenges of the regional solid waste system and zero waste initiatives
- Strengthen and build collaborative relationships

equity-denied groups are not disproportionately impacted by Metro Vancouver operations and that initiatives within Metro Vancouver's mandate have the opportunity to contribute to the advancement of equity in the region.

- Come to understand perspectives, priorities and desired outcomes of stakeholders and communities of interest for waste management across the region, with a specific effort to increase participation by diverse and equity-denied groups, such as youth, urban Indigenous communities, small and independent business owners, and non-English language speakers

Engagement Approach

Based on pre-engagement feedback, the phases of engagement will be developed with the following approaches and considerations in mind:

- Early, continuous and iterative engagement and feedback opportunities
- Clearly defined engagement purpose and expectations, including what elements of the plan are open for discussion/consideration
- Respect for time required of busy stakeholders to provide feedback, and sufficient time allowed
- Transparency on how input is used to come to a final decision
- Fair, collaborative tone for engagement that fosters active listening with an open mind, without pre-determined outcomes
- Strategies to increase accessibility and engage underrepresented and equity-denied communities
- Review of baseline regional recycling and waste data and measurement methodologies

A summary of how input and feedback received during pre-engagement has shaped the engagement approach is provided in Appendix A.

Engagement Parameters

It is important to establish the scope of engagement, both what is in and what is out of scope, in order to be able to plan the engagement successfully and to manage expectations.

The scope of this engagement includes the following parameters:

- The solid waste management plan will build on the strengths of the current plan, and identify opportunities for accelerated waste reduction and recycling while reducing greenhouse gases and promoting a circular economy. Alignment with provincial and federal regulation and legislation, and municipal authority will be considered in the plan development.
- The public engagement program will provide opportunities for informed and meaningful engagement with governments, including government agencies, waste and recycling industry, waste producers, businesses, communities of interest, equity-denied and underrepresented groups, and Metro Vancouver residents to guide updates to the plan.

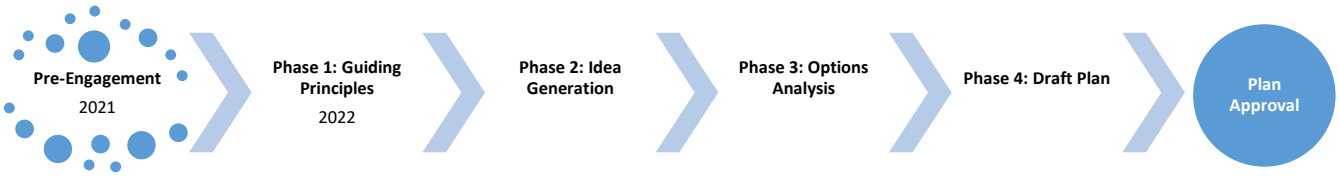
3. **Engagement Phases, Timeline and Methods**

The public engagement program includes a phased approach that is iterative and flexible. The public engagement program will provide participants with ample opportunity to access sound and impartial information, engage in discussions with Metro Vancouver, and provide input for consideration by Metro Vancouver staff and the Board to help shape subsequent phases of engagement and ultimately the updated solid waste management plan itself. Information on the engagement process and opportunities to provide input will be posted on the Metro Vancouver website as it becomes available. Meetings, feedback forms/questionnaires, correspondence and delegations to the Engagement Panel and Zero Waste Committee will be used as mechanisms to receive feedback on the solid waste management plan

and the engagement process. The public engagement program is flexible and will consider additional interests and issues that emerge during the solid waste management plan review and update.

Due to the ongoing COVID-19 pandemic, all engagement approaches will comply with public health guidelines. Metro Vancouver aims to leverage digital platforms to reach out to more audiences than traditionally possible with in-person meetings and events.

The proposed phases of engagement are outlined below, followed by objectives and methods for pre-engagement (complete) and Phase 1 (in development). Timing is flexible to ensure maximum participation in a robust, transparent, and meaningful process.



Methods

The following are potential methods of outreach and engagement that may be used during any of the phases of engagement and will be adjusted based on the objectives of each phase of engagement:

Engagement

- Collaboration with others to host third-party workshops and events, and amplify messages (e.g. RCBC, Binners' Project, cultural and religious organizations)
- Focus groups
- Focused, sector- and topic-specific discussions; working groups
- In-person meetings, including presentations and discussions at community meeting
- Market research surveys
- Meetings with the Engagement Panel
- Online engagement platform – includes options for multiple languages and visual web accessibility tools
- Online meetings
- Open houses and workshops
- Questionnaires (online or hard copy at community locations)
- Public/technical advisory committee meetings

Outreach

- Educational components (e.g. backgrounders, discussion guides)
- Email notifications
- Multiple language communications where possible and where it serves the audience
- Press engagement
- Printed materials or packages, to be used by individuals or groups to further engagement among their networks
- Promotional materials tailored to different audiences, in a variety of media outlets
- Social media
- Videos
- Website content

- Telephone polling where appropriate
- Updates at existing committee meeting
- Webinars

Through pre-engagement, Metro Vancouver learned from stakeholders that continual communication — often and through a variety of channels — promotes transparency. It was also suggested to work with others to host or facilitate engagement events and amplify communications.

A communications plan has been developed for the solid waste management plan public engagement program, detailing the specific communications tactics required to deliver on each phase of engagement.

Pre-Engagement (public April 27 – June 28, 2021; Indigenous April 27 – July 2, 2021)

- *Description:* Pre-engagement solicits feedback on preferred engagement approaches and asks what people need to know to meaningfully participate. This occurs before formal engagement begins.
- *Objectives:* Understand key stakeholder groups' preferred communication channels, methods of participation, key information required, and what is needed to make participation easier. Gain insights from stakeholders and communities of interest on how the process can be designed to reach equity-denied groups.
- *Notification and Methods Used:*
    - Email and letter notifications advising that engagement on updated solid waste management plan will begin soon
    - Website content
    - Online questionnaire
    - One-on-one online meetings with interested parties and stakeholder groups
    - Opportunities for stakeholders to present to the Engagement Panel
    - Online workshops and presentations
    - Social media platforms

A full summary of the pre-engagement phase and results is included in the Zero Waste Committee report dated July 16, 2021, titled "Pre-Engagement Results – Solid Waste Management Plan Update".

Engagement on Public and Technical Advisory Committee(s) (July 23 – September 15, 2021)*:*

- *Description*: Metro Vancouver engaged on the structure and membership criteria prior to drafting the public and technical advisory committee(s) terms of reference. Note that engagement with Indigenous peoples is expected to be coordinated through a separate, collaborative process.
- *Objective*: Receive feedback on the structure, sectors/interests represented, and membership selection criteria for the public and technical advisory committee(s). This information was considered in drafting the terms of reference for the committee(s) (Appendix B).
- *Methods*:
    - Email notification
    - Online questionnaire
    - Invite written comments

Phase 1: Plan Guiding Principles Engagement (Mid-2022)

- *Description*: Guiding principles for the updated solid waste management plan (different from the engagement guiding principles described earlier in this report) reflect fundamental values that guide plan development and implementation. They will cut across all or most goals, strategies, and actions and can be translated into criteria to help evaluate goals, strategies, and/or actions. The BC Ministry of Environment and Climate Strategy's *A Guide to Solid Waste Management Planning* provides eight provincial principles for solid waste management for regional districts to incorporate in the development of their solid waste management plan, to be supplemented with other locally relevant guiding principles.
- *Objective*: Understand the fundamental values of the public, stakeholders and communities of interest to help guide the solid waste management plan development and establish the overarching vision and direction.
- *Potential Methods*:
    - Joint Zero Waste and Climate Action Committee workshop
    - Public/technical advisory committee meetings
    - Online or in-person workshops consisting of presentations, interactive exercises and feedback sessions with all levels of government and stakeholders. May be hosted in collaboration with others (e.g. Recycling Council of British Columbia, Binners' Project, religious and cultural organizations, industry associations)
    - Webinars, presentations and videos
    - Opportunities for stakeholders to present to the Engagement Panel
    - Website content
    - Online questionnaires or feedback forms
    - Additional methods to increase accessibility and engage underrepresented and equity-denied communities

Details for these subsequent phases will follow as they are developed with stakeholders, the public, and communities of interest.

Phase 2: Idea Generation Engagement (Late 2022)

Phase 3: Options Analysis Engagement (Mid-2023)

Phase 4: Engagement on Draft Plan (Early 2024)

After plan approval: Continued engagement during plan implementation (2024 onward)

The public engagement program is an iterative document and will be adapted and updated with each engagement phase as the solid waste management plan is developed.

4. Audiences

The following audiences have been identified who may be impacted by or have an interest in the review and update of the solid waste management plan and will be engaged to provide feedback during all phases of engagement:

- Community, environmental and non-profit groups, non-governmental organizations, youth and students, schools

- Government and regulatory agencies, including Indigenous peoples in BC, provincial and federal governments, member jurisdictions, adjacent regional districts, crown corporations, airport and port authorities, and health authorities
- Industry and business associations, boards of trade and chambers of commerce, professional associations and academic institutions
- Metro Vancouver residents
- Small to medium businesses, innovators, employees within organizations, experts in industry and technology
- Waste and recycling industry, including small and large haulers, processors, extended producer responsibility programs, disposal facilities, and waste/recycling industry associations, binner community, reuse/repair organizations and the Metro Vancouver Solid Waste and Recycling Industry Advisory Committee
- Waste producers, including various sectors such as food service and industry, grocery, construction, tourism, office and property management, real estate, retail, residents, and educational institutions
- And others who may be interested

Metro Vancouver has developed and regularly updates a database that includes contact information of individuals and organizations who fall within the categories described above. The public can also sign up to a number of solid waste newsletters and project notification lists, including one for the solid waste management plan update.

Metro Vancouver will strive to facilitate dialogue between jurisdictions and stakeholders with different perspectives and responsibilities, to allow parties to gain a better understanding of other perspectives and discuss interconnected systems and possible partnerships that can support zero waste, environmental health, and circular economy goals.

To reach and involve equity-denied or underrepresented groups not typically involved in Metro Vancouver solid waste processes, specifically youth, the binner's community, and non-English language speakers, efforts will be made to ensure opportunities for meaningful engagement. Possible methods, by group, to deliver this include:

- Youth – Tailor questionnaires, social media and campaigns; partner with influencers, leverage existing communities, communication channels and places of gathering; collaborate with prominent groups
- Binner's community – Collaborate with the Binners' Project to access existing networks and communications channels
- Non-English language speakers – Translate important materials, offer interpretation services, target media promotions

In addition, engagement will be designed to encourage more equal participation geographically across the region. Possible methods to achieve this include:

- Target social media promotions to each jurisdiction individually as the target market
- Host events in strategic geographic locations

- Partner with municipalities to reach out to stakeholders in their respective communities and draw on established networks and relationships
- Work with local community based groups to host small engagement events across the region; or prepare information packages for those local groups to consider at their existing meetings

Indigenous Engagement

While Indigenous peoples will be invited to participate in all public engagement activities, a separate draft Indigenous engagement strategy outlines a collaborative government-to-government engagement approach with Indigenous Nations whose territories include all or part of the Metro Vancouver region as well as a community engagement approach with urban Indigenous organizations, off-reserve and non-status First Nations, Métis and Inuit.

The Indigenous engagement strategy for the solid waste management plan update reflects Metro Vancouver's commitment to engaging with Indigenous Nations who claim Aboriginal rights in the region, and Indigenous communities. Metro Vancouver aims to follow the principles of meaningful engagement laid out in the *Declaration on the Rights of Indigenous Peoples Act*, as well as its own policies and commitments towards reconciliation and engagement. Metro Vancouver will seek to create diverse and multiple engagement opportunities, to ensure that Metro Vancouver and Indigenous peoples can have a meaningful dialogue on the review and update of the solid waste management plan.

5. Public/ Technical Advisory Committee

The BC Ministry of Environment and Climate Change Strategy's *A Guide to Solid Waste Management Planning* recommends establishing public and technical advisory committee(s) to assist with the planning process and ensure that diverse views are represented. Metro Vancouver will form a public/technical advisory committee, with subcommittees formed as required based on discussions with the committee, to advise on plan development and report to staff and the Zero Waste Committee. The committee will consist of a variety of representatives: industry, public community groups, and subject matter experts. A Zero Waste Committee member will participate in committee meetings and act as a liaison to the Zero Waste Committee. The public engagement program will be reviewed with the public/technical advisory committee at an early meeting and updated as needed throughout the plan update process. In addition, the public/technical advisory committee will provide input during each stage of the solid waste management plan's development. Sectors and interests that may be represented on the committee, and personal qualities, perspectives and experiences of members are listed below. A terms of reference for the committee is provided in Appendix B.

Sectors/Interests Represented by Members

- Adjacent regional district elected official
- Agriculture
- Circular economy
- Construction and demolition industry
- Extended producer responsibility programs
- Food service
- Government agencies and health authorities
- Large waste generators (e.g. academic institutions, school boards, transportation hubs, entertainment sector)

- Multi-family residences (e.g. residents, landlords, property management associations)
- Non-governmental/non-profit organizations and environmental stewardship groups
- Organics processing
- Public members-at-large (e.g. youth, seniors, and multicultural, accessibility, and resident/community associations)
- Recycling industry
- Reduction/repair/refill industry
- Retail/grocery
- Small- and medium-sized businesses and business improvement associations, chambers of commerce, boards of trade
- Tourism and hospitality
- Waste industry
- Workers/unions

Personal Qualities, Perspectives and Experience

- Demonstrates community/committee involvement and the ability to work collaboratively with others (e.g. openness to different/opposing views)
- Demonstrates personal commitment to zero waste/circular economy goals, sustainability, and climate action
- Demonstrates the ability to advance innovation
- Experienced with waste, waste reduction, and recycling (i.e. lived experience, technical expertise, or both)
- Belongs to a community that is typically underrepresented (e.g. women, LGBTQ2S+, Indigenous persons, immigrants, visible minority, persons with disabilities, youth, etc.)
- Represents the interests/perspectives of a group of people/sector

6. Reporting

Metro Vancouver documents feedback received during engagement processes through meeting summaries, online comments, feedback forms, questionnaires and correspondence (emails and letters to Metro Vancouver elected officials and staff). Metro Vancouver will use various methods to report back to audiences about how their input has been considered, including:

- Interim engagement summary reports to the Zero Waste Committee and Board, including documents tracking the issues, comments, and questions raised during engagement and the corresponding Metro Vancouver responses
- Regular updates to the project web page
- Responses to feedback received

A summary of feedback gathered through the engagement process will accompany the updated solid waste management plan that will be submitted to the BC Ministry of Environment and Climate Change Strategy for approval. The engagement summary will include:

- A summary of all engagement activities and results, including copies of notifications, advertisements, web content, reports, and meeting summary notes
- Identification of feedback raised during the engagement process

- Metro Vancouver responses to feedback received and how it is being addressed or incorporated in the draft updated solid waste management plan
- Copies of all original written feedback received during the engagement process

Feedback Summary of What We Heard and What We're Doing

The following summary table shows how input and feedback shared during pre-engagement was considered and incorporated into the engagement approach.

What We Heard	What We're Doing
Provide early, continuous, iterative engagement, and more notifications	Timely, ongoing and evolving engagement opportunities will consider the preferred channels to receive information and provide feedback shared in pre-engagement
Respect the time required of busy stakeholders	Thoughtful and efficient opportunities to engage online, and in person when safe to do so, will accommodate a variety of engagement preferences and limitations
Clearly define engagement purpose, expectations, and what issues are 'on the table'	A clear scope and objectives of engagement will outline what is up for discussion at each engagement phase
Ensure transparency on how input was used and reasons for decisions	Timely and transparent reporting back will show how input and feedback affected the decision at each engagement phase
Listen, have an open mind, be fair and collaborative	A fair, collaborative tone for engagement will promote active listening and foster trust, without pre-determined outcomes
Work with partners to host/facilitate engagement events, and amplify/distribute communications	Collaborative relationships formed and strengthened with community groups and organizations will reach and involve their communities, including those not typically engaged
Create space for stakeholders with different interests to hear from each other, gain understanding of different perspectives, and form partnerships; also facilitate focused, sector-specific discussions	An engagement environment of reciprocal learning where a wide range of voices, perspectives and interests are shared, as well as focused, sector-specific discussions, will lead to sustainable decisions
Appreciation for the initial pre-engagement phase, and establishment of the Engagement Panel	A public engagement program guided by the Engagement Panel and informed by input and feedback gathered during pre-engagement will demonstrate continued responsiveness to feedback
Involve equity-denied communities, industry experts, innovators, small to medium businesses, small haulers and small processing facilities, and associations (industry, tourism, building, business improvement)	A plan to reach and involve a broad and diverse audience will ensure all potentially affected by or interested in a decision are heard, including equity-denied communities (youth, urban Indigenous, binners community, non-English language speakers)

Provide information on current solid waste management in the region, the previous solid waste management plan, details on how solid waste is handled in other jurisdictions, and a range of additional topics	Sufficient, clear and sound information provided during engagement will enable informed and meaningful participation
Consider translation and use of graphics, although English language communication is sufficient at this time	A variety of methods (e.g. translation, interpretation, connect via cultural organizations) to reach and involve non-English language speakers will support an equal opportunity to participate, within our ability
Metro Vancouver did not hear distinctly from certain sectors during pre-engagement, such as cultural associations, non-English language speakers, resident community associations, food service, and construction and demolition	Methods to reach and engage these sectors beyond what was offered during pre-engagement will be explored to ensure engagement opportunities are appealing and effective

metrovancouver

Solid Waste Management Plan

Public/Technical Advisory Committee

Terms of Reference

November 17, 2021

1. PURPOSE

Over the next two to three years, Metro Vancouver will engage with governments (including Indigenous Nations), government agencies, waste and recycling industry representatives, waste producers, businesses, communities of interest, and Metro Vancouver residents to review and update the current *Integrated Solid Waste and Resource Management Plan* (2011). The updated solid waste management plan will build on the strengths of the current plan and identify opportunities for accelerated waste reduction and diversion, while reducing greenhouse gases and promoting a circular economy.

The purpose of the solid waste management plan public/technical advisory committee (committee) is to provide a forum for contribution from individuals from a range of backgrounds to inform the review and update of the solid waste management plan. The purpose of these terms of reference is to describe role of the committee.

2. TIMEFRAME

The committee will exist for the duration of the solid waste management plan update process.

3. SCOPE OF WORK

The committee will receive and review information, and advise on topics related to the development of the solid waste management plan. Committee members will be invited to pose questions, engage in discussion, and provide comments for consideration as the plan is developed. Potential topics for engagement with the committee include the circular economy, waste reduction and recycling, greenhouse gas emissions reduction, residuals management, asset and risk management, innovation, resilience, affordability, and collaboration and engagement.

Representatives of the 10 local Indigenous Nations will be invited to observe committee meetings at their preference. A separate Indigenous engagement strategy will help ensure a collaborative government-to-government engagement approach with Indigenous Nations whose territories include all or part of the Metro Vancouver region as well as a community engagement approach with urban Indigenous organizations, off-reserve and non-status First Nations, Métis and Inuit.

4. MEMBERSHIP

The committee will be composed of members representing a diversity of sectors and interests, who bring a variety of personal qualities, perspectives, and experiences to solid waste and recycling issues.

The following is a list of sectors/interests that could be represented by committee members:

- Adjacent regional district elected official
- Agriculture
- Circular economy

- Construction and demolition
- Extended producer responsibility programs
- Food service
- Government agencies and health authorities
- Large waste generators (e.g. academic institutions, school boards, transportation hubs, entertainment sector)
- Multi-family residences (e.g. residents, landlords, property management associations)
- Non-governmental/non-profit organizations and environmental stewardship groups
- Organics processing
- Public members-at-large (e.g. youth, seniors, and multicultural, accessibility, and resident/community associations)
- Recycling industry
- Reduction/repair/refill industry
- Retail/grocery
- Small- and medium-sized businesses, and business improvement associations, chambers of commerce, boards of trade
- Tourism and hospitality
- Waste industry
- Workers/unions

The following is a list of possible desired personal qualities, perspectives and experience of committee members:

- Demonstrates community/committee involvement and the ability to work collaboratively with others (e.g. openness to different/opposing views)
- Demonstrates personal commitment to zero waste, circular economy goals, sustainability, and climate action
- Demonstrates the ability to advance innovation
- Experienced with waste, waste reduction and recycling (i.e. lived experience, technical expertise, or both)
- Belongs to a community that is typically underrepresented (e.g. women, LGBTQ2S+, Indigenous persons, immigrants, visible minority, persons with disabilities, youth, etc.)
- Represents the interests/perspectives of a group of people/sector

5. SELECTION PROCESS

Membership will last the duration of the solid waste management plan update process. Committee members should be prepared to participate through the full term.

Committee members with the exception of the chair and vice-chair will be filled through a call for applications. Potential committee members who belong to typically underrepresented or equity-denied communities will be identified through targeted recruitment, with support mechanisms put in place to lower barriers to participation.

The call for applications will be promoted publically, and shared with our member jurisdictions and partners. Potential committee members will be asked to specify their sector/interest during the call for applications and an individual could identify more than one sector/interest. Not all sectors/interests will necessarily be represented on the committee, and more than one individual could be selected to represent a sector/interest. Following receipt of applications, the applicants will be evaluated based on

the personal characteristics outlined in the above section on membership. Recommendations for members will be reviewed by the Independent Consultation and Engagement Panel in advance of the recommendations being considered by the Zero Waste Committee and Board in closed meetings, before being released to the public.

6. CHAIRS

The committee chair and vice-chair will be members of the Zero Waste Committee, recommended by the Board Chair and selected by the Board in a closed meeting.

7. ADVISORY ROLE OF COMMITTEE

The role of the committee is advisory to Metro Vancouver. No votes will be held to determine the group's position on issues or recommendations to Metro Vancouver. Where consensus exists, it will be noted; minority opinions will be considered to have merit and will be noted.

8. MEETINGS

a. Meetings will be held approximately 4–6 times per year for the duration of the solid waste management plan update process.
b. The meeting dates and times will be determined by the chair and vice-chair in consultation with committee members, and will be scheduled at intervals relevant for the solid waste management plan development.
c. The chair and vice-chair will work with Metro Vancouver staff to draft meeting agendas and coordinate meeting materials, which will be circulated to the committee in advance of meetings.
d. The meetings will be structured to encourage dialogue and collaboration on relevant issues within the constraints of the planned agendas.
e. Meeting minutes and action trackers will be kept for each meeting. Minutes shall not reflect the names of individual speakers or their stance on issues; rather, they shall reflect the issues discussed, significant points of view on the issues and the resolutions or actions to be taken.
f. Meetings will be held virtually or at Metro Vancouver offices located at 4515 Central Boulevard in Burnaby, British Columbia. If unable to attend a meeting in person, a member may participate via teleconference or videoconference.
g. A meeting quorum will be 50%+1 of active members.
h. Meetings will be open to any individual who wishes to observe the discussions either in person or through teleconference or videoconference, although only committee members will be provided standing to participate in the discussion. Non-members may request an opportunity to present to the committee through two weeks' advance written submission for consideration by the chair and vice-chair.
i. Metro Vancouver staff are not members of the committee, but will attend meetings to provide information on various topics, respond to questions etc.
j. The committee may invite groups and subject matter experts to present and provide advice and feedback on specific agenda items, at the discretion of the chair and vice-chair.
k. All committee agendas will be published and publicly available in advance of meetings, and presentations and meetings minutes posted thereafter on Metro Vancouver's website.
l. Metro Vancouver will coordinate the venue and meeting logistics, invitations, notetaker, refreshments, and all requests received for the committee.
m. Committee members may be reimbursed by Metro Vancouver for reasonable, out-of-pocket expenses associated with participating in meetings.

9. WORK PLAN

An annual work plan for the committee will be developed by Metro Vancouver staff based on deliverables in the solid waste management plan development. The work plan will be reviewed annually by the committee, and will guide development of meeting agendas.

10. CODE OF CONDUCT

This code is intended to serve as a framework to guide the spirit and intent of how members are expected to deliver on the committee's purpose and objectives in an ethical and respectful manner.

a. *Respect and Collaboration*: Discussions and debates shall take place in an atmosphere of mutual respect and solutions-oriented collaboration, recognizing the value of different perspectives and seeking to understand the interests and needs of all affected parties.
b. *Transparency*: It is expected that all members speak honestly and transparently, engaging in good-faith dialogue and sharing information openly to encourage fact-based dialogue.
c. *Treatment of other Members*: Members have a duty to treat other members with respect during committee meetings. Specifically, members have a duty to avoid:
    - disrupting meetings by making continual interruptions or whispered asides
    - making offensive or abusive remarks directed at other members
    - impugning the motives of other members or supporting staff
    - ignoring the legitimate direction of the chair or vice-chair

Members who object to the behaviour of another member as identified in this code of conduct are asked to identify their concerns immediately to the committee chair and vice-chair. A member whose behavior repeatedly does not meet the code of conduct requirements may be asked to resign or be removed from the committee by the chair or vice-chair.

11. MEMBERSHIP RESIGNATION

Members wishing to resign from committee membership should provide written notice of their intent to resign, including the effective date of their resignation, addressed to the committee chair and vice-chair.

12. BUDGET AND RESOURCES

Funding for general meetings is provided by Metro Vancouver. Any additional funding for special projects or studies is subject to Metro Vancouver approval.

13. MEDIA PROTOCOL

Media requests will be directed to Metro Vancouver's media relations team. Individual members will not speak on behalf of the committee, unless it has been discussed and approved by the committee chair and vice-chair in advance.

The committee chair and vice-chair will be the chief spokespeople on behalf of the committee. For high profile issues, the role of spokesperson rests with the Board chair, vice-chair or the chair of the Zero Waste Committee. On technical matters or in cases where an initiative is still at the staff proposal level, a senior staff member is the appropriate chief spokesperson.

14. DECLARING CONFLICT OF INTEREST

Committee and subcommittee members must declare any conflicts of interest, real or perceived, at the outset of the process or as soon as it becomes known to the member.

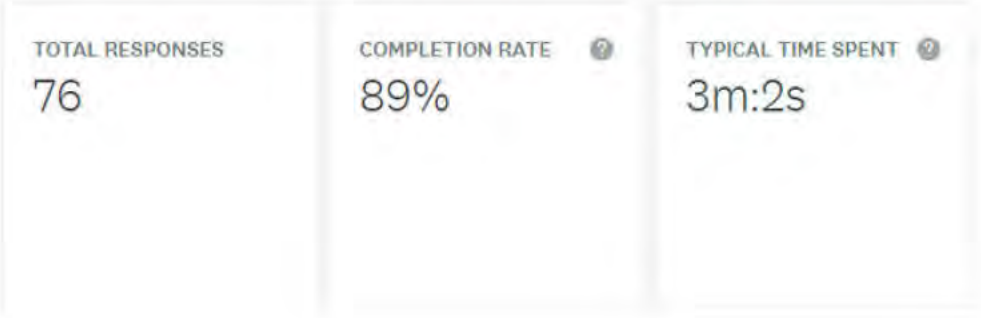
Post-Engagement Report

PROJECT NAME: BCAG Metro Vancouver Solid Waste Management Survery

TIMELINE: November 7th - December 7th

Location/Format:	• Textile, design and fashion businesses operating in British Columbia • A survey created via SurveyMonkey
Participants:	• Sent to subscribers of BCAG mailing list and client list of KenDor • Total of 1,586 recipients by email • Shared to BCAG, KenDor and 4 personal social media accounts • Total social media reach: 1500+
Summary of Promotions	• Survey (see survey here) created through SurveyMonkey and sent via email to BCAG and KenDor mailing lists • 2 follow-up emails sent to both mailing lists • Survey link shared on 6 social media accounts with followers primarily in the fashion industry

SURVEY SNAPSHOT:



Participant Demographics

Business Location:	• Vancouver: 33.33%, 23 participants • Not in Metro Vancouver: 21.74%, 15 participants • Delta: 10.14%, 7 participants • Richmond: 10.14%, 7 participants • Burnaby: 8.70%, 6 participants • Surrey: 5.80%, 4 participants • West Vancouver: 42.90%, 2 participants • New Westminster: 1.45%, 1 participant • District of North Vancouver: 1.45%, 1 participant • Port Coquitlam: 1.45%, 1 participant • Tsawwassen: 1.45%, 1 participant • White Rock, 1.45%, 1 participant • Anmore: 0.00%, 0 • Belcarra: 0.00%, 0 • Bowen Island: 0.00%, 0 • Coquitlam: 0.00%, 0 • City of Langley: 0.00%, 0 • Township of Langley: 0.00%, 0 • Lions Bay: 0.00%, 0 • Maple Ridge: 0.00%, 0 • City of North Vancouver: 0.00%, 0 • Pitt Meadows: 0.00%, 0 • Port Moody: 0.00%, 0 • Electoral Area A: 0.00%, 0
Primary Language	• English: 94.44%, 68 participants • Cantonese: 1.39%, 1 participant • Farsi: 1.39%, 1 participant • French: 1.39%, 1 participant • Other: 1.39, 1 participant (French also) • German: 0.00%, 0 • Korean: 0.00%, 0 • Mandarin: 0.00%, 0 • Spanish: 0.00%, 0 • Tagalog: 0.00%, 0 • Punjabi: 0.00%, 0

Participant Demographics

Age:	• 36-52: 34.11%, 26 participants • 19-35: 33.33%, 24 participants • 53-65: 22.22%, 16 participants • 66-74: 6.94%, 5 participants • 75 +: 1.39%, 1 participant • 18 years or younger: 0.00%, 0
Business Location Type(s):	• Office: 42.03%, 29 participants • From Home: 29.99%, 20 participants • Warehouse: 27.54%,19 participants • Factory: 23.19%, 16 participants • Studio: 21.74%, 15 participants • Mixed Use: 13.04%, 9 participants • Other (please specify): 7.25%, 5 participants (1. Studio and offices 2. our primary shredding plant is in Quebec, where the textile infrastructure is mostly located in Canadap 3. Veterinary 4. Textile Wholesaler 5. Co-working Office) • Storefront: 5.80%, 4 participants
Import Garments:	• No: 74.65%, 53 participants • Yes: 25.53%, 18 participants
Annual Import Quantities/ Insights:	• 10000+ • N/A • 20,000pcs • Import fabrics • 100,000's • Very little – we predominantly manufacture domestically. Less than 1500 pcs per year are imported and those are ones we can't produce here. • 5000–10,000 • 3 – 5k pcs per year. The vast majority of the garments we produce go directly to the U.S. Most of our imports are samples and projects for small local clients. • Confidentail, several hundreds of thousands • Much more than the average household, but not as much as a retailer. It is for film/costumes • 30000 • 100,000pcs • 5000

BESIDES THE 10 THEMES ABOVE, ARE THERE ANY OTHERS THAT SHOULD BE CONSIDERED?

Answers (1 of 2):	• Reduction, reuse, recyclability of ALL elements of packaging and product support (No packaging if possible, PLA blister packaging where required, QR codes vs. manuals, befriendly inks,etc) • awareness of recycling education program • Incentive tiers / badges for companies that achieve higher levels of success. • The list seems very thorough. Thought: investment in recycling and infrastructure to more adequately handle the volume of materials (I.e., bio plastics) • Creation of government programs beyond SR & ED Tax credits to ignite faster changes and developments in material innovation for the product creation industries. • I find prices higher for recycled products. It should be cheaper!. Without customer investment, policy does not translate into results • Have Metro Vancouver and the province of BC stop throwing their non biodegradable, nor incinerable flame resistant workwear from going to landfill, when their is a closed loop made in Canada recycling program right in their own back yard and readily available. • This is a smaller city but having fabric recycling spots in the city where people can give away old rags will be ideal. • Realistic and practicality of implementing above said themes • Natural fibers over man-made= better quality for the consumer and circular industry once items are exhausted they can be composted. • Things that biodegrade are a part of the circular economy • Think local. We need to change purchasing habits & we need to set an example. Buy local - food, clothes, products. This needs to happen in corporate purchasing and by our government and crown corps.

BC APPAREL & GEAR

BESIDES THE 10 THEMES ABOVE, ARE THERE ANY OTHERS THAT SHOULD BE CONSIDERED?

Answers (2 of 2):	• Supporting design for circularity through education to businesses. • Bring back single use plastics The paper is causing more garbage And it is gross. The fibres from the “paper straws” are extremely toxic to humans And not to mention the multiple cases of micro metals found in all of these single use paper products • Produce longer lasting more versatile products. Reeducate consumers that overconsumption is destroying our climate • Alignment with Global/European policies and standards. • A unified message on all fronts, K-12 schools , post secondary , institutions and business. • Practicality vs idealism. • 1. Workshops/Community Fairs/Events around understanding waste management for common people 2. Visibility of what happens to different waste streams • Consume less • All clothing and fabric needs to be recycled and turned into insulation or rugs or a durable fabric for car seat interiors etc. • Education is so important. Even a simple pamphlet circulated to each household would be great. Even with our current recycling program, I spend so much time standing in front of the recycling bin with a miscellaneous piece of plastic in my hand wondering if it can be recycled or is garbage. • 24 Hosting repair workshops

PLEASE SHARE ANY OTHER SPECIFIC COMMENTS OR IDEAS ABOUT WHAT YOU THINK SUCCESSFUL SOLID WASTE MANAGEMENT SHOULD LOOK LIKE IN THE FUTURE.

Answers (1 of 3):	• Look at the transfer network of goods and focus on the common nodes not the end points. Directly changing behaviors of producers and consumers seems easy but is difficult and remote from the solution. If you require retailers to take back packaging (like was done in Germany years ago), a lot less packaging use will quickly result. • I am in the clothing industry and I have not found many places to recycle fabric scraps • Mandate the Recycling and Global warming program in school Curriculum and recommended credits to take for the Post Secondary Education! • Higher solid waste diversion rates need to be coupled with local recycling into new usable materials so that those materials are not diverted into other regions / countries. Circular economies are more environmentally responsible if they exist within a contained geographic region. • More initiatives around tackling overconsumption at all levels of the industry. More research and developement on smart materials and skill-sharing for salvage & repair/reuse programs. • Well, currently it is hard to believe that recycling is actually happening. Is there proof? Do we know the efforts we are putting in make any difference whatsoever? It kinda feels like it isn't happening so there is a why bother attitude. Let's think about that for a second. • From the industrial workwear standpoint, we would like to see 3 things with regards to disposal of flame resistant aramid workwear garments and fabric scraps...1) Metro Van etc to stop throwing their non biodegradable textile waste into landfill, 2) Build recycling points into the public tender bidding process, as the closed loop system for this waste stream is available to all manufacturers supplying you. 3) Use your Metro Van big stick and tell industries to stop putting this type of waste into landfill. • These all feel very important so hard to prioritize or rank some lower

BC APPAREL & GEAR

PLEASE SHARE ANY OTHER SPECIFIC COMMENTS OR IDEAS ABOUT WHAT YOU THINK SUCCESSFUL SOLID WASTE MANAGEMENT SHOULD LOOK LIKE IN THE FUTURE.

Answers (2 of 3):	• A more extensive garbage collection where the waste produced gets thrown back into the production of manufacturing • 1. Consumers need to be incentivized by retailers to upcycle, recycle, and buy less. Incentives need to hit the pocketbook; if you don't need the incentive, then opt to pay it forward as an in-kind donation. 2. Education in the schools. Children influence their care providers and peers. Get the schools more involved. • We love seeing what other creative recycling programs are doing. Specifically, Raven Recycle in Whitehorse. As glass was not recyclable in the Yukon, they recently purchased a specific type of kiln and partnered with the local glassblowing community. They have an artist residency programs that gives artists the ability to pull any materials they want from the depot. Generally speaking, ways to involve the community in different ways, and to engage artists inusing found/recycled/sustainable materials. • Get plastic out of our lives! Specifically in clothing, single use food containers and wrap. • Grants or support for new businesses that can help with textile waste recycling. There currently is no infrastructure. • Bring back single use plastic Paper did not do nothing good for the environment or for the people living in this environment • 16 Digital Product Passports for all products and all supply chains. Full transparency, shared accountability and actual extended product responsibility that minimizes government / taxpayer waste management services. Shift the burden back to private profits.

PLEASE SHARE ANY OTHER SPECIFIC COMMENTS OR IDEAS ABOUT WHAT YOU THINK SUCCESSFUL SOLID WASTE MANAGEMENT SHOULD LOOK LIKE IN THE FUTURE.

Answers (3 of 3):	• Linking reuse, repair and recycling groups all together • The ability to recoup some of the costs associated with recycling. Clearer, more easier to access guidance around recycling of non-standard items (ie. Paper, plastic etc.) • Transparency on the use of waste, share lifecycle story, what is hard, what is easy. Progressive programs that support business that will not have the resources to change all at once. • I just threw out a massive bag of textiles, they where no longer wearable, and I had no where to recycle them. • There are many options that can be extended with the use of recycled clothing and fabrics • I think moving away from plastic packaging is essential to our future. I also believe that having consistent and transparent processes for managing compostable packaging is a must across Canada. • Having regional drop centres for textile waste

Summary

In creating and sending our “Solid Waste Management in Metro Vancouver” survey, we hoped to assist the city in gathering thoughts on the creation of its new plan. Using the resources of both KenDor Textiles and BCAG, we sent three email blasts to a list of 1500+ subscribers as well as social media postings to 1500+ followers. In total, we received 76 responses to the survey. While the written answers we received were very insightful, the lack of engagement was our biggest challenge. The quality of our replies was high and specifically came from the textiles and fashion industry. We hope this will be beneficial during the city’s planning stage.

In our written responses, the main takeaways are as follows; education on the current and new systems, incentives for proper recycling and sustainability, and proper textile recycling spots. Our full responses can be found in this report, but education stands out as the most important to the surveyed people.

As mentioned above, the most challenging aspect of this activity was the lack of engagement. This reads to us as a sign that this industry and the city might consider prioritizing brainstorms and ideas on how to get the public interested in this subject. Sustainability and environmental health, as we all know, are of the utmost importance. Although it has been and continues to be discussed worldwide, the general public doesn’t seem interested in the topic based on this experience. We suggest more groundwork be done to engage the community at large via short-form, easily digestible content through platforms such as TikTok, Instagram and YouTube, as a way to create more public interest when engagement activities such as this are distributed.

Metro Vancouver Solid Waste Management Public Engagement
Report prepared by Binners' Project for Metro Vancouver

About Us

Binners' Project is a group of waste-pickers aided by support staff dedicated to improving their economic opportunities, and reducing the stigma they face as informal recyclable collectors.

Binners' Project is a project on MakeWay's Shared Platform, which provides operational supports, governance, and charitable expertise for changemakers. MakeWay is a national charity that builds partnerships and solutions to help nature and communities thrive together.

Overview

Binners' Project created a low-barrier engagement strategy that focused on gathering feedback on Metro Vancouver's update to the Solid Waste Management Plan from community waste experts, binners. Binners are among one of the most marginalized groups in urban areas, and they bring valuable feedback to the solid waste systems and insight into the public's approach to disposing of waste.

The goal of the strategy was to collect binner feedback in a manner that was informed and in an accessible environment. The strategy was designed in two parts: Binners' Project members conducted in-person surveys with local binners at bottle depots in the Downtown Eastside and at the Coffee Cup Revolution, an income-generating event for binners that Binners' Project hosts at Victory Square Park annually. Binners' Project core staff facilitated the second portion of the engagement through consultations. The development of the engagement strategy to the final survey took place from the beginning of September to the first week of November.

Language barriers, choice of wording, design/layout of the survey, along with the complexity and lack of background knowledge of the Solid Waste Plan provided challenges for binners to complete the survey. Overall the engagement plan received positive feedback despite these challenges. Participants expressed appreciation for being heard and included in the study. Between October 4th and November 1st, 81 surveys were completed, two consultations were hosted and 33 people attended.

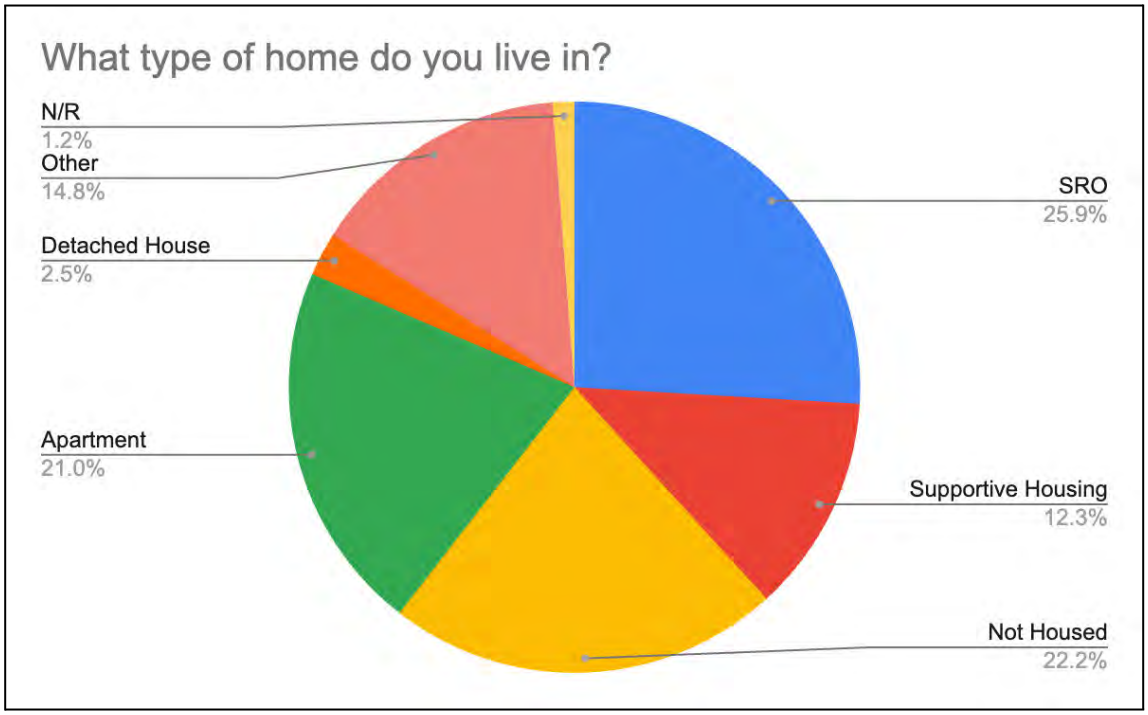
Engagement Strategy

Survey Methods

Binner-conducted surveys were staged from October 10th to November 1st. Binners' Project members were deployed in pairs to local bottle depots for two-hour shifts. The first survey shift on October 10th was intentionally staged before the Coffee Cup Revolution to identify any challenges with the survey and make any adjustments for binners leading and participating in the survey. Binners were approached, informed of the updated solid waste plan and offered to participate in the survey. Interested participants were then provided with a printed survey to complete by themselves or on their behalf by the surveyor.

Surveys were conducted on October 12th at Victory Square Park at Coffee Cup Revolution, an event identified as an engagement location due to its high concentration of community binners, by two Binners' Project members. Community binners were approached in the depot line while they waited for their cups to be counted. Line engagement occurred from 10:30am to 2:00pm. Participants who expressed a greater interest in the Solid Waste Plan were then invited to attend a consultation session the following day, on October 13th.

Participants of the survey spoke primarily English, with 77% stating that the language was spoken in their residential homes. Other languages noted were Cantonese, Farsi, French, German, Mandarin, and Spanish. 60% of survey participants reported they reside in supportive housing, SROs or disclosed that they had no housing. The highest participating age group (25.6%) was 46-55 years old. 33% of participants stated they lived in Vancouver (62.9% didn't disclose what city they lived in).



Consultation Methods

Two consultations were hosted at 312 Main St, one on October 4th and the other on October 13th. Consultations were facilitated by a Binners' Project core staff member. The first consultation was open to Binners' Project members. 15 members were invited, 13 attended. The format of the consultation followed what was structured in the toolkit provided by Metro Vancouver's engagement team. Explanation of the Solid Waste Plan was discussed, followed by elaboration on the themes, top and bottom priorities and the lastly completion of the surveys. Surveys were offered to be completed in the consultation or taken home for later completion.

The second consultation was offered to community members who expressed deep interest following their survey participation at the Coffee Cup Revolution. 20 people were invited, 20 people attended. As the

survey was already completed during the Coffee Cup Revolution the format of the consultation focused on top and bottom theme priorities.

Participant demographics from the first consultation included; 45% identified as English speakers (36% didn't provide an answer), 36% stated they reside in supportive housing (45% didn't provide an answer), 27% were in the 56-65 age group, and 27% noted they reside in Vancouver (73% didn't provide an answer). Demographic data was not collected from the second consultation as those participants had already completed the survey and provided that information.

Survey Results and Summary

81 surveys were completed during the engagement period. Survey responses identified "Incentives" and "Circular Economy" as the top priority themes. Little explanation was provided as to *why* incentives were prioritized, excluding one statement that said "higher deposit fees on more items increases returns." Circular Economy was identified as a priority due to its environmental consideration. Participants commented that reducing waste and investing in reusable and sustainable materials, as opposed to single use items, will have a positive environmental impact. In addition to the top two themes, "Education and Behaviour Change", along with "Design and Innovation" were included in the top four priorities. 40% of respondents didn't elaborate as to why they chose their top priorities.

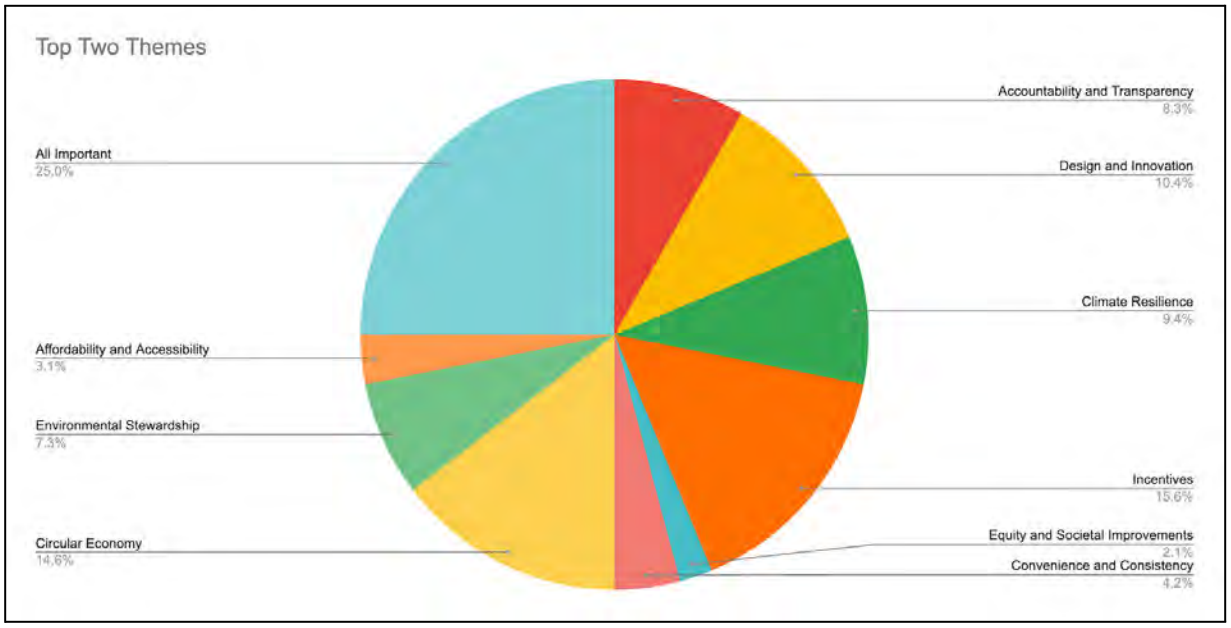
The two themes of "Design and Innovation", and "Affordability and Accessibility" produced the most votes for the *least* important themes. No explanation was provided as to why these two themes were listed as unimportant.

"Design and Innovation" proved to be the most polarizing theme, with it being voted highly in both the most and least important themes. While no explanation was provided as to why it was unimportant, there was reasoning supplied for its prioritization. Participants expressed a need to reduce single use items and instead invest in designing products that are reusable, biodegradable, reliable and reduce consumer costs.

37% of respondents identified all themes as 'Very Important.' The emphasis on the importance of all themes can be seen in the reduced response to themes of least priority. 56% of responses didn't identify two bottom priorities at all. Additionally, 53% of respondents who didn't identify two bottom themes used the final questions of the survey as a platform to communicate their concerns and challenges *outside* of the solid waste plan, particularly around housing. Out of those who provided bottom choices, 52.8% of them did not provide an explanation as to why they chose those themes.

See the following appendices for more detail on the surveys:

- Appendix 1 - Survey Response Forms (Does not include Oct 10th surveys)
- Appendix 1.1 - Survey Response Tracking
- Appendix 2 - Survey Response Forms (October 10th surveys)
    - *The method for these surveys was slightly different than the preceding surveys so those forms have been separated for posterity*



Consultation Results and Summary

Binners' Project members were very engaged in the first consultation. This resulted in a longer conversation and consequently not all content that was planned was covered. Top two and bottom two choices were either briefly explained or not at all. This resulted in a reduced response rate to those particular questions.

Participants requested a deeper explanation of the Solid Waste Management Plan before engaging further in the consultation. Clarity was asked on Metro Vancouver's Solid Waste responsibility, the plan's geographical range, and the waste collection process. Participants also required definition and elaboration of the following themes and terms; "circular economy", "extended producer responsibility", and the recycling process. "Design and Innovation" and "Convenience and Consistency" were voted as the top two priority themes. "Convenience and Consistency" was prioritized due to a need for a streamlined waste sorting process and consistent communication on how to navigate that process. Similar to the survey responses, participants chose design and innovation of products to step away from single use items and invest in reusable materials to reduce environmental impacts.

An additional concern raised by the group was a need for further garbage cans in the Downtown Eastside, and around the city. It has been noticed by binners that accessible garbage cans have been removed, particularly from the Downtown Eastside, which impacts a binner's ability to collect refundables and divert waste. One individual backed up the benefit of this service by stating that there needs to be better sorting processes in place to reduce the amount of waste going to landfills. Binners are currently contributing to that service but the city can benefit further if more binner-friendly bins were implemented.

The second consultation focused on top and bottom choices as participants had already completed the survey at Coffee Cup Revolution, and it was identified that responses to theme prioritization were low. All surveys completed at Coffee Cup Revolution are included in the survey results and summaries. Top and bottom themes from the consultation are included in the consultation results and summaries. Participants provided their top two choices more easily than the bottom two, with the latter having a significantly decreased response rate. Participants required explanation for the following terms and processes; Extended Producer Responsibility and Metro Vancouver's solid waste systems. The multiple systems created in Metro Vancouver to dispose of various types of plastics was communicated as confusing and unnecessary. "Why can't they [plastics] be recycled in the same bin like cardboard?...It's all plastic...it should go together. How can we change that?"

The conversation in the second consultation was not as in depth or as collaborative compared to the Binners' Project member consultation. Opinion statements were documented but often minimal elaboration was provided despite encouragement from the facilitator. "Education and Behavioural Change" was voted as a top priority. Consistent and accessible information was flagged as a needed development, as there is varying understanding on how waste can be sorted properly. It was noted that a change in mindset and perception towards waste is needed for people to understand the impact of consuming and incentivise them to recycle properly. "We are in a throw away world. People need to think about what they are buying so they can think before they throw it away. People don't know what they are throwing away." "Affordability and Accessibility", "Environmental Stewardship", "Convenience and Consistency", and "Design and Innovation" were additional themes noted as priorities. One participant emphasized the need for 24/7 recycling centers and another proposed idea was a charge-by-weight garbage collection service in residential buildings to incentivise residents to sort their waste properly.

There was no leading theme prioritized in the bottom section. "Accountability and Accessibility", "Design and Innovation", "Climate resilience", and "Equity and Societal Improvements"were mentioned but 85% of participants chose not to provide a bottom priority.

This could have been due to the comfort of participants. Binners' Project members were familiar with the space, the facilitator and other participants in the consultation, whereas participants in the second consultation did not have that level of familiarity. This was reflected in the feedback with a few people commenting that they did not feel comfortable in participating or providing their opinion.

Collectively between the two consultations, "Design and Innovation of Products" and "Convenience and Consistency" were voted the most important to prioritize.

Consultation Participant Feedback Summary

Overall the feedback from the consultations was positive, participants stating that they either strongly or simply agreed on survey questions. 93% of feedback was positive, with only one response stating that the workshop was biased, one response stating they didn't feel comfortable sharing their perspective, and one response stating that they didn't have enough information to participate. All responses that disagreed with an aspect of the consultation were in response to the second consultation, which was only open to community binners. The unfamiliarity of the space, the other participants, and the facilitator could have

contributed to the feelings of discomfort and their ability to express their opinion. Meanwhile Binners' Project members in the first consultation would have been familiar with all three of these factors, which could have impacted their comfort level and consequently contributed to a more in depth discussion.

Comments for improvement included the following; the facilitator ensuring one person spoke at a time, elaboration on the 'how to' process of the survey and solid waste engagement plan, a more enlightening survey, and a reflection on why addressing top and bottom themes were important.

See the following appendices for more detail on the consultations:

- Appendix 3 - Consultation #1 Survey Responses and Notes
- Appendix 3.1 - Consultation Engagement Notes
- Appendix 4 - Consultation Feedback and Notes
- Appendix 5 - Consultation Response Tracking

Overall Results and Recommendations

Binners' Project undertook a comprehensive low-barrier engagement strategy to gather feedback on Metro Vancouver's update to the Solid Waste Management Plan from the marginalized community of binners in Vancouver's DTES. Despite challenges such as language barriers and the complexity of the Solid Waste Plan, the engagement plan received positive feedback, with participants expressing gratitude for being included.

The survey results indicated a strong emphasis on the importance of all themes, with "Incentives" and the "Circular Economy" identified as top priorities. The consultations further highlighted the need for clarity on the Solid Waste Management Plan, definitions of terms, and explanations of themes. Participants emphasized the importance of convenient waste sorting processes, increased garbage cans, and a shift towards reusable materials.

The feedback from both consultations was generally positive, but some participants in the second consultation, open to community binners, expressed discomfort, potentially due to unfamiliarity with the facilitators and inexperience with consultations. Overall, the feedback suggested a need for clearer communication, more engaging surveys, and a focus on addressing both top and bottom themes.

Recommendations:

1. Improved Communication: Enhance communication about the Solid Waste Management Plan, including geographical scope, waste responsibility, and key terms, to ensure a better understanding among participants.
2. Enhanced Survey Design: Improve survey design by providing clearer instructions, incorporating more engaging elements, and ensuring language accessibility to minimize challenges faced by participants.

3. Focus on Reusable Materials: Encourage a shift towards reusable materials through education and incentives, supporting the community's desire to reduce single-use items and promote sustainability.
4. Equity and Inclusivity: Continue efforts to reduce barriers to participation for underrepresented or marginalized populations, ensuring that the engagement strategy remains inclusive and accessible to all community members.

By incorporating these recommendations, future engagement initiatives can build on the success of this consultation, fostering a more inclusive and effective dialogue on solid waste management in Metro Vancouver.

Post-Engagement Report

Report Submitted by: Sheila Molloy, Executive Director, Coast Waste Management Association

Submitted to: Brooke Atkinson, Engagement Specialist, Solid Waste Services, Metro Vancouver

THE GOAL

The goal of the engagement was to support Metro Vancouver Solid Waste Management Plan Update consultation process and to ensure a better representation of feedback from environment-based groups who are an important audience Metro Vancouver wishes to ensure feedback from.

As this was a resident survey, the benefit of the feedback is informed by the participants work in the environmental community as well as their view as residents, both of which will be affected by the outcomes of the final Solid Waste Management Plan.

We did hear back from four (4) members who let us know they had already taken the survey, which established to us that we were one of many paths supporting to Management Plan Update to get as many in as possible.

ABOUT THE PARTICIPANTS

The Coast Waste Management Association (cwma.ca) is a highly regarded, non-profit membership association serving the solid waste management industry across British Columbia. We are comprised of 192 member organizations with over 950 individual participants engaged in our community and a greater industry outreach of over 3500.

Our members and industry contacts are comprised of people involved in recycling, composting, deconstruction, extended product stewardship, marine debris management, waste disposal, waste education and consulting, and managing solid waste facilities. The participants on this activity are highly informed in matters of the environment and solid waste management specifically.

ENGAGEMENT ACTIVITY

CWMA sent out a survey to our members and our industry mailing lists regardless of geography to take advantage of the opportunity to build awareness of Metro Vancouver's work on their SWMP consultation and to support future engagement activities by setting a tone of collaboration.

Two separate information emails were sent one week apart. The emails included general information on the Metro Van Solid Waste Management Planning Consultation and a link to the survey which was the same public survey model (all base questions) being used by Metro Vancouver [redacted]

November 14 [redacted]
November 21 [redacted]

Thanks to Metro Vancouver for the opportunity to collaborate and support this important work.

Q1 A number of themes have been identified as potentially informing the vision and guiding principles for the updated solid waste management plan. Thinking of how we purchase, use, reuse, recycle, and throw things away in Metro Vancouver, please rank the following values and priorities.

Q2 Besides the 10 themes above, are there any others that should be considered?

Answered: 19 Skipped: 11

#	RESPONSES	DATE
1	The development of further processing (value added) that can use recycled products in our cities infrastructure. Such as turning plastics into manhole covers, drain covers, plastic poles etc.	11/23/2023 8:14 AM
2	requirement to deal with the waste of the products you sell	11/22/2023 10:22 AM
3	It is hard to understand what your thoughts are concerning some of your questions. For that reason, I almost did not take the survey. Q1. Government can do some high-level education, but leave the details to the service providers. EG: GHG involved in recycling glass far outweighs the GHG savings. Q2. Agree with environmental protection, but not if it involves another EPR of something already being handled by industry. Keeping tipping fees down will reduce illegal dumping if that is where you are heading. Q3 Making disposal fees affordable is what industry has been preaching. High fees & lack of bylaw and environmental enforcement cause more illegal dumping. Q4 Climate resilience is good, but it would be good to know what you're thinking about. If it has anything to do with WTE, then absolutely NO. Q5. Access is already provided by service providers. Those that don't want the information, don't ask or look for it. Q6 Not sure what accountability and transparency you are talking about, hence not important. Q7 Circular economy is a greenwashed term. If the environmental cost of collection, storage, transportation, exchanging and/or processing a material is higher than generating a new product with all inputs considered, then new is the way to go. GHG's and carbon footprint are what count, not a cute phrase like circular economy. Q8 We lost this battle when we brought in PPP EPR. If the packaging is not readily reusable or recyclable in larger markets, the fees charged by the EPR (eg Recycle BC) should be enough to cover the full cost of processing and recycling the material and packaging that is more than 20% larger than the item, it should also carry a prohibitive fee (eg Barbie doll $5 pkg fee) Q9 Bylaws should say you have to have the services or a self-haul system in place in order to get a business license. Q10 Government needs to let the industry innovate to drive competition. Dictating how a service should be delivered I agree 100% with increasing diversion, but I believe regional governments throughout BC need to get out of industry's way to deliver it. In MV, our diversion rates have been mostly stagnant since MV has been more focussed on working against industry than working to improve outcomes.	11/21/2023 5:25 PM
4	More events for recycling/upcycling	11/21/2023 3:29 PM
5	Making it easy and accessible to the commercial industry (i.e. construction companies & waste haulers) not just homeowners.	11/21/2023 11:18 AM
6	for Metro Vancouver it should be mostly focused on "practical" aspects to facilitate easy reduction of waste for inhabitants of the region: consumers and producers	11/21/2023 10:53 AM
7	1) Encouraging sharing systems in communities (so far seen as renting items from private companies or borrowing from libraries, tool libraries, thingery and in much more informal structures) 2) More conscious consumption and preventing waste before it happens. How can we as individuals navigate our capitalist consumer culture? How can we meet our desires for new, better, more and our search for happiness, without having to resort to buying something? Much like the create memories, not garbage campaign, I believe there's potential to highlight lifestyle switches year round that can prevent waste from occurring, while also having many other benefits to an individual.	11/21/2023 10:42 AM
8	Reduced risk for decision makers to recommend use of products like recovered asphalt in road base.	11/21/2023 10:11 AM
9	n/a	11/21/2023 9:55 AM
10	people who make no or very little waste at their residence should benefit, those who make lots of waste should be charged extra	11/21/2023 9:48 AM

11	Incentivizing local recycling and repurposing industries to avoid overseas shipments of recyclable materials.	11/15/2023 3:19 PM
12	risk assessment of long term disposal and diversion options	11/15/2023 1:28 PM
13	focus on C&D hubs - space dedicated for materials push to include deconstructed materials in procurement and in building codes (also recycled asphalt in roads!)	11/14/2023 4:02 PM
14	Consider wildlife attractant management, community safety and ecological impacts.	11/14/2023 3:07 PM
15	Economic accounatbility	11/14/2023 1:36 PM
16	N/A	11/14/2023 1:29 PM
17	1. Deposit/Returns systems on all beverage containers! 2. Refillable options for detergents, hair/body products and pet food.	11/14/2023 12:53 PM
18	clear delineation of commercial / residential services.	11/14/2023 12:45 PM
19	programs must be simple/easy for home owners.	11/14/2023 12:45 PM

Q3 Please share any other specific comments or ideas about what you think successful solid waste management should look like in the future

Answered: 18 Skipped: 12

#	RESPONSES	DATE
1	one that includes those of us who commute in to metro for work and use services as part of personal and work actions	12/7/2023 5:02 PM
2	If you are going to utilize a true circular system, we need to utilize our recycled material back into our city infrastructures. End markets for recycled material is key to ensuring full value and that value should be shared with the public.	11/23/2023 8:14 AM
3	I really like that Interior BC charges you for disposing of trash by the amount/weight of individual garbage. Maybe it could look like having the trucks weigh trash upon collection. Alternatively, award people for having the least amount of trash? Positive reinforcements seem to work better in North America	11/22/2023 12:49 PM
4	any incentive needs to be accompanied by penalties and enforcement	11/22/2023 10:22 AM
5	No load of waste shall be sent to final disposal (landfill or incineration) with more than 20% divertable content. Although this would require an amendment to the EMA, it would force us to put everything through an MRF and extract the recyclable and/or compostable material that lazy people or those who do not care about waste diversion, simply put in the garbage. Incineration in BC is a delusional idea as it creates GHG's burning waste to create electricity and displace BC's ZERO GHG hydro-generated electricity. The worst part is that if we divert what MV says it wants to divert and MV stops deliberately burning recyclable material (plastics), the incinerator will not generate enough BTU to create electricity; a double whammy caused by our success. No wonder MV has decided to pick fights to stall diversion vs work with industry to meet the region's goals.	11/21/2023 5:25 PM
6	Making it easy and accessible to the commercial industry (i.e. construction companies & waste haulers) not just homeowners.	11/21/2023 11:18 AM
7	a wide variety of practical options. clear messaging in the Metro Vancouver region about recycling. more alignment with all regions in BC/Canada on recyclable products. (avoid confusion for users)	11/21/2023 10:53 AM
8	1) Integration and promotion of more sharing structures, for example: a. expansion of community library services- some already lend books, digital equipment, musical instruments, puzzles...could they offer more items to share amongst the community? b. community centres usually have sports equipment for onsite sports- could they expand and develop short-term rental/lending of sports equipment to the community? c. could Cities/Metro Vancouver offer locations for neighborhoods to administer their own community sharing spaces? 2) Further development of reuse programs and infrastructure. This includes both encouraging the development of circular businesses while also promoting reuse behaviour in individuals (with a focus on making it easier and convenient). 3) Encouraging the development of more repair businesses, and promoting individuals to choose repair over disposal. A current barrier is finding existing repair businesses as they are usually independent, don't advertise, hard to find. How can they be highlighted?	11/21/2023 10:42 AM
9	Legislation that rewards waste diversion and circularity of CRD wastes such as Wood, increase the cost to dispose of unsorted mixed debris in the landfill, increased costs for companies that Demolish Buildings, rather than deconstruct and/or relocate perfectly useful homes	11/21/2023 10:11 AM
10	Ensure industry is consulted early and often.	11/21/2023 9:55 AM
11	Close collaboration between the regional government as the creator of the Solid Waste Management Plan and member municipalities which may enact bylaws in support of this plan.	11/15/2023 3:19 PM
12	reliability and low risk	11/15/2023 1:28 PM

13	sharing uneaten, unpurchased food	11/14/2023 4:02 PM
14	Wildlife attractant management should be a part of the management plan	11/14/2023 3:07 PM
15	Carbon reduction accountability	11/14/2023 1:36 PM
16	Consistent clarity and communication about where the waste actually ends up. Successful solid waste management will also shift our perception of waste into something more productive and useful even after it's "disposed".	11/14/2023 1:29 PM
17	There should be financial incentives to reduce waste - garbage pick up should be charged per container NOT hidden in the tax base.	11/14/2023 12:53 PM
18	waste/recycling should be handled locally, not shipped to other countries.	11/14/2023 12:45 PM

A: Activity Summary

Based on input from the community and the feasibility of the project, we have organized two types of engagement activities:

1. A **community workshop** designed to be language and culturally inclusive, tailored for those heavily involved to share their feedback and opinions.
2. A **wide-reaching community questionnaire**, crafted to be accessible in language, inviting participation from those interested in contributing from the broader community.

Originally, we had intended to organize a town hall, but a set meeting time proved to be inaccessible for a majority of participants.

Activity	Date	Time/ Duration	Location	Format	# participants
HK House Community Workshop	November 19, 2023	8:00pm - 9:30pm (1.5 hours)	Virtual on Google Meet	Roundtable, polls, discussions, jam boards. The session was conducted bilingually (English and Cantonese)	24
HK House Community Questionnaire	November 26, 2023	Open until 50 participants requested honorariums (1 day)	Translated Information PDFs on Google Drive, Questionnaire on Google Form	Information on Metro Vancouver's Solid Waste Management Plan update was translated and provided to the community. Those interested are invited to fill out the questionnaire	51

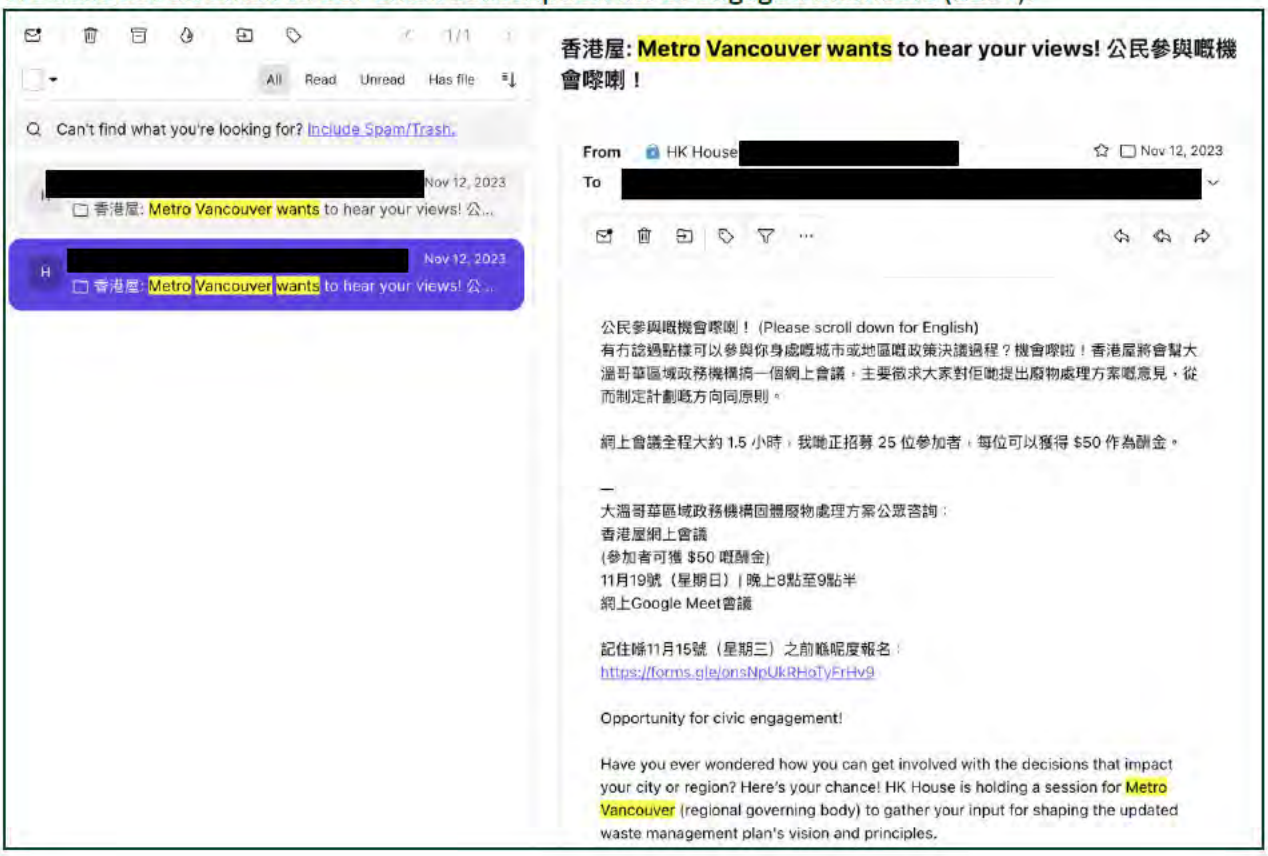
B: Promotions Summary

All promotional materials are created to be bilingual and accessible for our community.

1. Nov. 19 - HK House Community Workshop

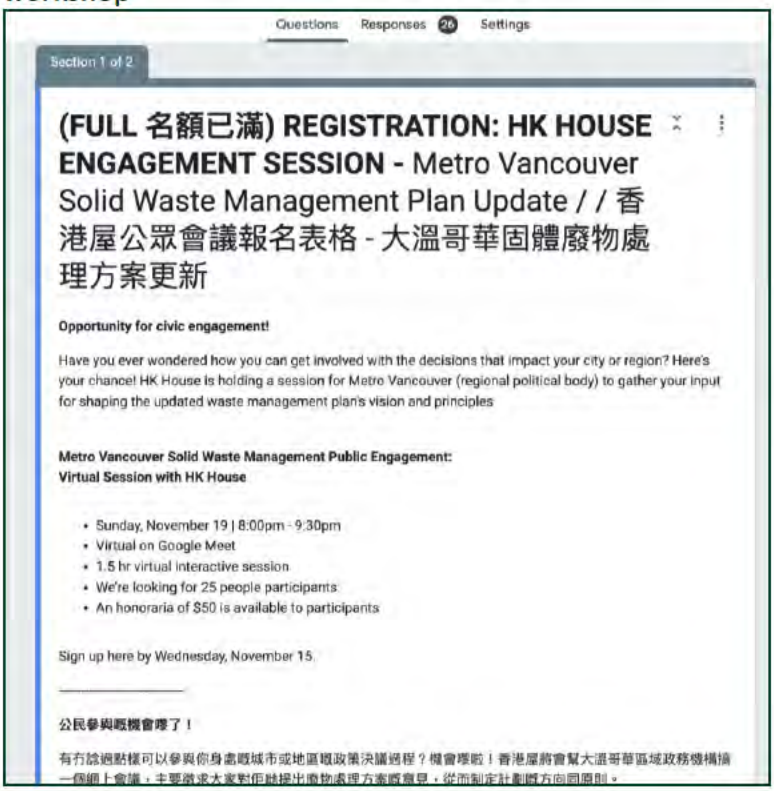
For the workshop, we only targeted our most engaged members.

- We sent out an email to our email subscription list of engaged members (120+):



- We also sent out the invitation to our community group of 306 members:

- 26 registered to join the session through our Google form. In the end, 24 participated in the workshop

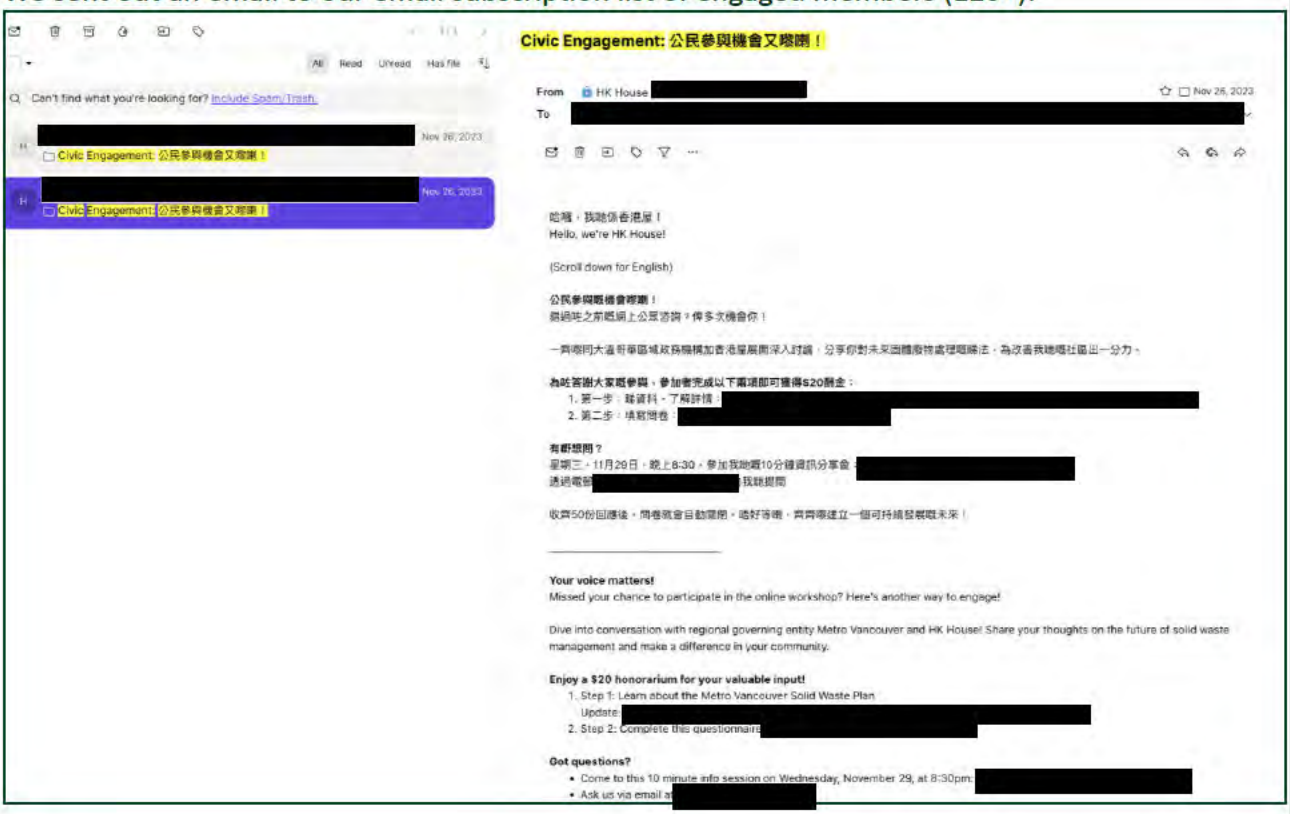


2. HK House Community Questionnaire

For the questionnaire, we sent the translated informational pdf and promotion out to our wider community.

- We promoted on Instagram to our 3,500+ followers:

- We sent out an email to our email subscription list of engaged members (120+):



- We also sent out the invitation to our community group of 306 members:

We were not expecting the overwhelming response. The questionnaire was full within a day, and we were unable to promote this on our Facebook or Twitter before this happened.

C: Demographics Summary

1. Nov. 19 - HK House Community Workshop [redacted]

- Where people live:
  - Majority of participants live in Burnaby (29.17%) and Richmond (29.17%)
  - Others live in Vancouver, Coquitlam and North Vancouver
  - One participant lives in New Westminster
- Type of Residence:
  - 66.67% of respondents live in condos or apartments
  - 16.67% live in detached homes
  - Others live in townhouses
- Languages spoken at home:
  - 87.50% of respondents speak Cantonese at home
  - 12.50% of respondents speak English at home
- Age:
  - 18 or younger: 4.17% of respondents
  - 19-35: 54.17% of respondents
  - 36-52: 41.67% of respondents

2. HK House Community Questionnaire [redacted]

- Where people live:
  - Majority of respondents live in Vancouver (39.22%) or Burnaby (37.32%)
  - Others live in Coquitlam, Richmond, and Surrey
  - One respondent lives in North Vancouver
- Type of Residence:
  - 56.86% of respondents live in condos or apartments
  - 35.29% live in detached homes
  - Others live in townhouses or low-rise buildings
- Languages spoken at home:
  - 94.12% of respondents speak Cantonese at home
  - 5.88% of respondents speak English at home
- Age:
  - 18 or younger: 1.96% of respondents
  - 19-35: 76.47% of respondents
  - 36-52: 21.57% of respondents

D: Feedback Summary

There were some emerging topics that came out of both engagements. Many pain points and areas of confusion were mentioned. Participants gave many examples, and focused on habits and comparisons with solid waste management they've experienced in different places they've lived in. Participants had so much feedback right off the bat during roundtable sessions and were very engaged.

1. HK House Community Workshop

Top two themes as voted:

- Convenience and consistency (20%) was voted the most important
- Affordable and accessible, Product design and innovation, and Incentives for recycling and waste reduction all tied for second ay 16%
- Accountability and transparency was third at 14%

Bottom two themes as voted:

- Education and community change (19%) and accountability and transparency (14%) were the bottom two themes as voted by participants

Emerging topics and comments during discussions:

- The participants believe that Metro Vancouver should be focusing on systems first.
- Many participants stressed that education is less important because people already know about sustainability, but do not have accessible or affordable options making it easy to do so.
- Being able to access and recycle easily and conveniently were deemed to be most important. Several folks commented how people will do it if it's easy and accessible.
    - One of the topics that participants brought up immediately was not being able to access to zero waste depots or facilities that can encourage recycling
    - Another common trend was not knowing what to do with waste like electronics, furniture, or other items that cannot be recycled or disposed of at their residence
    - Many also expressed confusion as there are many differences depending on the municipality, and also the type of residence you live in. Newcomers and even locals have differing knowledge of where to access information. The common feedback was that this information should be readily available instead of users needing to seek it out if recycling is to be encouraged.
- Several participants noted that tackling the issue at the source is more important, getting businesses and producers to create products that don't have waste, and creating an environment where circular economy/ reuse/ repair is easy to do, affordable and accessible
- There was also ample feedback about hoping Metro Vancouver can engage more communities and actually observe how people dispose of waste and be on the ground. Folks also mentioned how racialized communities do not get engaged.
- There were questions of what policies the government will launch from the top down, and how it's important to review and study whether current policies are effective. Participants stress how

governments need to take responsibility and make it much easy for folks who already want to recycle (everyone) to do so.

Please see our:

- In-session poll results – [redacted]
- Meeting notes – [redacted]
- Jam boards – [redacted]
- Workshop screen caps – [redacted]

2. HK House Community Questionnaire

Top two themes as voted:

- Affordability and accessibility of recycling and waste disposal options was voted the top theme at 25.49%
- Convenience and consistency – Waste and recycling services that are easy to understand and simple to use came in second with 16.67% of votes.
- Circular economy - Reuse, repair, and thrifting instead of throwing things away came in a close third with 14.71% of votes.

Bottom two themes as voted:

- Climate Resilience – Investing in systems with low climate impact, and Product design and innovation – Designing products to be more circular and regenerative tied for the top spot as least important with 19.80% of votes
- Accountability and transparency for producers and consumers to reduce waste came in second for least important with 13.66% of votes

% people found important:

- Equity and societal improvements - 62.75% voted as very important
- Affordability and accessibility - 72.55% voted as very important
- Environmental stewardship - 54.90% voted as very important
- Accountability and transparency - 47.06% voted as very important
- Product design and innovation - 45.10% voted as very important
- Incentives for recycling and waste reduction - 54.90% voted as very important
- Circular economy - 64.71% voted as very important
- Convenience and consistency - 54.90% voted as very important
- Education and behaviour change - 54.90% voted as very important
- Climate resilience - 39.22% voted as very important

Please see our:

- Questionnaire results, polls – [redacted]
- Questionnaire results, written feedback – [redacted]

E: Narrative Summary

Goals and objectives

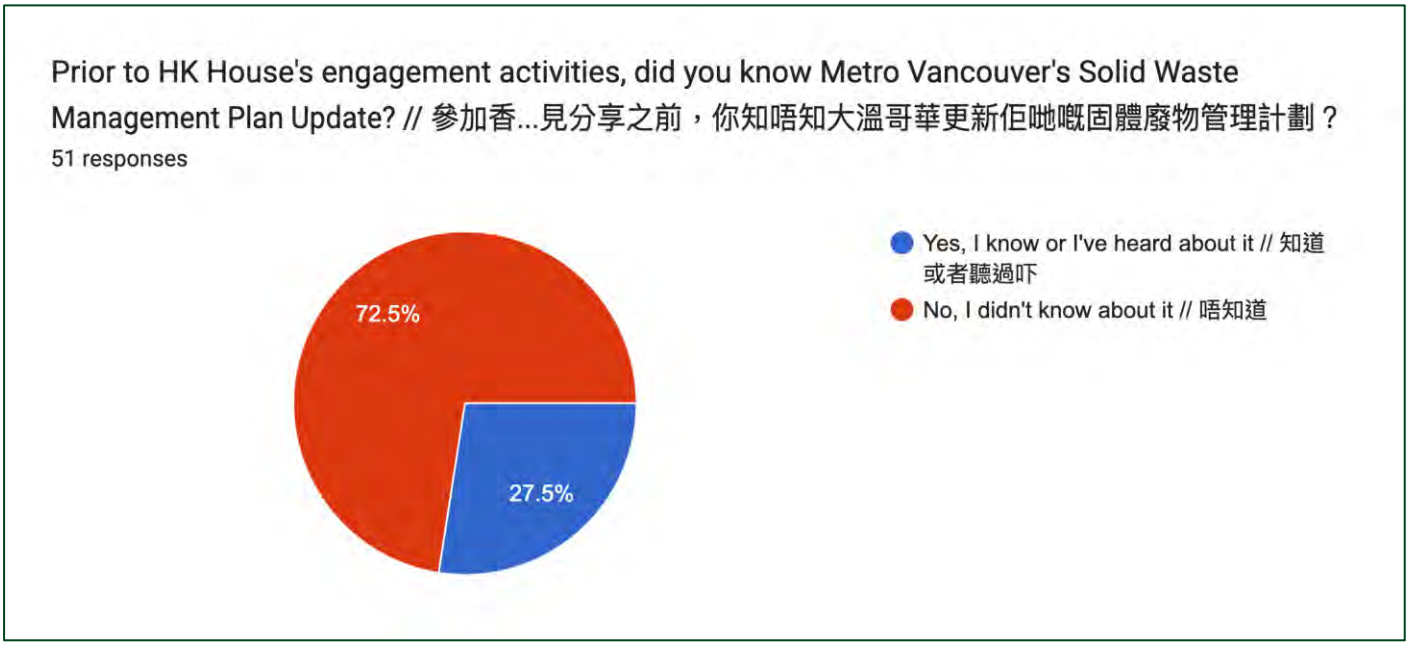
We were curious to see if we could get more of our community involved in civic activities, given that most of them hadn't participated in public engagement consultations before. This was one of the primary reasons for our involvement.

We were also aware that the Hong Konger diaspora community expressed an interest in sustainability. Consequently, we aimed to provide them with additional information and opportunities for engagement on this topic.

We asked the questions and were glad to find out that many of them were experiencing civic engagement for the first time.

1. Nov. 19 - HK House Community Workshop

2. HK House Community Questionnaire



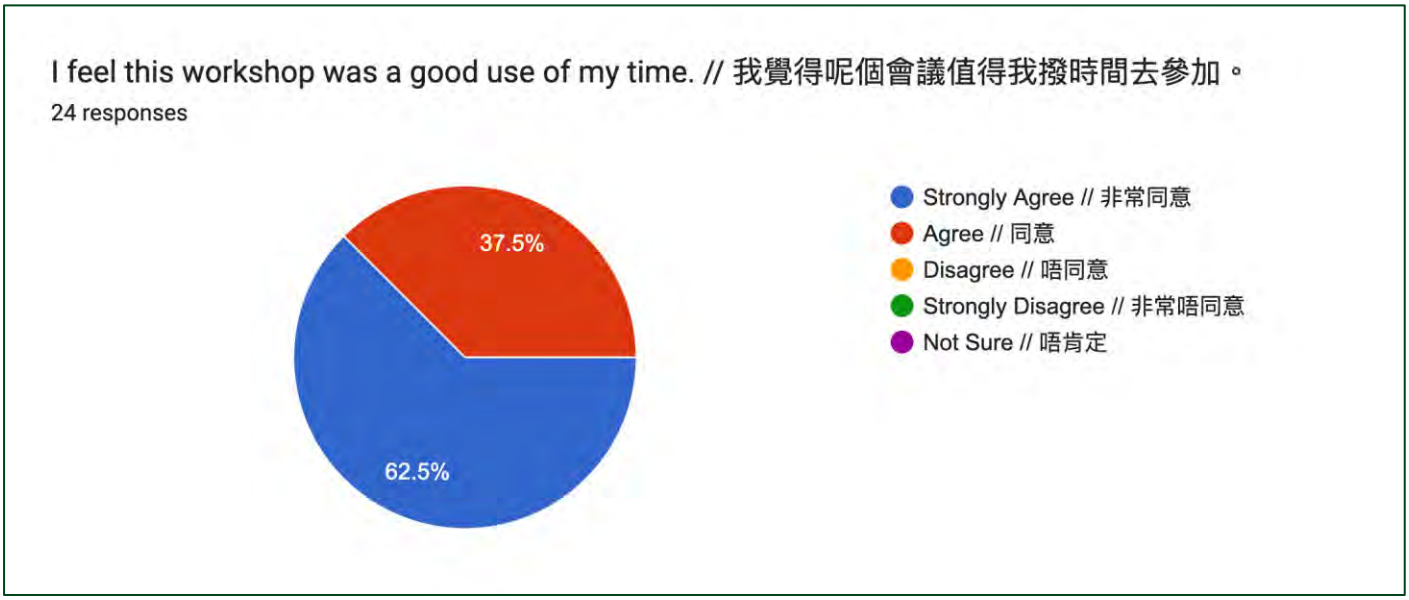
Challenges and results

Determining the engagement format posed a significant challenge throughout the process. Originally, we envisioned hosting a townhall, but concerns arose as community members highlighted the inaccessibility of the proposed event dates. Although there was widespread interest in participating in workshops and responding to questionnaires, both avenues quickly reached capacity. The community's strong desire for civic engagement was evident, yet the absence of accessible language and cultural support in usual municipal/ regional/ provincial/ federal engagements limited their options, causing a pent up demand for our sessions.

Technical challenges further complicated the workshop experience. Some participants struggled to navigate the polls and Jam boards, even with assistance. This caused them to be unable to participate fully. While in-person workshops would be beneficial, limited resources prevent us from organizing such events.

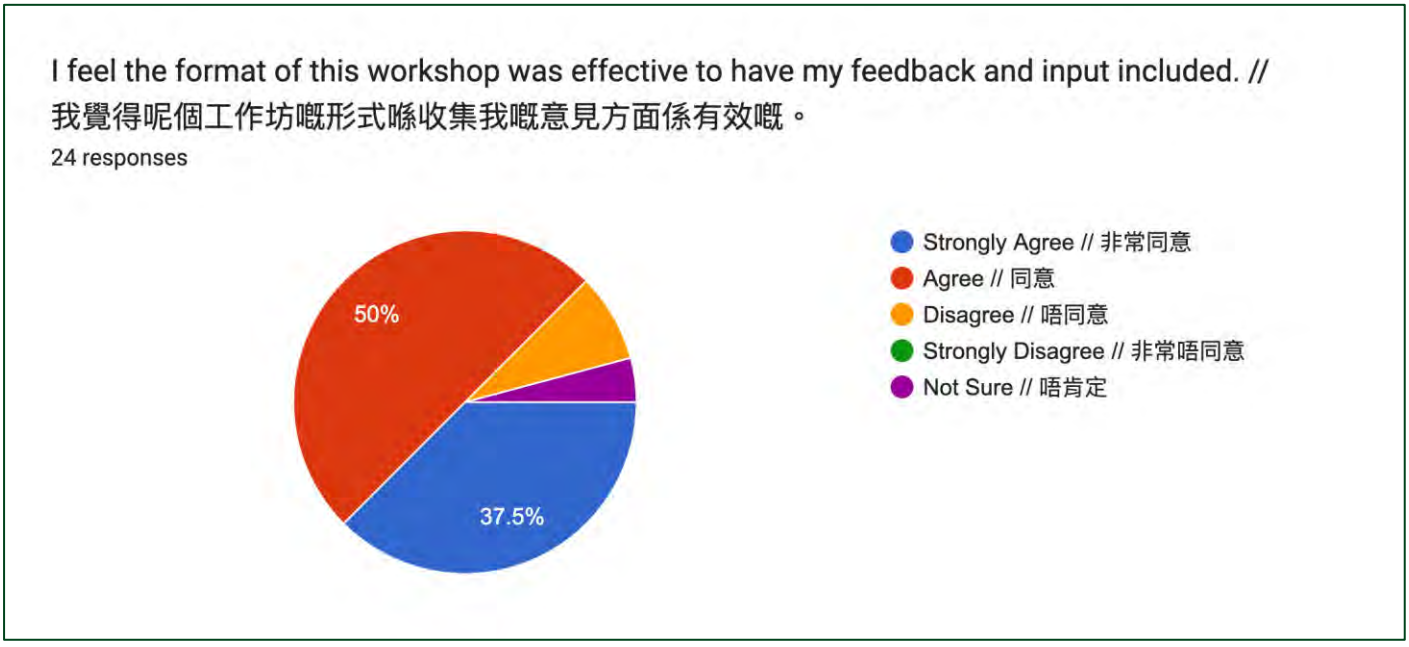
Feedback for the workshop:

We sent out a questionnaire for participants. Below are the summarized results.



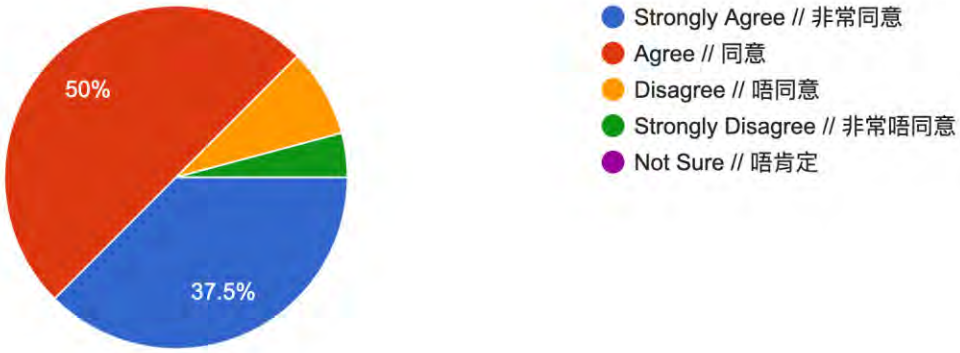
Most participants felt that it was a good use of their time.

Most felt the format to be effective. One was not sure and two disagreed. Throughout the process, two folks were unable to participate and didn't speak up. This may be due to the format, the way it's conducted, or technological accessibility.



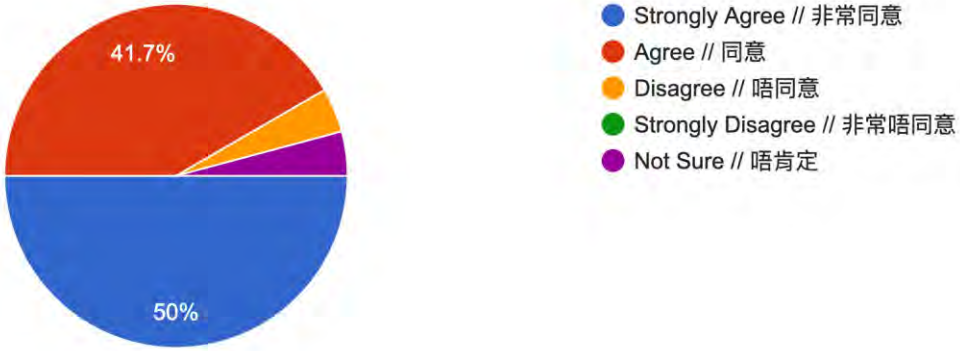
I had the information I needed to fully participate. // 會議提供咗足夠嘅資訊等我可以全面參與討論。

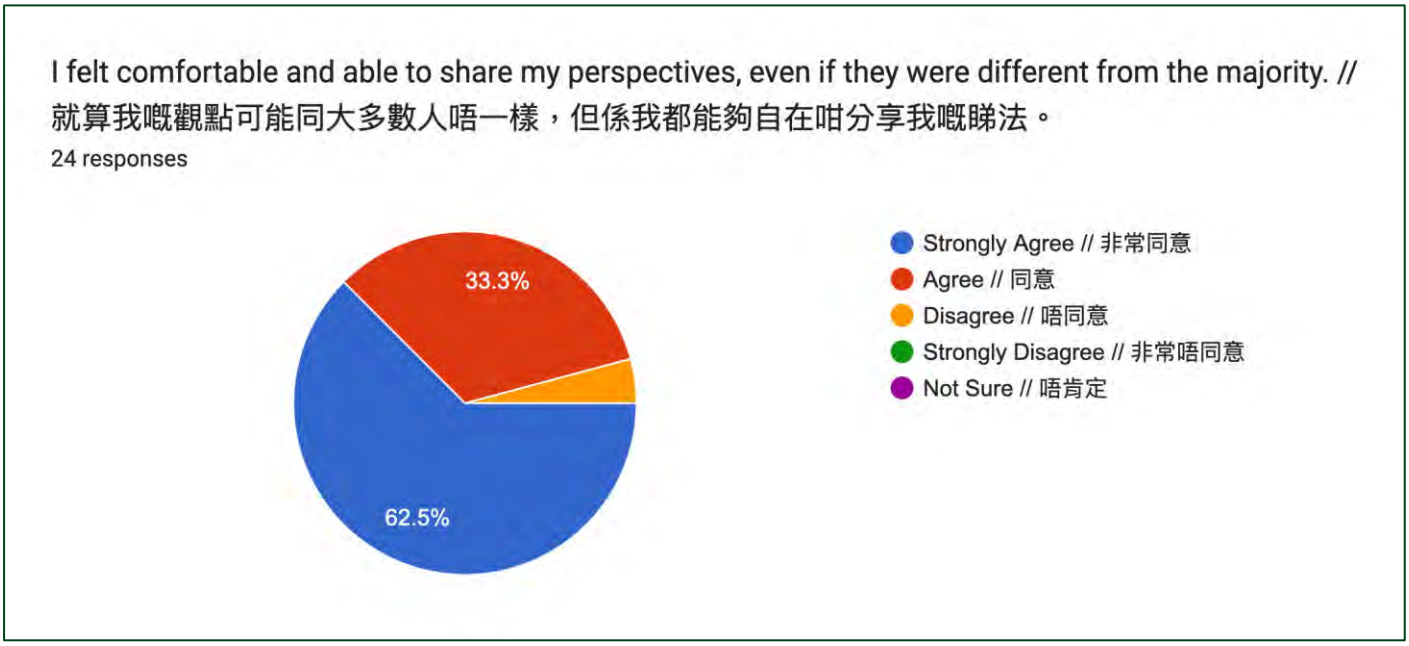
24 responses



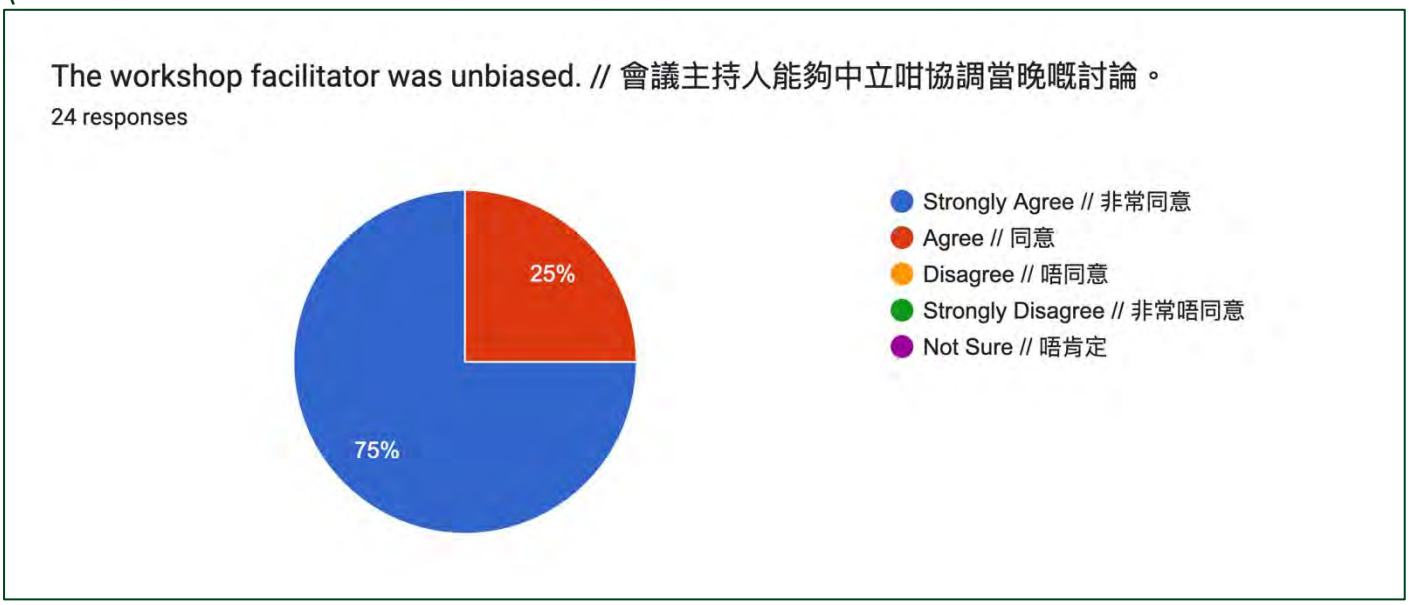
I felt that everyone was able to participate. // 我覺得會議上每個人都有機會參與討論。

24 responses





\



F: Description of Efforts to Reduce Barriers

Many participants from our community need language and cultural-sensitive engagement and feedback mechanisms.

- All of our materials and engagement activities require hours (20+ hours) of translation work beyond what can be allotted within the [redacted]

- We spent hours translating materials (entire workshop, polls, jam boards and PowerPoint presentations), surveys, survey results, transcripts from the dialogue and other workshop items to be inclusive for our folks.
- We have to translate all the feedback and qualitative answers in the surveys that were provided.
- We even spent a lot of time translating the [redacted] and making information accessible to our community:

These barriers often caused our community to not be able to learn about, nor participate in local affairs that will affect their livelihoods.

Metro Vancouver Solid Waste Management Plan Update

Report from December 4th, 2023 Event

(a) activity date, time/duration, location, and format;

The activity took place on Monday, December 4, 2023 from 10am-2pm at UBC in the Nest. Because this is a high traffic area, but also a place where people are “on the go”, we engaged individuals and groups with a virtual survey that was delivered via a QR code that linked to a Google Form. Prior to providing the QR code for the survey, we provided the Background Information so the participants would have the necessary context ahead of giving their feedback.

Questions in the Google form correlated with the survey questions on Metro Vancouver’s website.

(b) number of invitees and participants, and summary of promotions;

Number of Invitees and Participants

Because of the nature of the location and the format of the data collection, we didn’t offer any “invitations” but we did promote the event on social media as well as around the school with posters.

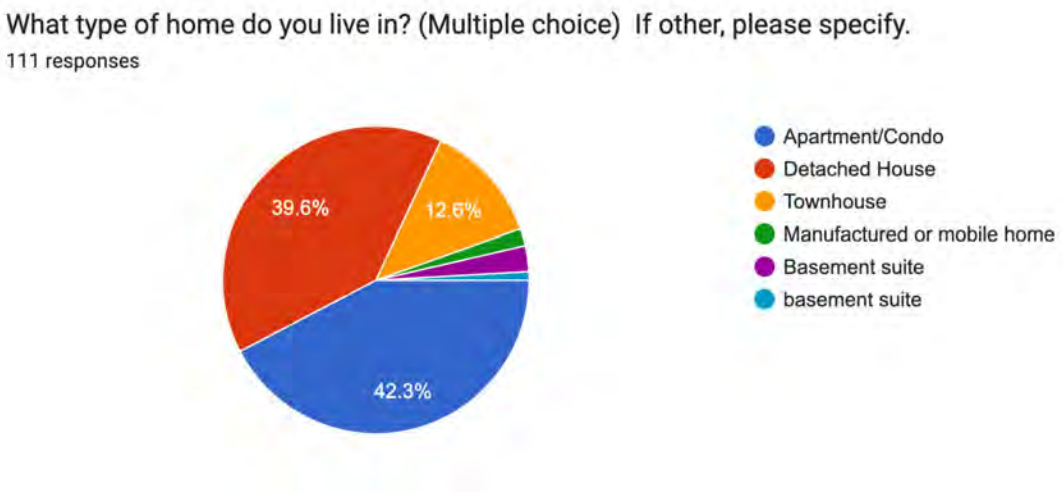
Overall, we collected feedback from 111 students.

Summary of Promotions

We shared the information via Mind Your Plastic's social media platforms, which included [redacted] [redacted] and [redacted] Because Instagram is our most engaged platform, and also includes more of our target demographic, we also reached out to businesses and groups in Vancouver to share which resulted in 7 pages sharing, and 258 impressions. Additionally, we created a poster that was posted around UBC Campus.

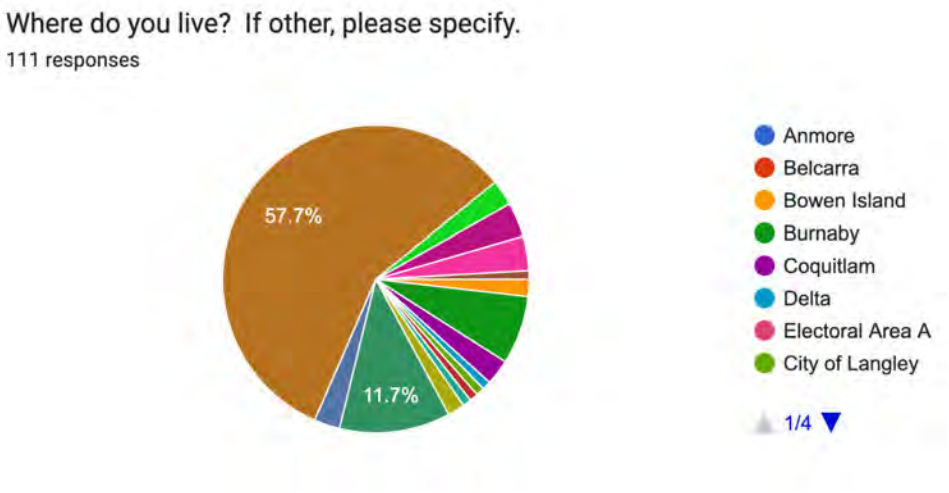
(c) a summary of participant demographics and interests where available (e.g., municipality of residence, main interests in environmental or solid waste planning)

Because this event took place at UBC, the vast majority of participants fell between the age categories of *18 and under,* and *19-35.* Please see below for the chart summaries of the demographic information including municipality of residence, type of residence, and age.



Below is a complete breakdown of results:

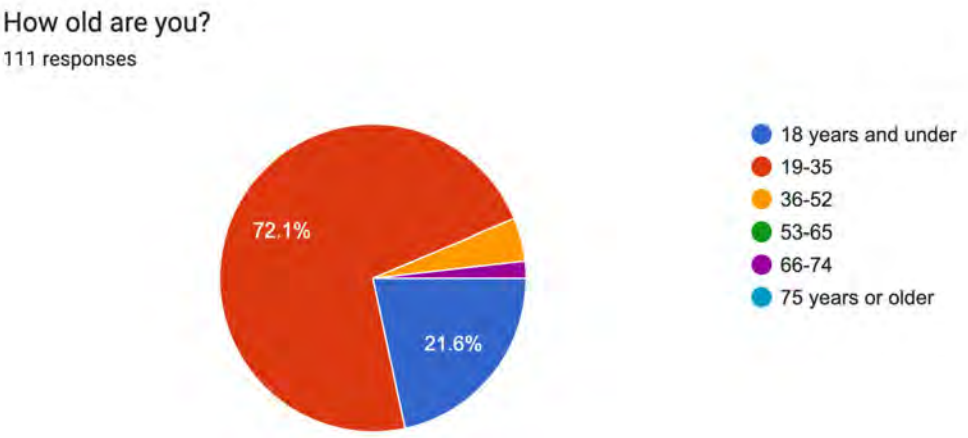
- *42.3% - Apartment/Condo*
- *39.6% - Detached House*
- *12.6% - Townhouse*
- *3.6% - Basement Suite (somehow this was duplicated as a result, so I have combined them here for a total %)*
- *1.8% - Manufactured or mobile home*



Below is a complete breakdown of results:

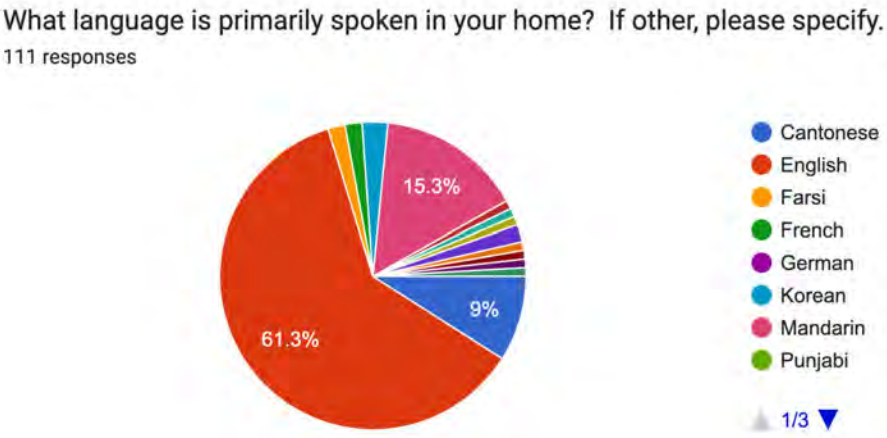
- *57.7% - Vancouver*
- *11.7% - Richmond*
- *7.2% - Burnaby*
- *3.6% - I do not live in Metro Vancouver*
- *3.6% - White Rock*
- *2.7% - Coquitlam*
- *2.7% - Surrey*
- *2.7% - West Vancouver*
- *1.8% - Bowen Island*
- *1.8% - City of North Vancouver*
- *0.9% - City of Langley*
- *0.9% - Delta*
- *0.9% - New Westminster*

- *0.9% - Pender Island*
- *0.9% - Township of Langley*



Below is a complete breakdown of results:

- *72.1% - 19-35*
- *21.6% - 18 years and under*
- *4.5% - 36-52*
- *1.8% - 66-74*



Below is a complete breakdown of results:

- *61.3% - English*
- *15.3% - Mandarin*
- *9% - Cantonese*
- *2.7% - Korean*
- *1.8% - Farsi*
- *1.8% - French*
- *1.8% - Portuguese*
- *0.9% - Greek*
- *0.9% - Hindi*
- *0.9% - Italian*
- *0.9% - Indian*
- *0.9% - Kaipingese*
- *0.9% - Spanish*
- *0.9% - Ukrainian*

(d) a summary of participant input and feedback related to vision and guiding principles for an updated solid waste management plan, in the form of:

(i) meeting notes;

Many of my conversations with the participants included discussion around how we can make sure that any changes are clearly communicated to the general public and on a similar note, how the public can ensure they have access to the correct information as many feel confused currently on what to do with various materials - especially with the introduction of many materials that seem like a viable alternative to harmful, single-use items like single-use plastics, but lack clear direction on how to properly dispose of them. Additionally, there was a strong focus on how many students want access to reduced packaging and reduce waste, while also ensuring these alternatives are affordable and accessible. We had many conversations with students who felt that they want to limit their packaging waste, but with zero-waste being niche and not available,

they are not able to justify the increased travel to zero-waste stores, or the increased cost.

(ii) survey results;

Please see the figures below that were produced using the data collected in the Google form.

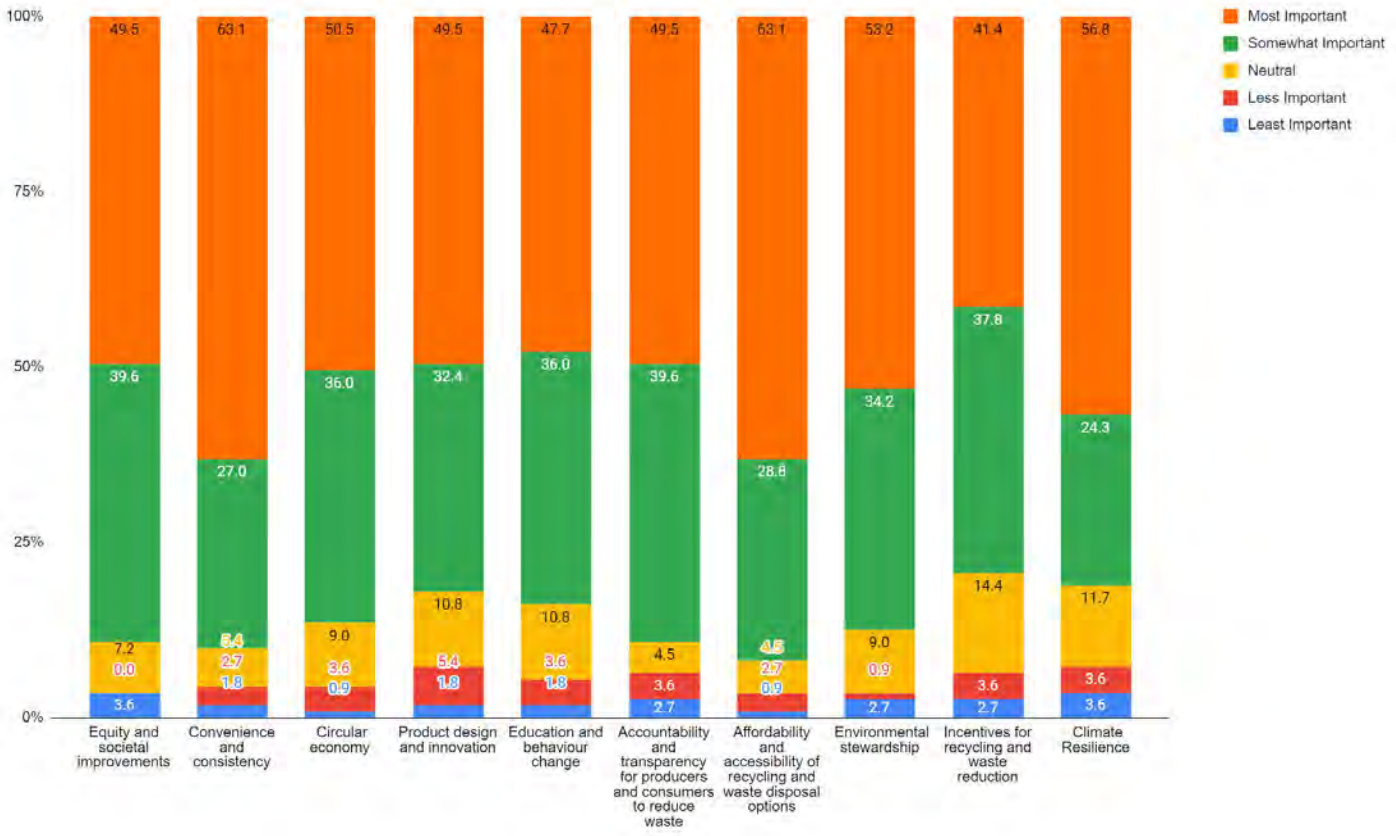


Figure 2 : Percentage of student responses for each identified theme. Each bar has a total value of 100% based on the total count of responses (n = 111).

Most Important (highest to lowest for individual votes)

- The majority of students identified all themes as "Most Important" in the ranking. Notably, *Convenience and Consistency, along with Affordability and Accessibility* emerged as the top choices within this category. *Accountability and Transparency, along* with *Equity and Societal Improvement,* received the most responses under the "Somewhat Important" ranking. In contrast, *Incentives for Recycling* was predominantly voted as "Neutral." Interestingly, *Incentives for Recycling, Accountability and Transparency,* aligned with *Climate Resilience* as the most voted themes under the "Less Important" rank. Moreover, among all themes, *Climate Resilience and Equity and Societal Improvements* garnered the highest percentage of votes in the "Least Important" category.

(iii) digital files and/or photos of workshop products, such as visual brainstorming activity boards;

We did not have any digital files, aside from our promotional materials on social media, as well as our Google Form survey.

(iv) written feedback from individual participants or groups; or

Please find a summary of all significant responses to the following questions in the survey (this was a mandatory response, so irrelevant responses like “no”, “n/a”, etc. have been removed).

Besides the 10 themes above, are there any others that should be considered?

- Extended producer responsibility
- Targeted towards large scale companies, not individuals
- Accountability for large companies and their effects on the environment
- Advertisement and campaigns.
- Incentives
- Long term effects of it

- Money
- I think targeting certain demographics about the climate should be considered, such as how social media use contributes to overconsumption in youth, etc.
- Realistic/Accessible processes of recycling
- It captures it most, I just think incentives that are realistic and practical are quite important.
- Accessible materials for homes (compost bags are expensive)
- Easy recycling of products by design rather than forever plastics being shipped to the Philippines from our blue bins
- From a systemic approach: increase the rates of correct garbage disposal and recycling. Lots of areas out there recycling and garbage together.
- Reduce plastic bags
- Composting information and education
- Penalties for polluters or non-conformers to encourage proper disposal
- First Nations worldviews, targeting corporations
- climate justice
- Education about how recycling impacts climate change and other societal issues
- school lunch waste, how many students are purchasing single use items when they can have a reusable alternative
- Education
- Education on waste and how it really impacts the earth and the environment
- Waste in school and malls
- Possible consequences
- Preserve forest and stop oil and gas expansion
- More education for general public about different types of garbage disposal
- Indigenous land principles (education)
- Increasing communication between govt and citizens
- Acknowledgement for those unable to do their part due to economical circumstances
- allowing inexpensive recycled clothing like thrift clothing to stay inexpensive an allow people with less money to afford clothing and stop overconsumption in wealthier people.
- implementation of bio architecture into the landscapes to help the emissions of C2O
- Showing to the public where the recycling goes and proving it actually is recycled to a full extent.
- Affordable and practical are the most important
- Waste and connection to climate change.
- Using eco friendly clothing more often than usual

- The most important one is the accessibility and understanding of the process.
- The amount of times garbage is collected
- Accessibility to more knowledge about services that are already provided
- Shifting the blame from consumers to corporations
- I think convenience should be considered or not allowing single use plastics and making people bring cups to
- create ideas for keeping plastic as a recyclable product that one can use by themselves over a over
- Making the webpage or introducing a system of videos for teaching immigrants how to use the recycling system in BC
- Seems to cover some good points. I'd just like if it was integrated more into society. Like you pay 25 cents when purchasing a recyclable bottle and then you get it back after dropping it off at a recycling station. Like in Germany.
- legislation incentives for officials to consider
- Multilingual support for my neighbors.
- Lower consumption
- Climate change
- Climate Change impacts
- Overall focus on environmental health

Please share any other specific comments or ideas about what you think successful solid waste management should look like in the future for Metro Vancouver.

- Paired extended producer responsibility and incentive programs for businesses to change practices
- connection between circular economy and affordability/accessibility (talked with the representative a little bit about this)
- I think education and behaviour change is the most important
- Transparency on what happens to waste
- Minimize the cost
- Visits to schools to promote campaigns and share knowledge.
- Community events such as the clothing swap by threading change
- not using plastics in grocery store for getting produce and fruit
- Educating the population about it.
- More incentives to manage waste
- Make it more efficient
- Break down how money can be saved on an individual level through waste management.

- I think a more effective and eco-friendly landfill should be in the future for Metro Vancouver
- Less trash on the streets in downtown
- More education in terms of what impacts not recycling can have on climate change and environment
- A solid waste management should be practical and realistic to incentivize citizens. It is very hard to persuade a majority with voluntary altruism.
- Accountability is vital for success
- Education is important to inform the public
- Accessible waste management
- garbage pickup
- Accessibility and simplicity are important. Sometimes it’s hard to know if something is recycling or garbage.
- Love the ideas and your mission
- Don't export garbage
- Teamwork and accountability
- Reduce plastic bags at grocery stores
- Accessible and affordable
- I think teaching younger students from elementary to young adults is a great system
- We should think about what we buy and produce and limit things that are not necessary
- Access for everybody, reducing personal waste, also targeting corporations in the lower mainland and their contributions
- Recycling trucks that pick up large cardboard boxes and other such recyclables that dont fit in recycling bins
- I personally don’t think anything will help. take the plastic stress situation for example, they revoked it
- school cafeteria reusable dishes or compostable utensils
- Easy to use garbage sorting
- More incentives and more environmentally friendly!
- More incentives
- Incentives for waste sorting
- The streets are clean.
- More resources
- More innovative ways of reuse
- Education In schools and school programs to support teachers
- I think convenience is the key
- I would appreciate more transparency about where plastic goes after it’s been recycled.
- Transparency about how much is actually recycled

- Accessible and easy to navigate sustainability
- Eliminate plastic waste
- Early education about how to be more environmentally friendly in our garbage disposal
- take more forms of recycled goods
- A easier way to know what can be recycled such as labels on specific items
- proper waste education for older generations
- nothing
- More recycling bins in downtown
- Increased transparency with businesses (food primary establishments)
- Don't have any in mind
- It needs to be transparent, practical and affordable
- How we are the stewards of the land and its systems. Our world can exist without us, we cannot exist without her.
- Maybe they should be more concentrated on making different marketing more eco friendly
- Should be simple, intuitive, and incentivized
- More sorting trash cans near bus stops
- Rewards regarding better waste management can motivate people to manage bwttwr
- Garbage pickup same day every week
- hopefully there will be a lot less litter on the grounds and less plastic used.
- I think that creating less single use plastics and forcing people to buy their own reusable products.
- More spaces for cans to be recycled on the streets.
- Recycle bins and garbage bins should be raccoon proof like having locks on them
- have solid waste refined by engineering recycle plants that are as effective as possible for productive results
- Same as above, make it easier for immigrants if you’re taking a lot of them - collaborate with universities and public agencies to inform and educate about these topics, rather than the people learning through receiving tickets
- Make it like Germanys bottle recycling plan.
- More bins and garbage locations
- Information for allophones in my area.
- Very simple and accessible with incentive
- Consistent garbage delivery
- Tertiary systems
- a central waste management centres located throughout the city
- Having a central waste management area for the public
- It should hopefully be a positive experience for everyone evolved and for the environment

- Def convenience.
- It should include more directions for how to appropriately recycle.

(v) other format of feedback summary agreed upon by the organization and Metro Vancouver;

n/a

(e) a brief narrative summary reviewing the goals, objectives and the results achieved by the engagement activity, including the challenges, any significant issues addressed, and general feedback received from participants about the activity itself; and

Mind Your Plastic is appreciative of this opportunity to engage the general public on behalf of Metro Vancouver on the critical topic of the Solid Waste Management Plan Update. We commend Metro Vancouver for making this available to organizations that can ensure there is a compilation of comprehensive feedback from diverse audiences. The participants we spoke with were also grateful for the opportunity to share their feedback in the quick conversation and survey approach that Mind Your Plastic selected.

Our main goals with this engagement activity were to:

- Inform the public of the upcoming Solid Waste Management Plan Update, as well as the information included in the Background Info (including process of coming up with the key considerations, as well as timeline for implementation)
- Collect as much feedback as possible from students
- Inform and engage students on the topic of waste reduction, the importance of a circular economy and real solutions alongside our partner, Sharewares.

We are thrilled that we were able to meet both of our goals, including exceeding our initial target of 100 participants and having numerous important conversations. We are also happy to see that the results contain valuable feedback from this group and we hope Metro Vancouver finds this information useful. Metro Vancouver did a great job

with setting organization's up for success by providing clear, comprehensive resources to help guide facilitators through leading the sessions successfully.

Additionally, our engagement event included collaborating with Sharewares and offering participants a free coffee in a Sharewares reusable cup - demonstrating the possibilities of circularity and waste reduction. This proved to be an effective incentive, as this was a driver for many participants. We also had the pleasure of hosting a student of UBC who is working on a project to understand the public's tendencies and preference when it comes to recycling and receiving a deposit refund for their refundables or putting it into a "lottery" where they have a chance of winning larger sums of money. This proved to be a great example of collaboration in the spirit of sustainability!

In regards to challenges we experienced, many were not as a result of Metro Vancouver's resources, but more organization specific. Timing to plan and execute was our biggest challenge, especially to ensure that we were able to meet the goals set out by Metro Vancouver and to collect feedback that is helpful for moving forward with the Solid Waste Management Plan Update. Given the format we selected, having lengthier discussions, as laid out in many of the resources, was not possible so balancing quality of feedback *and* quantity of participants was a challenge as we only had the capacity for one person to collect the feedback. However, we adjusted our approach to be able to connect with groups of folks versus only engaging individuals.

The event seemed to be very well received. After we were there for a few hours, we even had students approaching us to participate (the free coffee likely contributed to this). Every student we spoke to seemed to care about the issue and were grateful for the opportunity to provide their feedback.

(f) a description of any efforts to reduce barriers to participation for underrepresented or equity-denied populations (if applicable).

When approaching students, we tried to ensure we were approaching a diverse audience to produce diverse results. Our main barrier was not being able to adapt the survey into other languages which would have been helpful!

Surveys Conducted by OAC with Schools and Seniors

Administration of Surveys

Ocean Ambassadors worked with teachers to have students complete a Google Forms survey. 155 students completed the survey. Students were from Delta, Burnaby, Vancouver, West Vancouver, and Bowen Island. Forms were sent to 35 teachers.

Ocean Ambassadors administered surveys at West Vancouver Seniors' Centre in-person with the use of a tablet. OAC staff approached Seniors Centre participants and asked if they would be interested in participating in the short survey. In 5 days, OAC staff successfully engaged 112 people to take the survey. OAC read the survey questions to participants and then recorded answers provided. We found that participants often wanted to look at the tablet as well as listen to the questions.

Challenges Encountered and Solutions Implemented

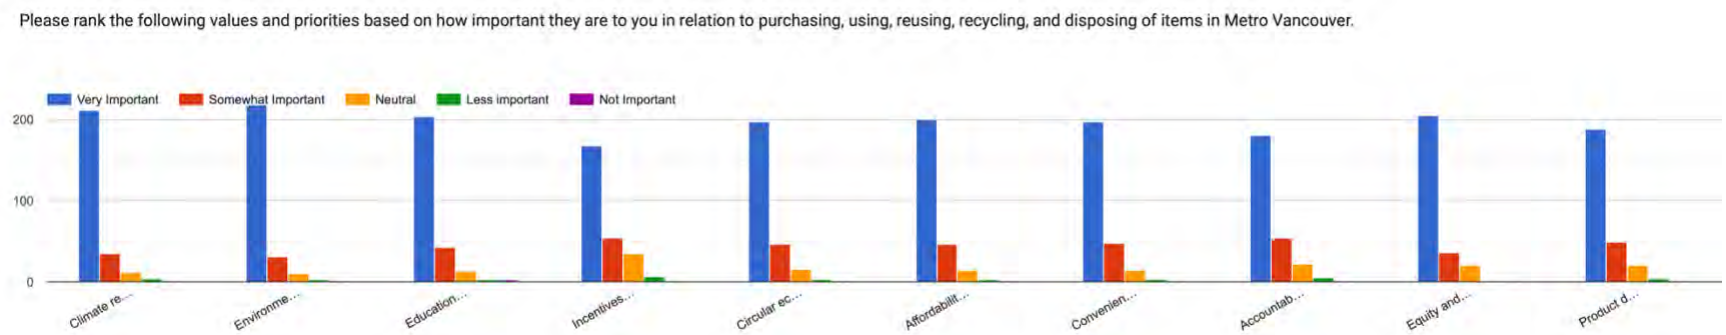
OAC staff encountered dozens of seniors that did not want to complete the survey due to language barriers. OAC tried to engage these people in conversations to make them comfortable and to slowly go through questions. This technique was successful some of the time, although many people refused to participate because of lack of understanding of English. An idea for the future might be to have the survey available in multiple languages.

OAC staff encountered many people who were suspicious of our motives for approaching them. Staff endeavored to quickly engage them and this was successful some of the time. We found that wearing an OAC branded shirt was helpful.

OAC were delayed for a week at the beginning of the project due to difficulty in booking times to be at the Seniors Centre. Once we were able to communicate with the appropriate staff member, scheduling became easy.

Surveys were energetically accepted by teachers who like the idea of having an opportunity for their students to participate. We did find that it was challenging for teachers to find the time to have students complete the survey. An idea for next time would be to offer a raffle prize to students who complete the survey.

Results Summary:



Comments:

In addition to the 10 themes mentioned above, are there any other themes that you believe should be taken into consideration?

The one i believe that should be taken into consideration is cutting down trees i know in some countries if you cut down you have to grow another tree but animals live in those trees and some of these animals already started a family, and baby birds can't fly yet and if yo cut down a tree these baby animals will die and it makes it harder for them to find another home.
circular economy reuse and repair
I don't know.
I'm not very sure. There is nothing else that I can think of.
I think one of the most important themes to me was already mentioned above "incentives for recycling and waste reduction for businesses and individuals"
preventing people from throwing away containers

MAYBE we can try to get more and more people to reuse and recycle what is rycycable
Showing people what happens to garbage, and how garbage affects the ocean.
being able to give own help to the environment
Carpooling. we need to make that more regular
I don not think so because I can not think of anything else.
no
No.
No. I dont really know much.
Affordability and accessibility of recycling and waste disposal options
No
I dont know
I think gender equailty could help a little.
I think we should add some more recycle and compost bins around the world
Nope
noooooo this is very good
Circular economy
I believe everyone should consider animals and what they could do to prevent so many animals like racoons from eating their trash/recycling/compost.
More eco friendly transportation.
Plastics. Food Waste
Ease of use and waste management
I think that we should be more mindful of the whereabouts of the homeless because they sometimes, can't find the right recycling and garbage stations to put their trash in.
Reduced price of education so all families may have children that are well educated without having to be a heavy amount of money.
Making housing more affordable, and easier to obtain reducing the homeless population.
Nothing I can think of
Going to a gift economy rather than a consumer driven one.
Food supply chain systems. Although you have enough themes to tackle already!
I would love everyone to rethink their use of all plastics!
I think that minimalism should be taken into account where we buy what we need or borrowing from a friend instead of buying what we want.

Nothing
Protecting nature's wonders from climate change
None
NO
Making more actions in order to stop poverty including those homeless people on the street. Homeless people can produce lots of waste so we have to take actions on how to stop this situation before the streets are filled with garbage and waste.
no you have covered everything important.
I think reuse and buying less is most important
system needs to be more simple
none
WE can pay for research to invent a new kind of plastic that does not harm the planet

Please provide any additional comments or ideas regarding your vision for successful solid waste management in the future.

Well my ideas are to stop cutting down trees, stop littering,stop testing and hurting animals, because every damage we do to the earth the more we're closer to destroying the earth.
I think educating and empowering the younger generations is key so any programs catering to them would be great.
this is crazy but I think if we make a statue out of compost and mushed and mixed it together and make blocks and stack them like a tower it would be safe and reused
You could make recycling a lot more convenient. People won't want to drive an extra 15 minute to recycle at a zero waste facility when they could throw something out in the garbage bin.
I don't have any at the moment
I don' know
I think that instead of just throwing it away, we can use the garbage to create some thing fun like an art project.
reusing materials instead of trowing them away
I think that we should be making more recyclable solutions for everyday tools/object so that not everything is made from plastic having more reusable containers or reusing bags more
I'm not quite sure

Buy less garbage, make more homemade things.
make your own way to reduce your use in plastic and
I hope we make it to our green goals!
I think we can use garbage and make it into something fun like an art project
I don't know
I don't know.
I think this is very important
-e
Just keep the environment clean and not polluted
I think climate change is something we have to prevent. Our future depends on it.
sorry I dont have any.
school
Put in thrift shop or make into other objects.
I think waste reduction is very important for our future.
I don't have any comments nor ideas.
idk i don't have any. lol
sdfgh
I do not have any additional comments or ideas regarding my vision for successful solid waste management in the future.
I hope we can acomplish these goals
Not sure.
Third world countries requiring aid
I think that there should be more places that provide recycling and trash stations around the world so we can help the climate crisis a little bit.
In the future, I believe that us people should come together and make use of all the materials we have and we should limit the pieces of garbage that are put to waste. I also believe that we should invest more money into saving up for more electrical cars so that our planet will be safer from climate change.
We should invest more money in compostable packaging, and materials so that we can minimize the amount of garbage and waste that we have.
Taking more donations and fundraisers for climate change and pollution materials.
Consuming less overall.
Education is priority.

Doing more fundraisers and awareness programs
I do believe we are a throw away society and I'd love people to think about buying cheap items that will not last.
I think there needs to be source-separation so that recyclable matierials are not ending up in the landfill.
Nothing
Have more trash cans in park for less waste
NO
Every school should be start teaching kids the importance about solid waste management at an early age so that they can always keep this in mind starting as young kids.
find solution to reduce waste and reduce use of fossil fuels.
none
Need to have government regulations
Individuals need to take on responsibility and cities need to have regulations
This is a problem for China and India who are creating so much pollution
We have to stop the producers from sending everything out in plastic. We should be able to purchase products that are not wrapped in plastic. We need to somehow make people care. How do we get people to care? We need more education and incentives. People need to hear more about the damage that is happening to our planet. Like the way ICBC does commercials, we need to be shocking people with commercials about the planet.
big companies should have to change how they package products. It's not up to individuals
We need recycling to be more easy to understand.
We should have more recycling bins on the streets
We should be worried about poverty first, not plastic
We need to concentrate on the economy. Canada is so small that we don't make a difference to world pollution. Until the big countries change, nothing will change.
Recycling is easy for people who care
Recycling should be made more simple
Circular economy is important. We need to send less things to the dump and reuse things
We NEED people to recycle
Companies need to change their packaging and we need to have easy recycling for soft plastics
We need to have less plastics with everything we buy.
We should to invent a kind of plastic that is good for the environment.
We should have more recycling choices like soft plastics and styrofoam.

the government needs to make laws for businesses to use less plastic
We need to have laws for copanies that make products.
Companies that make products should have to put in packaging without plastic if possible. There should be laws for companies.
Plastic packaging should be allowed only if necessary. For example, for equipment in hospitals. Other things should be packaged in paper or have less packaging overall.
We should have better signs on recycling and food waste bins to make it clear what is accepted.
There should be laws for businesses to use no single use plastics.
We should have bans on single-use items and some kinds of plastic packaging that are not needed.
We need the federal government to create bans on singles items
We need to teach young people about caring for our community - to not litter and to recycle.
We can teach people that they need less things. We need to get people to understand that advertising is making them always want.
We need to have consistent recycling and food waste in Metro Van. The current system is confusing.
Would be good to have laws that limit the use of single use plastics. We need to have clear regulations for businesses to follow.

Metro Vancouver Solid Waste Management Plan
Vision and Guiding Principles

Collaborative Engagement
Final Report to Metro Vancouver

Introduction:

The Recycling Council of British Columbia (RCBC) has partnered with Metro Vancouver in their collaborative engagement process to increase the reach of consultations taking place to inform the development of the vision and guiding principles for the Solid Waste Management Plan update process. In order to do so, RCBC has sought to consult with RCBC Members in the non-profit and business/industry sectors that interact with and are impacted by solid waste management in the Metro Vancouver region. This consultation has taken the form of a targeted survey, constructed to enable these stakeholders to provide feedback that is specific to their sectors and areas of work.

In addition to this targeted survey, RCBC Information Services staff also encouraged residents and businesses in the Metro Vancouver region to participate in the public survey by including the link and a brief note in email responses to enquiries originating in the region. This message was sent at least 64 times from [redacted] over a two week period.

Survey Design:

The survey was developed based on the public survey conducted by Metro Vancouver, with additions made to better capture the specific industries and areas of work represented by the surveyed membership. The goal of the survey was to understand which of the proposed themes were most important to the target audience, and to solicit additional feedback about their vision for the future of solid waste management in the region.

The survey was distributed to RCBC Members in the non-profit and business sectors located in the Metro Vancouver region. The survey was initially distributed to 114 contacts on October 12, 2023. Recipients were asked to respond by October 27th. A reminder was sent on October 23rd, 2023. A final reminder was distributed through RCBC's member newsletter, ReCap, in early November with an extension to the closing date requesting final responses by November 8, 2023. Several members were also contacted directly by email to solicit their feedback.

Respondents were asked to rank a number of themes from not important to very important. This portion of the survey was taken directly from the public Metro Vancouver survey. The remaining questions were either adapted from the public survey, or developed by RCBC to better understand the feedback of the surveyed membership:

Q: Of the above themes, which would you identify as most important to your industry or sector and why?

- *Incentives for recycling and waste reduction – for businesses and individuals*
- *Climate resilience – investing in systems with low climate impact*
- *Accountability and transparency for producers and consumers to reduce waste*
- *Affordability and accessibility of recycling and waste disposal options*
- *Equity and societal improvements - All groups have access to information,*
- *education and services*
- *Convenience and consistency – waste and recycling services that are easy to*
- *understand and simple to use*
- *Product design and innovation – designing products to be more circular and regenerative*
- *Environmental stewardship – protection of natural spaces*
- *Education and behaviour change – changing how we think about waste and what we purchase*
- *Circular economy - reuse, repair, and thrifting instead of throwing things away*

Q: Please share any other comments or ideas about what you think successful solid waste management should look like in the future, especially as they relate to your sector or industry.

Q: Which option best describes your business or organization? (multiple choice)

- *Recycling Business (hauler, processor, etc.)*
- *Non-Profit Environmental Organization*
- *Charitable Organization*
- *Consultant*
- *Product Supplier or Manufacturer*
- *Depot Operator*
- *Other (please specify)*

Q: What community is your business or organization located in? (multiple choice of Metro Vancouver municipalities)

Q: Does your business or organization also operate outside of the Metro Vancouver Regional District?

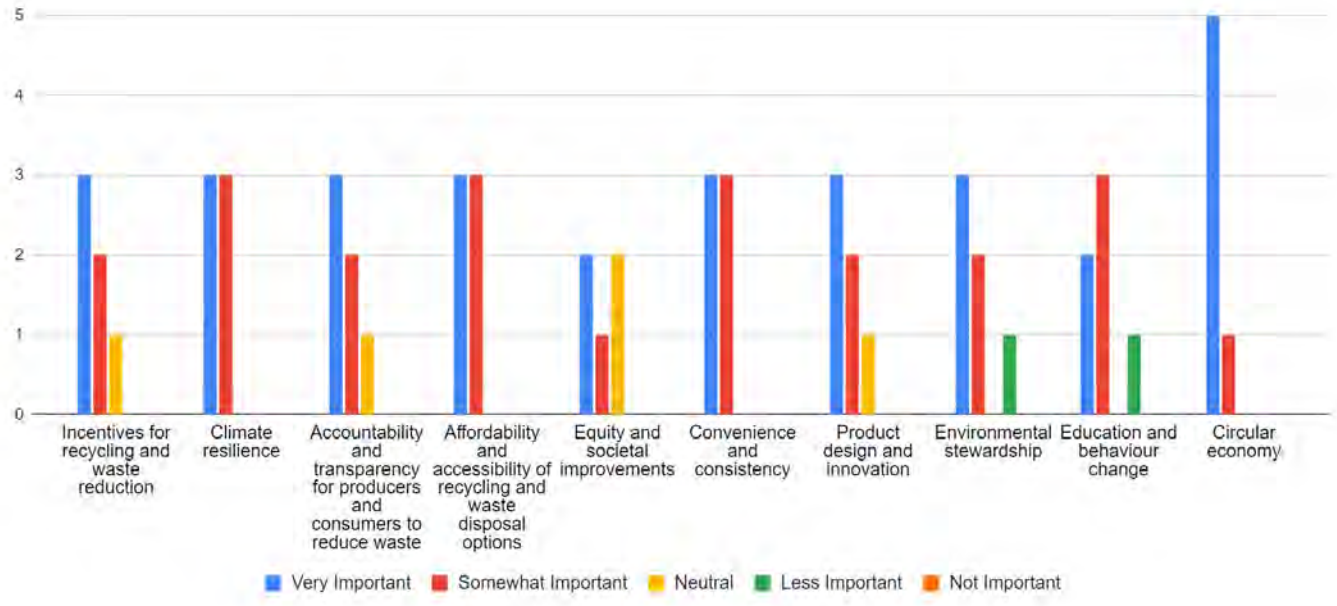
Q: Are there any additional comments or information related to solid waste management in the Metro Vancouver region that you would like to share?

Q: Would you like to provide additional feedback? Please feel free to include your name and contact information here and we are happy to follow up with you directly.

Survey Results:

The survey ultimately received 6 responses. While the total number of responses is fewer than was hoped, they represent RCBC Members in 6 different member municipalities, in 4 different business or organization types, and a split between those who operate only in Metro Vancouver and those who also operate in other regions.

Respondents were asked to rank a number of themes from not important to very important. The following chart shows the responses:



These responses indicate that all of the presented themes are considered ‘very important’ by at least two of the six respondents, with Circular Economy ranked as ‘very important’ by five of six. Similarly, all themes were ranked ‘somewhat important’ by at least one respondent. Environmental Stewardship and Education and Behaviour Change were the only themes that earned ‘less important’ rankings, and none of the presented themes were ranked as ‘not important’ by any of the respondents.

Q: Of the above themes, which would you identify as most important to your industry or sector and why?

Five of the six respondents provided comments on the theme they found most important to their industry or sector. Two identified Circular Economy as most important, and Environmental Protection, Incentives, and Waste Prevention were each chosen once. The complete text of the provided comments follows:

"Environmental protection, not just of natural spaces but of all the environment (air quality, water quality, etc)" - citizen
"Incentives for recycling and waste reduction – for businesses and individuals, because I've seen firsthand how incentives and regulation create needed change at scale, and shift the general status quo." - Recycling Business (hauler, processor, etc.)

"Circular economy. With bikes being our focus, it's important to us to keep bikes in working condition by finding useful parts and material from other bikes that are no longer ridable." - Non-Profit Environmental Organization

"Education and transparency about what can be recycled and what happens to it. Circular economy as we want to encourage people to reuse instead of buying new but also behaviour change - getting more people to understand that they should be responsible for their waste and the items they purchase" - Recycling Business (hauler, processor, etc.)

"waste prevention - we have focused too much on recycling and diverting materials from a landfill" - Consultant

Q: Please share any other comments or ideas about what you think successful solid waste management should look like in the future, especially as they relate to your sector or industry.

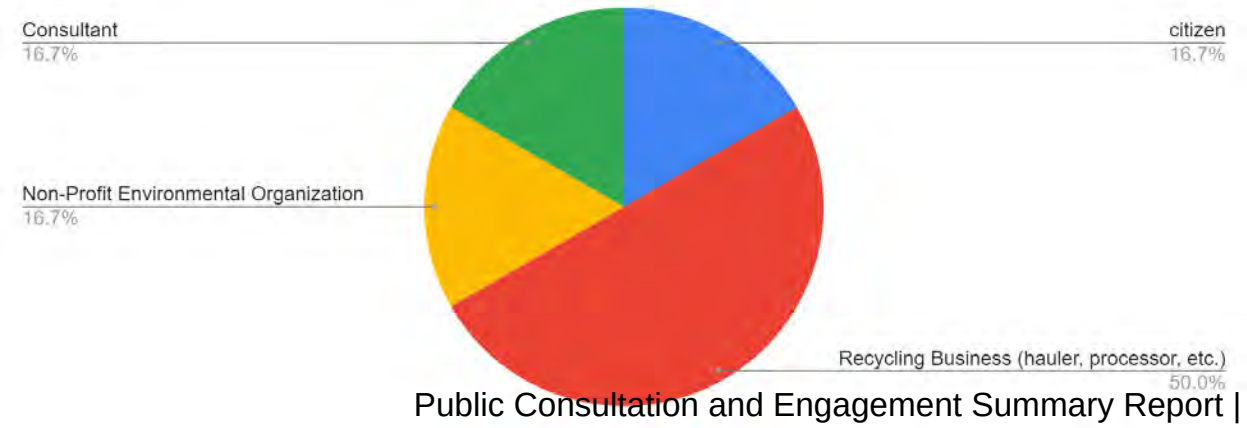
Three respondents chose to share additional comments about what they think successful solid waste management should look like in the future. Several of these suggestions also connected to the themes presented, such as incentives and education.

"Actually work on zero waste" - citizen

"We need more regulation and landfill bans. Look at the huge shift that happened in 2013 when we banned organics from landfill." - Recycling Business (hauler, processor, etc.)

"More incentives. Information on what is happening with these materials. Getting larger organizations to implement a recycling plan. " - Non-Profit Environmental Organization

Q: Which option best describes your business or organization?

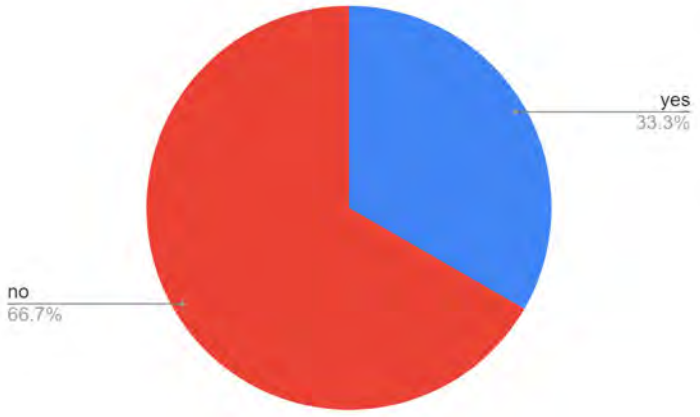


Q: What community is your business or organization located in?

Each of the six respondents identified a different Metro Vancouver municipality as the primary location for their business or organization. Represented communities are Burnaby, District of North Vancouver, Ladner, Maple Ridge, Port Coquitlam, and Vancouver.

Q: Does your business or organization also operate outside of the Metro Vancouver Regional District?

Respondents indicated that they operate primarily within the Metro Vancouver region, with 66% operating only within Metro Vancouver while 33% also operate in communities outside of the region.



Q: Are there any additional comments or information related to solid waste management in the Metro Vancouver region that you would like to share?

Two respondents provided additional comments:

> “Time to close the waste to energy facility” - citizen

> "In an ideal world, I'd like to see regulations banning the sale of non-repairable toys

devices, and electronics in our region." - Recycling Business (hauler, processor, etc.)

Q: Would you like to provide additional feedback? Please feel free to include your name and contact information here and we are happy to follow up with you directly.

One respondent provided their name and indicated an interest in engaging with Metro Vancouver on end of life solutions for single-use items.

Observations & Recommendations:

Engagement in this process was poorer than anticipated. It may be that this stage of the engagement process is early and conceptual to the extent that stakeholders are not sufficiently motivated to engage, or that stakeholders are looking for engagement opportunities more tailored to their particular interests or concerns. One respondent representing a business in the recycling sector indicated an interest in engaging in consultations with Metro Vancouver regarding end of life solutions for single-use items, specifically.

Conclusions:

This survey aimed to solicit feedback from RCBC Members in the Business/Industry and Non-Profit sectors. Of the six respondents, four were recycling businesses or consultants, one identified as an environmental non-profit, and another described themselves as a citizen. Each respondent was located in a different Metro Vancouver member municipality.

Overall, the survey results indicate a strong emphasis placed on the Circular Economy theme, though all themes were ranked ‘very important’ by at least 2 respondents, and none were ranked ‘not important’. Feedback received suggests that there is interest and support for the introduction of additional regulations such as landfill bans or bans restricting the sale of non-repairable devices. Education and transparency are also noted as important factors in encouraging participation and trust in recycling and circular systems.

Background

This Collaborative Engagement opportunity is Metro Vancouver's initiative to gather public input on emerging themes that will inform the vision and guiding principles of its Solid Waste Management Plan update.

Master Recycler Vancouver (MRV) is an in-depth train-the-trainer adult education program on waste reduction and prevention for residents, businesses, and public entities. The program consists of 22+ hours of instruction along with one-on-one mentorship to complete 30 community outreach hours. Initially attracting only participants from Vancouver and the Lower Mainland, since becoming virtual following the COVID pandemic, the program has attracted out-of-region and cross-Canada participation. MRV is open to all residents for a refundable deposit and includes a network of over 130 past graduates.

MRV grew out of the Zero Waste Committee of the Society Promoting Environmental Conservation (SPEC), a non-profit, charitable, volunteer-driven organization founded in 1969 whose mission is to provide its community with practical solutions for urban sustainability. SPEC's vision is a healthy, just and vibrant urban life that enhances local and global ecosystems.

At MRV, we understand how important solid waste management planning is for both inter-regional initiatives in years to come, and for their cross-regional influence. Our audience spans people from a wide variety of industries and tends to consist of the residents with the most eagerness for "zero waste". We want to ensure that the engagement opportunities capture the priorities and unique insights of this audience.

The purpose of this broadscale public engagement was to evaluate ten themes that had emerged from Metro Vancouver's initial stages of consultation. The ten themes provided for feedback are:

- Accountability and transparency — For producers and consumers to reduce waste.
- Affordability and accessibility — Of recycling and waste disposal options.
- Circular economy – Reuse, repair, and thrifting instead of throwing things away.
- Climate Resilience – Investing in systems with low climate impact.
- Convenience and consistency – Waste and recycling services that are easy to understand and simple to use.
- Education and behaviour change – Changing how we think about waste and what we purchase.
- Environmental stewardship – Protection of natural spaces.
- Equity and societal improvements – All groups have access to information, education and services.
- Incentives for recycling and waste reduction – for businesses and individuals.
- Product design and innovation – Designing products to be more circular and regenerative.

Overview of Engagement Activities

Approach

The Collaborative Engagement consisted of an online survey and a live virtual workshop facilitated by the co-founders and facilitators of Master Recycler Vancouver, Emily McGill and Eyal Lebel. The survey was open for responses over a 3 week period in November-December 2023, and the virtual workshop took place from 6-7:30pm on Wednesday, December 6, 2023, via Zoom.

Outreach included invitations sent via email newsletters and working group mailing lists for SPEC and the Master Recycler Vancouver participant network, as well as social media posts via Master Recycler Vancouver (Instagram, Twitter, and Facebook group).

Survey Design

The survey consisted of seven questions provided by Metro Vancouver. A brief simplified version of the survey is included in the Appendix for reference. All questions were required.

The questions included:

- One question ranking each of 10 emerging themes on a five-point scale from Most important to Not important
- Two questions asking for qualitative input on any other themes that should be considered, and any specific comments or ideas about successful solid waste management in Metro Vancouver
- Four demographic questions: type of housing, location, age range, and language spoken most at home.

Workshop Design

Metro Vancouver provided a robust template for the Collaborative Engagement workshop, which MRV adapted. The workshop asked participants to choose their top two and bottom two themes, discuss aloud and via a shared virtual Jamboard why they made those selections, share anything they thought was missing from these themes, and complete the sentence "When considering the state of solid waste management in Metro Vancouver, the most important thing to me is…".

Engagement Statistics

Survey Participants: 40
Workshop Participants: 10 (13 registered)

Survey Outcomes

Respondent Demographics

There were 40 respondents, 39 of whom speak English at home. More than half (22) respondents live in Vancouver. All respondents live in either a detached house (40%), apartment/condo (45%) or townhouse (15%). The majority (65%) are between 19 and 52, and the remainder are 53 or older.

Household Type

Detached House: 40% (16 people)
Apartment/Condo: 45% (18 people)
Townhouse: 15% (6 people)

Languages Spoken at Home

39 of 40 (97.5%) of respondents speak primarily English at home, and one respondent speaks primarily Spanish at home.

Age Range

35% of respondents are 19-25, 30% are 36-52, 18% 53-65, 10% 66-74, and the remaining 8% are 75 or older.

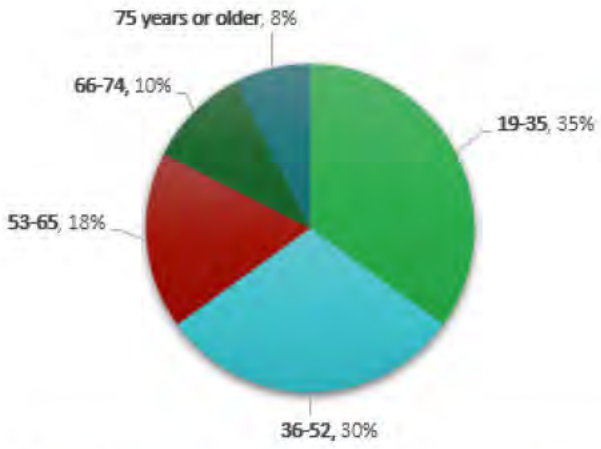

Figure 1 Age range by percent of survey respondents

Home Location

Of the survey respondents, 55% (22 people) live in Vancouver, 13% (5 people) in each of New Westminster and Coquitlam, 5% (2 people) in Burnaby, and 13% elsewhere - one person each in Surrey, West Vancouver, UBC, District of North Vancouver, and Port Coquitlam. One respondent does not live in Metro Vancouver.

Table 1 Survey Respondents' Home Locations

Home Location	Number of Respondents
Vancouver	22
New Westminster	5
Coquitlam	5
Burnaby	2
Surrey	1
West Vancouver	1
UBC	1
District of North Vancouver	1
Port Coquitlam	1
I do not live in Metro Vancouver	1

Theme Importance Ranking

In the survey respondents were asked to individually rank each theme on a five-point scale from "Most Important" to "Not Important". The same ranking could be applied to multiple themes, as there were five ranks for ten themes.

Frequency of all rankings

Importance Ranks	Most important	Somewhat important	Neutral	Less important	Not important
Frequency of Response	40 (all)	30	17	3	2

Frequency of above neutral rankings

Of the forty respondents, 7 of them ranked all 10 themes as "Most Important", while an additional fifteen (twenty-two people total) ranked *all* the themes either "Most" or "Somewhat" important.

All themes received at least one ranking of 'Most Important'. Circular economy is the only theme which received exclusively "Most" and "Somewhat" important designations. Circular economy was ranked "Most Important" 85% of the time, followed by "Product design and innovation" at 75%.

Frequency of rankings neutral or less

Only three people ranked any theme 'Less Important" and two people "Not Important" rank, though seventeen respondents used the "Neutral" designation. The only two themes which received any "not important" rank were "Education and behaviour change" and "Incentives for recycling and waste reduction".

Table 2 Per cent Responses for Each Emerging Theme, Rank of Importance

Zero values are not shown. The count of responses is provided in the [redacted]

Emerging Themes	Most Important	Somewhat Important	Neutral	Less Important	Not Important
Circular economy	85%	15%			
Product design and innovation	75%	23%	3%		
Climate Resilience	68%	28%	3%	3%	
Education and behaviour change	65%	33%			3%
Accountability and transparency	63%	33%	5%		
Environmental stewardship	60%	33%	8%		
Equity and societal improvements	60%	30%	10%		
Affordability and accessibility	59%	31%	8%	3%	
Convenience and consistency	55%	33%	8%	5%	
Incentives for recycling and waste reduction	53%	15%	25%	3%	5%

Long-form Question Answers

Two qualitative long-form questions were offered:

1. Besides the 10 themes above, are there any others that should be considered?
2. Please share any other specific comments or ideas about what you think successful solid waste management should look like in the future for Metro Vancouver.

For other theme considerations, ten respondents either said "n/a", or that the themes were sufficient as-is. For comments and ideas, five respondents either said "n/a" and one said that the existing themes seemed to cover it well. Four of the respondents mentioned declined on both questions.

In the responses for other theme considerations, the answers by and large are ideas that fall under existing themes, rather than new or divergent standalone themes themselves. The other specific comments or ideas constitute ideas that relate to themes, values, or approaches to solid waste management. The answers to both questions are summarized here, grouped either by which theme they most relate to.

Correlating Themes with Survey Responses

Most of the survey responses can be grouped under several of the existing themes, summarized below.

- Circular economy; normalizing and prioritizing reduction, reuse, diversion from landfill (recycling and compost), sharing services, include reimagining (reinvent/repurpose), improving efficiency and resilience of waste/recycling systems, municipal textile recycling.
- Climate resilience; align with climate action goals.
- Education and behaviour change; providing public education about where recycling goes, working with schools, improved messaging on-product to indicate its footprint / diversion potential, communication and public relations around performance towards goals, repair café's throughout Metro Vancouver, education needing to emphasize reciprocity between nature and humanity, better communication on proper sorting, an emphasis on large businesses, clear guidelines around compostables (only paper/wood/fiber, no plastic lookalikes), promote the recordings available from the Zero Waste Conference for public education
- Accountability and transparency; regulations that require reporting, extended producer responsibility / fees for industries with a lot of waste (e.g. fashion), information on how Metro Vancouver waste flows out of region, effectiveness of different recycling strategies.
- Affordability and accessibility; streamlining laneway waste pickup, harmonization across cities.
- Incentives; higher fees for non-participation in diversion efforts, enforcement, incentivizing bulk product sales
- Product design and innovation; reducing plastic packaging across all sectors.
- Climate resilience; green energy

Other Comments and Ideas

Standalone concepts or ideas that apply across themes include:

- Multidisciplinary focus, across regulation/education/innovation and between sectors (government, industry, public)
- Waste-to-energy initiatives as a last resort
- Curbside pick-up days every year, facilitated by municipalities.
- Construction and demolition waste; keep track / codify building materials at time of construction for later recycling.
- Wider regulatory framework – connecting the themes to provincial and federal waste legislation/regulations; advocacy for nation-wide waste regulations, with provincial/regional waste systems.
- Job creation in waste reduction
- Building capacity for binners
- The recycling profession being dignified and safe.
- Enforcement, e.g. public buildings following best practices.
- Recycling accessibility for hospitals
- Being on the leading edge of sustainability practices
- Learning from what other countries are doing.
- Clear messaging about diversion potential for products and packaging, e.g. reusable fabric bags from stores, compostable items, plastic bags labeled as 'compostable'
- One respondent had a specific concept to have neighbourhood recycling consolidation hubs at a neighbourhood scale, as an improvement on the current distributed depot system.

Workshop Results

Workshop Format: Virtual
Date: Dec 6, 2023
Registered: 13
Attended: 10
# of event promotions: 8 (social posts, newsletter, emails)

Onoe participant reported previously completing the survey circulating from Metro Vancouver.

The Jamboard used in the workshop is available for review here:

[redacted]

Images of the completed Jamboard pages are available in the Appendix. Not all participants engaged in the Jamboard, and of those who did, the live discussion provided more context on their Jamboard responses. These discussion points are summarized in the [redacted] on the following page.

Overview of Top Two and Bottom Two Themes

Of all the themes, only Circular Economy was exclusively selected in the top two, and only affordability and accessibility was exclusively selected in the bottom two.

Table 3 Frequency of selection in top or bottom two, for all themes

	Frequency of Selection	
Themes	Top Two	Bottom Two
Accountability and transparency	2	1
Affordability and accessibility		5
Circular economy	4	
Climate Resilience	3	2
Convenience and consistency	2	3
Education and behaviour change	2	1
Environmental stewardship	1	3
Equity and societal improvements	1	2
Incentives for recycling and waste reduction	1	2
Product design and innovation	3	1

Discussions Overview

The participants did not have clarifying questions about the solid waste management planning process overall. One clarifying question was asked to provide examples of what 'accountability and transparency' might mean. There was time for each participant to state the rationale for their top and bottom two choices out loud. Overall, a common comment was that it was very difficult to select top and bottom, since all the themes were obviously important.

Workshop Notes

The summary here draws from notes taken during the workshop. Individual responses are summarized and grouped according to the theme they related to. Where responses in the discussion sections of the workshop are similar, they are summarized as a single response rather than recorded individually.

Session	Notes on Participant Input	Facilitator Observations
Roundtable	Asked to provide examples for accountability and transparency	The only question related to examples of theme implementation. Participants confirmed the background on the SWMP process was clear.
Top two	Circular Economy - Enabling repair over replacing (purchasing new) is important for behaviour change. - Must take precedence to influence any product innovation to make sure it causes net reduction in production. - Reuse should be the highest priority. - Critical for prioritizing reduction. It must be the base / foundation for the other themes to be acted on properly. - There is an existing knowledge base from the past on how to reuse and make items durable, e.g. soft drinks in glass bottles. Product Innovation - Can include making things more repairable and durable (might be the same as circular economy) - The right to repair legislation is critical / has to accompany this, especially since a lot of what people purchase is technology. - Solves the problem from the source rather than dealing with the end of life. Accountability and transparency - It touches on so many of the other themes and can improve implementation of the other themes.	The most prominent top two, weighing poll answers with the ensuing discussion, were: - Circular economy - Accountability and transparency In the real-time discussion about the top two themes, participants reflected on each other's rationales that there seem to be the same underlying values being expressed, but people's selection reflects different interpretations of the themes. The discussion around accountability and transparency

Session	Notes on Participant Input	Facilitator Observations
	- Having more systematic transparency around product footprint / design will help support businesses who are making a difference who are educating their customers on their own. - Transparency in what gets recycled and where it goes is necessary because people at the waste depot, even if they're recycling, doubt where it's going, and there are people not making it to the depot who are probably discouraged by a lack of transparency. **Convenience and Consistency** - There are some people who use the excuse of inconvenience for non-participation in diversion efforts; making it easier should improve recycling rates (e.g. for soft plastics) **Environmental Stewardship** - Encompasses all the other themes. **Climate Resilience** - The most serious problem facing humanity; catastrophic impacts if it is not addressed. **Incentives for waste reduction and recycling** - An option for 'easy wins' - Being rewarded for good actions is scientifically proven to be a good lever, at least for short-term initiation of changed behaviour to create a community of practice / community norms.	seemed to dovetail with education and behaviour change, although education and behaviour change was overall deprioritized, seen as a lower return on investment than other themes.
Bottom two	**Affordability and accessibility** - Gut feeling that most people already can divert waste. - "If we can afford to consume the way we do, we can afford to cut back on consumption behaviours and shift." - This sounds like improving convenience, but the consumer convenience preference is what's driving consumption – when does that stop? "We are too much of an Amazon society right now." - In the past, waste disposal was very inexpensive, but still compared to the damage being done with waste it's still quite cheap – we don't need to make it cheaper. - It's just not as important as the other themes. **Climate resilience** - The metrics for assessing climate initiatives are too inexact and don't effectively connect to individual actions; it's hard for the public to measure.	The most prominent bottom two, weighing poll answers with the ensuing discussion, were: - Affordability and accessibility - Climate resilience Participants uniformly said it was difficult to deprioritize any of the themes. There was an interesting convergence on the bottom priority of affordability and accessibility.

Session	Notes on Participant Input	Facilitator Observations
	- There are already significant resources dedicated to a climate focus at an institutional and governmental level, from business to municipal to provincial and federal, and there are better topics of focus for solid waste management. - It's more removed from solid waste management than the other themes. - It's too broad. **Education and behaviour change** - It's extremely difficult to change behaviour with education alone. - Education can end up backfiring, e.g. people can be discouraged. - Its cost-to-benefit ratio is difficult to measure and likely less than other themes. **Environmental stewardship** - It's already implicit in the other themes; if we take care of those, this will be addressed. **Product design and innovation** - Focusing on product innovation risks continued encouragement of overproduction. Yes, let's innovate, but only in conjunction with reduction, reuse, and circular economy design principles. - The right to repair is more important. - Let's reuse what we can with what we already have — obviously we'll have to innovate some, but not make that our top priority, use what we have and find different ways to put in the stream	Product design and innovation was generally agreed upon as a bottom priority only in the sense of wanting to reduce consumption overall; participants thought that prioritizing product design and innovation over, for example, circular economy, could directly increase production without improving diversion. Similarly, environmental stewardship and climate resilience are seen as overarching or underlying themes that influence and are influenced by all the others.
What's missing? What else?	- Legislation for the right to repair. - Small businesses really need support for their improved reuse / diversion; they're often innovating / doing the most, but they don't have enough exposure to survive as a company. - Extended producer responsibility: if you produce it, you have to have a solution. - The idea of extended *consumer* responsibility; if you buy it, you have to be accountable – the more you consume, the more you pay. - Priority on construction and demolition waste, including renovations, for both commercial and residential buildings. - Enforcement e.g. contamination for commercial users, diversion requirements. - The biggest diversion opportunity gap from a resident perspective is textile recycling. - Commercial sector private contracting with haulers makes it easier for them to not comply with diversion requirements. Increased fines or enforcement could help. - Developing / improving building codes for improved recycling areas; create best practices that can be applied across new building designs.	Legislating the right to repair consistently arose throughout the conversations and was discussed here the most. The idea of consumer responsibility - repercussions for overconsumption - had agreement among several participants, although how this could be implemented wasn't clear.

Session	Notes on Participant Input	Facilitator Observations
	- (From workshop feedback survey) Waste composition studies - these could be built out more to become more accessible to more commercial & residential spaces, possibly require studies to be done periodically so data can be compared year over year for example. Setting targets for the region and then providing evidence (by way of these studies) may encourage commercial and residential spaces to prioritize their actions around waste management. It may also create more jobs for Metro Van.	
The most important thing for me....	- Accountability and enforcement for both consumers and manufacturers; bylaws to enforce diversion efforts (e.g. contamination fees, no dumping) - Support (financial, recognition, promotion) to individuals, groups, and businesses already modeling the themes, especially support for small business. - Overall, a reduction in the consumption lifestyle	There was a strong sense of individual agency to participate in diversion efforts, tempered by a yearning for it to be easier to engage in a lower-consumption lifestyle.
Summary of participants demographics and interests	There were specific interests among the participants in: - Supporting small businesses who are implementing waste diversion initiatives and struggling to make ends meet. - Multi-family buildings having improved waste areas	Participants were primarily past graduates of the Master Recycler Vancouver program. There were 3 people who work in municipal solid waste (2 from City of Vancouver, 1 City of Richmond). All workshop participants were over 32 years old, and a mixture of household types but primarily multi-family. One participant lived outside of Metro Vancouver.

Conclusion

Across both the survey and the workshop, it's clear that all the emerging themes are important to those who provided their insights. Both survey respondents and workshop participants commented on how they value the opportunity to provide input at this early stage of development. We anticipate growing participation in future collaborative engagement opportunities which Metro Vancouver may undertake for the Solid Waste Management Plan update.

We and our community look forward to further engagement opportunities. Please don't hesitate to reach out with any questions on this report.

Sincerely,

Emily McGill

Metro Vancouver Solid Waste Management Plan Survey Summary

Invitation to participate in survey sent Nov 24, 2023, follow up emails Nov 27 & 30th. Deadline to participate Dec 1, 2023. Extended to Dec 6, 2023.

Invitation distributed to 147 email addresses on file, representing 75 member companies. 3 Emails sent and one reminder in weekly update to members. 15 unique responses between Nov 24 and Dec 4.

Email recipients are private sector service providers (haulers), receiving and processing facilities, brokers and suppliers of industry. 12 of 15 respondents reside in Metro Vancouver region, 2 out of MV region and 1 answered 'other'
White Rock x 1
Maple Ridge x 2
Langley x 3
North Vancouver x 1
Vancouver x 2
Coquitlam x 1
Burnaby x 2
outside MV x 2
Other x 1.
70% live in detached home, 12% in condo/apartment, 11% townhouse, 7% other
Age range – 19 - 35 12%, 36 - 52 33%, 54 – 65 55%
Language spoken at home - 100% English

Q1 – Rate importance from 1 to 5 with 1 being least important to 5 being most important

Equity and societal improvements - All groups have access to information, education and services
Avg - 3
Convenience and consistency – waste and recycling services that are easy to understand and simple to use
Avg - 4
Circular economy - reuse, repair, and thrifting instead of throwing things away
Avg - 3
Product design and innovation – designing products to be more circular and regenerative
Avg- 4
Education and behaviour change – changing how we think about waste and what we purchase
Avg - 4
Accountability and transparency for producers and consumers to reduce waste
Avg - 3
Affordability and accessibility of recycling and waste disposal options
Avg - 4
Environmental stewardship – protection of natural spaces
Avg - 3
Incentives for recycling and waste reduction – for businesses and individuals
Avg - 4
Climate Resilience – investing in systems with low climate impact
Avg – 3

Q2 – Other suggested themes to be considered

- Recognize that not everyone will want to or even cares about recycling, by allowing waste sorting facilities to remove what is left. These are proven to work worldwide regardless what our local governments want to say about it.

- accountabiity and policy development transparency

- Transparency in waste processing facilities

- private sector investment, capacity in region

- Longterm landfill disposal plan

- Regulations that allow cost competitive and innovative solutions for tax payers.

Q3 – Other comments or ideas

- Let waste & recycling industry freely compete. If we want to fine haulers for cardboard and other recyclables being in their loads, we must allow them to dump and sort their loads prior to disposing of it.

- innovaton

- better regional alignment

- circular economy

- allow for investment / innovative technologies in region to handle non recyclables / create new products

We were happy to provide the survey to members, some had indicated they had already participated in the survey provided by MV at an earlier date. Many of our members also indicated they were looking forward to the next phase of engagement. There is some distrust in the process with MV so found some of these members being skeptical of participating.

Vancouver Food Runners

DECEMBER 2023

METRO VANCOUVER
SOLID WASTE MANAGEMENT PLAN UPDATE
ENGAGEMENT ACTIVITIES REPORT

PREPARED BY

VANCOUVER FOOD RUNNERS

ENGAGEMENT ACTIVITY #1 (27 SEPT 2023)

VFR HELD A VIRTUAL LUNCH & LEARN SESSION FOR FOOD INDUSTRY PROFESSIONALS ABOUT REDUCING FOOD WASTE. BROOKE ATKINSON, METRO VANCOUVER SENIOR ENGAGEMENT SPECIALIST, WENT THROUGH THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE SURVEY (SHORT VERSION) WITH THOSE WHO ATTENDED.

- 68 individuals registered for the event (38 individuals attended the Lunch & Learn Event, including speakers)
- Youtube recording of the event: https://www.youtube.com/watch?v=hPJNDLxQanA (*sent to everyone who registered)*
- 19 individuals completed the Metro Van survey (short version) from this engagement activity (primarily food industry professionals)

Survey Results: 19 Respondents

The following themes were felt to be "very important" by the greatest number of respondents:

1) Equity and societal improvements - all groups have access to information, education, and services (15 respondents)
2) Climate resilience - investing in systems with low climate impact (14 respondents)
3) Circular economy - reuse, repair, and thrifting instead of throwing things away (14 respondents)
4) Accountability and transparency for producers and consumers to reduce waste (14 respondents)

In the "other" category, for themes to be considered, respondents mentioned:

- Need for food waste tracking and reporting
- We shouldn't reward or provide incentives to do the "right thing." ALL of those topics are paramount to shifting this paradigm of how we use the resources we have.
- Having a concrete plan and structure on how to reuse food quickly -- perhaps a commissary kitchen with professional chefs and food service professionals being paid a living wage, so that they can tackle food waste, innovate food circularity, educate the public, and help fight food insecurity by giving back nutritious food to the community. It will take investment, but it will have lots of ROIs with respect to the environment and the health of the public.
- Focus on food waste prevention for restaurants, ensuring food efficiency (in grams of food waste per cover) is tracked. If not tracked, businesses should pay more taxes. And this money should help finance food waste audits or education.

ENGAGEMENT ACTIVITY #2 (30 SEPT 2023)

VFR E-NEWSLETTER FEATURE ON PAUL HENDERSON, GENERAL MANAGER OF METRO VANCOUVER SOLID WASTE SERVICES, WHICH INCLUDED THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE SURVEY

- VFR e-newsletter sent to 1315 readers: open rate: 60.4% (794 individuals engaged with the article)
- Article was also featured on VFR's social media channels (Instagram and Facebook): 2500+ followers (reached 213 accounts on IG)
- 28 individuals completed the Metro Van survey from this engagement activity (primarily VFR volunteers)

Article on Paul Henderson and the Metro Vancouver Solid Waste Management Plan Update

VFR: Paul, tell us about yourself and your journey leading up to your current role as General Manager of Solid Waste Services at Metro Vancouver.

Paul Henderson: I have spent my entire career working in local government, with a focus on waste reduction, recycling, and the management of garbage. I had the privilege of working for the City of Vancouver for 22 years and have worked for Metro Vancouver for the last 12 years. I'm a professional engineer with a Master of Applied Science (Engineering) degree as well as an MBA.

I see prevention of food waste as a key priority for Metro Vancouver as well as the region as a whole. Work by non-profits such as Vancouver Food Runners is critical in achieving our collective goals.

VFR: Tell us a bit more about Metro Vancouver Solid Waste: its role in terms of services, planning, and management of solid waste in the region.

PH: Metro Vancouver has a North American leading recycling rate of 65% — roughly twice the Canadian average –- and continues to strive towards zero waste, greenhouse gas emission reduction, and a circular economy.

Metro Vancouver is responsible for planning for less waste, improving reuse and recycling systems, and managing and disposing of the remaining waste in an environmentally responsible manner. We operate a series of solid waste facilities in the region that provide reliable and resilient waste and recycling services available to all residents and businesses in the region. We also work with our member jurisdictions on waste reduction solutions.

VFR: At Vancouver Food Runners, our program is focused on redirecting surplus food from businesses to nearby nonprofits, so we have a specific interest in food waste reduction. Please share about Metro Vancouver's work in food waste prevention and reduction, and also touch upon the importance of using your green bin!

PH: In Metro Vancouver, we are working to reduce food waste in two ways: by preventing food from being wasted in the first place, and by diverting food scraps from disposal. Composting food scraps is an easy way to have a big impact in our region. By using their green bins, Metro Vancouver residents have:

Saved 420,000 tonnes of food scraps from the garbage in 2021, preventing 160,000 tonnes of greenhouse gases which is comparable to taking 50,000 cars of the road.

ENGAGEMENT ACTIVITY #2 CON'T

VFR E-NEWSLETTER FEATURE ON PAUL HENDERSON, GENERAL MANAGER OF METRO VANCOUVER SOLID WASTE SERVICES, INCLUDING METRO VAN SOLID WASTE MANAGEMENT PLAN UPDATE SURVEY

Diverted enough organic material to create 140,000 tonnes of finished compost in 2021 —enough to cover more than twice the area of Downtown Vancouver!

Metro Vancouver has several initiatives that focus on food waste reduction in the region. We work with the National Zero Waste Council on the Love Food Hate Waste Canada campaign promoting food waste prevention among Canadians.

We also work with FoodMesh on the Metro Vancouver Food Recovery Network, which is an online platform that connects organizations with surplus food to those who can put the food to good use.

VFR: The Metro Vancouver solid waste management plan is currently in the process of being updated. Please tell us about this update and why it is important.

PH: We are updating our solid waste management plan, building on the strengths of the current plan (approved in 2011), and identifying opportunities for accelerated waste reduction and diversion while reducing greenhouse gases and promoting a circular economy.

Metro Vancouver is actively engaging with governments, including First Nations, government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan.

We are currently in the vision and guiding principles phase and are seeking feedback from the community about values and priorities related to how residents and businesses purchase, use, reuse, recycle, and throw things away in our region.

To learn more about the update, please visit our website; and complete the 5-minute feedback survey below.

Survey Results: 28 Respondents

The following themes were felt to be "very important" by the greatest number of respondents:

1) Incentives for recycling and waste reduction for businesses and individuals (24 respondents)
2) Convenience and consistency - waste and recycling services that are easy to understand and simple to use (23 respondents)
2) Accountability and transparency for producers and consumers to reduce waste (23 respondents)

In the "other" category, for themes to be considered, respondents mentioned:

- Need for businesses to donate their surplus food
- Need to focus on infrastructure (specifically new composting infrastructure)
- Food waste tracking and reporting
- Reducing plastic packaging on products sold in grocery stores
- Changing people's thinking about being "too busy" to recycle or reuse

ENGAGEMENT ACTIVITY #2 CON'T

VFR E-NEWSLETTER FEATURE ON PAUL HENDERSON, GENERAL MANAGER OF METRO VANCOUVER SOLID WASTE SERVICES, INCLUDING METRO VAN SOLID WASTE MANAGEMENT PLAN UPDATE SURVEY

Responses to the comments or ideas about what a successful solid waste management should look like in the future.

"We, as a community, are responsible for our waste. Every individual must appreciate and understand this to its essence. It isn't just the sorting of the items into the correct blue box/yellow bag that is an individual's responsibility; it is the initial purchase of the item and where it ends up! When someone buys a bag of chips and a plastic bottle of coke, are they thinking of where both items end up? No. Once used, they are thrown into the garbage at the mall and then is someone else's responsibility. Likely, it ends up in another country across the planet. Likely not recycled. Or possibly, shipped elsewhere in our province? It is becoming clearer and clearer that stronger education and consequences be put in place to get a handle on the 'disposable' approach we have to our waste issues."

"Sorry, it looks like everything is VERY Important. Right now, one of my main concerns is the confusion about sorting items. I believe that requires more than education, it needs simplification, which may need to back up some steps to streamline what is produced as well as what is available for purchase by consumers - e.g., single use plastic banned in grocery stores, but required and sold for garbage bags."

"Composting and source separation technologies are growing, and we should incorporate these into the waste plan. Don't ignore innovation -- what we have today isn't going to handle the growing waste problem that we have. Recently, Metro Van has banned certified compostables (even the ones that work well) to encourage people to start food scrap collecting (compostable checkout bags). I'm not saying this is the best solution for collecting food waste, but for some situations, it should be encouraged and certified compostable bags can do that. As of today, it seems like recycling is favoured, reusables is praised (I do agree!); but compostables are not encouraged, which is a bummer because many green jobs in BC are in the compostable industry. There's got to be a way to align the various green jobs and waste management practices to keep us flowing in the right direction."

"I really think it's important to educate people and companies on how to reduce waste. And to encourage large multi-national companies to act locally to ensure that the communities in which they are doing business benefit from their "waste" (i.e., food rescue)."

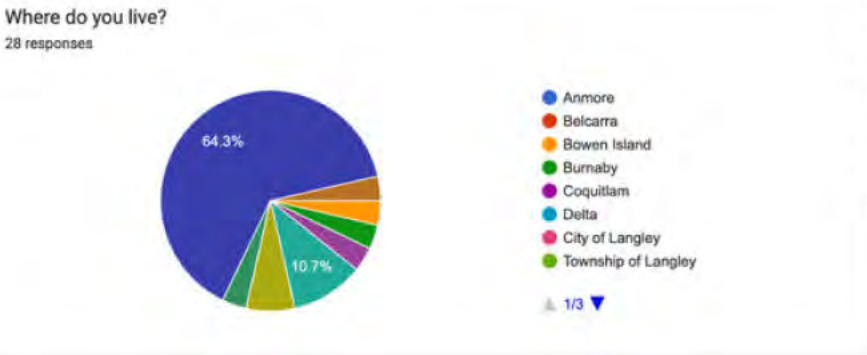
Other ideas from respondents:

- Household wasted reduced by 25% (too many people do not recycle)
- Monetary incentives/ tax incentives for people with low income
- Having to bring soft plastic to a recycling centre versus curbside pick-up makes people just toss it in the garbage
- More funding for this work
- Provide incentives for restaurants to prevent food waste and disclose food efficiency (in grams of food waste per cover)
- Less talk about recycling and more about reducing
- Allow biodegradable organics collection bags in the organics pick-up
- More penalties (tax) for single-use items

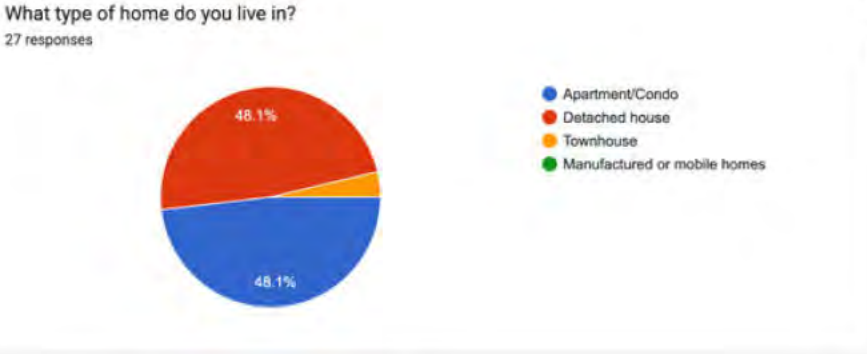
ENGAGEMENT ACTIVITY #2 CON'T

VFR E-NEWSLETTER FEATURE ON PAUL HENDERSON, GENERAL MANAGER OF METRO VANCOUVER SOLID WASTE SERVICES, INCLUDING METRO VAN SOLID WASTE MANAGEMENT PLAN UPDATE SURVEY

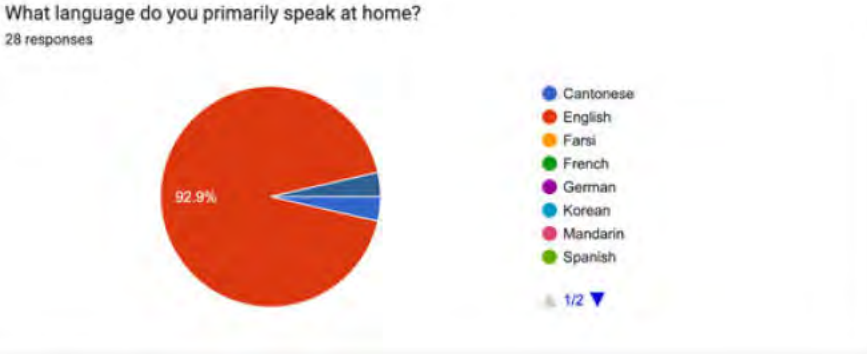
Demographic Profile of Respondents



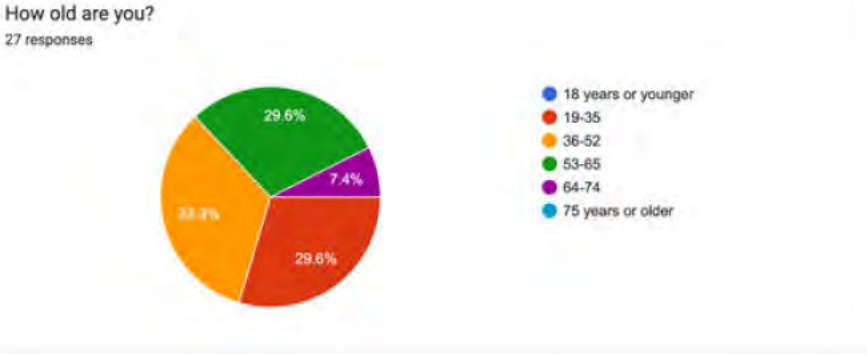
Vancouver: 64.3%
City of North Vancouver: 10.7%
District of North Vancouver: 7.1%
Surrey: 3.6%
West Vancouver: 3.6%
New Westminister: 3.6%
Bowen Island: 3.6%
Burnaby: 3.6%



Detached House: 48.1%
Apartment/Condo: 48.1%
Townhouse: 3.7%



English: 92.9%
Punjabi: 3.6%
Cantonese: 3.6%



ENGAGEMENT ACTIVITY #3 KEY INTERVIEWS

FIVE IN-DEPTH INTERVIEWS WERE CONDUCTED WITH METRO VANCOUVER FOOD INDUSTRY LEADERS TO GATHER INFORMATION ON KEY THEMES RELATED TO THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE

Key interview with David Speight
Executive Chef & Culinary Director, UBC Food Services
Date: 25 October 2023

Meeting Summary:

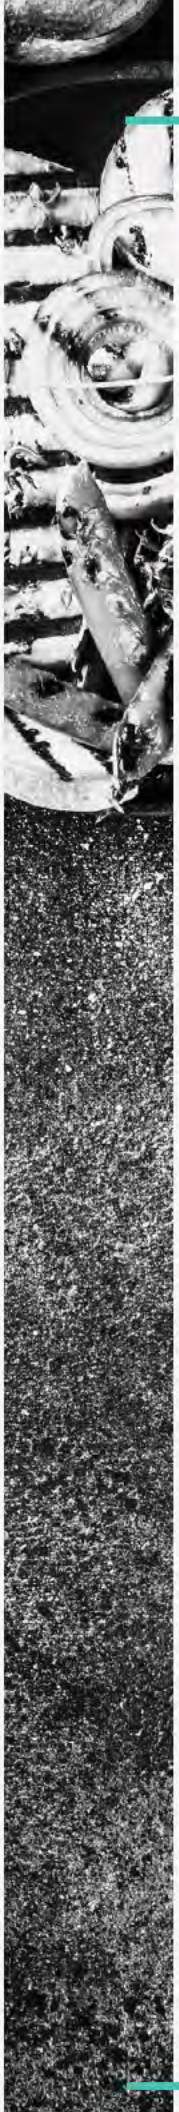
David discussed the state of UBC and the food industry post-COVID. He shared that UBC was impacted by the pandemic, but they never fully closed and are now back to normal with events and catering. He also talked about the challenges of hiring staff due to people leaving the industry during the pandemic. David also discussed the positive job market in the food industry this year after a tough hiring push last year. For the Metro Vancouver update themes, David said they were all important, and that it was hard to choose, but he listed affordability, accessibility, convenience, consistency, accountability, and transparency as being non-negotiable and central themes. He also felt that education and behaviour change were very important, as this would lead to societal change. David put product design and innovation more towards the bottom.

The conversation then shifted to preventing food waste in Vancouver. David suggested that regulation is necessary to incentivize businesses and consumers to participate in preventing food waste, but also acknowledged the importance of values-based approaches and consumer demand. David also discussed the challenges of infrastructure, such as space and composting areas, in preventing food waste and the need for creative solutions to address these challenges. Overall, David emphasized the importance of collaboration between businesses, consumers, and government in preventing food waste. He also discussed the challenges and opportunities around composting in businesses, with David emphasizing the importance of a holistic approach and societal mindset change.

Key Action Items for Metro Vancouver:

- Metro Vancouver should consider the financial incentives and penalties associated with regulation to encourage businesses to participate in food waste reduction
- Metro Vancouver should ensure meaningful and authentic engagement by incorporating feedback and insights from stakeholders into the plan
- Metro Vancouver needs involve Indigenous voices and communities in the planning process.
- Metro Vancouver should engage with large mainline suppliers, such as Gordon Food Services and Sysco, to address their role in food waste management and prevention
- Metro Vancouver should provide food businesses with sufficient time to adapt to any new regulations and provide supports for businesses with any sustainability initiatives they undertake

"As much as Metro Vancouver is responsible for Metro Vancouver, this is a global problem. And there is no one government that can solve this on their own. I think starting with education is really key for all of these things. And then if I had to pick another one, I'd say accountability and traceability. And that kind of goes back to industry. And policy and regulation. Without accountability or transparency, then you're left to individual businesses making individual decisions. Some may be making the right decision, but, as we know, a lot are making the financially best decision for just their business. So, I think these themes are really paramount as well."



ENGAGEMENT ACTIVITY #3 KEY INTERVIEWS

FIVE IN-DEPTH INTERVIEWS WERE CONDUCTED WITH METRO VANCOUVER FOOD INDUSTRY LEADERS TO GATHER INFORMATION ON KEY THEMES RELATED TO THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE

Key interview with Husein Rahemtulla
Founder & COO of Fresh Prep
Date: 25 October 2023

Meeting Summary:

A lot of this interview covered the challenges of composting and waste management for businesses and the potential for government to incentivize composting and recycling. Husein mentioned that Fresh Prep deals with waste privately, and they have their own contracts for composting and recycling.

The meeting also discussed the Solid Waste Management Plan's vision and guiding principles. Husein felt that it is important to focus on incentives for recycling and waste reduction. Husein was also interested in the idea of legislating that food be redirected to the best possible end use (how certain European countries are moving towards this). Husein was least interested in the themes of equity and societal improvements, as he was not sure what type of action could be taken on these issues. Husein was also least interested in climate resilience, as he also felt that this theme was less actionable and tangible.

Husein also discussed the importance of having clear and measurable goals, penalties for non-compliance, and the need for businesses to donate surplus food that is still usable.

He also discussed the potential for a food recovery hub in Metro Vancouver that would bring together food recovery organizations and social enterprises to process surplus food, create meals, and provide jobs.

Key Action Items for Metro Vancouver:

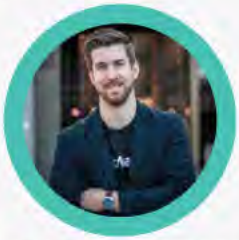
- Metro Vancouver should explore the feasibility of implementing a fee based on waste usage and assess the need for larger bins and more frequent pick-ups for businesses
- Metro Vancouver should consider regulations requiring businesses to donate usable surplus food
- Metro Vancouver should explore the possibility of incentivizing businesses to hire sustainability analysts
- Metro Vancouver should collaborate with food recovery organizations and social enterprises to develop a food recovery hub

"I would expect most businesses to have that in place, thinking about prevention, because it just impacts their bottom line, so they're careful about that sort of thing. But I think having funding for roles that can look more carefully at that, especially for businesses that might not have the size to afford that, like a sustainability analyst type of role where you can evaluate and measure and then follow up on reporting. With something like, how much waste are we producing or what's our carbon footprint?

With those types of rules, I think a business has to set aside budget for it, and there's not a very clear impact or return on that investment of hiring a person for it. So, having it incentivized or subsidized, I think would be really helpful or even like a consulting type of option for that."

ENGAGEMENT ACTIVITY #3 KEY INTERVIEWS

FIVE IN-DEPTH INTERVIEWS WERE CONDUCTED WITH METRO VANCOUVER FOOD INDUSTRY LEADERS TO GATHER INFORMATION ON KEY THEMES RELATED TO THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE



Key interview with Drew Munro
Founder & CEO of UpMeals
Date: 26 October 2023

Meeting Summary:

Drew discussed key issues related to solid waste management, and the most important themes for him were: incentives for recycling and waste reduction, and accountability and transparency. He also felt more exploration and work needs to be done on understanding the full carbon footprint of a business (e.g., trucks on the road to drive food around). Drew also shared about the challenges around space, infrastructure, and costs associated with composting and hauling services. Drew was least interested in the circular economy (e.g., businesses are not considering their whole carbon footprint); and he was also least interested in equity and societal improvements, because he felt that government was doing work in this area already.

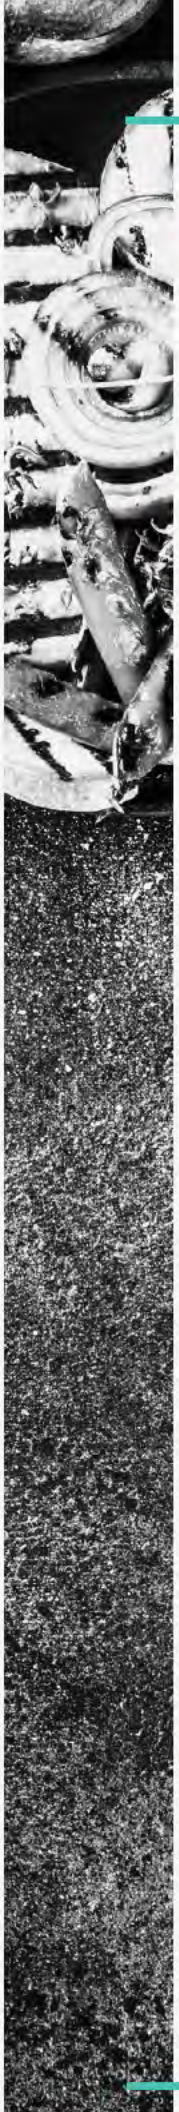
Drew outlined his thoughts on how to craft a vision statement and guiding principles for Metro Vancouver solid waste management. He recommended that the vision statement should be easily understood and big enough to get people excited, but not too big that it seems unrealistic. Drew also discussed the importance of engaging businesses in creating sustainable policies (the need for real and authentic engagement with the food industry) and the need for meaningful incentives to encourage compliance. Drew suggested a reporting structure with rewards and penalties as well as recognition through awards as ways to incentivize businesses. Overall, the discussion shed light on the complexities of sustainability in the food industry and the need for innovative solutions that take into account the broader climate picture.

Key Action Items for Metro Vancouver:

- Metro Vancouver should explore the carbon emissions impact of circular economy initiatives, assess their effectiveness, and engage in more in-depth discussions and consultations with businesses to understand their operations and challenges
- Metro Vancouver should consider implementing incentives and rewards for businesses that comply with waste reduction policies, and develop a reporting system for businesses to track and report their waste reduction efforts, with rewards or penalties based on compliance
- Metro Vancouver should consider creating city awards or recognition programs to showcase and support businesses that prioritize waste reduction and sustainability

"I know from speaking to other businesses and members of the business community that when new policy or waste protocols or fees or whatever you want to call it are put in place, the onus is always put on the businesses to just comply and follow the rules, and this is the way it's done now versus really trying to find a way to incentivize the behaviour and reward businesses that have higher levels of compliance and also the individuals."

"And you do that sort of thing by having that accountability and that transparency and showcasing who's doing it well and who's not. I think if there was, you know, a work with us and let's incentivize companies who do this exceptionally well, it would be so much more effective than I think what happens often, which is either the City or Metro Vancouver imposing things and, you know, without getting as much input from the business community. So, that's kind of my rationale behind the two that I think speak to me the most as being things that could be improved."



ENGAGEMENT ACTIVITY #3 KEY INTERVIEWS

FIVE IN-DEPTH INTERVIEWS WERE CONDUCTED WITH METRO VANCOUVER FOOD INDUSTRY LEADERS TO GATHER INFORMATION ON KEY THEMES RELATED TO THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE

Key interview with Kunal Dighe, Executive Chef of the JW Marriott Parq Vancouver &
Nicholas Czekurlon, Chief Steward of the JW Marriott Parq Vancouver
Date: 26 October 2023

Meeting Summary:

Kunal and Nick discussed key themes for the solid waste update, including design and innovation of products and spaces, and education and behaviour changes. Both emphasized the need for a collaborative effort to address the challenges of solid waste management and sustainability, with a focus on the circular economy and product design as well as education and behaviour changes. For them, personally, they were least interested in incentives, accountability, and transparency.

Kunal and Nick shared ways to improve food waste management and solid waste management in the region, including implementing a food waste certification for chefs and businesses, recognizing circular food champions, and sharing information and best practices between cities. They also discussed the challenges of engaging with a diverse range of people in the consultation process, including non-businesspeople and Indigenous communities.

Kunal and Nick talked about organizing food waste prevention sessions for chefs to educate them on sustainability practices. They expressed that it is challenging to work with chefs' busy schedules and suggested creating an actual organization for food sustainability education. They also discussed the specifics of a training session, including the possibility of an on-site visit and practical demonstrations of food recovery programs.

Overall, the meeting highlighted the importance of a holistic approach to the problem of food waste and the impact of any changes on multiple categories as well as the need for inclusive and comprehensive engagement and feedback from Metro Vancouver.

Key Action Items for Metro Vancouver:

- Metro Vancouver needs to support with developing food waste training sessions and certification program for those in the food industry
- Metro Vancouver needs to support with developing an information portal for food businesses to share resources, best practices, and get inspired to reduce food waste.

Kunal Dighe: "At some point, you maybe need to force the hand a little bit and then people need to adapt and then you realize it's not so bad and then you just naturally get used to it. For example, like how the City of Vancouver has a food safe certification, so you need to know the food standards. I was thinking there should be a food waste certification that every chef needs to have -- a certification when you're hiring people, you need to know the certification."

"Sharing information: for example, there should be a portal, like what the City of Toronto doing or what the City of Seattle is doing, how we can share this information, so we have more resources. And, you know, just sharing each other's best practices. A place where we can get more inspired and have a target. That's the one thing we are missing."

ENGAGEMENT ACTIVITY #3 KEY INTERVIEWS

FIVE IN-DEPTH INTERVIEWS WERE CONDUCTED WITH METRO VANCOUVER FOOD INDUSTRY LEADERS TO GATHER INFORMATION ON KEY THEMES RELATED TO THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE

Key interview with TJ Conwi
Founder and Head Chef at Ono Vancouver and ReRoot
Date: 24 November 2023

Meeting Summary:

TJ identified the top two themes that are most important to him: the circular economy and convenience and consistency. He discussed the need for metrics to measure food waste reduction and the short-term and long-term actions needed for environmental stewardship. TJ also discussed the importance of regulation and incentivization for a circular food economy, suggesting that a combination of regulation and incentivization is necessary to promote a circular food economy.

TJ also discussed the key elements for a vision and guiding principles for solid waste management in Metro Vancouver. TJ suggested that innovation and regulation are important for the vision, while emphasizing the importance of community awareness and involvement in connecting food security and food waste together for guiding principles.

TJ also shared about the importance of educating people on food waste management and sustainability, proposing working with BetterTable.ca to create a certification program. TJ also shared about the need for food infrastructure funding to build a commercial kitchen that can be a hub for processing surplus food into meals as well as educating and training people on food waste management and sustainability.

Key Action Items for Metro Vancouver:

- Metro Vancouver should establish a commercial kitchen/food hub to process surplus food into meals and provide job skills training around food waste prevention and cooking with surplus food
- Metro Vancouver should establish grants for businesses engaged in practices that advance sustainable industry practices and the circular economy and reduce food waste
- Metro Vancouver should support with developing a training or certification on food waste prevention and reduction for those in the food industry

"To me that's partly like, you know, looking at France, right? Like having that piece of legislation that is not deniable. This is something you need to do; you have to do this. I think that is the biggest piece that will change so many things. Also, grants, so people like me will be able to do what we're trying to do without having to become a charitable organization."

"I actually think that they need to talk to the schools, the culinary schools. When I started working, the green bin was very much optional. My chef just didn't have any thought about the food waste. It was just like, 'make sure the buffet is full" and all that, right? So, what I'm finding is that when I am going to Vancouver Community College, when I'm teaching, I'm having to explain to them that 'no, you don't have, you know, the food liability issues' -- that is long gone."

"On the day we did the film screening at the Vancouver Community College, one of the instructors there was a former chef of the VCC. Now he's doing more off site teaching. He was actually building curriculum on food waste outside because he said this was something that he wanted. He's been wanting to put it in the curriculum or at least an awareness of it back when he was involved in writing curriculum at the VCC 10 years ago. Before, he said there was never any uptake in it. But, feel like now is a good time."

ENGAGEMENT ACTIVITY #4 SURVEY WITH FOOD BUSINESSES (OCT - NOV 2023)

VFR INCLUDED THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE SURVEY IN VFR'S ANNUAL FEEDBACK SURVEY FOR FOOD BUSINESS PARTNERS. 16 BUSINESS PARTNERS COMPLETED THE SURVEY.

Survey Results: 16 Respondents

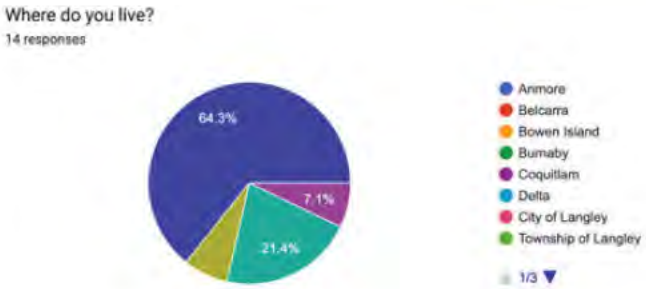
The following themes were felt to be "very important" by the greatest number of respondents:

1) Education and behaviour change - changing how we think about waste and what we purchase (13 respondents)
2) Convenience and consistency - waste and recycling services that are easy to understand and easy to use (13 respondents)
3) Climate resilience - investing in systems with low climate impact (12 respondents)
4) Accountability and transparency for producers and consumers to reduce waste (12 respondents)

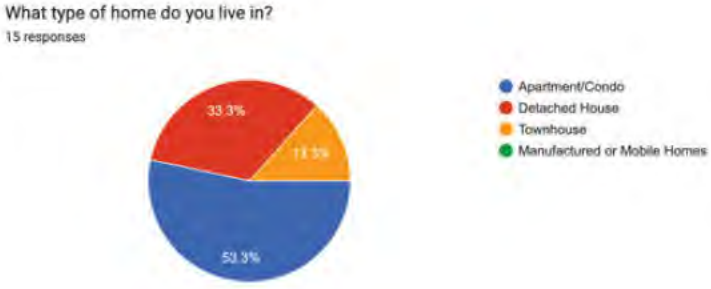
In the "other" category, for themes to be considered, respondents mentioned:

- Financial penalties for businesses that do not comply
- Greater penalties for businesses that do not actively try to reduce their food waste
- Better recycling infrastructure

Demographic Profile of Respondents



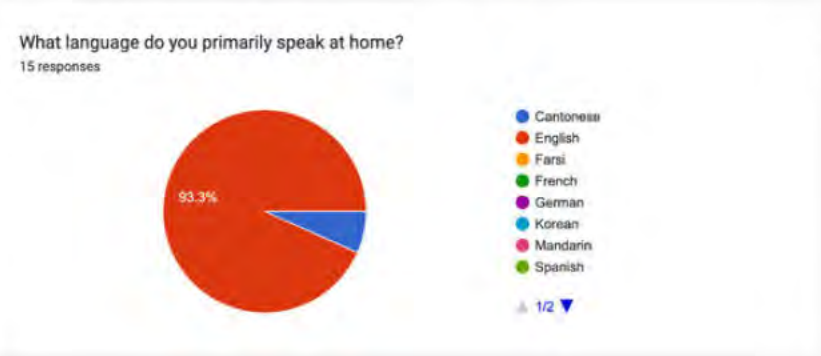
Vancouver: 64.3%
City of North Vancouver: 21.4%
District of North Vancouver: 7.1%
New Westminster: 7.1%



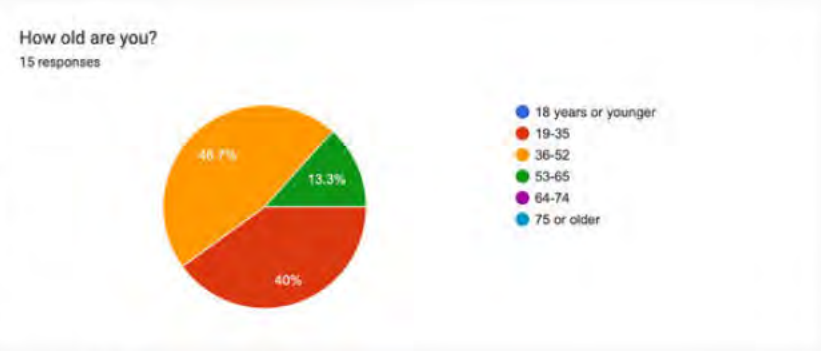
ENGAGEMENT ACTIVITY #4 SURVEY WITH FOOD BUSINESSES (OCT - NOV 2023)

VFR INCLUDED THE METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN UPDATE SURVEY IN VFR'S ANNUAL FEEDBACK SURVEY FOR FOOD BUSINESS PARTNERS. 16 BUSINESS PARTNERS COMPLETED THE SURVEY.

Demographic Profile of Respondents Con't



English: 93.3%
Cantonese: 6.7%



Summary of Activities

- Overall, VFR's engagement activities were quite accessible, as all of them were conducted online.
- VFR conducted 4 engagement activities with food industry professionals and volunteers involved in VFR's program to gather feedback on the Metro Vancouver solid waste management plan update. Five in-depth interviews were undertaken and, in total, 63 individuals completed the survey. Overall, respondents indicated that all of the themes were important, but "accountability and transparency" emerged as a priority theme in 3 of the engagement activities.
- In the in-depth interviews with food industry leaders, regulation (e.g. laws and penalties), incentives (e.g. awards and tax credits), training and education (e.g. program/certification as well as an information portal), funding (e.g., sustainability grants), and infrastructure (e.g. food hub to process surplus into meals) were brought up as ways to prevent and decrease food waste in Metro Vancouver. The food industry leaders were very interested in tangible actions that Metro Vancouver could be working on to prevent/reduce food waste in the region.
- Overall, the food industry leaders were happy that they were being asked about the Metro Van update, but some expressed skepticism around whether their feedback would be integrated in a significant way (some wondered if it was a "tick the box" exercise).
- The food industry leaders felt that any changes to policies or regulations should include the food industry in the process as well, so that their feedback is valued and considered; and that the food industry needs to be given time to adapt to any changes and that they need support/aid in any transition (e.g. funding and adequate infrastructure support).
- Overall, the challenges in this project were minimal, but conducting the survey with the food businesses was the most challenging (engagement activity #4), as those in the food industry are incredibly busy and not in front of their computers. Repeated attempts were made to engage our food business partners to complete the survey, but this strategy had limited success.

Partner: Women Transforming Cities

Target demographic: Women and Gender Non Conforming people, people under 35

Number of participants: 28

Activities:

- Re-creation of the solid waste survey in the WTC platform
- Hosting a member drop-in event (virtual) to learn about the survey, ask questions, and complete it together
- Communications materials to promote the survey in WTC Member Communications, WTC Slack Channels and the organization's newsletter
- Follow up and promotion of the survey to key members

Duration of activities: November - early December 2023

Feedback: We duplicated the Metro Vancouver survey exactly, to make the data collection the most useful to be helpful. As a result, one of the questions we were asked multiple times was why people's gender identity was not asked as part of this survey. This is something you might want to consider in future surveys.

Survey results are attached as a PDF.

WTC Engagement Survey Results

Besides the 10 themes above, are there any others that should be considered?

- Less packaging , more regulations so less waste to deal with.
- We need to consider how our waste management impacts our non human relatives - the animals we live with in and around the city (rats, bears, fish, birds, etc)
- More incentives for businesses to reduce waste.
- ensuring that folks with disabilities / differing abilities needs are part of the decision-making process when new policies are being considered
- Interconnection with other industries' climate plans (like measures to recycle materials from "tear-down" homes). Also think about partnerships with organizations that do repair and reuse materials.
- Not that I can think of
- I believe that Metro Van should be working with the producers of waste to penalize large amounts of waste. I also think that commercial waste needs to be looked at - we do a lot of work at home to separate our waste, and our building looks on a small grocery store and we see everything being tossed into the waste bins - including food waste and cardboard. it is frustrating.

Please share any other specific comments or ideas about what you think successful solid waste management should look like in the future.

- Building community connections (I'm thinking about we deepen the share economy and create more opportunities like a Thingery (a shared repository of items borrowed) that support mutifamily living) Finding ways to balance delivered items (highly accessible) with reducing the waste connected to it (packaging, emissions) A Use What You Have campaign with videos on how to repurpose things, especially textiles if you're not into sewing.
- More recycling options in large apartment buildings outside just paper, cans, glass and organics. E.g. Styrofoam is not allowed to go into the garbage, however, many packages still have styrofoam, requiring the recipient to seek out Recycling Depots (there is only on on Powell that will take it). that seems counterproductive considering the amount of styrofoam

being received daily in delivered packages. Since the material is not banned, there need to be easier recycling options to ensure it doesn't end up in the garbage.

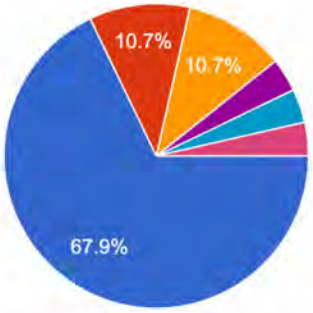
- There needs to be much greater focus on reusing and on reducing packaging etc.
- Moving away from emphasis on individual actions towards a collective responsibility that puts the onus more on business and governments as opposed to tying it to personal altruism
- Less focus on individual accountability and more pressure on corporations and businesses to reduce waste.
- less waste produced equals less waste to manage
- I think waste management should be minimal, as it's absolutely critical that our efforts shift toward the circular economy. Focus accessible and affordable waste disposal on lower income communities, while considering how higher-income communities can be incentivized to reduce waste since they can afford higher cost green measures and have the privilege of time to pursue recycling, repair and waste-reducing initiatives if forced to.
- I think clear information about recycling is really important
- I live in a walk up unit apartment building in North Vancouver, and there are lots of people living here who do not speak English. There is no waste information in different languages available. The District knows that the area I live in people primarily speak Farsi, so there should be waste information available in Farsi. The impact is that in our green compost bin, people put plastic bags, recycling and all sorts of waste which renders the compost unusable. This was every single week the same thing happened, and no one ever intervened.

Where do you live

Vancouver - 22 - 78.6%
Burnaby - 2 - 7.1%
City of North Vancouver - 2 - 7.1%
New Westminster - 1 - 3%
District of North Vancouver - 1 - 3%

What type of house do you live in?

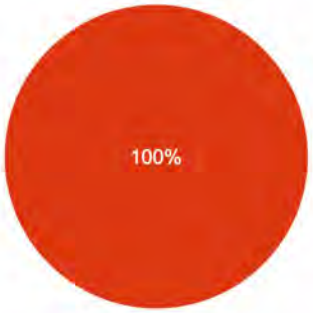
28 responses



- Apartment/condo
- Detached house
- Townhouse
- Manufactured or mobile home
- An apartment within a house that shares garbage/compost/recycling bins
- Laneway home
- Duplex rental

What language do you primarily speak at home

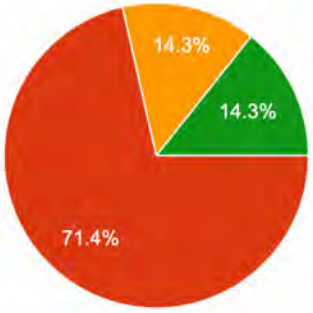
28 responses



- Cantonese
- English
- Farsi
- French
- German
- Korean
- Mandarin
- Spanish
- Tagalog

How old are you?

28 responses



- 18 years or younger
- 19-35
- 36-52
- 53-65
- 64-74
- 75 years or older

Metro Vancouver Solid Waste Management Plan Update – Vision and Guiding Principles Workshop Report

YWCA City Shift Community Advisory Council

October 18, 2023

Prepared by Shauna Shortt, YWCA City Shift Project Lead

Workshop Report - Metro Vancouver Solid Waste Management Plan Update – Vision and Guiding Principles

Introduction

On October 18, 2023, nine YWCA City Shift Community Advisory Council members participated in a virtual workshop that focused on providing input on the Vision and Guiding Principles of Metro Vancouver's Solid Waste Management Plan update.

YWCA City Shift is a project that calls on local decision-makers to transform our region into a place that has equitable opportunities for everyone to live safely and thrive. To do this, we need to hear from a range of diverse voices at the municipal level and embrace innovative solutions to the pressing challenges before us. YWCA City Shift aims to advance systemic change by working collaboratively with municipalities to promote the widespread use of GBA Plus and foster more inclusive and equitable city planning, policies, strategies and services.

Persistent systemic inequalities and lack of representation make tools like GBA Plus essential to ensuring equity for residents across Metro Vancouver, especially when decision-makers do not reflect the communities they serve. For example, while women make up more than half the population, they remain underrepresented in local government, accounting for less than one quarter of Metro Vancouver mayors and well under half of councillors. In eight of Metro Vancouver's 21 municipalities, including larger cities like Surrey, Richmond, Burnaby, Delta and Coquitlam, women make up less than one third of councillors.

From very early in the project, the City Shift team has sought the guidance of people with lived experience through two advisory councils. A Strategic Advisory Council and a Community Advisory Council, consisting of women and gender-diverse people with intersectional identities living in the Metro Vancouver region. Learn more about YWCA City Shift here: [redacted]

Workshop Facilitator and Process

YWCA staff members Shauna Shortt, City Shift Project Lead and Heiky Kwan, Senior Marketing and Communications Strategist, attended the workshop as staff support. Shauna Shortt was workshop facilitator and Heiky Kwan was active listener[1] and note taker.

After the territorial acknowledgement and group welcome, Shauna Shortt provided an overview of the workshop guidelines, agenda and Solid Waste Management Plan update process.

Participants were encouraged to ask questions throughout the workshop and were asked to complete a survey on the workshop at the end. See **Appendix 1** for the list of questions raised and **Appendix 2** for participant survey responses.

[1] All YWCA Community Advisory Council meetings have a YWCA staff member active listener.

Participant Responses

1: Identifying participants top two themes

The group was given time to reflect on the 10 themes provided and then asked to rank their top two themes using the following polls[2]:

[2] Note, the screen shots do not capture the first category “Accountability and Transparency”

After sharing the poll results, Shauna Shortt began the roundtable discussion by asking each participant to share their top two themes, as well as provide a reason for their selections.

Participant #1

- **Accountability and transparency**: For example, organic labels – there's no clarity about the source and it's not clear or transparent.
- **Incentives for recycling and waste reduction:** We need to motivate businesses and individuals to recycle.

Participant #2

- **Circular economy:** Feel we are a consumer society that's beyond disgusting and it's a very throwaway culture and we produce more garbage per capita than others. We need to be consuming less, reusing and cutting down production and changing notions of production.
- **Product design and innovation:** We need to design products to be more circular and regenerative. There needs to be a lot less packaging waste.

Participant #3

- **Environmental stewardship:** It's important both here and overseas. We keep natural spaces here pristine, but we contribute to polluting other places.
- **Convenience and consistency:** Having a child change my habits, it's important for families who may be producing a lot of waste to have some level of consistency for recycling that is available. If we work on making the process more convenient, it will make the behaviour shifts a lot more feasible.

Participant #4

- **Environment stewardship:** Protection of natural spaces. We need to protect our natural spaces using the law. Canada was sending waste to other countries for disposal. What is the impact there? We need striker laws.
- **Incentives for recycling and waste reduction**: Incentives for businesses and individuals. Can give us better data for government on what kind of waste people are producing. Incentives work – they go beyond education that does not always lead to behaviour change.

Participant #5

- **Equity and societal improvements:** Equity in recycling. The binner's conversation and how they can support the community and benefit. Changing the conversation and shifting stigma and shift conversations about recycling and waste in general.
- **Circular economy:** People aren't aware of ways to do this: i.e. trading and awareness for people to know how they can contribute to the circular economy and Metro Vancouver could be a platform for people to do that.

Participant #6

- **Convenience and consistency:** People who move around a lot have different arrangements apartment single family home are all different, so it's hard for transient communities to recycle. Make it easy for folks.
- **Equity and societal improvements**: As it relates to communities and language accessibility for communities to learn how to recycle in different ways

Participant #7

- **Climate resilience:** Tired of policies that that revolve around individuals. Want it to be more systemic. Can have a better system for waste.
- **Accountability and transparency:** Especially for producers and businesses is important. i.e. lots of things wrapped in plastic when they're already in a package, etc. There should be more expectations for bigger producers of waste to reduce their waste and less on the consumer.

Participant #8

- It was a struggle to pick only two because they're all linked.
- **Affordable and accessible:** Making choices easy and reducing barriers – but this is actually linked closely to consistency, especially in different jurisdictions, making it easy for folks who are moving.
- **Circular economy:** Moving away from linear economies and moving to thrifting is very important and pays tribute to cultures that are already doing so. But this is linked to product design too, as products will be made for multiple uses. These are systemic solutions that need to be thought of.
- **Equity and societal improvements:** Remove systemic barriers and the barriers around waste and recycling to discriminate against people. Through waste, zoning was changed and people may no longer have access, etc.

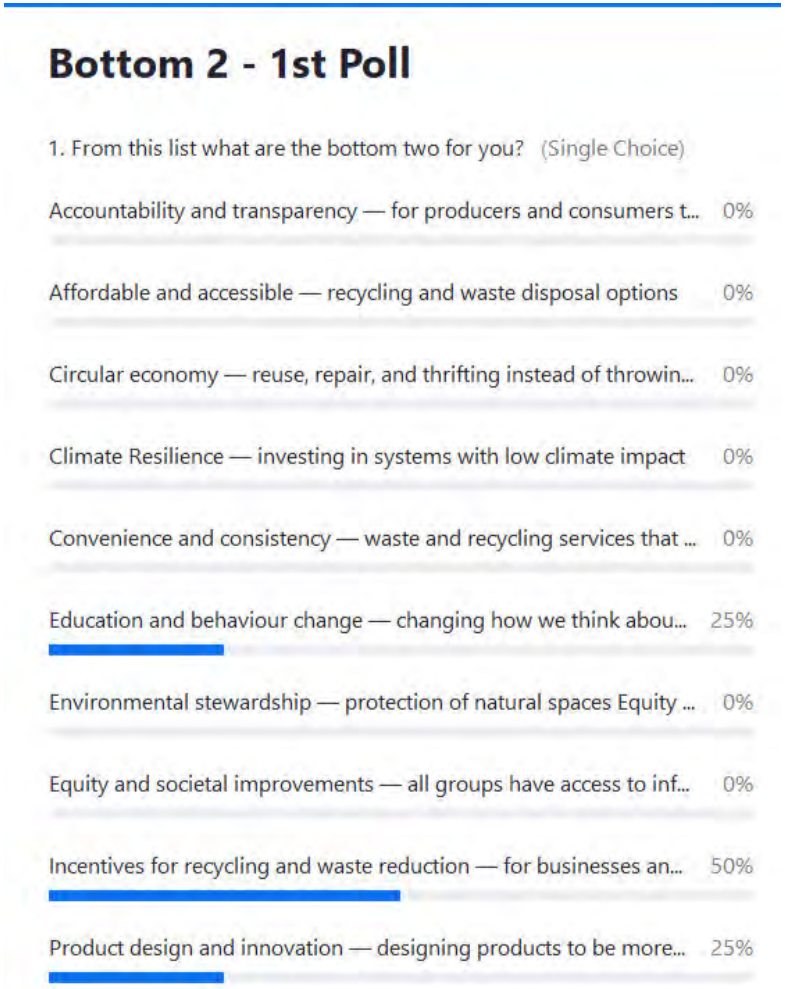
Participant #9

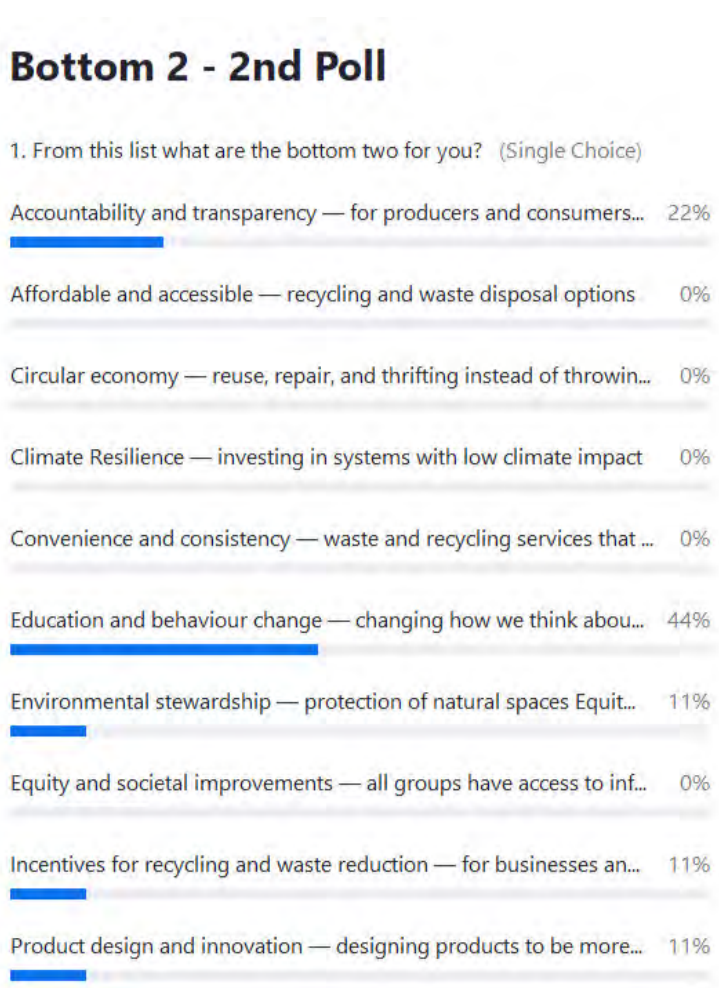
- **Education and behaviour change:** Important to have education, people still don't' know how to recycle products.
- **Accountability and transparency:** Companies should be accountable for natural resources and should be accountable.

*Note, this participant jointed the workshop late and did not participate in the polls.

2: Identifying participants bottom two themes

Once again, the group was given time to reflect on the 10 themes provided and then asked to rank their bottom two themes using the following polls:





After sharing the poll results, Shauna Shortt began the roundtable discussion by asking each participant to share their bottom two themes, as well as provide a reason for their selections. Note, only eight participants provided a response to this question.

Participant #1

- **Incentives for recycling and waste reduction:** For businesses and individuals this is not stopping certain types of consumption. It's not working in many places and there is a risk that incentives make things optional. We need more systemic changes.
- **Education and behavioural change:** This isn't something Metro Vancouver should be doing, they can ally themselves with communities who do this work well.

Participant #2

- **Education and behavioural change.** Metro Vancouver should not be doing this, but there are much larger problems at hand that Metro Vancouver should be looking at. Metro Vancouver plays a key role in operations.
- **Incentives for recycling and waste reduction:** It will be a nice thing to do instead. Ingrained as a part of the culture instead. Worry that incentives make things nice to do and not systemic. Carrot and stick model. How do we change culture and not just short-term incentives? How do we create systemic solutions?

Participant #3

- **Incentives for recycling and waste reduction:** It's not changing things in a significant way currently. We need better options and less opportunities to create waste.
- **Education and behavioural change:** Not Metro Vancouver's role to do education. And education puts too much focus on consumers. Metro Vancouver needs to make the system better.

Participant #4

- **Incentives for recycling and waste reduction:** Similar thought stream as the folks before. Operate with strategies and policies in place, if we change the structure it will influence people's behaviour and normalize it, it changes actions on a larger scale instead of it being a choice. Think about mushrooms – remove plastic packaging option. Think about how we operate within systems. Our decisions are based on policies that are already in place. Need to shift structures to change behaviour. We need to have better recycling options.
- **Accountability and transparency:** It goes hand in hand. Primary avenue that organizations and individuals that can participate in. Normalizes it as how Metro Vancouver operates.

Participant #5

- **Product design and innovation**: Designing products to be more circular and regenerative is important, but research can be very costly and some companies won't do it. There are also regulatory challenges to consider.

- **Education and behavioural change:** Again, should not be Metro Vancouver. There are other organizations that can focus on this.

Participant #6

- **Education and behavioural change:** Awareness is needed, even though it's a part of the bottom two.
- **Product design and innovation**: We use things too much and we don't repair. We need a culture of repair, not just creating more.

Participant #7

- **Incentives for recycling and waste reduction:** This is the lowest bar of what people to need. There are other institutional problems that exist and should be addressed first.
- **Product design and innovation**: Should not be handled by Metro Vancouver who will be unable to regulate. There are major gaps.

Participant #8

- **Education and behavioural change:** Feels like it happens across generations. People return to a sense of what's comfortable.
- **Accountability and transparency:** It felt like one of the lower priority pieces because they're looking the action-oriented items. Don't' know how effective they will be in this realm.

Conclusion

The workshop took about 1.5 hours to complete. Workshop participants indicated that they were interested in learning more about how Metro Vancouver plans to update the Solid Waste Management Plan. A number of follow up questions were recorded and shared with Metro Vancouver after the workshop, with all answers by Metro Vancouver provided to the participants. Many of the questions raised were related to Metro Vancouver's engagement processes.

Engagement Summary

Zero Waste BC conducted a workshop, a survey and a focus group in October 2023 to learn more about participants' perspectives developing Metro Vancouver's Vision and Guiding Principles for solid waste planning. The process and results are shown below.

1. Workshop

An online workshop was held on October 5 from 11:30am-1:00pm. Invitations were sent to Zero Waste BC members and board members via email, as well as included in the email newsletter. An invitation was also sent to previous workshop participants. The workshop was promoted on Zero Waste BC's website and social media via LinkedIn and Facebook, as well as through social media channels of SPEC, Climate Caucus, WECAN, and CityHive.

A total of 19 participants attended the workshop. There was a mix of representation, mostly from NGOs, which were over half of the participants (Figure 1).

Figure 1. Workshop Participants

The format of the workshop generally followed the facilitation plan provided by Metro Vancouver including a review of themes identified by Metro Vancouver. Content was expanded to discuss the topic of zero waste more broadly, review the zero waste hierarchy and BC Ministry of Environment and Climate Change Strategy guiding principles, and consider links between waste and climate and environmental footprints.

The workshop opened with the question “What is zero waste?” Key themes of the participants’ responses were:

- A sense of responsibility for material that is generated and handled
- Thinking differently about what resources and materials are so they are valued
- Using a systems approach to avoid making waste and generally following the zero waste hierarchy to prioritize reuse before diversion

During the roundtable, questions were raised by participants related to engagement of stakeholders in the solid waste industry, embedding circularity into procurement for governments, best practices research on recyclable and compostable containers, and ensuring wood waste is not downcycled/combusted (and counted as recycling).

For discussions about the vision and guiding principles, participants were divided into 2 breakout groups. The notes and Miro boards were combined for the report, which are in Appendix A and include additional detail from the discussions.

The first discussion was an open question about participants’ visions for zero waste in Metro Vancouver. Key themes were:

- Responsibility of producers for their waste
- Culture change and embracing cross-cultural collaboration
- Equity and accessibility
- Having infrastructure and systems in place for local solutions
- Alignment with the Zero Waste Hierarchy as defined by the Zero Waste International Alliance (not just zero waste to landfill)
- Systems view and changing the paradigm of waste - prioritizing the higher levels of the zero waste hierarchy and making it easier to reduce, reuse, and repair
- Promotion and education to reinforce behaviour changes
- Data transparency, access, and full-cost/life-cycle accounting for all waste produced
- Partnerships to reduce waste

After participants reviewed the themes from Metro Vancouver and additional content, they identified missing items. The themes for missing items were:

- Metrics to track progress
- Ensuring all waste from the region is captured and not impacting the environment
- Maintaining public trust (related to recycling and end of life management) through clear definition of terms, data transparency and listening to communities, especially those who are low income and minorities
- Social and environmental benefits and incentives for local economies and communities to implement zero waste with a focus on the higher levels of the hierarchy
- Government support for reinforcing sustainability principles and pushing back against endless growth and expansion

Participants voted for their top and bottom three priorities. The themes/guiding principles that had the most votes for the top priorities were:

- Education and behaviour change - Changing how we think about waste and what we purchase
- Accountability and transparency for producers and consumers to reduce waste
- Affordability and accessibility of recycling and waste disposal options
- Reuse, repair, and thrifting instead of throwing things away
- Incentives for recycling and waste reduction - for businesses and individuals
- Product design and innovation - Designing products to be more circular and regenerative

Participants struggled to identify bottom priorities because they believed many of them are important. However, they did find that some themes/guiding principles were not worded clearly or should be better defined. The general comment was that these themes seem to guide conversations towards maintaining the status quo and are very vague.

In identifying the most important thing for a solid waste management plan, the following were key themes of the discussion:

- Systemic approaches focusing on upstream solutions to change product design and make it easier for consumers to reduce waste
- Promotion and education to ensure people understand circularity and zero waste
- Removing waste incineration as an option so that there is more support for reducing waste and finding alternatives rather than justifying waste generation
- Equity, justice, and accessibility so small players and equity-deserving groups can meaningfully participate in the circular economy
- Protecting the environment from toxic substances and materials
- Transparency of information from Metro Vancouver

Workshop Evaluation

All participants were invited to complete a short workshop evaluation. A link was provided at the end of the workshop and sent in a follow-up email. Seven participants completed the evaluation. The evaluation form from Metro Vancouver was used.

Responses to the Likert scale questions are summarized in Figure 2. Participants generally strongly agreed or agreed with all the statements.

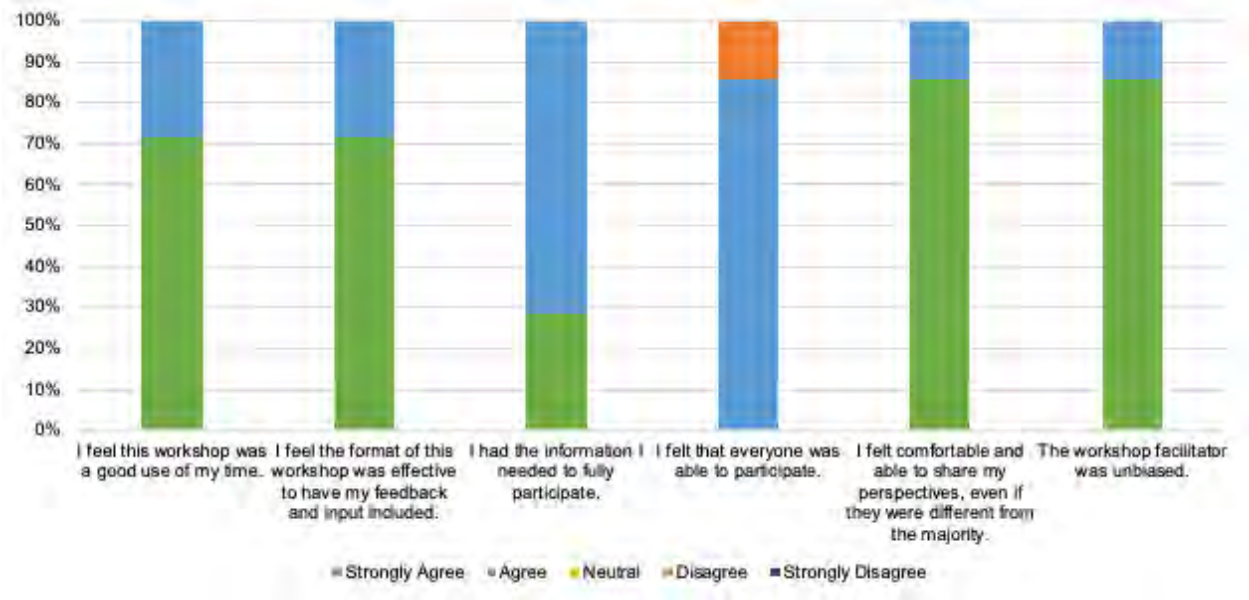


Figure 2. Workshop Evaluation Responses

In the open responses about one thing that went well in the workshop, participants liked how ideas were shared and the use of the online information sharing platform, Miro. They also appreciated the workshop flow and facilitation adaptation when the original plan was not working as well.

In the open responses about one thing that could be improved, the Miro board was noted as being challenging for some people to use. The presentation was seen as redundant for people with subject matter expertise. Participants also noted that some people spoke up or were more involved than others, and to increase the cultural inclusion and diversity of the process. There were suggestions for warm-up or icebreaker exercises for participants to get to know each other better.

2. Survey

This survey was based on the Metro Vancouver survey, with additional questions related to zero waste. The survey was emailed to Zero Waste BC members and board members, as well as included in the newsletter. Reminders were also posted to Facebook on October 4 and 13. The survey was open from September 22 to October 15.

There were 6 responses to the survey. As there are few respondents, only general comments about participant demographics are included. Respondents to the survey all resided in Metro Vancouver and were mostly from Vancouver (67%). Half (50%) of the respondents reside in apartments/condos. All respondents are English speakers. The largest age demographic group was 19 to 35 (33%). Most participants identified as environmental advocates (67%). Further details are included in Appendix B.

In the first open question “What does zero waste mean to you?”, the responses generally referred to preventing waste, being responsible with material use, and keeping materials out of incinerators and landfills.

In the second open question “Why is zero waste important to you?”, there were mixed responses. Some themes were environmental sustainability and protection and the effects of waste on vulnerable communities.

In ranking the themes from Metro Vancouver, no respondents ranked any of the values and priorities as less or not important. Climate resilience and environmental stewardship were the most important priorities, selected by all respondents as very important (Figure 3).

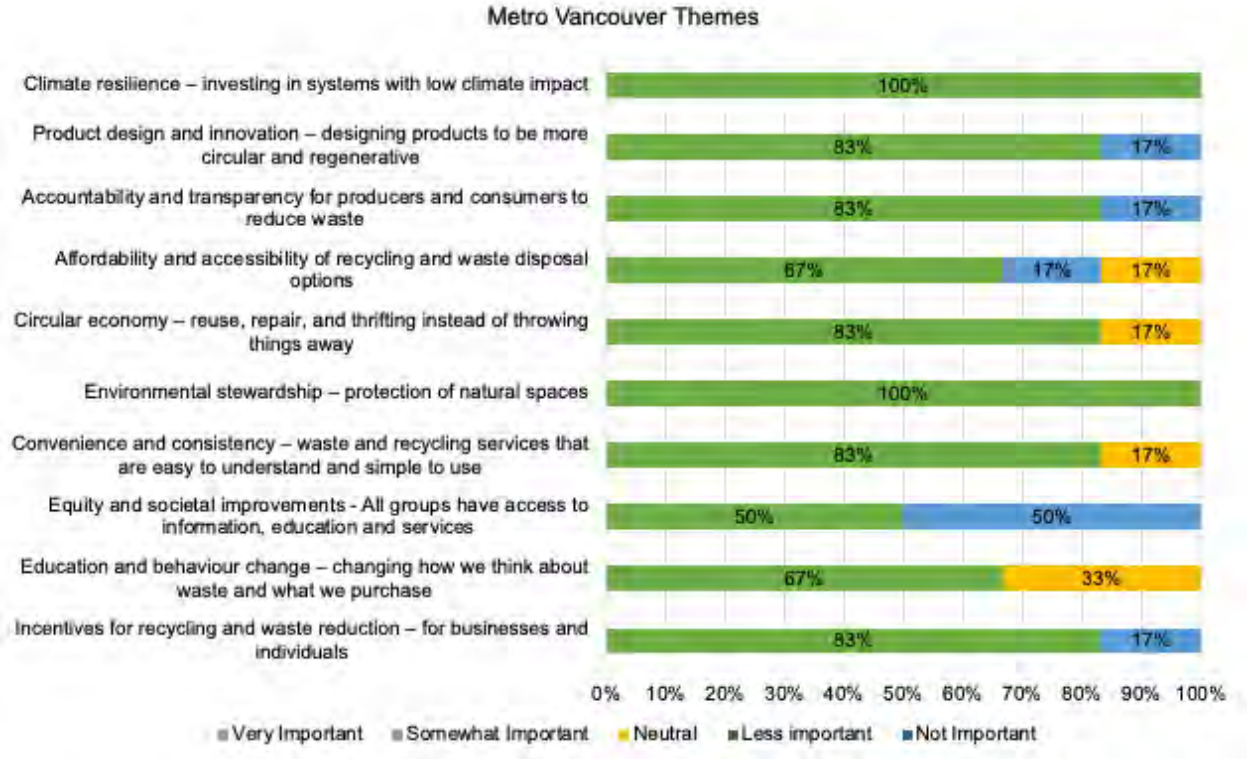

Figure 3. Ranking of Metro Vancouver Themes

Respondents also identified the following themes that were not included in the above question:

- Salvaging wood waste and biomass
- Costs and long-term impacts
- Space for private innovation
- Community development
- Renewable energy generation from waste
- More bylaws at the municipal and regional level

Respondents ranked the zero waste hierarchy levels from most (Rank 1) to least (Rank 7) important (Figure 4). Rethink/Redesign was highly ranked as the first (67%) and second (17%) priority. Reduce, reuse, recycle/compost were a mix, but generally ranked in the top half.

Material recovery and residuals management were in the bottom half. Many ranked unacceptable (67%) as the lowest priority.

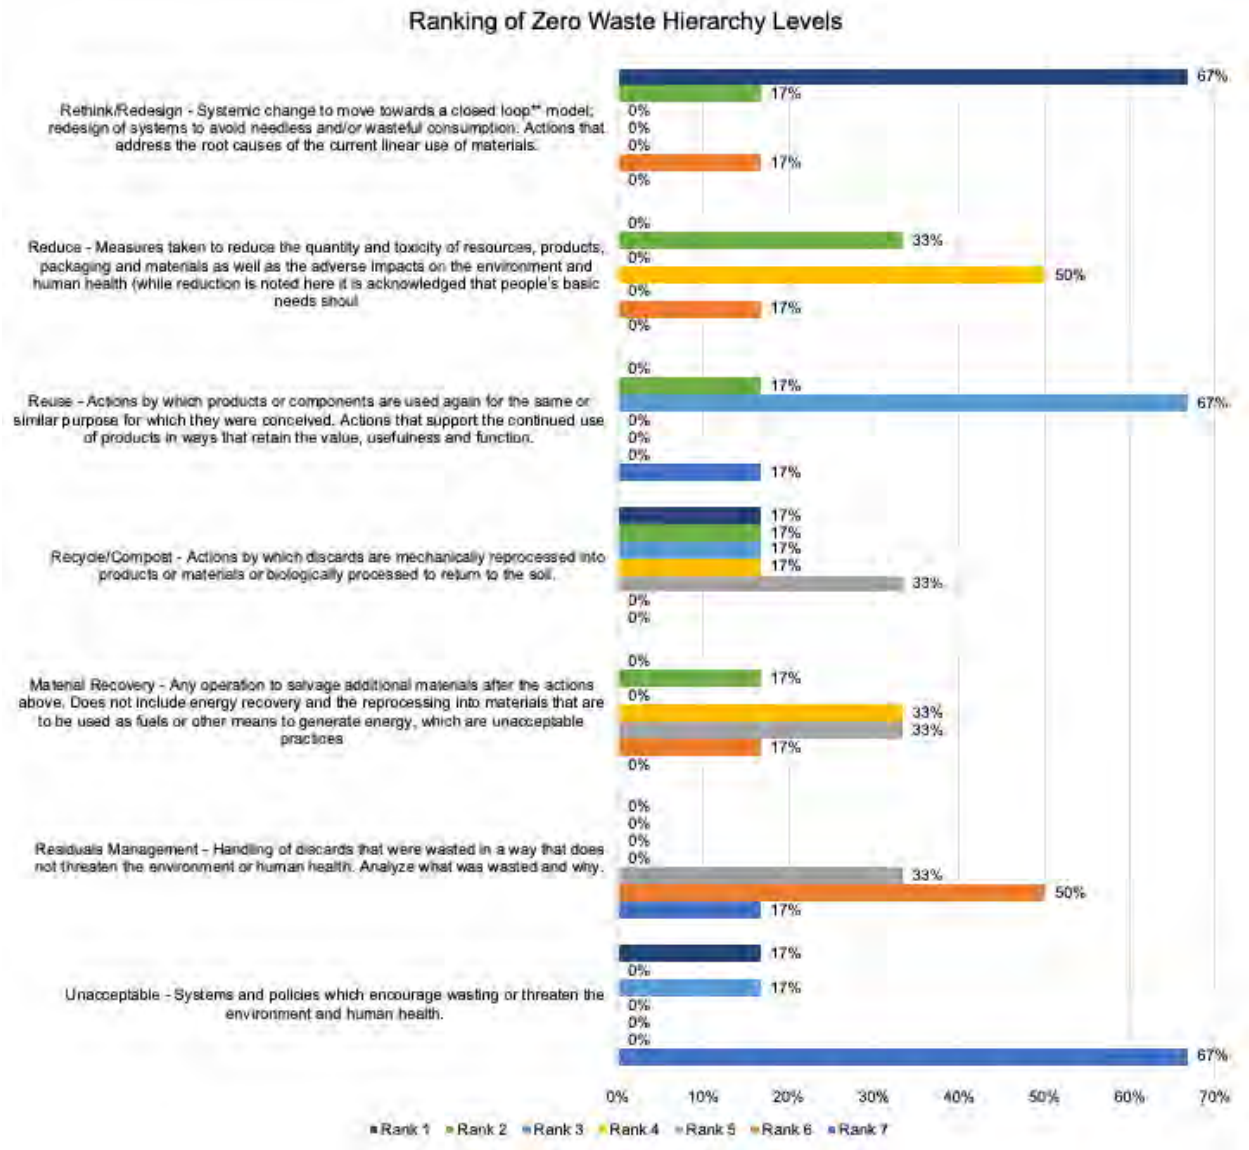

Figure 4. Ranking of Zero Waste Hierarchy Levels

3. Focus Group

A focus group was held on October 12th. Participants were invited to the focus group directly and seven of the eight who wished to attend did so. The backgrounder and supporting information were sent to participants ahead of the meeting. There was a mix of representation by sector, as shown in Figure 4.

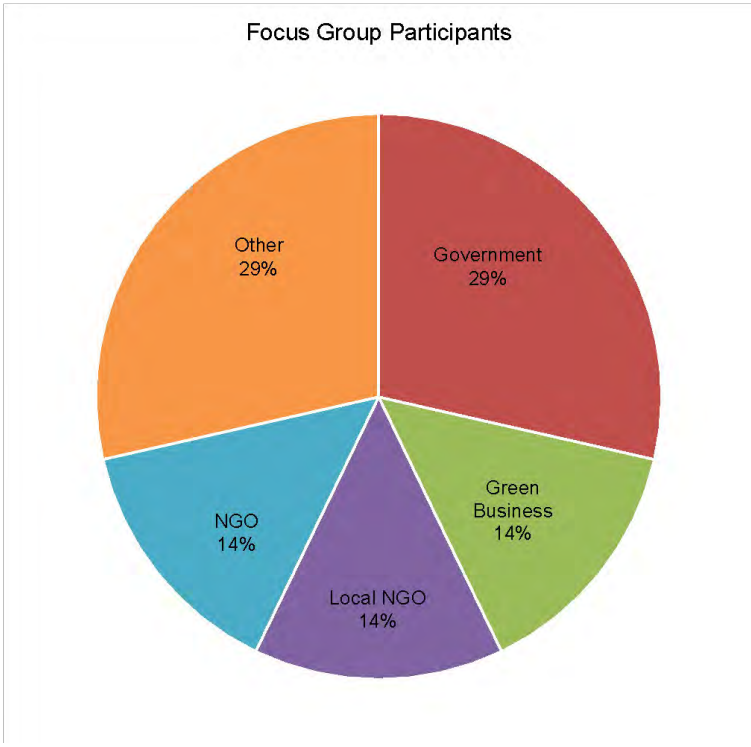

Figure 4. Focus Group Participants

After introductions, the focus group started with a brief presentation and opportunity to ask questions. Participants were asked to write down and then share their vision. Discussion ensued on the vision. The next step asked participants to select a guiding principle from the suite of options available across Metro Vancouver themes and guiding principles from the BC SWMP Guide, the Zero Waste Hierarchy and Metro Vancouver's 2011 SWMP. They could also add new items or combine existing principles and themes. They were invited to discuss why they had selected given options.

Themes that emerged included:

- A focus on the first three Rs of the Zero Waste Hierarchy (rethink, reduce, reuse)
- The need for partnerships and collaboration based on trust, transparency and accountability
- Less emphasis on incineration and energy recovery
- Strive to make zero waste initiatives affordable, accessible and consistent
- Emphasize links to environmental stewardship, lowering carbon and environmental impact footprints and shifting to a circular economy (product design, extend product life, value management)
- Use a carrot and stick approach for behaviour change with enforcement

Detailed notes are included in Appendix B. Feedback on the process was requested by follow up email but no responses were received. Participants expressed appreciation for the invitation, event format and informative sharing session.

Appendix A Workshop Results

Workshop Notes

Virtual or In-Person: Virtual

Workshop Date: October 5, 2023

# of Participants Registered: 30

# of Actual Participants: 19

# of event promotions: Direct emails to over 123 groups (including NGOs, academics, ZWBC Board and past event participants), included in newsletter, listserve, advertised on the website as well as Facebook and Linked in. Reminders sent.

Session	Participant Notes
Summary of participants demographics from intros + organizations represented	• NGO - 9 • Local NGO - 2 • Green Business - 3 • Government - 2 • Crown Corporation - 1 • Other - 2
What is zero waste?	• Being responsible for the material that passes through your custody • Refuse, reuse, recycle everything possible • Rethink, value resources, avoid creating waste • Full of opportunities for thinking outside the box in innovation in materials and approaches, materials reuse and repurposing, and diverting as much as possible out of the landfill waste stream. • Systems where waste is designed out, materials are chosen carefully and are easily recycled back into the same products at the end of their usefulness, single use is minimized to essential needs, toxic substances and problematic materials have been removed and very little recycling or waste to landfill or any other type of end of life management occurs.
Roundtable	• How are we bringing in or connecting people working on the industry side of things and not just players not on the table. How can industries start looking at circularity instead of just economics in dealing with procurement? • Who is doing the research on truly recyclable and compostable containers? How can I access "best practices" information? Concern about greenwashing that is occurring. • How do we also ensure we don't immediately downcycle things like wood waste into wood chips/compost? We are missing an incredible an

	environmental value + economic value of multiple life cycle stages before composting.
Vision	See Miro ● Stronger emphasis on waste producer responsibility - industry, manufacturing, etc. ● We need to get the industry to participate. ● Waste reduction strategies that acknowledge needed culture change. ● Recognize that non-Western cultures actually have a lot of “sustainable” actions embedded because it’s just a way of life. Learn from Indigenous peoples and newcomers. Collaboration goes both ways. Embrace cross-cultural collaboration. ● Look at consumption and the broader concept of consumer behavior ● A plan that prioritizes equity and accessibility. ● The plan applies equally to all the regions of Metro Vancouver. ● More uniformity across the region for waste management and diversion. ● A comprehensive plan that makes finding used materials easy, places to repair in neighbourhoods, and has more zero waste facilities available to the public. Provide clear guidelines on alternatives to the use of plastic. ● Keeping solutions local. Designate municipal land within the city limits and provide below-market rent for diversion, reuse, upcycling and recycling infrastructure and industry. Ensure there is industrial land available for processing and that people living close to the facilities will not be negatively affected. ● Process plastics locally. Do tours of facilities so people understand how recycling works. ● Build off existing local knowledge. Need to integrate local innovators. ● Align with land use and industrial zoning. Align Metro Vancouver plans. ● Zero waste should mean that there is zero waste going to the landfill or incinerator (not just zero waste to landfill) - align with international, peer-reviewed Zero Waste Hierarchy rather than going in the opposite direction (incineration is in the Unacceptable tier) ● Thinking about systems as a whole and people's lifestyle choices. ● Prioritize refusing, repurposing, reusing, reducing and developing cradle to cradle systems change. ● Rethinking systems at all levels of government and industry to embed zero waste principles. ● Value resources. ● Lots of promotion and engagement: pop-ups, opportunities for the community to learn about what zero waste means, getting community buy-in ● Education to get people to understand environmental costs of single use ● Education to move away from reliance on “recycling” ● Make reuse most cost effective ● Regional access to reuse systems - backhaul and sanitization

	● Make finding used materials easy, repair in neighbourhoods, zero waste facilities for public ● Increase compostables and supporting infrastructure ● Waste/resource information and access ● Transparency for recycling ● Increase partnerships between organizations to reduce waste ● Encourage businesses (green/non-green) to be sustainable ● Full accounting for all waste that may be produced, including microplastics ● Consider full life cycle analysis for product when making decisions on materials
Missing items	See Miro ● Need better metrics on how we are tracking progress. Measurement and monitoring needs to inform policy for waste reduction and progress. ● Solid waste infrastructure needs to ultimately capture all the waste in the region and prevent it from going into the environment. ● Value not just consumer goods, but also organics and biomass. ● Be transparent about what the terms mean. Define what is included in recycling and composting. Does recycling include chemical recycling? If we are talking about continuing recycling, are we eliminating things that could be reused? ● Local economies are struggling- they need govt. support to sustain costs- we need to sustain local companies and make them feasible- local economies as a concept is too overarching- for example- how to make a local cafe that focuses on reusing and repairs- sustainable entrepreneurships- we need to make sure they sustain- **restorative cities and economies-** instead of micro-cleaning- low-barrier jobs in circular economies. Social and environmental benefits are included- it also includes financial benefits for small businesses trying to start and maintain work. ● Governments need to publicize and promote environmental initiatives more. ● How to regulate industries or residential sectors in a community when it relates to industry talks only about growth and expansion and these values don't fit with the idea of sustainability? Governments support capitalism which is fundamentally against the ideals of sustainability- "endless growth"- should be criticized. ● We all want to push to reuse- how to overcome barriers to reusing material in the construction industry. Also, actively listening to community members and making them feel heard is extremely important- transparency in building trust is important ● Addressing cost barriers to communities. Materials are sometimes dumped because transportation and other fees of taking them to other places are too expensive- regulations must be shaped to change this. Opportunity for **future advocacy** with NZWC giving MV a voice at the federal level- involvement in the national discourse and ability to voice local concerns. ● Businesses might need incentives for engaging in sustainability ● Cost of land challenge- struggle to keep upcycling spaces open and offer their services because of expensive rent etc.- also expensive to transport

	materials to various spaces. It takes a lot to change behaviour and systems. ● We are talking a lot about community. Engagement- we need to build trust- environmental justice lens- low income and minority communities- need to respect and understand the systems already run by these local communities and minority groups- need to respect and understand them instead of pushing top-down policies on these areas. Build on what exists
Top priorities (3)	See Miro Education and behavioural change: A lot of work is about behavioural studies. A lot of people in BC do a lot of these sustainable actions, but the motivation is not sustainability. It's just their way of life. Actions are good for the planet, but may not be intentional. Saving, repairing, making use of what they buy, getting money's worth - these are values that we need to consider to engage more people who might not care as much about the environment. Behavior change can greatly influence people and direct them in the way that brings a sustainable future. Accountability: Having more accountability (Producers and consumers)-tackling the problems from both sides- can also propel further initiatives Incentives: What incentives can be given to industries to form better designs. Bylaws/provincial bylaws might be beneficial for assisting with these circular economy strategies Product Design: Example - neighbourhood bike showcase- information awareness to the public can help the public know which product is more sustainable or better for the public.
Bottom priorities (3)	See Miro Facilitator's note: Participants struggled to identify bottom priorities because they believed many of these are important. They did find some of the priorities are not worded clearly, or need to be better defined. These are indicated with YELLOW stars. General comment: There are implicit assumptions behind these themes from Metro Vancouver that guide conversations in a certain way towards maintaining status quo. What can we do about that? Opportunity costs: Need to be aware of sunk cost effect with government policies. Can't let those define future actions that may be more costly. Highest and best use: Makes a lot of circular things less feasible- looking at it from land use and not material use perspective.
The most important	See Miro

thing for me….	Systemic approaches focusing on upstream: Massive part of waste is plastic. We have spent decades educating consumers to be better consumers. Producers are making hundreds of different types of plastics. A lot of recycling goes to the transfer station and then goes to garbage because those hundreds of types of plastics are not all recyclable. We are focusing on individual people and putting investment in them to sort materials properly. Better at focusing upstream at the producers and changing what comes down at the people. Promotion and Education: Encompass community and make sure people understand what circularity and the 3Rs are. Change happens with knowledge General question: Why don't we synthesize these several vision pointers and instead build 3 or 4 broad ideas or visions? No Incineration: Waste incineration shouldn't be an option because it justifies waste. Removing it as an option will push for reducing waste and thinking of alternatives. Coordination between divisions: Are there other plans? Liquid waste? What happens to biosolids?
Summary of participants interests	● Emphasis on upstream values and prioritizing the top tiers of the zero waste hierarchy - systems change starting from producers, not the consumers ● Trust and transparency - clearly define what different terms mean to Metro Vancouver rather than hiding assumptions, make it publicly available what is happening with waste materials, where they are going, and the environmental and societal impacts ● Having the local infrastructure and systems to ensure items and materials stay local through supporting local innovators and local businesses ● Education and behaviour change needs to consider non-Western paradigms and learn from the diverse cultures in Metro Vancouver

Focus Group Date: October 12, 2023

# of Participants Registered: 8

# of Actual Participants: 7

Session	Participant Notes
Roundtable Questions	• Where is "refuse" (as in to refuse an item) in the hierarchy? A. in rethink/redesign.
Vision	• Follow the ZWIA hierarchy and definitions (NZWC does not define ZW, nor have principles, support international movement for ZW) • Promote hierarchy for ZW • Needs a shift in mindset to move beyond management • Focus on reuse, repair, repair • Closed loop systems, reuse where possible, policies to support this • Share sheds, lending libraries • Focus on high impact materials in the waste stream • Classified properly, extend life of product • Clarity on terminology for reuse, recycling, etc. • Facilitate connections (like industrial symbiosis) • Supportive of local business in 2 parts, 1. businesses involved in waste/recycling/reuse and 2. regular businesses subject to policy • A Metro Vancouver where going zero waste is simple, clear and the norm • Could it be easy • Simple convenient system that directs residents to pyramid -make it easy • Deep transparency around where materials go and easy to understand • Businesses trying to do the right thing -compostable materials - certification/labelling • Need to be clear on what is classed as recycling (e.g. wood burned at pulp mills, etc. is called recycling). Need to force industry to do something better. • Stop focusing on recycling as a silver bullet. • No burn no bury - push for urgency, and systems change • What the vision should not include: Biosolids to incinerators, to add more throughput; bottom ash to cement; wood burning on Coquitlam site; district energy using waste to energy • Promoting successes (like Recycle BC -plastics) • Lean in to what is going well • All materials are valued, not how to get rid of something I do not want /need

Guiding Principles – The group was shown the Metro Vancouver themes, the principles from the ZW hierarchy, the provincial guiding principles and the principles from the previous plan. Asked to start talking about the most important ones to them. Shown to the right in rough order of importance	● Opportunity cost -consider what is not being done while choosing other actions to pursue (example. time, money and effort wasted in pursuing expanded incineration in last plan instead of more waste reduction measures) ● Need for partnerships -so much could be done if the community gets on board ● Transparency + Accountability (cement kilns for example -not same regulations and standards), erosion of public trust and motivation to take action when it feels like it is not clear if it is making a difference ● Local economy -need to reserve industrial land, NADA closed, need private businesses not being supported), could be treated out like for north shore organics contract instead of supporting a good local business -net local benefit + ● Highest and best use of materials ● Process close to source -reuse is closest ● First 3 Rs -rethink, reduce, reuse (thought recycling was getting too much focus, need to have first three be rethink/reduce, reduce and reuse). Keeping products in use by the original owner as long as possible ● ZWIA standards for ZW to be used -align with international standards ● Partnerships built around a positive goal ● Affordability and accessibility -including for reuse. Reframing it, awareness of other cultural practices, bulk should not be more expensive. ● Convenience and consistency -not just for waste and recycling but across the full hierarchy (e.g. reuse, repair, etc.) ● Education and behaviour change to bring people along. Carrot and stick - have people understand what they are already paying for in terms of taxes, etc. as well as environmental/social harms ● Equity and societal improvements ● Highlight businesses opportunities/jobs from zero waste ● On site and community based - supporting local business ● Resilience-climate-infrastructure but also systems and processes ● Promote Zero Waste and Circular Economy ● Public health/equity -needed as history of pushing negative consequences to poor communities. ● Prevent organics and recycling going to garbage -inspect each load, open bags ● Salvage for reuse -highest and best use ● Precautionary principle -discussion on why it is important (example. use of bottom ash in concrete) ● ZW principles -depends on how they define it -use ZWIA principles ● Information and improvement -need to monitor metrics and provide clear feedback to all to help drive change, transparency is important for this as well ● Support reuse, repair, thrifting (note that CE is not defined as only these actions so perhaps remove confusing label) ● Environmental stewardship -good lens -**responsibility to** natural spaces as well as environment in general (air quality, water quality, not polluting) ● Process and consultation -need to all be aligned (processes including RFPs) ● Product Design and innovation-is needed ● Convenience and consistency -make it cheaper to do the right thing for businesses -ensure feedback is going back to generator, not hauler; ensure haulers are doing the right thing

	● Polluter pays/user pays -could be stronger. Acknowledge externalized costs ● Level playing field -generators and haulers ● Missing: Enforcement of policies (like organics, disposal bans) Comments: ● Need to make sure these principles flow through into purchasing/operations, etc. as this has not been the case to date. Need radical rethink of RFP processes at Metro Vancouver ● Caution with “materials as resources”-if it is used to push for incineration ● Some parties may be more willing to partner and work together on zero waste if incineration was not on the table (Example. flow control is a good measure but not to shore up materials for incineration). Previous plan’s focus on incineration and the way the previous consultation was handled led to distrust of Metro Vancouver. ● Caution around “not exporting waste” as can be used to justify incineration. Do not export harm– how to define, caution around dispersing materials. Noted that could export materials but needs to be to a location that welcomes them and has the capacity to deal with them safely and in an environmentally sound way Ones not supported: ● Energy recovery, 5Rs inc energy recovery ● Integrated resource recovery ● Aligning with other plans should not be an absolute -may not have alignment so aim for SWMP to be progressive (even if not aligned). Others were not disliked but not flagged: ● Sustainability ● Natural/social/economic capital ● Minimize discharges ● Conservation of energy ● Materials are resources (not energy) ● Closed loop systems ● Collaborate with other RDs ● Develop collaborative partnerships ● Maximize use of waste materials and manage residuals appropriately
Summary of participants interests	● Working on the first three Rs of the ZW hierarchy and collaboration on this ● Broader reach of actions ● Building trust which will be needed for the partnerships and collaboration ● Less focus and resources on incineration

Post-Engagement Report

Engagement Activity Summary:

Activity:	
Activity Date	Survey: Sept 17th - December 8th Focus Group: November 28th, 2024

Meeting Notes

Summary of notes. Please see full notes in the appendix.

Topic/Question Addressed	***What was said***
Q1 What are the main actions you take to eliminate waste? (led by Debrand, Our Social Fabric - OSF and Fabcycle)	*Summary:* ● Reuse, repair clothing and fabrics ● Thoughtful/reduced consumption - buying less or quality goods ● Transparency in material sourcing/fabric content ● Using waste as a resource for creative projects ● Utilizing textile recycling/reuse organizations like OSF/Fabcycle or thrifting ● Donating to shelters ● Consumer education from brand level ● Efficiency in production process (not over buying material, precision in cutting, zero waste pattern making) ● Promote sustainable consumption habits
Q2: As Metro Vancouver updates the plan, what ideas and actions can build on their success to: Leverage knowledge and expertise through collaboration (led by Debrand)	*Summary:* ● Embed recycling info into fabric - content of fabric is key for recycling ● Community mindset/knowledge sharing to build community and spread message ● More shared spaces - start with developer to integrate workshop spaces into building ● Marketing as a means of education ● Build knowledge-sharing platforms ● Keeping educators informed so new and existing sustainable practices are taught ● Databases(apps) for available resources (clothing pick-up, repair, etc.)

Q3: How can Metro Vancouver collaborate with others more effectively to advance knowledge and expertise through collaboration? (led by Debrand)	Summary: ● More shared spaces for industry level collaboration that are easy to find and subsidize their rents ● Share excess materials from brand level ● Keeping products in life cycle ● Shifting attitudes to focus on less consumption ● Industry voice is important and needs to be consulted to understand pain points ● Building community in the industry to promote conversation ● Sharing knowledge “fibre shed maps” sharing exact details of what works for companies ● Cross connections of industries eg. Reestablishing agriculture and textile connection
Q4: As Metro Vancouver updates the plan, what ideas and actions can build on their success to help expand inclusive programs and services in the region? (led by OSF)	Summary: ● Centralize recycling info and make it easy to find/access ● Scale services for manufacturers ● Build accessible recycling hubs in communities that take everything and are then transported out ● Ease of access and proximity are necessary ● Textile waste bin that goes to a hub with equipment that community can utilize eg. San Francisco artist in residence at dump ● Put responsibility of garment return on to brands/companies. Consumers should not have to pay to return, recycle or repair clothing ● Bring in Home ec and other educators to teach the value of food and clothing ● View waste as a creative resource
Q5: What roles do businesses, the waste management industry, not-for-profits, community organizations, and others play? (led by OSF)	Summary: ● Questioning the sustainability of Take-back Programs (H&M example) - it encourages more consumption and unsure of what happens to the product ● Brand should be responsible for reuse and repair initiatives ○ Better if local - emissions from sending back consideration ○ Rebird Arc’teryx is a good example ○ Shared cost - start with brand then consumer responsible after x # of repairs

	• Durability of products should be considered at production • Government ban on fast fashion • Importance of accurate information - eg. Vancovuer campaign that spread misinformation on repairing Blundstones • App to centralize fabric waste as a resource - like “Too Good To Go” but for fabric • Eliminating shame of mistakes. Shame makes brands hide mistakes and send things to landfill instead of sharing and collaborating to solve issues • Tax for waste • Need for textile recycling infrastructure in Metro Vancouver
Q6: As Metro Vancouver updates the plan, what ideas and actions can build on our success to plan for future infrastructure and systems for waste management across the region? (led by Fabcycle)	Summary: • Companies need to track and be aware of their sustainable actions • Promote better treatment of waste so it does not get damaged and can be properly • Proper labeling and communication of what fabrics companies are using so end user knows proper disposal • Clear communication about how to dispose of or recycle products. • More consideration for shoe repair/recycling - currently cobbling is only option and industry is aging out • Ease of textile waste collection and local infrastructure for sorting • More government funding and support for education around issue and services like clothing swaps and annual garment collecting • Use of sustainable packaging eg. wool, bio plastics
Q7: What is going well in this area that should be expanded on? (led by Fabcycle)	Summary: • OSF and Fabcycle, other zero waste centers are great and educate on waste • Small community initiatives focused on repair, workshops, mending and teaching • Small businesses/organizations starting conversations • Events like these focus groups to start this conversations • Thrifting and recycling gaps • Easy, accessible collection works best

	• Monetary incentives like for cans work well - would like to see implemented for textiles
Closing Discussion	Summary: • Transparency from companies in all aspects - proper labelling on disposal and garment content, what is happening to unused clothing, what is working well for them • Brands need to take responsibility for take back, repair initiatives • Community initiatives and shared spaces and that have equipment for community and industry to come together and use waste as resource • End-of-life design considerations • Networking and sharing resources • Curbside pick-up for textiles, ease of collection • Monetizing waste
Engagement Questionnaire Results	
Summary of survey results. Full survey results in appendix.	
Topic/Question Addressed	***What was said***
Q1: How familiar are you with Metro Vancouver's role in waste reduction, recycling, and solid waste management in the fashion and apparel industry?	Q2A: How often do you engage in the following waste reduction practices?	

Q2B: Is there anything else not listed above that you always or often do to reduce textile waste?	• Buying/producing less • Starting dialogues in your community • Repurposing or using previously used/deadstock material • Clothing swaps
Q3: How confident are you that the textile and apparel items you recycle are actually repurposed into new products rather than ending up in landfills?	Q4A: To what extent do the following barriers prevent you from actively reducing textile waste and participating in recycling programs?	
Q4B: Are there any other barriers not listed above that prevent you and your business from participating in textile waste reduction efforts?	• Hard to find/inconvenient • Little confidence things are actually being recycled • No infrastructure that actually recycles textiles in proximity
Q5: How well do you think current waste management programs and services work for everyone in the community?	
Q6: Which community members do you think may be having a difficult time with the current programs and services?	• 55+ with limited info • Young families, full-time parents • Distance, transport, hours, cost • Newcomers, low-income, unhoused • Mental health, homelessness, addiction • Reduce/reuse over recycling • Plastics recycling is inefficient

Q7: What can be done to make the programs and services more inclusive so that they work for everyone?	• Easier access for all recyclables • Recycling bins or drop-off points in neighborhoods, specifically DTES • Transparency on accepted items • Local processing, less shipping • Education, awareness campaigns • Incentives for reducing/reusing • Clearer, visible recycling options
Q8A: What should be Metro Vancouver's top priorities for the future of solid waste management in the fashion and apparel sector? Please select your top 2.	Q8B: Are there other priorities that Metro Vancouver should be considering that are not listed above?	• Textile bins in public spaces • Recycle textiles into new products locally • Collect clean waste from from Textile manufacturers • Affordable solutions without tax hikes • Hold brands accountable- more need take-back programs • Policy changes for imported clothing
Q10: Do you have any further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in our region?	• Sorting burden on thrift stores • Incentives for local brands to reduce packaging/use sustainable material • Ban textile production waste in landfill garbage bins • Collection services companies can use so clean fabric waste doesn't go to landfills • More readily available recyclable items
Q11: What types of textile recycling programs would be most beneficial for you or your involvement in the fashion and apparel community?	
Q12: What are the biggest challenges you face in reducing textile waste and adopting sustainable practices, whether as a business, student, or individual?	Q13: Where do you currently get information about sustainable fashion and textile recycling?	Q14: What sustainable practices do you currently engage in when purchasing or creating fashion items?	Q15: What types of community initiatives would you like to see to promote sustainability in fashion?	
Q16: How can Metro Vancouver and the BC Apparel and Gear Association better support the fashion community in adopting sustainable practices?	• Ban textile production waste in landfill. • Support brands that offer repair services • Make ethical brands affordable • Promoting lower consumption and holding brands accountable for their products, post consumer

Efforts to Reduce Barriers to Participation

- Survey for online participation if in person was not an option
- Free event
- Event held in an accessible space
- Promoted on several platforms to reach diverse audience

Participants Feedback (engagement evaluation)

Overall, participants found the workshop valuable and inclusive, with effective facilitation and collaboration.

Highlights:

- Breakout group format worked well.
- Strong facilitation and initial introductions were appreciated.

Suggestions:

- Share questions beforehand for better preparation.
- Improve room setup to reduce noise and distractions.
- Allow more time for discussions and consider virtual breakout groups.

Additional Ideas:

- Create a participant map to enhance networking.
- Facilitate regular industry meetups for collaboration.

Narrative Summary

Goals and objectives	Collect feedback from apparel and gear professionals, educators and students on how we can build on the success of textile waste recycling and disposal.

Results achieved	The engagement activity successfully collected feedback from apparel and gear professionals, educators, and students, aligning with the goal of advancing textile waste recycling and disposal. Key outcomes included: **Transparency and Accountability** ● Call for clear labeling of materials and recycling instructions. ● Emphasis on brand responsibility for take-back and repair programs. **Community and Collaboration** ● Need for shared repair and workshop spaces with proper equipment. ● Importance of knowledge-sharing platforms and cross-industry connections. **Education and Awareness** ● Need for consumer education through marketing and campaigns. ● Teach sustainable practices in schools and community workshops. **Infrastructure and Accessibility** ● Suggestions for improved local recycling hubs and curbside textile collection. ● Tools like apps and databases for tracking and managing waste. **Innovative Ideas** ● Monetizing waste (e.g., incentives similar to bottle recycling). ● Viewing textile waste as a creative resource for projects and education. These insights provide actionable ideas and strategies to enhance existing efforts and support systemic changes for sustainable textile waste management.

Challenges and issues addressed	During the engagement, participants highlighted several challenges and significant issues, including: **Transparency and Trust** ● Concerns about unclear labeling of materials and recycling instructions. ● Skepticism around the sustainability of brand-led take-back programs, citing potential for greenwashing. **Infrastructure Gaps** ● Limited access to local recycling facilities and textile collection systems. ● Lack of centralized tools for tracking and managing textile waste. **Education and Awareness** ● Need for stronger consumer education, emphasizing marketer responsibility to promote sustainable practices. ● Gaps in public understanding of proper textile recycling and disposal methods. **Cultural and Industry Barriers** ● Difficulty shifting attitudes toward reduced consumption and durable goods. ● Fear of sharing mistakes, leading to hidden waste and missed opportunities for collaboration. These challenges underscored the need for systemic improvements in transparency, infrastructure, education, and cultural mindset shifts to build more effective and sustainable textile waste solutions.
General feedback	Participants found the workshop valuable, with positive feedback on the breakout group format and facilitation. Areas for improvement included reducing noise distractions and providing discussion questions in advance. Some suggested more opportunities for industry collaboration through regular meetups.

Post Engagement Report - Waste Management | BC Hotel Association

Activities Summary

Activity: Online Survey & Communications

Activity Date:	November 5 - December 6, 2024
Organization:	Bc Hotel Association (BCHA)
Location:	Online | Social Media | Direct Email Communications
Format:	Survey Monkey Survey LinkedIn Facebook Instagram Direct Eblast Newsletter
Number of Participants:	Survey Responses - 13 Dedicated Eblasts - 200 Metro Van recipients Newsletters - 2000+ Recipients (across BC and beyond) **Social Reach:** LinkedIn - 6385 Followers Facebook - 384 Followers Instagram - 1679 Followers
Summary of Promotions:	LinkedIn - 6 posts & 4+ reshares Facebook - 2 posts Instagram - 3 story posts Newsletters - 5 inclusions Dedicated Eblasts - 3

Activity: In Person Presentation & Slido Poll

Activity Date:	Wednesday, November 27, 2024 (HAV) & November 19, 2024 (Board of Directors)
Organization:	BCHA at Hotel Association of Vancouver Meeting
Location:	Delta Hotel Vancouver
Format:	In Person - Slide Deck Presentation & Slido (results below) | BOD Information only
Number of Participants:	≈35
Summary of Promotions:	BCHA President & CEO presented on current work the association is doing. Included five slides on Waste Management and the project outline (built from the toolkit) and included two of the questions from survey, done in real time on Slido followed by discussion and Q&A if applicable. Audience included General Managers of Hotels from across Metro Van - members of the Hotel Association of Vancouver. All members (including those unable to attend in person) received the slide deck for review following presentation. *Note that many hoteliers also operate F&B operations within their properties. Small informational presentation to Board of Directors (5 in Metro Van) on the efforts and hopeful outcomes of the survey.

Results Sumarry

Participant Survey Feedback/Input

Topic/Question:	**Responses**	*13 responses
What type of business are you?	Accomodator **41.67%** Tourism Business **8.33%** Restaurant **0%** Association/DMO **33.33%** Other **16.67%**	
Where is your organization based?	Richmond **8.33%** District of North Vancouver **8.33%** Vancouver **83.33%**	

How old are you?	25.34 **27.27%** 35-44 **27.27%** 45.54 **18.18%** 55-64 **27.27%**
How familiar are you with Metro Vancouver's role in waste reduction, recycling, and garbage management?	Very famliar **33.33%** Somewhat familiar **16.67%** Neutral **41.67%** Somewhat unfamiliar **0%** Very unfamiliar **8.33%**
How often do you do the following to reduce waste?	

	ALWAYS	OFTEN	SOMETIMES	RARELY	NEVER	I DON'T KNOW
Bring your own reusable shopping bags	41.67% 5	33.33% 4	25.00% 3	0.00% 0	0.00% 0	0.00% 0
Meal plan to avoid food waste	25.00% 3	33.33% 4	8.33% 1	16.67% 2	16.67% 2	0.00% 0
Compost organic waste including food scraps and yard trimmings (e.g. backyard composting or green bin pick-up)	66.67% 8	33.33% 4	0.00% 0	0.00% 0	0.00% 0	0.00% 0
Pass down or donate unwanted clothes, or participate in clothing swaps	50.00% 6	50.00% 6	0.00% 0	0.00% 0	0.00% 0	0.00% 0
Buy or trade second-hand items	36.36% 4	18.18% 2	45.45% 5	0.00% 0	0.00% 0	0.00% 0
Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of them	0.00% 0	25.00% 3	58.33% 7	8.33% 1	8.33% 1	0.00% 0
Reuse or repurpose items rather than dispose of them (wrapping paper, food containers, plant pots, etc.)	27.27% 3	45.45% 5	9.09% 1	18.18% 2	0.00% 0	0.00% 0
Bring your own reusable cup, dishes, or utensils for takeout	8.33% 1	25.00% 3	41.67% 5	25.00% 3	0.00% 0	0.00% 0

How confident are you that the items you recycle are being recycled into new products instead of ending up in disposal (i.e., garbage, landfill)?

Very confident **0%**
Fairly confident **41.67%**
Neutral **25%**
Slightly Confident **8.33%**
Not at all confident **25%**
Don't know **0%**

To what extent do the potential barriers below prevent you and your business from participating more actively in waste reduction and recycling efforts?

	NOT A BARRIER	SLIGHT BARRIER	MODERATE BARRIER	SIGNIFICANT BARRIER	DON'T KNOW
Not sure where to drop off recyclables	45.45% 5	27.27% 3	9.09% 1	18.18% 2	0.00% 0
Waste reduction and recycling is not a priority for me	72.73% 8	18.18% 2	9.09% 1	0.00% 0	0.00% 0
Uncertainty about what materials are accepted for recycling in curbside pickup	18.18% 2	54.55% 6	27.27% 3	0.00% 0	0.00% 0
Not enough or overflowing recycling and green bins in multi-family residence	45.45% 5	27.27% 3	9.09% 1	18.18% 2	0.00% 0
Not enough information about reuse and repair options	18.18% 2	36.36% 4	9.09% 1	36.36% 4	0.00% 0
Time constraints	54.55% 6	27.27% 3	9.09% 1	9.09% 1	0.00% 0
Low availability of products that use less packaging or reusable packaging	27.27% 3	27.27% 3	45.45% 5	0.00% 0	0.00% 0
Cultural or language barriers	72.73% 8	9.09% 1	0.00% 0	18.18% 2	0.00% 0
Not feeling welcomed at facilities and recycling and waste drop-off points	72.73% 8	9.09% 1	9.09% 1	9.09% 1	0.00% 0

How well do you think current waste management programs and services work for everyone in the community?

Works well for everyone **10%**
Works well for most, but not for everyone **40%**
Works well for some, but difficult for most **40%**
Does not work for the majority of community members **0%**

What should be Metro Vancouver's top priorities for the future when it comes to solid waste management? Please select your top two.	Using new technology and other forms of innovation to improve waste management	33.33%
	Reducing and preventing overall waste	58.33%
	Delivering regional solid waste services in a cost-effective way	0.00%
	Developing new facilities or drop-off points for recycling, reusables, and waste	25.00%
	Providing services that are easy to use for all residents and businesses	33.33%
	Enhancing education programs and campaigns	25.00%
	Lowering carbon emissions through new technology and practices	0.00%
	Enhancing reuse and recycling opportunities at businesses and multi-family properties	16.67%

Participant Slido (In Person) Feedback/Input		
Topic/Question	**Responses**	*35 attendees
1. How well do you think current waste management programs and services work for everyone in the community?	Works well for everyone **0%** Works well for most, but not for everyone **7%** Works well for some, but difficult to manage for most **43%** Does not work for the majority of community members **43%** Don't know **7%**	

2. Please select the top 3 barriers that most prevent you and your business from participating more actively in waste reduction and recycling efforts.	Uncertainty about what materials are accepted fr recycling curbside pickup **6.31** Not enough information about reuse and repair options **4.38** Not enough/overflowing green bins in multi-family residence **3.85** Low availability of products that use less packaging **2.62** Not sure where to drop off recyclables **1.69** Not feeling welcomed at facilities and ercyciling and waste drop-off points **1.23** Time constraints **0.61** Waste reduction and recycling is not a priority for me **0** Cultural or language barriers **0**
Additional Meeting Discution/Questions	The discussion following the presentation were around emphasizing the top choices in the slido poll. Difficulty in managing as there are many moving pieces to hotel operations. Cost effective solutions and incentives for participating in sustainable, recyclying and waste management solutions. Streamlining initiatives as to not add to operational stresses were some points outlined in why it may be difficult to manage for most.

Narrative Summary

Goals and Objectives	Our goals were to reach our hotel members and tourism and hospitality industry within Metro Van while also garnering feedback from partners we often work closely with each day. Through feedback received with our survey and our slido questions, we aimed to acquire tangilble data to present on the impression of current waste management efforts as well as suggestions for ways it can work better for our industry. In addition, we looked to use social media, newsletters, and in person meetings, to outline the goals of Metro Van Waste Management with this project, creating awareness.

Results Achieved	Survey Responses - 13 In Person Presentation Attendance - 35 Dedicated Eblasts - 200 Metro Van Specific Newsletter Reach - 2000+ (across BC) Social Reach: LinkedIn - 6385 Followers Facebook - 384 Followers Instagram - 1679 Followers
Challenges and Issues Addressed	This time of year our industry receives a large amount of communications about ongoing initiatives, not only from BCHA but other partners organizations. This adds a hurdle to having accommodators spend any amount of time to complete surveys. By presenting a couple of the questions in real time to the Hotel Association of Vancouver, we were able to have a larger amount of participation providing feedback. We also leveraged our partners (listed below) to include the information in their newsletters and social, but we are unable to know how often they included it or their reach.
General Feedback	I think we were successful it garnering feedback from a good amount of industry professionals and decision makers in hotels by using more than one format to do so. Equally as important was the amount of awareness to the initiative we created through our many communications channels and their extensive reach.
Industry Feedback	**BetterTable™** 1mo ••• 2,398 followers Thank you for sharing this survey! Engagement Activity Summary

Activity:	
Activity Date	Monday, September 23rd - Friday, November 8th, 2024.
Organization/group name	Binners' Project
Time/Duration	90 - 120 minutes per session
Location	Downtown Eastside, Vancouver
Format	Community Consultation and Engagement Survey
# of Participants	Consultations: 27 participants, Surveys: 116 participants
Summary of Promotions *(optional)*	N/A

Participant Feedback/Input

Meeting Notes

The following topics were covered over three consultations:

- Rethinking and preventing waste in the first place (RPV).
- Increase participation and reduce contamination in green bin and recycling programs (IPRC).
- Plan for future infrastructure and systems for waste management across the region (ISWM).

The feedback below is compiled from all three consultations. Similar themes arose from each consultation, along with unique ideas. Each unique idea referenced to a specific consultation topic is associated with its acronym (noted above).

Topic/Question Addressed	***What was said***
What are the main actions you take to eliminate waste?	• Recycle home supplies and shop at thrift stores. Donate to second-hand stores so that others can use it. • Separate and divert paper, plastic, garbage and compost as much as possible, while encouraging and educating others to do the same. • Recycling, and repairing furniture. By refurbishing goods such as shoes and electronics, new life is given to these products. • Try to buy things that will last longer so they use less, "quality over quantity".
What do you see as the challenges and barriers?	• Public knowledge isn't widely known about how to divert waste. A lot of people just don't know [about recycling or their consumer habits]! I've seen and met people in condos who have no idea how to dispose of waste, but apartment buildings also don't have a good infrastructure to support waste diversion. • Improper or inconsistent availability of specific bins for organics, needles and diapers in housing sites. When there is a lack of access to needle boxes, people just put them in the waste, contaminating the bag and making it dangerous for binners. Diapers become a problem because they spoil everything else in the bag. (IPRC) • Plastic packaging! There is thin plastic packaging everywhere and not a good system to dispose of it. Some packages can't be reused or recycled e.g. veggie bags.

	● Things are not made to be fixed. Things are made to be disposed of. Electronics are a great example because we no longer take them to a store to be fixed, you have to either return them to a manufacturer or dispose of them. ● Most large retail spaces produce a lot of packaging and recycling. They should be required to hire people to sort and divert waste. There is less connection between the leadership of these large spaces and the actual waste they produce and what happens to it. Potential financial opportunities are being missed. (IPRC) ● Not having the motivation or commitment from the public. We live a fast-paced lifestyle where we aren't thinking about how to make things better, especially if changes will impact the lifestyle that we enjoy. (ISWM)
What could Metro Vancouver do to address these challenges?	● Create a robust marketing campaign to help educate and also highlight the successes of the system. Market it across various outlets to reach residents connected to the internet and those not, E.g., YouTube, posters, person-to-person, surveys, etc. ● In-person meetings where people can come to attend and learn about the waste systems and how to be a more active participant in waste diversion. Share information on where people can go to fix, buy or recycle things. ● Create more incentives for reuse and proper waste diversion e.g. coffee cups, mattresses, and building more drop-off locations. ● Make it easier for people to communicate challenges with Metro Vancouver on an ongoing basis. For example, make an app where people can report problems by taking photos and uploading them for review. If there is a problem or inconsistency with bins e.g. overflowing, limited access etc. then binners could relay that information. ● Make it less expensive to do the right thing. Enforce a deduction or incentive to do the right by recycling efforts. E.g. Invest in a collection service, or flip the prices around. Pay less to get the good stuff and make it more expensive to buy the cheap stuff.
In what ways can Metro Vancouver collaborate with others?	● News advertisements - get stories on the news to promote waste disposal. Build a new media campaign. Get big chain restaurants to reduce packaging and get them to be a part of the advertisement. ● Local organizations, food banks, local buildings, local binners. Have small groups of people go to businesses around the region to educate people on how to effectively recycle. Let haulers be a part of the solution, they can educate the public on their rounds. ● Encourage/require large buildings/businesses to hire groups like Binners' Project to sort waste. ● A Sister City project. Metro Vancouver could exchange ideas with another city/region with a focus on waste. ● Incorporate recycled art into our natural landscape. Engage with schools, universities, and art projects, to create a festival of recycled sculptures and encourage engagement/investment in recycling from the community. A lot of people in the DTES would love to tap into that creative component. ● Facilitate a collaboration between local farmers, local food deliveries, and DTES to reduce carbon footprint.
Knowledge Gaps and Communications. What info is missing?	● Clear labelling on products, on how to recycle products, clarify what is in products/product packaging. It is still unclear what can be refunded, especially regarding milk containers. ● Businesses need to take responsibility for their products and their end-life

	● There is a lack of bins around the neighbourhoods, with limited access in other areas, and there is inconsistent and unclear signage on bins on what items should go in each. Simplify the waste system! Offer more clarification. ● What's the budget for this type of plan? How is the money being spent, and what impact will this have on residents and individuals?
What are some ways to engage with residents?	● Posters, flyers, online, social media, in-person surveys and events, newspapers, pop-up booths, and community events. ● Connect with local organizations and waste haulers to reach a wider audience. ● Metro Vancouver should create its own newspaper focused on waste reduction and updates.
Is there anything else you'd like to add?	● Incorporate more consultations, and update participants throughout the year on the updates.

Engagement Questionnaire Results

The majority of participants noted a **level of familiarity** with Metro Vancouver's role in waste reduction, recycling and waste management. People living on the streets, the homeless, and persons with mobility limitations or disabilities were identified as community members who have a difficult time with current waste programs and services. Those who live in poorer neighbourhoods were also flagged as more likely to have barriers to participation in waste management. Rich people, tourists, youths and businesses were noted as having an inability to participate due to a lack of knowledge on how to properly divert waste.

Topic/Question Addressed	***What was said***
Barriers	The majority of participants noted to have **slight to moderate barriers** preventing them from participating in recycling efforts and waste reduction. The following were noted as **significant barriers**: ● Low availability of products that use less packaging or reusable packaging ● Time constraints ● Not feeling welcomed at facilities and recycling and waste drop-off points ● Not enough overflowing recycling and green bins in multi-family residences Additional barriers not listed that prevent participation in waste reduction efforts: ● Locks on dumpsters ● Mobility limitations ● Transportation
Access to current waste management programs and services	The majority of respondents claimed that the **current waste management programs and services do not work well for all community members**. Suggestions on what can be done to make programs and services more inclusive for everyone: ● Increase refunds on containers ● Improve and increase transport and accessibility to depots ● More recycling depots and recycling programs ● More advertising available in other languages ● Simplify recycling programs and make them consistent across the region. ● Create more community programs and education resources (in multiple languages)

Metro Vancouver's top priority for the future	Reducing and preventing overall waste
Additional ideas on how Metro Vancouver can reduce the amount of waste in our region	• Host more community events to educate the public and get them invested in disposing of their waste the right way. • Create more events that incentivize people to divert waste e.g. Binners' Project's Coffee Cup Revolution. • Add more bins and more collection points. • Update facilities! Edmonton has some of the most up-to-date waste management facilities
Demographics	The majority of survey respondents stated that they lived in **Vancouver**, were **44 years or older**, and spoke **English**. The following residences were noted: • Other: Homeless • Social/Supportive Housing • SRO • Detached homes • Manufactured or mobile home

Efforts to Reduce Barriers to Participation (Optional)

To make the engagement accessible to binners, Binners' Project members conducted in-person surveys at recycling depots and Coffee Cup Revolution. Participants were offered the opportunity to write their responses or to have their answers written by the facilitator. This approach provided binners with language, mobility, and technological barriers the opportunity to participate in the engagement. Participants were also offered a $5 Tim Horton's gift card for the completion of the survey.

Participants Feedback (engagement evaluation)

Overall feedback on the consultations was positive. The majority of participants enjoyed the opportunity to offer ideas, discuss things as a group, and felt informed enough to participate. Areas for improvement centred around the format of the workshop, which 2-3 people noted as ineffective, and facilitator bias which was noted by one person. (Appendix 3)

Narrative Summary (Your brief reflections on the engagement)

Goals and objectives	Binners' Project's low-barrier engagement strategy focused on gathering feedback from community waste experts, binners. Binners are among the most marginalized groups in urban areas, and they offer valuable feedback on solid waste systems and key insights into the public's approach and habits when disposing of waste. The goal of the strategy was to collect binner feedback in a manner that was informed and in an accessible environment where binners felt comfortable to participate (e.g. on the street, near the depots).
Results achieved	143 binners participated in the engagement, either through the consultation or survey. The results showed that binners are interested in improving the region's waste management and are eager to participate in waste initiatives and recycling programs if they are informed and in a position to contribute. Barriers such as housing, education, accessibility and transportation, and language can impact a binner's ability to participate. A common theme that arose from the engagement centred around a simplified and uniform recycling system, that was accessible to everyone and that held everyone accountable.

Challenges and issues addressed	The length of the survey made it difficult to keep participants engaged and complete the survey in its entirety. As a result, the open-ended questions were often skipped over or answered in less depth. Binners facilitating the surveys used various engagement tactics, in addition to gift cards, to keep participants engaged to complete the survey in its entirety.
General feedback	The survey was noted as more user-friendly compared to 2023's phase one engagement survey. The multiple-choice layout proved easier for participants to follow, as well as the use of simplified language. This could have been a contributing factor to the larger amount of surveys collected during this phase. Binners expressed appreciation for being able to participate in the engagement noting that it was nice to be included, and their perspective sought after.

Engagement Activity Summary

Activity:	
Activity Date	December 7th, 2024
Organization/group name	Bioloop Foundation
Time/Duration	10 hours
Location	515 West Hastings Street, Vancouver, BC
Format	*Hackathon – Case Competition*
# of Participants	12
Summary of Promotions *(optional)*	The event was promoted using different strategies. Traditional posters were distributed to public libraries as well posters were placed around the City of Vancouver following guidelines for displaying posters and signs on City property. High Schools around Metro Vancouver were contacted and encouraged to promote the event with high school students. Eventbrite ads ensure the event was posted at the top of the platform and these ads were targeted to our selected demographic in Metro Vancouver. Instagram ads reached 17,890 accounts of youth living around Metro Vancouver.

Participant feedback/Input

Efforts to Reduce Barriers to Participation (Optional)

We implemented several measures to reduce barriers to participation for underrepresented and equity-denied populations, fostering an inclusive and supportive environment for all attendees:

1. **Diverse Participant Outreach**:
   The event specifically invited youth (15 to 30 years old) who self-identify as Black, Indigenous, People of Colour, 2SLGBTQIA+, and People with long-term, intermittent, or recurring disabilities. Outreach efforts included collaborations with community organizations, schools, and social media platforms to ensure the event reached a broad audience.
2. **Accessibility Provisions**:
   The venue at **515 West Hastings Street, Vancouver**, was selected for its accessibility, including wheelchair-friendly facilities, ample public transportation options, and accessible parking.
3. **Financial Support**:
   Participation was made free of charge, removing financial barriers. Food and beverages were provided throughout the day at no cost.
4. **Safe and Inclusive Space**:
   The hackathon was designed to promote psychological safety by creating a welcoming atmosphere for marginalized groups. Event guidelines prioritized respect, inclusivity, and a zero-tolerance policy toward discrimination or harassment.

These efforts contributed to breaking down systemic barriers and creating a welcoming platform where youth from underrepresented communities could collaborate and innovate.

Participants Feedback (engagement evaluation)

1. **Inclusivity and Accessibility**:
   - Many participants praised the event for creating a safe and inclusive space where they felt welcomed and valued.
2. **Workshops and Mentorship**:
   - Attendees found the workshops insightful and engaging.
   - Mentorship sessions were a key strength, with participants commending the quality and approachability of the mentors.
3. **Networking Opportunities**:
   - Participants enjoyed the opportunity to connect with like-minded peers, community leaders, and industry professionals.
4. **Event Organization**:
   - The provision of food and beverages throughout the day was well-received, ensuring everyone felt cared for.
5. **Focus on Equity and Climate Action**:
   - Participants appreciated the event's emphasis on tackling climate change through equity-driven solutions, describing it as inspiring and thought-provoking.

Constructive Feedback:

1. **Time Constraints**:
   - Several participants mentioned feeling rushed during the ideation and presentation phases, suggesting more time for team collaboration and refinement.
2. **Team Formation**:
   - Some participants expressed challenges in forming teams, particularly for those who were new or attended alone. They suggested a more structured team-matching process to improve inclusivity.
3. **Follow-Up Opportunities**:
   - Attendees expressed a desire for post-event support, such as continued mentorship, funding opportunities, or networking events to help bring their ideas to life.
4. **More Technical Guidance**:
   - A few participants suggested offering more in-depth technical workshops or resources to assist those with less experience in areas like prototyping or data analysis.
5. **Broader Outreach**:
   - While the event was praised for its inclusivity, some participants felt that even more outreach to underrepresented communities could bring greater diversity to future events.

General Sentiments:

Overall, participants described the hackathon as a transformative and empowering experience. Many expressed gratitude for the opportunity to contribute to meaningful solutions for Metro Vancouver's solid waste management plan while addressing broader sustainability challenges. Suggestions for improvement focused on logistical refinements and expanding the event's impact beyond the hackathon itself.

Narrative Summary (Your brief reflections on the engagement)	
Goals and objectives	**Initial Goals** • Encourage participants to develop creative and practical ideas to support Metro Vancouver's updated Solid Waste Management Plan, with a focus on achieving sustainability and addressing waste challenges. • Provide an inclusive platform for youth (ages 15–30) from underrepresented and equity-denied groups, including Black, Indigenous, People of Colour, 2SLGBTQIA+, and individuals with disabilities, to showcase their talents and perspectives in solving environmental challenges. • Build connections among participants, mentors, industry leaders, and community organizations to encourage teamwork, knowledge-sharing, and long-term partnerships. • Facilitate discussions to explore how communities can adapt to climate change, enhance resilience, and implement sustainable practices in daily life.

	• Highlight the importance of Indigenous knowledge and cultural heritage in environmental strategies, fostering respect and collaboration with Indigenous communities. • Equip participants with tools and knowledge to develop ideas that contribute to a circular economy, reducing waste and promoting sustainable production and consumption practices. **Objectives** • Facilitate the development of innovative and actionable ideas for Metro Vancouver's Solid Waste Management Plan, addressing challenges related to waste reduction, resource efficiency, and sustainability. • Ensure representation and participation from underrepresented groups, including youth who self-identify as Black, Indigenous, People of Colour, 2SLGBTQIA+**,** and individuals with disabilities, by providing accessible resources and a supportive environment. • Host interactive workshops, and mentorship sessions to equip participants with tools, knowledge, and insights into sustainability, climate resilience, and circular economy concepts. • Promote teamwork by encouraging participants to work in diverse, multidisciplinary teams and foster meaningful connections with mentors, industry professionals, and community organizations. • Incorporate Indigenous knowledge into workshops and discussions, fostering collaboration and respect for cultural heritage while enhancing environmental strategies.
Results achieved	**1. Participation and Inclusivity** • 12 participants from **diverse backgrounds** (Black, Indigenous, People of Colour, 2SLGBTQIA+, and individuals with disabilities) attended the event, reflecting strong alignment with the goal of empowering underrepresented communities. **2. Innovative Ideas Generated** • **3 teams** presented solutions addressing sustainability challenges, including waste reduction, renewable energy systems, and circular economy practices. **3. Integration of Indigenous Knowledge** • Several teams incorporated Indigenous approaches into their ideas, such as land stewardship and sustainable resource management.

	4. Networking and Collaboration • Participants, mentors, and community leaders formed meaningful connections, with attendees expressing interest in continuing partnerships post-engagement**.** **5. Awareness and Skill Development** • Participants reported gaining new skills in teamwork, critical thinking, and environmental problem-solving through workshops and mentorship. • The event raised awareness about climate resilience, the circular economy, and sustainable living practices **6. Recognition and Celebration** • The closing ceremony celebrated all participants, with recognition awarded to the top team. • Many participants expressed a sense of pride and empowerment, with several planning to continue developing their ideas beyond the event. Key Outcomes in Numbers • 12 participants from diverse backgrounds. • 3 innovative solutions pitched, with 1 standout idea selected by judges. • 6 mentors and 3 organizations provided support. • 2 workshops enriched participants' skills and knowledge.
Challenges and issues addressed	**Challenges Faced** **1. Team Formation and Collaboration** • **Issue**: Participants chose to sign up to the engagement event using the easiest platform, Eventbrite. Majority of participants did not bother to sign up through the website, where participants needed to sign a questionnaire dedicated for team formation. • **Response**: Organizers quickly implemented on-site team-matching process, facilitator-led introductions, to help participants connect and feel included. **2. Time Constraints**

	• **Issue**: Participants felt the timeline for ideation, development, and final presentations was too tight, leaving little room for refining their ideas. • **Response**: Mentors stepped in to help streamline participants' work by guiding them on prioritizing key elements of their solutions. However, this feedback highlighted the need for a slightly longer event duration in future iterations. **4. Ensuring Representation Across Communities** • **Issue**: Despite significant outreach efforts, some underrepresented groups, particularly youth from rural areas and certain equity-denied communities, were less represented than anticipated. • **Response**: A travel subsidy will have helped address part of the issue, but it underscored the importance of earlier and broader outreach, as well as partnerships with rural organizations, for future events. **5. Attendance** • **Issue**: Only 12 participants out of 35 signed up attended the event • **Response**: Despite constant outreach and communication with participants, approximately one-third of the expected participants attended the event. For future events we recommend attendance incentives. **Significant Issues Addressed** **1. Raising Awareness of Sustainability Challenges** • **Addressed**: Many participants entered the engagement event with limited knowledge of Metro Vancouver's solid waste management issues and circular economy concepts. • **Impact**: Through workshops, mentorship, and guided discussions, the event successfully raised awareness of these critical topics, equipping participants with the knowledge to develop meaningful solutions. **4. Building Confidence and Skillsets** • **Addressed**: For participants with little prior experience in pitching ideas or collaborating in a competitive setting, confidence was a significant barrier. • **Impact**: Mentors provided one-on-one guidance, and workshops offered structured skill-building, enabling participants to gain confidence and contribute effectively. **5. Post-Event Support** • **Addressed**: Participants expressed concerns about how to continue developing their ideas after the engagement event.

	• **Impact**: While no immediate follow-up program was in place, organizers began exploring opportunities for ongoing mentorship and funding partnerships based on participant feedback.
General feedback	*Participants generally provided positive feedback about the engagement event, praising its inclusivity, organization, and focus on sustainability. They valued the workshops, mentorship, and networking opportunities, which many found engaging and inspiring. However, some noted challenges with time constraints and team formation, suggesting slight improvements in structure and resources for future events. Overall, the event was described as empowering, transformative, and impactful.*

Breaking Barriers: Inclusive Design for Solid Waste Management

Topic #1: As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**: Expand inclusive programs and services.

Comments (What was said – bullet points)

Barriers identified by Teams:

Team 1

- People face physical limitations to waste management in buildings.
- Many can feel frustrated with the recycling system and numbering.
- It is difficult to handle heavy loads to carry.

Team 2

- Individuals suffering with anxiety, can find it easily overwhelming by recycling and composting directions.
- The team requested education on the management of waste in a household; where items need to be placed and strategies to successful manage household waste.
- Waste management can be made more accessible as many people can find it challenging to adapt to new habits and routines.

Team 3

- Non-English speakers, and newcomers struggle with the recycling and the waste management system.
- Seniors and people with mobility issues, find it hard to contribute to recycling practices
- Community members with physical limitations find it difficult to reach waste drop off points.

Solutions Identified

1. Infrastructure and Accessibility Enhancements

- **Redesign Bins:** Develop lightweight, ergonomic bins for easier use by individuals with mobility challenges.
- **Door-to-Door Collection:** Provide targeted pickup services in high-density and underserved areas, with home care programs for waste sorting.
- **Decentralized Drop-Off Centers:** Set up redemption and recycling points within residential buildings or community hubs.

2. Technology Integration

- **AI-Assisted Sorting:** Implement AI-powered applications to help residents identify and sort waste accurately in real-time.
- **Barcode Systems:** Use barcodes or QR codes to provide sorting instructions and increase confidence in recycling.
- **Smart Facilities:** Establish AI-enabled sorting facilities to reduce individual sorting burdens and improve overall system efficiency.

3. Education and Outreach

- **Tailored Education Programs:** Offer waste management workshops targeting newcomers, non-English speakers, and individuals with cognitive barriers.
- **Clear Signage:** Standardize signage with visual and multilingual instructions for bins and drop-off locations.
- **Community-Led Recycling Events:** Organize "Recycling Parties" to promote mutual aid and incentivize community responsibility.

4. Policy and Incentives

- **Consistent Policies:** Align waste management goals across all government levels to reduce public confusion.

- **Incentive Programs:** Launch a points-based system offering financial rewards for proper recycling practices.
- **Support Informal Recyclers:** Provide safety gear and lightweight tools to street recyclers, ensuring their contribution is recognized and safe.

5. Collaboration and Community Responsibility

- **Interdisciplinary Partnerships:** Foster collaboration among governments, nonprofits, and private sectors to pool resources and expertise.
- **Promote Shared Responsibility:** Shift the focus from individual to community responsibility through collective initiatives and support systems.
- **Culturally Inclusive Strategies:** Incorporate Indigenous knowledge and respect diverse cultural perspectives in waste management planning.

6. Sustainable Manufacturing

- Advocate for sustainable alternatives like plant-based and compostable materials.
- Encourage businesses to adopt zero-waste production methods powered by renewable energy sources like solar, wind, and geothermal.

Q&A

Question asked	Answer given
How can we ensure that solid waste management policies and programs are consistent and clear across different municipalities in Metro Vancouver?	• **Unified Policy Framework:** Develop a Metro Vancouver-wide solid waste management policy that standardizes guidelines, signage, and practices across all municipalities. • **Public Communication:** Launch a regional public awareness campaign to educate residents on the unified policies, using simple, consistent messaging in multiple languages. • **Stakeholder Coordination:** Establish a collaborative task force involving municipal governments, private waste management companies, and community organizations to ensure alignment and adaptability. • **Digital Platforms:** Create an official Metro Vancouver app or website that provides real-time updates and resources on waste management policies.
What specific resources can be provided to marginalized groups, such as newcomers or individuals with disabilities, to help them participate effectively in recycling and composting programs?	• **Multilingual Guides:** Distribute recycling and composting guides in the most common languages spoken in the community, supplemented with visual aids for clarity. • **Cultural Ambassadors:** Partner with community organizations to train cultural ambassadors who can educate and assist newcomers. • **Accessible Infrastructure:** Install user-friendly bins with clear visual indicators, ergonomic designs,

	and height-adjustable features for individuals with disabilities. • **Support Programs:** Provide door-to-door waste collection services or home-care support for individuals with mobility challenges or other physical limitations.
How can advanced technologies like AI be integrated into solid waste management systems without creating additional barriers for those who are not tech-savvy?	• **User-Friendly Applications:** Design AI-powered apps with simple interfaces, voice commands, and multilingual support to assist residents in identifying and sorting waste. • **Hybrid Systems:** Combine AI with physical aids, such as barcode labels or RFID tags, to make waste sorting easier without requiring direct app usage. • **Public Training:** Offer workshops and tutorials to teach residents how to use AI tools for waste management, with a focus on accessibility and inclusivity. • **Tech-Free Alternatives:** Ensure that traditional methods like printed guides and hotline services remain available for those who prefer not to use technology.
What incentives or strategies can be introduced to encourage community responsibility and active participation in sustainable solid waste management?	• **Community Points System:** Launch a points-based reward system where households or neighborhoods earn incentives (e.g., discounts, rebates, or donations to local projects) for proper recycling and composting. • **Recycling Events:** Organize community recycling events or "Recycling Parties" that combine waste management with social engagement, making the practice fun and interactive.

	• **Recognition Programs:** Acknowledge and reward community members or groups who demonstrate exceptional commitment to sustainability through public recognition or awards. • **Mutual Aid Networks:** Foster a culture of community support where individuals assist neighbors with waste sorting or disposal, especially those facing barriers.

Envisioning Tomorrow: Building Inclusive Solid Waste Management Systems

Topic #2: As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**: Plan for future infrastructure and systems for waste management across the region.

Comments (What was said – bullet points)

Key Actions and Solutions

1. Accountability for Unsustainable Practices

- **Hold Bad Actors Accountable:** Enforce regulations requiring companies and organizations to follow sustainable solid waste management practices. Implement fines or penalties for violations.
- **Mandatory Reporting:** Require businesses to report solid waste reduction strategies and their progress toward sustainability goals.

2. Use of Technology for Accessibility

- **AI and App Integration:**
    - Develop an AI-powered app to guide residents on what, where, and how to recycle/dispose of solid waste.
    - Include multilingual options, visual aids, and voice command features for inclusivity.
    - Offer notifications for waste collection days and nearest drop-off sites.
- **AI Sorting Facility:** Build an AI-enabled centralized facility for waste sorting, reducing the onus on individuals and enhancing efficiency.

3. Incentives and Waste Drop-Off Accessibility

- **Vending Machine-Style Systems:** Install automated waste drop-off systems with incentives, such as small financial rewards or community points for proper recycling and disposal.
- **Localized Drop-Off Sites:**
    - Increase waste drop-off points in residential apartments, businesses, and public spaces.
    - Ensure these sites are wheelchair-accessible and conveniently located to minimize travel distances.

4. Expanding Community Access and Awareness

- **Door-to-Door Collection:** Scale up existing campaigns to include underserved areas and provide waste collection services tailored to individuals with mobility issues or other barriers.
- **Centralized Information Hub:** Create an online platform providing zero-waste solutions, waste sorting guides, and sustainable practices in Metro Vancouver.
- **Social Media Campaigns:** Use social platforms to share educational content, promote initiatives, and amplify the voices of community members.

5. Partnerships with Indigenous Communities

- **Sustainability Values:** Collaborate with Indigenous leaders and communities to integrate traditional ecological knowledge and values of sustainability into solid waste management strategies.
- **Reconciliation Goals:** Ensure that partnerships align with the goals of reconciliation by providing equitable representation and opportunities for Indigenous communities in decision-making and implementation.

6. Fair Funding and Job Creation

- **Government Collaboration:** Secure fair funding from municipal, provincial, and federal governments to support sustainable solid waste management initiatives.
- **Job Creation Program:** Develop programs focused on hiring local workers, especially youth, seniors, and marginalized groups, for roles in solid waste management, education, and outreach.

7. Circular Economy Principles

- **Shift from Linear Practices:** Work with businesses, including large grocery stores and small enterprises, to reduce waste and promote refillable products and packages.
- **Collaborate on Food Waste Solutions:** Partner with organizations addressing food insecurity to redistribute surplus food and collect food waste directly from businesses and households.

8. Community Building and Individual Action

- **Community Conversations:** Encourage residents to discuss sustainability with family, friends, and neighbors to foster collective responsibility.
- **Community Responsibility:** Promote initiatives that center on shared accountability rather than leaving the burden solely on individuals.
- **Zero-Waste Events:** Organize events, workshops, and campaigns to engage the community and raise awareness.

Q&A

Question asked	Answer given
How can Metro Vancouver ensure that large corporations, such as grocery stores and manufacturers, take responsibility for reducing waste and transitioning to refillable products or sustainable packaging?	• **Extended Producer Responsibility (EPR):** Expand and enforce EPR programs to hold corporations accountable for the entire lifecycle of their products, including packaging. Require companies to manage the collection, recycling, or safe disposal of their solid waste. • **Incentivize Sustainable Practices:** Offer tax breaks, grants, or subsidies to businesses that adopt refillable, reusable, or compostable packaging. • **Mandatory Waste Reduction Targets:** Introduce regulations requiring corporations to meet specific waste reduction and sustainability goals within a set timeline. • **Collaboration:** Partner with businesses to develop shared solutions, such as bulk refill stations or standardized, recyclable containers that can be reused across brands.
What specific incentives can be provided to encourage individuals and communities to participate in sustainable solid waste management practices, such as recycling or composting?	• **Financial Incentives:** o Implement a community points system where proper waste sorting earns points that can be redeemed for discounts or vouchers.

	o Introduce deposit-refund systems for recyclable containers and compostable materials to encourage proper disposal. • **Convenience-Based Rewards:** Set up vending machine-style waste drop-off systems that reward users with small monetary or non-monetary benefits for correctly disposing of items. • **Community Recognition:** Launch programs to recognize and reward neighborhoods or communities for high participation rates, such as public awards or community grants for local projects. • **Educational Programs:** Provide free workshops, webinars, and events on solid waste management and offer small incentives (e.g., gift cards, free compost bins) to attendees. • **Social Incentives:** Create community-led initiatives like "Recycling Parties" or competitions that gamify recycling and composting to make participation engaging and fun.
How can Indigenous knowledge and values of sustainability be effectively integrated into Metro Vancouver's waste management system while advancing reconciliation goals?	• **Indigenous Advisory Council:** Establish an advisory council comprising Indigenous leaders to guide solid waste management strategies and ensure alignment with Indigenous values and cultural practices. • **Knowledge-Sharing Workshops:** Organize workshops where Indigenous communities share traditional ecological knowledge with policymakers, businesses, and residents to incorporate holistic and sustainable approaches. • **Economic Collaboration:** Partner with Indigenous businesses and communities on initiatives such as

	composting programs, organic waste-to-energy projects, and sustainable materials manufacturing. • **Joint Projects:** Develop collaborative programs that integrate Indigenous practices into urban sustainability initiatives, such as community composting gardens or permaculture projects. • **Educational Integration:** Include Indigenous perspectives on sustainability in public education campaigns and school curriculums to foster awareness and respect for these values.
What role can AI and technology play in making waste sorting and recycling more accessible for residents who face barriers, such as language or physical limitations?	• **AI-Powered Waste Sorting:** Implement AI-based sorting facilities that reduce the burden on residents by automatically separating recyclable, compostable, and non-recyclable waste. • **Multilingual Sorting Apps:** Develop apps with AI-driven image recognition that allow users to scan waste items and receive clear, multilingual instructions on how to dispose of them. • **Voice Command Integration:** Incorporate voice assistant technologies (e.g., Alexa or Google Assistant) to answer solid waste management questions, providing hands-free accessibility for individuals with disabilities. • **Barcode and RFID Systems:** Introduce barcodes or RFID tags on products that residents can scan to get disposal instructions, improving confidence in waste sorting.

	• **Smart Bins:** Deploy smart bins with built-in AI that identify waste types and direct residents on proper disposal or automatically sort the waste. • **Community Education:** Use augmented reality (AR) or interactive tools in educational campaigns to teach residents how to sort waste properly, making learning more engaging and accessible.

Summary of presentation (SEE ATTACHED ABSTRACTS AND SLIDES FOR REFERENCE):

TEAM 1 – Waste to Carbon

Barrier identified:

The "bag it and ship it" method of food waste management remains dominant, emphasizing the transportation of organic waste to centralized facilities. This approach creates logistical inefficiencies, increases carbon footprints, and adds costs, especially in regions with limited access to centralized systems.

Challenge identified:

While local organic waste processing methods are cost-effective, they often lack the infrastructure and scalability of centralized systems. Conversely, centralized systems incur significant transportation and operational costs, creating a disparity between the economic and environmental sustainability of both approaches

Solution, Idea or Action Proposed:

Comments (What was said – bullet points)

Solutions Proposed

- Implementation of decentralized carbonization units to manage food waste at the local level.
- Integration of AI technology to analyze, predict, and optimize food redistribution, ensuring edible surplus food reaches those in need and waste streams are efficiently managed.
- Hybrid models combining local and centralized systems to balance cost-effectiveness with scalability.

Impact

Adopting these solutions is expected to reduce the environmental impact of food waste, lower overall organic waste management costs, and increase the accessibility of surplus food for redistribution. Furthermore, local carbonization promotes circular economy practices by converting waste into reusable products, fostering sustainable development. Integrating AI into the process ensures data-driven decision-making, enhancing efficiency and resource utilization.

TEAM 2 – Ucycle

Barriers identified:

- Lack of awareness on the impact of solid waste on society is a growing concern.
- Lack of interest in maintaining recycling habits.
- Lack of accurate data to show the environmental impact when we do recycling.

Challenges identified:

- Educating the public on proper waste disposal, waste management and recycling.
- User experience and accessibility
- Motivating the community towards a new culture of zero waste
- Centralizing all services and resources onto one app
- Cooperation and cohesiveness between companies
- Resistance from businesses due to lack of incentives.
- Consumers unaware of impact of improper waste and recycling disposal
- Fundraising (crowdfunding, government grants, donations)

Solution, Idea or Action Proposed:

Comments (What was said – bullet points)

Solution:

- Ucycle program and service with a user-friendly app and website
- Educate and re-educate the public on proper solid waste and recycling disposal
- Provide ongoing and detailed data and analytics on waste reduction information to increase transparency with residents of the community and businesses/organizations.

Impact:

- Reduction of Waste and increase of proper recycling
- Increase of Community Engagement and Accountability
- Overall reduced carbon footprint and a cleaner city

TEAM 3 – EcoSnap

Barriers identified:

1. Vulnerable Individuals: Struggle with mobility, time, or cost to sort and recycle properly.

2. Knowledge Gaps: Unaware of reusable packaging systems or complex recycling rules.

3. Overburdened Individuals: High responsibility placed on individuals without enough systemic support.

Challenges identified:

1. **Enhanced Accessibility:** Provide staff or volunteers to assist vulnerable individuals with sorting and recycling tasks. Door collection.
2. **Responsibility Shift:** Transfer the burden of proper recycling from individuals to governments, municipalities, or strata organizations for better system management.
3. **AI Integration:** Leverage AI to handle waste sorting, eliminating the need for users to decipher guidelines or search online, making the process seamless and efficient. Improve the waste wizard. Add features of image, voice analysis

Solution, Idea or Action Proposed:

Comments (What was said – bullet points)

EcoSnap:

A one-stop application for education, accessibility support and rewards for sustainable-focused users.

1. Education: Use EcoSnap AI to scan and sort waste easily at home. Instant guidance removes confusion and saves time.

2. Accessibility Support for Recycling and Waste Management

a. Municipal and Community Support

- Establish volunteer programs that recruit and train individuals to assist people with disabilities or those less privileged in performing recycling and trash-sorting duties.

b. Business Responsibilities

- **Apartment Complexes and Residential Communities:** Residential management (e.g., strata councils) should mandate staff or services dedicated to assisting residents with disabilities or limited resources in trash collection and recycling.
- **Supermarkets and Retail Stores:** Provide accessible and convenient disposable recycling bins in residential areas or centralized locations, such as near gas stations.

c. Government Initiatives

- Hire individuals from diverse backgrounds to lead regular informational sessions and events at apartment complexes or residential community spaces, educating residents on proper recycling and sorting practices.
- Rewards: Rewards for consistent checking items on recycling, such as points or cashback, through seamless integration with deposit-refund systems

Q&A

Team 1 Waste to Carbon

Question asked	Answer given
Barrier to entry for the public?	The barriers to entry for the public will depend on the level of accessibility and education surrounding the new systems: • **Awareness and Education:** o A lack of understanding about the technology (e.g., decentralized carbonization units or AI-based redistribution systems) could deter public participation. o Public awareness campaigns and workshops will be crucial to educate communities about the benefits and how to use these systems effectively.

	• **Accessibility:**
	  o If decentralized carbonization units are installed in community centers or shared spaces (rather than individual homes), public participation is more likely due to shared responsibility and reduced personal effort.
	  o Integration into existing solid waste management systems (e.g., curbside organic collection) will help reduce barriers.
	• **Behavioral Change:**
	  o Encouraging people to separate organic waste or participate in food redistribution programs may require a cultural shift, which could initially pose a challenge. Incentives (e.g., community rewards, cost savings) could help ease the transition.

Cost and materials involved?	• **Decentralized Carbonization Units:**
	  o **Cost:** The cost of implementing small-scale carbonization units will depend on their size and technology. Initial investment could be significant, but over time, the reduced transportation and operational costs might offset this expense. Around $400 for each waste to carbon device.
	  o **Materials:** The units will require high-temperature-resistant materials for processing waste into biochar, as well as energy sources (e.g., solar, electric). A focus on renewable energy sources could make them more sustainable.

	• **AI Integration:**
	  o **Cost:** Developing AI tools for food redistribution or solid waste management could involve significant initial costs, including software development, data collection, and ongoing system maintenance.
	  o **Infrastructure:** The cost of integrating AI with waste collection systems (e.g., apps, databases, sorting technologies) would need to be covered by government funding, private sector collaboration, or grants.
	• **Hybrid Models:**
	  o **Cost:** Establishing hybrid systems may involve investments in both local and centralized infrastructure. However, these costs could be mitigated through partnerships with existing solid waste management services and community programs.
	  o **Materials:** Infrastructure will require durable, recyclable, and low-maintenance materials to ensure long-term use.

Will every home need "AI"?	No, every home will not need to have AI installed. The proposed AI integration would function at a system-wide level rather than on an individual household basis: • **Community-Level AI:** o AI systems could be centralized in municipal solid waste management facilities or as part of community-level solid waste processing centers.

	o Residents could use an **AI-powered app** or a barcode/RFID system to get guidance on waste sorting and food redistribution without requiring individual AI installations. • **Decentralized Carbonization Units and AI:** o These units would operate independently of AI at the local level but could still benefit from centralized AI systems that manage logistics and optimize their operations. • **Household Interaction with AI:** o The public's interaction with AI would be minimal and likely app based. For instance, residents could use a smartphone app to scan items and get instructions for disposal, eliminating the need for every home to have its own AI device.

Team 2 Ucycle

Question asked	Answer given
How to bridge the digital divide?	• **Community Hubs for Access:** o Set up kiosks or stations at public libraries, community centers, or recycling drop-off locations where individuals can access the app and services. o Provide staff or volunteers to assist those who need help using the technology. • **Offline Solutions:** o Distribute printed materials (e.g., brochures, posters, calendars) with essential solid waste management information, including proper disposal methods, schedules, and resources. o Develop a toll-free hotline for those without digital access to receive guidance and information. • **Partnerships:** o Partner with local organizations to host in-person workshops, educate the public, and provide hands-on assistance. o Work with nonprofits or government programs to distribute affordable smartphones or internet access to low-income households.

How to assist those that will not use the app?	• **Door-to-Door Engagement:**
	  o Employ or train community ambassadors to visit households, distribute information, and assist with solid waste sorting and management.
	• **Physical Resources and Tools:**
	  o Provide physical guides, color-coded bins, or stickers with clear instructions on solid waste disposal and recycling practices.
	• **Local Events and Workshops:**
	  o Host community events like recycling fairs or workshops to educate residents in a face-to-face setting.
	  o Offer incentives (e.g., small gifts or discounts) for participation to encourage engagement.
	• **Traditional Media Campaigns:**
	  o Use radio, television, and local newspapers to disseminate information about waste management and recycling programs.

How to balance the carrot and stick approach?	• **Carrot (Incentives):** o **Rewards for Positive Behavior:** Introduce a points-based reward system for households or businesses that consistently sort and recycle waste properly. Points could be exchanged for discounts, vouchers, or community recognition.

	o **Tax Benefits:** Offer tax rebates or reductions for businesses and organizations that adopt sustainable solid waste practices. o **Community Recognition:** Highlight top-performing individuals, businesses, or neighborhoods in newsletters or community events to motivate others. • **Stick (Penalties):** o **Warnings First:** Begin with warnings or educational notices for improper disposal rather than immediate penalties. o **Fines for Repeat Offenses:** Impose fines on individuals or businesses that repeatedly fail to comply with proper waste management practices. o **Monitoring and Feedback:** Use data analytics to track progress and provide feedback, ensuring penalties are fair and based on clear evidence of non-compliance. • **Transparent Communication:** o Clearly communicate the reasons behind both rewards and penalties to ensure public understanding and acceptance. Emphasize that the goal is environmental improvement, not punishment.

Team 3 EcoSnap

Question asked	Answer given
How can we ensure EcoSnap is accessible to all individuals, especially those without smartphones or internet access?	• **Alternative Access Points:** EcoSnap could be integrated into community kiosks, libraries, and recycling centers where individuals can access its features using public devices. • **Offline Tools:** For individuals without smartphones, printed QR codes or recycling guides could help them identify proper sorting procedures, with accessible instructions on physical media. • **In-Person Assistance:** Volunteer programs or government initiatives can complement the app by offering hands-on support for individuals who cannot access or use EcoSnap.
How does AI integration enhance accessibility and efficiency?	• **AI Waste Wizard:** EcoSnap's AI could use image and voice recognition to help users identify and sort solid waste items easily, removing the need for complicated manual sorting. • **Predictive Features:** AI could predict patterns in waste disposal and recommend tailored solutions for households or communities to reduce waste. • **Seamless User Experience:** AI tools eliminate confusion by offering instant, personalized guidance, making the recycling process intuitive and stress-free.
How will vulnerable individuals be supported in waste sorting and recycling?	• **Volunteer Programs:** Municipalities and community organizations could develop

	volunteer initiatives to assist individuals with disabilities, mobility challenges, or time constraints. • **On-Site Staff:** Residential management (e.g., strata councils) could hire or train staff to help residents with sorting and recycling tasks. • **Door-to-Door Support:** Establish systems for door-to-door waste collection for individuals with mobility issues or other barriers.

CityHive Youth Focus Group Post-Engagement Report

Engagement Activity Summary

Activity: Focus group	
Activity Date	November 12, 2024
Organization/group name	CityHive Youth Engagement Society
Time/Duration	2 hours
Location	CityStudio (1800 Spyglass Place)
Format	Focus Group
# of Participants	16
Summary of Promotions *(optional)*	Email outreach to alumni network, current program participants, and community partners

Participant feedback/Input	
Meeting Notes	
Topic/Question Addressed	**What was said**
Identifying Barriers and Key Challenges	• It wouldn't be such an issue eliminating waste if we weren't so consumerist where mass consumption is incentivized. If we were the generation of my grandparents where things were made to a high quality or could be repurposed, then we would not face the same issues of waste management. I think this is the biggest challenge/barrier in managing waste. • Reducing waste by reusing I feel like Metro Van could have more repair clinics. Where do you go if you want to reuse something? Or donate something? They haven't updated their website in years. I don't know what to do with these things but if there are alternatives they could make that more present. • One of the issues is the idea of recycling as removed from the home, we are now separated from it and just send our recycling to another location instead • Every system is complicated. While we are all here and interested in sustainability, not everyone is • The housing crisis, food insecurity, etc.. Many crises facing people, it's hard to ask people to care about all these things, when their immediate needs are not met. This issue is much bigger – if we cannot tackle people's core needs we will struggle to get people to be engaged. • At the core of it recycling is not the best answer to any kind of waste, the issue is more at the production site.

	● I am not sure if there is enough care from the government to have policies and guidelines on this. Hard to talk about this at an individual level because we know it is systemic. But it is good that Metro Van understands it is not just on the consumer. Should mostly be on producer accountability ● Some people don't have time in their lives to keep types of packaging at the top of mind when doing their regular shopping. Even for individuals it is hard to know what to recycle, where to recycle, etc… ● A lot of the stuff in there isn't sorted properly so knowing that a lot of it might just end up in the garbage anyway ● Different municipalities do things differently too. On the island aluminum and soft plastics are separate. More consistency across municipalities could be less confusing. More streamlining. ● Education doesn't change behaviour. Awareness can to some extent. But we have a lot of immigrants coming in and for newcomers there is a need to understand a difference in behaviour. There needs to be incentive. Free or low cost recycling … but people feel like they should be benefiting from this ● There's no risk/reward balance for individual recycling choices. For individual choices: make it more interesting/gamify it ● Should be consistent. Why do all municipalities not have the same pick up time? If they want to make a policy change there needs to be consistency between and amongst municipalities. At all levels of government, not just the most local – but upwards through regions and the province. You can't have changes implemented in one place and not in others. If you go from Vancouver to Burnaby and have vastly different experiences of recycling. ● A lot of communities have the skills to be sustainable, but may not have the land to operate in a circular nature. If you only have an apartment, you can't grow your own food, and then have a compost system. When you have your own needs met you also can be creative in sustainability within your own home ● Sewing, growing your own food, etc.. Having land is important for this ● Individual - Recycling household small appliances in apartment buildings; doesn't do recycling, city doesn't have pick up service, people have to go to the recycling centre that is not accessible by transit (Richmond); e.g. light bulbs. Could do drop off sites at community centres, do pick up for a fee, have recycling bins in apartment buildings ● What do you do when you don't have a car? Happy to call for pick up for a fee. People turn to private companies, but prefers city for accountability - want to know it's actually being recycled and have dedicated systems to address it ● there's resources about how to throw away major household items like toasters but not too much formal guidance of what to do with daily household items like little bits left of candles or soap and how to dispose of that sustainably

	● Vancouver household waste app; not good user experience and not widely used. There is a language barrier in Richmond because it's only english. There should be a picture feature eg take a photo and know where it goes ● Confusion - more education + misconception about where waste is going ● Lack of transportation - people are not incentivized to waste less, but actually recycle less when they have no means to get to a dump ● Could we put refundable deposits on other objects if you recycle? ● Want to see more accessibility, make it fun ● More legislations on producers to make more sustainable packaging ● Several years ago, I tried gathering data on how many tonnes of waste we've been producing. At that time, data was inconsistent or wasn't there. How does the system work in terms of data collection - maybe it's not within their capacity in terms of capacity/fiscal budget. But having a consistent garbage and composting system might be helpful, but this could be too high level for a complex system. Could be helpful for personal and producer accountability. ● In terms of recycling, maybe it's just me but in the past I've struggled to find recycling depots close to me for electronics. Had to go down to Marine Drive. Some would take TVs but wouldn't take cell phones, for example. I don't want to drive all the way down to Marine Drive. Making this process easier might be more helpful for individual accountability. Especially hard when these places are only open during work or school hours. Not everyone can take time off to do these things. Even hard plastics, they do collect these at the depots but I don't want to collect these at home. Hard to know cups with styrofoam, where that would go in regular recycling. I know this exists for certain languages, but I know that there aren't many resources that exist for Vietnamese communities. So sometimes people just have to guess where things go if language is a barrier. ● Hard to go to the recycling depot if you don't have a car. Difficult to take transit with garbage. It's even still common to not know where things like pizza boxes or paper go in regular recycling cans. Having pictures above recycling bins would be helpful. Especially for those that don't speak English. ● Not only recycling, but understanding how we can reduce waste in general would be helpful. I think consumption is a big part of it, how can we consume less? ● Even with peeled garlic at the grocery stores, lots of waste there from producers. ● For international people, not as much access to recycling programs. More engagement should be done with international communities. In their home countries, recycling might look very

	different and you have to learn a new system when you're here. More accessibility to education and language-friendly options would be helpful. ● Thinking about producer accountability… What is Amazon doing to reduce their garbage? ● In New West, people get stars if they recycle well. This gives people at New West the opportunity to receive positive feedback for their work or gives them opportunities before they are fined. ● Have a QR code at the site of the bins, where you can type in what you have and have the QR code show you where you can put in the garbage. Having live incentives for putting waste in the right bins could be helpful. Perhaps LED light that shows emoticon when you put waste in the right bin.
In what ways could Metro Vancouver collaborate with others to more effectively advance accountability for eliminating waste?	● Library and recreation centers having workshops for knowledge sharing ● Needs to be a general consensus on how to go about things ● Having a standard set like, 'These are the places you can go to for these things' to increase public knowledge. Return-it depot is an example of a success story of having consistency that the public can know offers a certain service. Consistent signage, location names (even if there are private companies that operate them) ● Partner with container-free stores ● Have a common map: Where can you go to refill your things, Where can you go to donate X,Y,Z ● One resource for: Repair, Donate, Deposit ● A lot of people care about their city, but are less connected to the lower-mainland as a whole. Each city has its own community centres and it often feels like the city advertises things more on a city level rather than promoting things to a wider audience. Create understanding of how impact in Langley may also impact Richmond, for example. Have also a common sense of responsibility and accountability and also pride in the progress Metro Vancouver has made ● In BIPOC spaces that I have been in previously there was more value in having more nuance, rather than one simple way of advertising. There needs to be a way to approach nuance within the cities ● Each community has different needs and wants, but when it comes to recycling and waste there is common ground – everyone produces waste and needs to dispose of it. A universal approach with waste may be more efficient ● In schools, kids can hold the family accountable too. When I was in school I remember they would have challenges for us to do at home and it would get the whole family involved. When you are consistent in teaching a behavior it can create change ● Single family homes vs stratas vs apartments are all very different. Just want to throw everything in one place when waste sorting is

	less accessible. In single family homes it is easier to sort things than in an apartment. Some people don't have the interest in doing that. Landlords should enforce that more ● My strata do audits on waste management. My friend's apartment has one stream recycling and then other people will sort it down the line. But once again, there's no consistency between different stratas ● Require reporting when it comes to waste as we do with emissions. Policy on producers so they have to provide reporting and then give incentive ● Hopefully the municipality has it in the first place – not every municipality has the same resources. Only 17 out of 22 of the member jurisdictions have the same schedule of garbage collection every other week to reduce waste. There is no continuity from jurisdiction to jurisdiction ● Schools - changing cultural norms, have 'Recycling ambassadors' to help build cultural awareness ● Universities - make it cohesive across campuses ● Producers of research materials e.g. plastic flasks, etc. can be made from sustainable materials, educate research institutions on how to reduce barriers to recycling ● Ugly Food Day - produce that we weren't able to sell, by donation or free. Can be supported by municipalities to encourage more events like that. Other products that could not be sold but still functionable ● Apartments and housing units contract companies to manage waste ● Working with companies to add deposits on toiletries ● Encourage easily-recyclable designs for products for example all made from same components ● Improve capacity for recycling ● Prevent companies from creating things designed to break ● Create new norms - Programs like cupshare at cafes, discounts if you bring your own container ● Greenwashing: Where do the extra 25c go from cup fees? It doesn't really incentivize people to change behaviour. Cities have to track where the collected money is going - would have to implement a tax (province) ● Zero-waste initiatives, stores, movements ● Translink for transporting the waste with public transportation ● Private companies ● All municipals collaborate on the same waste management policy/plan ● Local/Canadian social media influencers to make funny ads on waste disposal (youth awareness) → combine with raffle to get views up ● Work with companies for sustainable swag

	● One of the things I'm curious about but I feel like individual accountability is focused on those single family homes. What does that look like for people in apartments? Harder to hold people accountable when there's 100+ people in one building. Maybe there needs to be collaboration with property owners or managers. ● Get people to reimagine an alternative reality for waste management. Minecraft might be an interesting place to start (or wherever the kids are playing games nowadays) ● Would like to see more options than plastic. Are there other resources or materials we can use that's biodegradable? But eco-friendly materials are oftentimes shipped in plastic too. ● Incentivizing recycling with other things, such as bus pass price reduction or reduced strata fees. ● Look at gaming communities like Twitch and ask them how to connect games with waste management. A lot of incentivizing comes from games already. ● Metro Vancouver should collect data on what waste is mismanaged the most - as in not sorted properly. And incentivize those especially. That would be so nice to have, but at the same time, it would be hard to implement. Where else would we get the percentage for the city budget. One thing that's worked for my partner's building is they hold yard sales for items they don't need anymore; it's especially helpful for those who don't feel safe to sell items on Facebook Marketplace and sell to the community instead. For things like furniture or children's clothes, if you leave it in a certain spot, the property manager takes it and makes sure that it's recycled properly. Maybe a community center collaboration?? ● Too Good To Go app - this might be a good way to sell things at a lower cost. What do grocery stores do with their produce and leftover items? If not everyone is able to afford items, the grocery stores send it but someone mentioned once how certain organizations in town are able to accept food donations if they are past expiry. Trying to wrap my head around grocery stores and food waste. Clothing stores, gift stores, offices and their swag - it's not very useful but it's for advertisement. Can we hand out chocolate or chips instead to eliminate waste. ● Not all restaurants classify and sort out their garbage. Maybe some incentives for restaurants to recycle more. Maybe a discount can be offered. In downtown, you can use an app to recycle, but it's not accessible for everyone. (Similar to Mugshare program at UBC) ● Who could instruct? Be an educator on these issues ● Could legislation help create more consistency in different forms of housing?

Knowledge Gaps and Communications	● Big gap of where does our waste go. Is it the municipality? Or each city does its own? Or is there one central location ● Are we doing better this year compared to previous years? What is the future for where we are headed? Are we projected to be doing better in terms of wasting less? What are we doing now to be proactive in reducing waste? ● I want to know where and how we got the statistics. Where does one bottle get you? How important is each piece of waste? If you do this, it has this impact. Those kinds of things, people knowing about their contribution and impact is important. Seeing in numbers that if every person does something there is change possible ● Cool to know what initiatives or legislation that Metro Van is working towards to make the producers more accountable. "Compostable" bags not actually being composted because they require very specific processes that are not available in metro-van ● How are we combating green washing ● Really like the piece about making it tangible for people to see the effects of their behaviour. In Tehran, we had a public chart that said what the pollution levels were. We do the same thing with the fire risk charts in BC. Having something built like that around town that reflects what the current state is, and what the projected state is ● What happens to those bags when they go in the compost? Same with those forks? ● Curious how we increased it already to 65% and what is everyone else at? ● The information we receive on a local level is all city specific. People don't know that Metro Vancouver has this impact and mandate to bring about real change. If people actually knew that they may pay attention more ● Hear a lot that individual actions don't matter a lot, but I would like to know how much money I am saving from recycling clothes, from sewing your own clothes, or from bottle deposits, If this information was given to me ● Financials: Tell people how much they are **saving** by doing these things ● Schools - Culture of sustainability; Targeting young generations through workshops. Initiative to connect larger community with the school (waste management stewardship) ● What can you recycle and how clean do they need to be? ● Transparency - where does it go ● Communication on available resources like graphics or technology like apps. Link headquarters e.g. 'Waste Hub' website as a landing site for resources ● Workshops, open houses with Metro Van residences, groups, communities. People are ready to learn and ready to contribute. For businesses specifically too

	● Transit ads (eg Richmond) w/ QR code in multiple languages and graphics/ photos for accessibility ● How is management responsibility split within municipalities in Metro Van? What would be possible for all municipalities?Metro Van has high rates of mobility within municipalities-- a metro van comprehensive recycling communication strategy for people who move through multiple municipalities during their day ● Jurisdiction map of Metro Van ● What happens after you recycle? ● Why is it hard to recycle all kinds of materials? ● What does metro Vancouver do with the recycling they collect? ● Where does the waste get sorted? ● Think of waste holistically, how much waste did we create in creating this material and how much water, etc? App in New West called Recycle Coach - it's not consistent, but you could get prizes through it sometimes. More municipalities could implement something like this ● My mom is from India and getting her to recycle is a lifelong process, but when someone realizes how long something lasts for, that could be an incentive. Incentivizing with money is helpful; now because you have to buy bags at the store, now everybody is bringing reusable bags. ● It's interesting how every municipality would have different waste management system ● BC Hydro has those prizes and you have to go online and answer the questions and you could get a prize. The prize makes it work. ● Textile Exchange - global non profit ● Recycling campaign challenges where you post on social media might work. Meme challenge could also work. TikTok challenge? ● Don't know how important solid waste is to the government/how many resources they want to put into it
Efforts to Reduce Barriers to Participation (Optional)	
● Offering honorarium for participants ● Providing hot meal before focus group engagement ● Providing bus tickets for participants to get to and from the engagement ● Setting up and providing a low stimulation room for participants to step away during the engagement	
Participants Feedback (engagement evaluation)	
● Only half of the attendees completed the post-session survey (8 / 16) so the evaluation is only representative of half the group. ● Of those who completed the survey, they felt that the engagement was a good use of their time and they were able to participate and share their perspectives. Most felt that they received the information they needed to participate. ● Small group discussions were well-received as a format that allowed for more in-depth sharing.	

● There was a desire to hear directly from Metro Vancouver on the engagement process itself as well as share and answer more technical aspects of the Solid Waste Management Plan.	
Narrative Summary (Your brief reflections on the engagement)	
Goals and objectives	● To provide a space for young people in the Metro Vancouver region to share their insights, ideas, and perspectives on the Solid Waste Management plan ● To showcase the unique value that young people bring in public engagement processes ● To facilitate space for young people to feel invested in and part of the decision making processes related to the region they live in ● To convene an engagement where young people can connect with other like-minded youth
Results achieved	● 20 young people (maximum capacity) registered for the focus group within 24 hours, highlighting the interest that youth have in being engaged around topics like these ● Diverse range of youth showed up to the engagement (from geographical representation to diverse demographic communities) ● Connections made between youth participants within their small breakout groups ● Expressed interest from participants to continue being engaged in future or similar projects
Challenges and issues addressed	● While the information provided by Metro Vancouver through the Collaborative Engagement toolkit document was comprehensive and extremely helpful in planning for the engagement, there were specific questions that attendees had that would have benefited from having a Metro Vancouver representative present. Questions around the subject matter of Solid Waste Management as well as the overall engagement process itself came up throughout the engagement and while we tried to direct folks to the website and backgrounder, a representative would've been able to provide more depth. This would've also helped facilitate trust building between young people and Metro Vancouver.
General feedback	Well received! Many would love to see more youth-specific engagement initiatives that are longer term and ongoing.

Appendix 1: Participants demographic information

This only encompasses the 16 attendees who were present at the engagement activity, not including those who registered but could not attend.

- Geographical representation
    - City of Vancouver: 9
    - City of New Westminster: 1
    - Electoral Area A: 1
    - City of Burnaby: 1
    - City of Surrey: 1
    - City of North Vancouver: 1
    - City of Richmond: 1
    - City of Port Moody: 1
- Demographic representation (self-identified via registration form)
    - A majority of attendees identified as racialized people of colour (12/16).
    - Some attendees identified as queer or part of the LGBTQ2SIA+ community.
    - Some identified as immigrants or newcomers. We had participants who identified as disabled as well as participants who identified as Muslim.
    - In terms of age cohort breakdown, we heard from 9 attendees from the 27-30 age group, 5 from the 23-26 age group, and 2 from the 19-22 age group.

Appendix 2: Participant evaluation forms

See Google Sheet with responses [redacted].

COAST
WASTE MANAGEMENT ASSOCIATION

Summary Report

Metro Vancouver Solid Waste Management Plan Update—Idea Generation
Collaborative Engagement Summary Report

Report Submitted by: Sheila Molloy, Executive Director, Coast Waste Management Association
Submitted to: Brooke Atkinson, Engagement Specialist, Solid Waste Services, Metro Vancouver
Submitted: December 13, 2024

CWMA COLLABORATIVE ENGAGEMENT

The top-level goal of this collaborative engagement was to provide Metro Vancouver with ideas and considerations to improve waste management strategies within the region and help them fulfill their commitment to connecting with audiences that are not usually engaged in the updated management plan.

ENGAGEMENT ACTIVITY DETAILS

- Two focus groups
  November 14, 2024 | 10:00 - 11:30 AM PST | [redacted]
  November 19, 2024 | 12:00 - 1:30 PM PST | [redacted]
- One-on-one interviews
- E-newsletter and mailing list promotion
- CWMA Working Group promotion of other organization's Idea Generation Engagements
- Final feedback survey

TIMELINE

- October 30, 2024 – E-news marketing
- October 31, 2024 – Full mailing list marketing to 3600+ community members
- October 31, 2024 – Individual outreach to specific focus group participants
- November 6, 2024 – Email reminder in e-newsletter
- November 11, 2024 – Email reminder in e-newsletter
- December 2, 2024 – Full mailing list marketing to 3600+ community members

THE ORGANIZATION

Coast Waste Management Association https://cwma.ca is a highly regarded, non-profit membership association serving the solid waste industry across British Columbia. We are the largest industry-facing association in the province.

CWMA is comprised of 225 member organizations with over 1200 individual participants engaged in our community and is proud of our greater industry network of over 3600.

Our member participants represent the greater industry with corporations of all sizes and sectors, local governments, non-profits, stewardship organizations, and First Nations.

All our members are directly or indirectly affected by Metro Vancouver's Solid Waste Management Plan.

ENGAGEMENT ACTIVITY GOALS

Focus Groups

The primary goal of the focus group sessions was to bring together a cross-section of leaders in the solid waste management industry of British Columbia. These leaders represent various sub-sectors to ensure diverse perspectives and innovative ideas for Metro Vancouver's Solid Waste Management Plan update. The use of focus groups was intentional to specifically leverage the collective ideas of the group by facilitating a discussion that encouraged participants to build on each other's ideas to make the feedback collaborative.

One-on-One Interviews

For key individuals who could not attend a Focus Group session, one-on-one interviews allowed us to follow up and gain additional information on the topics discussed in the focus groups.

Final Feedback Survey

This was a final opportunity for everyone in the industry who had not yet taken part in any of the other *Idea Generation* engagement opportunities. A questionnaire was developed based on the focus groups and one-on-one interviews and allowed the collection of broader sentiments across the industry on the topics and ideas generated.

E-newsletter and Mailing List Marketing

To ensure CWMA effectively marketed the engagements to members and colleagues in the industry, we sent out reminders using our weekly e-newsletter and specific outreach to our greater mailing list of over 3,600.

Working Group Promotion of Other Organization's Idea Generation Engagements

In the regular course of our well-attended working group meetings, CWMA offered the opportunity for other organizations to highlight the research initiative to their members. Cross-promotion and encouraging everyone to take any of the circulating surveys was part of CWMA's collaborative actions to maximize the reach and feedback for Metro Vancouver.

FOCUS GROUPS and ONE-ON-ONE INTERVIEWS

METHODOLOGY

Zoom meetings were used for both Focus Groups and the One-on-One Interviews.

CWMA followed the *Workshop Agenda Approach* as suggested by Metro Vancouver's community engagement templates.

The topics, as provided by Metro Vancouver's guidance for these Idea Generation sessions, were used as the base for the discussions. However, rather than select two specific topics, CWMA offered the option for our participants to prioritize their preferred areas of discussion and gave them all the time to add ideas on all the topics.

Preparation for the focus group included sending Metro Vancouver's backgrounder and the following Agenda in advance:

1) Welcome & Setting the Stage
2) Introductions (name/organization)
3) Roundtable Speed Share / your top idea
4) Roundtable Discussion topics (2 or 3 will be selected to guide our conversation):
   - Rethink and prevent waste in the first place.
   - Enhance accountability for eliminating waste.
   - Leverage knowledge and expertise through collaboration.
   - Increase participation and reduce contamination in organics and recycling programs.
   - Promote confidence in recycling systems.
   - Expand inclusive programs and services.
   - Plan for future infrastructure and systems for waste management across the region.

A poll in the Zoom meeting was used to determine which topics were most applicable to the group, but all the discussion topics above were touched on by both the Focus Group Participants as well as the one-on-one interviews.

Professional Facilitation was used to uncover everyone's ideas and perspectives, and the one-on-one interviews utilized the same agenda as the focus groups and were done by the same facilitator.

OVERALL RESULT

- Twenty (20) people took part in the focus groups.
- Four (4) additional one-on-one interviews were done following these sessions.

Group 1 selected and focused on
- Rethink and prevent waste in the first place.
- Increase participation and reduce contamination in organics and recycling programs.

- Leverage knowledge and expertise through collaboration.

Group 2 selected and focused on
- Rethink and prevent waste in the first place.
- Enhance accountability for eliminating waste.
- Plan for future infrastructure and systems for waste management across the region.

The one-on-one interviewees spoke about all the topics.

- Overall, the CWMA focus group sessions fostered a vibrant exchange of ideas and perspectives.

- Participants were passionate about advancing sustainable waste management practices and expressed a strong desire for Metro Vancouver to demonstrate leadership in this area.

- The discussions highlighted the need for a holistic approach, recognizing the interconnectedness of waste management with various economic, social, and environmental factors.

SURVEY

METHODOLOGY

The survey was built in and sent as a link using the SurveyMonkey online web tool.

It was a final opportunity for the industry to send ideas. With so many options available as part of this greater outreach, CWMA wanted to ensure there was one last time to generate some new ideas.

The questions aligned with the Focus Group discussions to enable us to use the feedback as part of the aggregated results.

The survey was sent out on December 2 and closed on December 6. Only one reminder was sent.

OVERALL RESULT

18 people responded and prioritized:
- Rethink and prevent waste in the first place
- Plan for future infrastructure and systems for waste management across the region

The survey results enhanced the Focus Group feedback while still bringing unique, individual responses to build on a strong list of ideas to consider

AGGREGATED FEEDBACK & KEY THEMES

PARTICIPANT HIGHLIGHTS

Of the 42 people who participated:
One was from the USA
41 were from British Columbia
58% were from outside Metro Van
42% were from within Metro Van

The group included non-profit environmental organizations, stewardship organizations, First Nations, municipalities, and private corporations, including waste management equipment, solution providers, collectors, recyclers, waste management software experts, and consultants.

IMPACT

Participants were gauged on how this plan would impact their work.

Metro Vancouver is responsible for 1) Waste reduction and recycling planning, 2) Operating a series of solid waste facilities in the region, 3) Licensing private solid waste facilities, and 4) Education and behaviour change campaigns.

- All participants were asked or discussed how the areas of responsibility impacted their work.
- Every participant is affected by Metro Vancouver's work in these areas indirectly or directly.
- *Waste reduction and recycling planning* had the **greatest direct impact** on this group.
- *Education and behaviour change campaigns* had the **greatest indirect impact** on this group.

FAMILIARITY

Participants were gauged on how familiar they were with Metro Vancouver's current work.

How FAMILIAR are you with Metro Vancouver's role in waste reduction, recycling, and garbage management?

- In the focus groups and the survey, a clear majority (over 80%) were familiar or somewhat familiar with Metro Vancouver's role in waste reduction, recycling, and garbage management.

- Sending out the preliminary information and gauging how informed participants were was key to reducing hearing ideas that are already being undertaken and maximizing the new, unique ideas.

KEY THEMES

We have organized the aggregated feedback based on the discussion topics as provided by Metro Vancouver's guidance.

- Rethink and prevent waste in the first place.
- Enhance accountability for eliminating waste.
- Leverage knowledge and expertise through collaboration.
- Increase participation and reduce contamination in organics and recycling programs.
- Promote confidence in recycling systems.
- Expand inclusive programs and services.
- Plan for future infrastructure and systems for waste management across the region.

1) How can Metro Vancouver rethink and prevent waste in the first place?

- NOTE: This was a top priority for <u>all participants.</u>

- **Education and public awareness:** Participants emphasized the need for continuous and targeted education campaigns involving schools, community groups, and producers to promote responsible waste management practices.

- **Collaboration and partnerships:** Building strong partnerships with First Nations communities, producers, and organizations like CWMA was seen as crucial for leveraging expertise and resources.

- **Infrastructure and economic incentives**: Suggestions included exploring options for land access and financial support for recycling and reuse facilities, particularly for depots and for exploring innovative processing technologies that would build local recycling and a more circular economy.

- **Consumer responsibility and behavioural change:** Highlighting the importance of consumer choices and incentivizing waste reduction through rewards programs and accessible information on proper disposal methods.

- **Prioritizing resource recovery:** Identifying and focusing on high-value materials that can be diverted from landfills and reintegrated into the economy. This includes exploring international best practices for resource recovery and innovative solutions.

- **Promoting reuse and repair infrastructure:** Establishing region-wide infrastructure and systems that support the reuse and repair of items, fostering a culture of repair and extending the lifespan of products. This could include supporting initiatives like repair cafes, tool libraries, and donation platforms.

- **Embracing circular economy principles:** Implementing systems thinking and life cycle analysis to understand material flows and promote closed-loop systems where waste is minimized and resources are continually circulated.

- **Enhancing producer responsibility:** Advocating for robust Extended Producer Responsibility (EPR) programs that incentivize manufacturers to design for recyclability, incorporate recycled content, and implement take-back schemes for their products.

- **Engaging and educating the community:** Implementing comprehensive education campaigns targeted at schools, community groups, and the broader public to raise awareness, promote responsible consumption habits, and foster a sense of community ownership over waste reduction efforts.

2) How can Metro Vancouver enhance accountability for waste reduction goals?

- **Strengthening enforcement and penalties:** Implementing stricter enforcement mechanisms and meaningful penalties for illegal dumping and improper waste disposal to deter negative behaviours.

- **Implementing transparent data tracking:** Developing a comprehensive system to track and measure waste generation, diversion rates, and the environmental impact of waste management practices. This data should be readily accessible to the public to ensure transparency and accountability.

- **Prioritizing high tipping fees:** Implementing high tipping fees at landfills and transfer stations to incentivize waste reduction and resource recovery.

- **Mandating product transparency:** Requiring producers to disclose the composition of their products, including recycled content and potential for recyclability, to empower consumers to make informed purchasing decisions.

- **Aligning funding with waste reduction goals:** Ensuring that financial resources are directed towards initiatives that prioritize waste prevention, reuse, and resource recovery rather than solely focusing on traditional waste management methods.

3) How can Metro Vancouver leverage knowledge and expertise through collaboration?

- **Diverse stakeholder engagement:** Involving a wider range of stakeholders, including those who may not be traditional "experts," to bring fresh perspectives and insights.

- **Support for industry associations:** Providing ongoing support for organizations like CWMA that facilitate knowledge sharing, best practice dissemination, and collaborative initiatives.

- **Working groups and committees:** Establishing targeted working groups to address specific waste streams or challenges, drawing upon the expertise of relevant stakeholders. NOTE:

The participants appreciated the work of the National Zero Waste Council in this regard, but the focus was on increasing local actions.

- **Facilitating cross-sector partnerships:** Building strong collaborations between municipalities, First Nations communities, businesses, non-profit organizations, and research institutions to share knowledge, resources, and best practices.
- **Supporting industry working groups:** Establishing and supporting working groups focused on specific waste streams or challenges to facilitate knowledge exchange, identify innovative solutions, and develop collaborative initiatives.
- **Promoting regional and international knowledge transfer:** Engaging in active knowledge transfer with other regions and countries to learn from successful waste reduction initiatives and adapt best practices to the Metro Vancouver context.
- **Investing in research and development:** Supporting research and development projects focused on innovative waste reduction technologies, materials recovery processes, and circular economy models to foster continuous improvement.

4) How can Metro Vancouver increase participation and reduce contamination in recycling and organics programs?

- **Clear and consistent messaging**: Developing standardized and easily understandable guidelines for sorting and disposal across all municipalities within Metro Vancouver.
- **Community-based initiatives:** Implementing reward programs and community projects to incentivize participation and recognize efforts to reduce contamination.
- **Regular audits and feedback:** Conduct ongoing audits of waste streams to identify areas for improvement and provide feedback to residents and businesses.
- **Accessible infrastructure:** Ensuring convenient and well-maintained collection infrastructure, including depots, drop-off locations, and appropriately sized bins.
- **Simplifying sorting guidelines:** Providing clear, consistent, and easy-to-understand guidelines for sorting waste, organics, and recyclables to eliminate confusion and minimize contamination.
- **Implementing robust educational campaigns:** Launching ongoing public education campaigns using various channels, including social media, community events, and school programs, to reinforce proper sorting practices and highlight the benefits of participation.
- **Providing accessible infrastructure:** Ensuring convenient and accessible infrastructure for waste collection and drop-off, including strategically placed bins, depots, and recycling facilities.

- **Exploring innovative collection methods:** Piloting new collection methods, such as pay-as-you-throw programs or incentivized recycling programs, to encourage participation and reward responsible waste management.

- **Addressing language barriers:** Offering waste sorting information and resources in multiple languages to ensure accessibility and understanding for diverse communities.

5) How can Metro Vancouver promote confidence in its recycling systems?

- **Demonstrating transparency in recycling processes:** Providing clear information about the destination and processing of recycled materials, including showcasing success stories and the positive impact of recycling efforts.

- **Combating misinformation and negative publicity:** Actively addressing public concerns and misinformation about recycling practices, emphasizing the effectiveness of programs and dispelling myths that undermine public confidence.

- **Engaging in open dialogue with the public:** Hosting public forums, workshops, and online discussions to address concerns, answer questions, and foster a sense of trust and transparency in recycling operations.

- **Collaborating with media outlets:** Working with media outlets to provide accurate and positive coverage of recycling initiatives and achievements, highlighting the benefits and importance of public participation.

- **Promoting third-party audits and certifications:** Seeking independent audits and certifications for recycling facilities and processes to validate compliance with environmental standards and demonstrate commitment to best practices.

6) How can Metro Vancouver Expand inclusive programs and services?

- **Land availability and cost:** Securing affordable land for recycling depots, transfer stations, and resource recovery facilities, particularly in densely populated urban areas, poses a significant challenge.

- **Accessibility and convenience:** Ensuring that waste reduction services, such as drop-off locations and collection programs, are conveniently located and readily accessible to all residents and businesses, particularly those in underserved communities.

- **Funding constraints:** Allocating sufficient financial resources to support the development and implementation of inclusive waste reduction programs, particularly for initiatives that may not generate immediate revenue.

- **Stakeholder engagement:** Effectively engaging diverse stakeholders, including residents, businesses, non-profit organizations, and First Nations communities, to ensure that programs and services are tailored to meet specific needs and preferences.

- **Addressing contamination issues:** Implementing effective strategies to educate the public and reduce contamination in recycling and composting streams which can undermine the efficiency and viability of resource recovery programs.

- **Proximity to a landfill impacts waste management practice**
  Communities with limited access to landfills, such as those on islands, often exhibit greater resourcefulness and community-driven reuse initiatives due to the practical challenges of transporting waste. This highlights the potential of fostering a similar sense of responsibility and localized solutions in urban environments.

7) What role can Metro Vancouver play in planning for future infrastructure and systems for waste management across the region?

- **Conducting comprehensive needs assessments:** Undertaking thorough needs assessments to project future waste generation and diversion needs, considering population growth, economic development, and evolving waste composition.

- **Developing long-term infrastructure plans:** Creating long-term infrastructure plans that outline the required facilities, technologies, and investments to support sustainable waste management and resource recovery goals.

- **Exploring innovative waste management technologies:** Investigating and piloting new and emerging waste management technologies, such as advanced sorting systems, anaerobic digestion, and waste-to-energy, to assess their potential for the region.

- **Collaborating on regional waste management strategies:** Working collaboratively with neighbouring municipalities and regional districts to develop integrated waste management strategies that address shared challenges and optimize resource sharing.

- **Securing funding for future infrastructure:** Actively pursuing funding opportunities from provincial and federal governments, private sector partners, and other sources to support the development of critical waste management infrastructure.

ADDITIONAL DISCUSSION

First Nations

Prevalent in the focus group discussions was the role that First Nations communities and businesses can play in Metro Vancouver's solid waste management plan. Whether from inside

Metro Vancouver or experts in waste management systems from across the province, the participant's discussion led to the following ideas to consider:

- **Meaningful consultation and partnership:** Ensuring meaningful consultation and engagement with First Nations communities throughout the planning and implementation phases of the solid waste management plan.

- **Recognizing traditional ecological knowledge:** Incorporating traditional ecological knowledge and practices of First Nations communities into waste reduction strategies and resource management initiatives.

- **Supporting First Nations-led initiatives:** Providing financial and technical support to First Nations communities to develop and implement their own waste management programs and infrastructure projects.

- **Prioritizing procurement from First Nations businesses:** Actively seeking out and prioritizing procurement of goods and services from First Nations-owned businesses in the waste management sector.

- **Fostering capacity building and economic opportunities:** Collaborating with First Nations communities to create training and employment opportunities in the waste management and resource recovery sectors.

Producer Responsibility

Also discussed in detail in both groups was the role producer responsibility organizations (PROs) play in waste prevention and how Metro Vancouver could continue to lead by encouraging:

- **Product Design and Extended Producer Responsibility (EPR**): Encouraging current producers to design products with recyclability and end-of-life management in mind and expanding EPR programs to cover a wider range of products.

- **Collaboration with Municipalities**: Encouraging producers to partner with municipalities to raise awareness about recycling programs, provide convenient collection options, and support more repair and reuse initiatives. Metro Vancouver leading this type of collaboration would be a great benefit for the entire industry.

INDIVIDUAL IDEAS TO CONSIDER

A few stand-alone ideas emerged in the discussions and from the survey's open-ended question responses that are worth highlighting:

- Recognizing the interconnectedness of solid and liquid waste streams, particularly in the context of food waste, allows for a more holistic and efficient approach to resource recovery. Integrating strategies from both areas can potentially minimize environmental impacts.
- Prohibit soil disposal in landfills and promote soil recycling/regeneration within the region.
- Increase soft plastics recycling/collection.
- Focus less on residents and more on other sectors where the largest gains in diversion could be made, e.g. wood waste; industrial, commercial and institutional (ICI); and demolition, land-clearing and construction (DLC).
- Best practices: doing more studies on waste reduction would be great to see and a good resource to be shared with other Municipalities and Regional Districts.
- Metro Vancouver must continue to lead so that others will follow.

APPENDICES

[redacted]
Focus Group November 14, 2024 | 10:00 - 11:30 AM PST [redacted]
Focus Group November 19, 2024 | 12:00 - 1:30 PM PST [redacted]
October 30, 2024 Focus Group Invitation/Reminder – [redacted]
October 31, 2024 Focus Group Invitation – [redacted]
December 2, 2024 – [redacted]

Thanks to Metro Vancouver for the opportunity to collaborate and support this important work.

Post-Engagement Report

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall.

Engagement Activity Summary

Activity:	
Activity Date	November 13 & 20, 2024
Organization/group name	Templeton Secondary School Environment Club
Time/Duration	35 minutes + 35 minutes (2 workshops in total)
Location	Templeton Secondary
Format	Workshop
# of Participants	20
Summary of Promotions *(optional)*	

Participant feedback/Input

Meeting Notes

Include any notes from the engagement activities. These are "what was said" notes and should be as close to verbatim as possible. Use one bullet point per speaker (i.e., start a new bullet when a new person starts speaking.)

Topic/Question Addressed	*What was said*

Q1 What do you see as the primary challenges or barriers that you face in try to dispose of and/or recycle waste?
 	
For every barrier listed, try to think of an alternative or something that would make it easier for you to address that problem.
	• Recycling flexible plastics
	  ○ Have to drive, bike, etc. to recycle them
	  ○ Travelling far to recycle creates more CO_2
	• Plastic lining on cans, cups, etc. -> mixed materials
	• Bubble tea cups have mixed materials (compost straw, plastic body, paper)
	• Culture of laziness – if everyone else isn't doing it, then why should I
	• STEM class at school did a waste audit and found compost bin was OK but the garbage bin had all sorts of materials mixed in it

	• More signs would be helpful, even if some people don't read them. And if they don't read, tell them • Symbols/labels on wrappers – not clear on where things go. Need more labels • Climate change is daunting issue; but recently learned that only 3.5% of people need to actively make change to solve this, so need to share that people CAN make a difference o Root of it: Why do people not care? They think that it won't make a difference
Q2 What types of information would be most helpful for you in furthering your understanding of reducing and recycling waste properly? Do you have any questions about this topic that Metro Vancouver may be able to answer for you?	• What's "in it" for them? (especially for teens) o Why bother if we don't get anything out of it? • Idea: Teenagers like music so maybe provide concert tickets or something as a prize • Recycling deposits – so little money, not enough incentive • Their club is implementing Halloween wrappers recycling, and everyone who participates enters into a draw for a Tim Hortons gift card • Initiatives like this starts routine for people, build habits • Question: Where does recycling end up, after you throw it in the bin? • Why does it matter, if everything all ends in one place?
Q3 What are some ways to engage with Metro Vancouver residents, especially high school students, on the issue of waste reduction and recycling?	• People from the City come into schools, or do a school event with fun activities AND information sharing • Concerned about elderly folks collecting cans, want to do something to support these people. They often get shamed o *The Binners' Project was introduced as a possible resource for the students to look into* • Show consequences E.g. when students watched a documentary on meat, people cut down on their meat consumption • Use art to show what could happen in 20 years and consequences/impacts but also

	the opposite, of what things CAN look like. Both perspectives important because what motivates one might not motivate another person
	• Social media can be impersonal; more likely to do something about it if learn in-person
	• For high schools without environment clubs, it's hard to start one. Should be more opportunities to give projects/ building blocks to those schools to start
	  o Advertise opportunities for clubs to join together and network
	• Biggest road block is accessibility and knowledge
	  o Can use social media, influencers
	• Teach what's compost, what's recyclable

Questionnaire Results

If you have conducted a questionnaire, please include a summary of the results here.

N/A

Efforts to Reduce Barriers to Participation (Optional)

Description of efforts made to reduce barriers to participation for underrepresented or equity-denied populations (if applicable).

The workshops were held during school hours at the environment club's weekly meetings, so that youth were able to participate easily without any barriers.

Using the toolkit provided by MV, I tailored some of the questions for the students to make it more relevant and engaging for youth, as opposed to a general adult audience. The warm-up question was changed to a brainstorming and discussion activity, where youth were asked to think back to a time when they had to dispose of something but didn't know where or how. The purpose of this exercise is to help youth understand how the solid waste management plan impacts their daily lives, the barriers that they/their families face in reducing contamination, and to prompt them to start thinking of possible solutions.

Participants Feedback (engagement evaluation)

Summary of written feedback from participants on how the engagement activity went (attach evaluation feedback as appendix)

Attached is the evaluation feedback from the teacher who hosted this workshop. It was not possible to get written evaluation feedback from each student. Overall, the teacher found the workshops engaging and effective. She preferred the second workshop, which was conducted in-person as it was more engaging. A

piece of constructive feedback was that providing food/snacks to students during the workshop would have made them more comfortable and may prompt more discussion. The teacher would like the results of these workshops and engagement to be shared back with the students in the future so that they could see how their input made a tangible difference.	
Narrative Summary (Your brief reflections on the engagement)	
Goals and objectives	*Outline the initial goals and objectives of the engagement activity.* The goals were: • To get youth input and ideas on how to increase participation and reduce contamination in recycling and organics programs • To engage high school students on the topic of waste and help them feel empowered to have a say in their community • To assist Metro Vancouver in reaching youth, a key demographic that is traditionally overlooked in sustainability planning and initiatives

Results achieved	*Summary of results, key outcomes, and how they align with the initial goals.*
	Overall notes on the workshop:
	• The focus area chosen for the students was on increasing participation and reducing contamination in organics and recycling programs.
	• The workshop was split over two days (approx. 35 minutes each) because there was not enough time to cover all the background information while also allowing for in-depth discussions in one lunch period. The first workshop was conducted on Microsoft Teams because of a lack of resources for me to attend in person, and I gave a general presentation on the SWMP update and Metro Vancouver. The second workshop was done in person with the Metro Vancouver film crew and was focused on getting the youth to share their thoughts on the three discussion questions.
	• The Metro Vancouver backgrounder and informational handout was sent out to all students beforehand.
	• On average, students rated their knowledge of Metro Vancouver before the workshop as **3.5**, on a scale of 1 (*never heard of MV before*) to 5 (*I know about everything that MV does)*. This particular group's knowledge is higher than the average high school student's because the teacher sponsor teaches jurisdictions to her students every year.
	• At the end of the workshop, several resources were shared with students, including:
	  ○ VanCollect website & app
	  ○ Vancouver Zero Waste Centre
	  ○ SPEC Repair Cafés

	- zerowaste@metrovancouver.org for additional comments, feedback, questions - Metro Van SWMP Update website - If there was more time, it would have been interesting to get student input into other focus areas, such as how to reduce and prevent waste in the first place, as this group seemed to have a lot to say about waste. The club is already active in leading waste reduction and recycling projects at their school, such as participating in VSB and Recycle BC's Flexible Plastics School Collection Program and organizing a clothing swap. I observed that these students obviously knew and cared a lot about the issue of waste. But even within this highly engaged group, they had identified some barriers to sorting their waste properly, namely with flexible plastics and items composed of mixed materials. The rest of the discussion was mainly focused on how to reach other youth who may not be as passionate or aware of the issues, and ways to incentivize and mobilize them. They believe that more signs and labels are needed to educate people on how to sort their waste. There is a lack of education on why this all even matters, and the possible scenarios from reducing waste or *not* reducing waste should be clearly communicated to people in order to encourage them to adopt habits. The students also mentioned that while online spaces like social media are important to raise awareness, they would like to see more in-person activities, engagement, and support through events and school environment clubs. The club was somewhat familiar with Recycle BC already because of their participation in the Flexible Plastics School Collection Program, but they weren't sure about how Recycle BC fits in with the work that Metro Vancouver is doing on the SWMP. Metro Vancouver should consider tapping into and collaborating on the work that Recycle BC and the Vancouver School Board are already doing in schools on waste, in order to further engage this underrepresented demographic (if you aren't already doing so).
Challenges and issues addressed	*Description of any challenges faced, and significant issues addressed during the engagement.* The teacher noted that the group is normally even more active in discussion but may have felt a little shy about speaking up with the camera and microphone present. As an external facilitator, I felt that the discussion went very well and plenty of ideas were shared, but perhaps there were a few individuals who were not as outspoken as others and the camera may have been a factor.
General feedback	*Overview of general feedback received from participants about the engagement activity itself. (Very brief)* The students expressed their appreciation for the workshop activities and the opportunity to provide input to Metro Vancouver. This group has a lot of

	interest in learning more about what their feedback will be used for moving forward, as well as hearing about how the next phase of engagement goes.

Appendix

Flexible plastics collection at Templeton Secondary School, led by the Environment Club.

Below is the evaluation form from the teacher sponsor of the environment club.

Post-Engagement Report

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall.

Engagement Activity Summary

Activity:	
Activity Date	November 12, 2024
Organization/group name	Semiahmoo Secondary – Two Life Sciences 11 classes
Time/Duration	1 hour (per class)
Location	Semiahmoo Secondary
Format	Workshop
# of Participants	29 + 30 = 59 students
Summary of Promotions *(optional)*	

Participant feedback/Input	
Meeting Notes	
Include any notes from the engagement activities. These are "what was said" notes and should be as close to verbatim as possible. Use one bullet point per speaker (i.e., start a new bullet when a new person starts speaking.) **Note:** The classes were too big for a discussion with the whole group, so students were put into small discussion groups of 4-5 of their peers and they took their own notes on sticky notes as they went through the three discussion questions. The "What was said" notes below are summarized from the overall themes and repeated points emerging from the collected sticky notes, as well as what I heard from walking around the classroom during the discussions. For fully transcribed, verbatim notes from students, please see the appendix.	
Topic/Question Addressed	***What was said***
Q1 What do you see as the primary challenges or barriers that you face in try to dispose of and/or recycle waste? For every barrier listed, try to think of an alternative or something that would make it easier for you to address that problem.	Barrier 1: Laziness / Convenience • Too much effort needed to take the extra step to recycle, especially when there are already limited bins to sort the waste into • Difficult and inconvenient to recycle waste that is not collected by the household recycling/composting bins

	• Single-use options are just more convenient to use in some cases Barrier 2: Lack of Knowledge • Don't know what to do with mixed materials (e.g. when plastics and paper are used together in a product) • Don't know what to do with waste that could potentially go into multiple bins (e.g. paper straws, take out containers, pizza boxes) • Confusing when different locations have inconsistent/different bins (e.g. school vs home) • Packaging and containers don't have enough labelling or instructions on how to dispose; need more clear labelling • Would like to know where a product came from, what it's made of • Lack of information on where to recycle other items that are not as common; would like to learn what websites can be used/trusted to find out this information • Older generations also don't know, need to reach them via newspaper, billboards Barrier 3: Lack of Infrastructure • Compostable bags are not accepted in residential bins • Residential waste limited in the types of materials accepted • Some places have bins with different slots for recycling but everything ends up in the same trash bag • Some places don't have enough bins or they're overflowing • Build more stations/depots to get refunds on recyclable bottles • Better labelled bins • Install more recycling/composting bins in public spaces • One student said she used to live in Vancouver and when she moved to Surrey it was confusing as the different municipalities had different sorting systems
Q2 What types of information would be most helpful for you in furthering your understanding of reducing and recycling waste properly?	Labels • More labels on everything that say where they can be thrown away

Do you have any questions about this topic that Metro Vancouver may be able to answer for you?	• More labels or posters with details posted above garbage, compost, recycling bins that include a fuller suite of items that can be disposed of in them • Labels can include more info like photos and words to make it more accessible and easier to understand Online Solutions • Official source online such as websites or apps with information o They may exist already but students are unaware of them • Create an app that helps identify waste • QR codes in public places that link to a website with understandable language • Use social media to share information General Information Sharing • Clearer guidelines on what can and cannot be recycled in my area • More education about the types of waste to be sorted • Clear alternative methods of disposal for waste that's not acceptable in residential collection, show exactly where it can be recycled instead • Locations of all recycling facilities for electronics, clothing, mixed material items • Where does all our waste go after it's collected? o Both positive and negative statistics are of interest • Advantages and incentives for recycling and reducing waste • Information on why it's important to separate waste properly, importance for our region and services • Informational posters • TV ads • Flyers in the mail • More workshops, hands-on learning opportunities • Field trips for high school students • Comic / art pieces showing what's done with the waste/where it goes in public areas (bus stops, billboards) Questions

	• Does MV have any incentives for reducing household waste?
	• Are there any plans to expand composting options for materials like Styrofoam or other materials that are harder to process?
	• How do you dispose of:
	  o Clothes
	  o Wooden cutlery
	  o Tiny pieces of paper
	  o Metal
	  o Broken glass/porcelain objects if wrapping them with plastic would make it different materials
	• Do you take staples out of booklets?
	• Is there an easy-to-follow guide to what goes where, is there a website?
	• If people are throwing away furniture, who should we call or where can we throw it?

Q3 What are some ways to engage with Metro Vancouver residents, especially high school students, on the issue of waste reduction and recycling?	In schools • More awareness through presentations to classes from teachers • External guest speakers and workshops to talk to students • More in-classroom discussions • Creating scholarships related to waste • Incorporate waste education into curriculum and course coverage (have mandatory units in a course and field trips) • Hands-on learning • Offer prizes and reward system in school • Require volunteer hours for students • Waste sorting competitions • Make sorting and recycling fun and engaging for younger kids so that they are more educated and care more as they grow up Social media • Instagram page, stories, reels • TikTok trends, videos • YouTube videos • Informative posts but also make interesting, eye-catching videos; funny videos with catchy phrases; short but engaging content • Giveaways on social media Other comments

	• Create a BC-specific website that provides searchable information on how to sort waste in every city • Online lists of what kinds of things are accepted in blue, black, and green bins • Create a recycling app that shows what items are recyclable, their drop-off locations, tips for reducing waste • Make information relatable to the everyday citizen • Hands-on activities in the community • More encouragement for citizens, share the consequences of inaction and how important it is • Spread awareness through posters, news, advertisements • More presence at community events where people already gather (e.g. a booth on waste at the Christmas market)

Questionnaire Results

If you have conducted a questionnaire, please include a summary of the results here.

N/A

Efforts to Reduce Barriers to Participation (Optional)

Description of efforts made to reduce barriers to participation for underrepresented or equity-denied populations (if applicable).

The workshop was held during school hours during the Life Sciences 11 classes, so that youth were able to participate easily.

Using the toolkit provided by MV, I tailored some of the questions for the students to make it more relevant and engaging for youth, as opposed to a general or adult audience. The warm-up question was changed to a brainstorming and discussion activity, where youth were asked to think back to a time when they had to dispose of something but didn't know where or how. The purpose of this exercise is to help youth understand how the solid waste management plan impacts their daily lives, the barriers that they/their families face in reducing contamination, and to prompt them to start thinking of possible solutions.

Participants Feedback (engagement evaluation)

Summary of written feedback from participants on how the engagement activity went (attach evaluation feedback as appendix)

Attached is the evaluation feedback from one of the teachers of the Life Science 11 classes. It was not possible to get written evaluation feedback from each student.	
Narrative Summary (Your brief reflections on the engagement)	
Goals and objectives	*Outline the initial goals and objectives of the engagement activity.* The goals were: • To get youth input and ideas on how to increase participation and reduce contamination in recycling and organics programs • To engage high school students on the important topic of waste and help them feel empowered to have a say in their community • To assist Metro Vancouver in reaching youth, a key demographic that is traditionally overlooked in sustainability planning and initiatives
Results achieved	*Summary of results, key outcomes, and how they align with the initial goals.* General notes on the workshop: • The focus area chosen for the students was "increasing participation and reducing contamination in organics and recycling programs." • This report combines the results of two different Life Sciences 11 classes at Semiahmoo Secondary. • The classes were polled informally with a show of hands on their knowledge of Metro Vancouver at the beginning of the workshop. On average, students rated their knowledge as 2, on a scale of 1 (*never heard of MV before*) to 5 (*I know about everything that MV does).* • At the end of the workshop, several resources were shared with students, including: o Surrey Rethink Waste website & app o Central Surrey Recycling and Waste Centre o Surrey Repair Cafés o Metro Vancouver Youth and Education Advisory Panel opportunity o zerowaste@metrovancouver.org for additional comments, feedback, questions o Metro Van SWMP Update website Overall, I heard from students that a major barrier to recycling and composting waste properly comes from a culture of laziness that is due to a lack of knowledge on waste and also due to the inconvenience of our waste systems and infrastructure. Common barriers mentioned by students included not knowing how to recycle common items that aren't accepted in residential waste collection and in school bins, as well as missing information on the products/labels about how to dispose at the end of life.

	Students preferred finding their information through online sources like websites, apps, and social media, and would like to learn more about what can be recycled and where, why it's important to recycle, and what is done to the material after it's collected. Generally, they would like to see more awareness campaigns on TV, posters, and in ads too. Students agreed that it was important to engage youth on this topic and to educate their peers, both online on social media but also in person at the schools. They would like to see a more active push for waste education in schools through activities such as mandatory coursework, field trips, presentations from external speakers working on waste, and potential incentives like scholarships, prizes, and volunteer hours for graduation. Through this workshop, students were able to increase their awareness of Metro Vancouver and its role in managing waste in the region.
Challenges and issues addressed	*Description of any challenges faced, and significant issues addressed during the engagement.* The level of engagement was high for both classes, and most students were engaged and ready to discuss the topic. However, there were a handful of students from each class who were noticeably less engaged, but in the end all students were able to participate however they wished, and everyone submitted sticky notes. It is still important to get the input of "indifferent" youth and hear about the barriers and challenges that they face in sorting waste. Small prizes of reusable bags and utensils were given out at the end of class as an incentive to stay engaged through the workshop. The size of the classes made it difficult for me as a facilitator to hear every conversation that happened, but the sticky notes were helpful to collect students' ideas and concerns. The sticky notes also allowed everyone to participate, as some students may not feel comfortable in a focus group setting where they may have to speak up in front of all their peers.
General feedback	*Overview of general feedback received from participants about the engagement activity itself. (Very brief)* Verbal feedback from the students and teachers at the end of the workshop indicated that they enjoyed the workshop. Through the notes collected on Discussion Question #3, it seems like there is appetite from students on hearing more from Metro Vancouver directly about waste reduction and recycling.

Appendix

Appendix 1: Evaluation form from one of the Life Sciences 11 teachers whose class I spoke to

Appendix 2: Transcribed sticky note comments generated from the group discussions from all students in both classes

Post-Engagement Report

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall.

Engagement Activity Summary

Activity:	
Activity Date	November 12, 2024
Organization/group name	Semiahmoo Secondary – "Earthworks" Environment Club
Time/Duration	35 minutes
Location	Semiahmoo Secondary
Format	Workshop
# of Participants	15
Summary of Promotions *(optional)*	

Participant feedback/Input	
Meeting Notes	
Include any notes from the engagement activities. These are "what was said" notes and should be as close to verbatim as possible. Use one bullet point per speaker (i.e., start a new bullet when a new person starts speaking.)	
Topic/Question Addressed	***What was said***
Q1 What do you see as the primary challenges or barriers that you face in trying to dispose of and/or recycle waste? For every barrier listed, try to think of an alternative or something that would make it easier for you to address that problem.	• Figuring out which bin to go in, end up throwing out in garbage (Solution: More education) • Not enough garbage bins, e.g. in parks • Inconvenience – Have to drive out to London Drugs etc. vs can easily trash it at home. Especially when you have just one item • Clothing – my family usually passes down clothes but it doesn't work for all families • Deciding what goes where. Surrey is strict; they notify you if you don't sort properly and won't pick up your trash again, so end up throwing it in the trash

Q2 What types of information would be most helpful for you in furthering your understanding of reducing and recycling waste properly? Do you have any questions about this topic that Metro Vancouver may be able to answer for you?	• Social media – we use it a lot more • Signs above bins, outside of school • An app that scans objects, tells you where to put waste • Would be nice if Metro Vancouver website had search engine for where to throw away items

Q3 What are some ways to engage with Metro Vancouver residents, especially high school students, on the issue of waste reduction and recycling?	• Door to door flyers (even though many times they're ignored)
	• Access to a direct source who can speak to these things and students can ask questions
	• Presentations at school, done for all classes to spread the word. Since students are "forced" to be here
	• Garbage sorting duty, rotated through the classes at school
	• More high school workshops. Add on activities to make it fun
	• Elementary school students are impressionable, start there
	  ○ *Note: I followed up to ask students for their memories and impressions of learning about waste in elementary school and this is what they said:*
	  ▪ "We used to have to take trash home and were not allowed to throw out anything at school"
	  ▪ "We didn't talk a lot about how to sort or reduce waste in elementary school"
	  ▪ Remember having a box just for recycling sharpies; There was only one teacher who was the champion for reducing waste at school. Need more educators to champion for these things.

Questionnaire Results	
If you have conducted a questionnaire, please include a summary of the results here. N/A	
Efforts to Reduce Barriers to Participation (Optional)	

Description of efforts made to reduce barriers to participation for underrepresented or equity-denied populations (if applicable).

The workshop was held during school hours at the environment club's weekly meeting, so that youth were able to participate easily without any barriers.

Using the toolkit provided by MV, I tailored some of the questions for the students to make it more relevant and engaging for youth, as opposed to a general adult audience. The warm-up question was changed to a brainstorming and discussion activity, where youth were asked to think back to a time when they had to dispose of something but didn't know where or how. The purpose of this exercise is to help youth understand how the solid waste management plan impacts their daily lives, the barriers that they/their families face in reducing contamination, and to prompt them to start thinking of possible solutions.

Participants Feedback (engagement evaluation)

Summary of written feedback from participants on how the engagement activity went (attach evaluation feedback as appendix)

Attached is the evaluation feedback from the teacher who hosted this workshop. It was not possible to get written evaluation feedback from each student. Overall, the teacher found the workshop worthwhile and engaging. The teacher would have preferred to have more information and concrete examples of what students can do to get involved in the issue of waste during the presentation. If Metro Vancouver plans on hosting future engagement with students, clear call-to-actions specific to the youth audience could be added to the toolkit and/or presentation.

Narrative Summary (Your brief reflections on the engagement)

Goals and objectives	*Outline the initial goals and objectives of the engagement activity.* The goals were: • To get youth input and ideas on how to increase participation and reduce contamination in recycling and organics programs • To engage high school students on the topic of waste and help them feel empowered to have a say in their community • To assist Metro Vancouver in reaching youth, a key demographic that is traditionally overlooked in sustainability planning and initiatives
Results achieved	*Summary of results, key outcomes, and how they align with the initial goals.* Overall facilitator notes on the workshop: • The SWMP focus area chosen for the students was "increasing participation and reducing contamination in organics and recycling programs". • The Metro Vancouver backgrounder and informational handout was sent out to all students beforehand.

	• The club was polled informally with a show of hands on their knowledge of Metro Vancouver at the beginning of the workshop. On average, students rated their knowledge as 2.5, on a scale of 1 (*never heard of MV before*) to 5 (*I know about everything that MV does)*. • Students in the environment club are likely to be more keenly interested in the topic and have more specific feedback compared to the general youth population. • If there were more time/resources, it would have been interesting to get student input into other focus areas, such as how to reduce and prevent waste in the first place, as this group seemed to have a lot to say about the topic of waste. • At the end of the workshop, several resources were shared with students, including: o Surrey Rethink Waste website & app o Central Surrey Recycling and Waste Centre o Surrey Repair Cafés o Metro Vancouver Youth and Education Advisory Panel opportunity o zerowaste@metrovancouver.org for additional comments, feedback, questions o Metro Van SWMP Update website Overall, I heard from students that while they are aware of how to recycle and compost most items properly, they felt that there was a lack of knowledge and infrastructure on recycling more "complicated" items such as soft plastics, Styrofoam, clothing, and mixed materials. Students mentioned a lack of recycling bins in spaces that they frequent, such as parks. They would like to know where to find a reliable source of information if they run into questions of where to dispose of something. Students emphasized the importance of using the school system to reach their peers with information about waste, and mentioned that they enjoy in-person workshops and activities that are engaging and fun, and prefer to hear directly from someone working on these issues so that they can ask questions. Through this workshop, students were able to increase their awareness of Metro Vancouver and its role in managing waste in the region.
Challenges and issues addressed	*Description of any challenges faced, and significant issues addressed during the engagement.* No major challenges came up during the engagement. The only challenge was with timing, as 35 minutes was limited and the discussion could have been longer. However, sufficient feedback was received from the students.
General feedback	*Overview of general feedback received from participants about the engagement activity itself. (Very brief)*

	Verbal feedback from the teacher and students at the end of the workshop indicated that they enjoyed the workshop and that they were glad that Metro Vancouver was engaging students on this important issue.

Appendix

Below is the evaluation form from the teacher sponsor of the environment club.

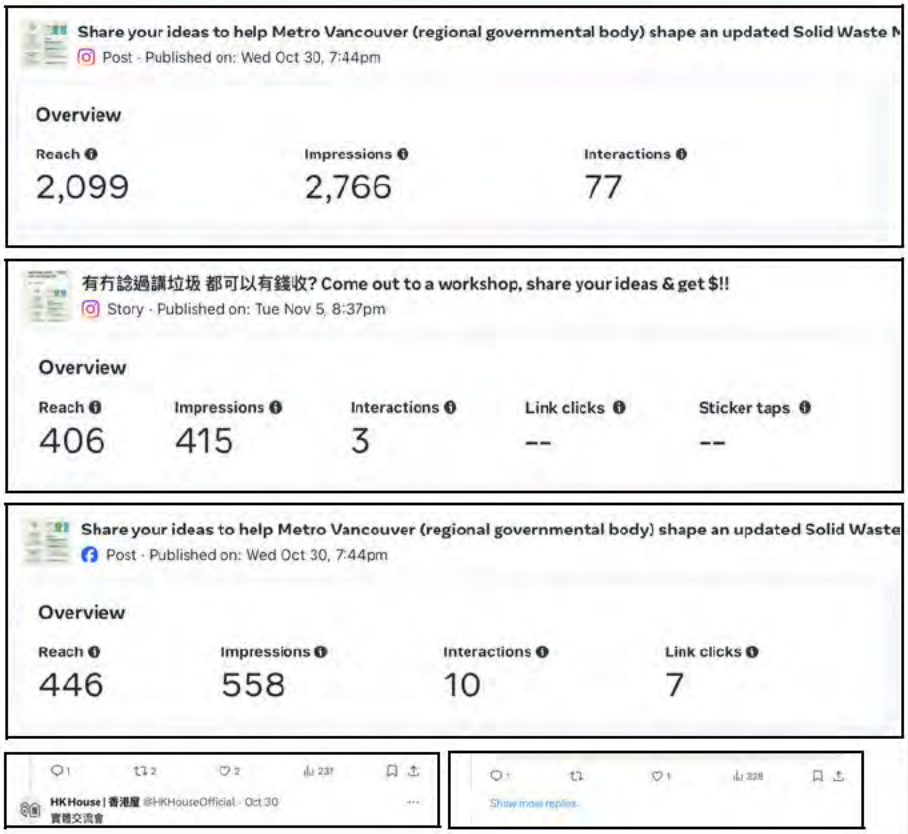
Engagement Activity Summary

Activity:	
Activity Date	Virtual session: November 14, 2024 In-person session: November 17, 2024
Organization/group name	Hong Kong House Cultural Society, operating as HK House
Time/Duration	Virtual session: ● November 14, 2024 | 8:00 - 9:30PM (1.5hr) In-person session: ● November 17, 2024 | 2:00 - 3:30PM (1.5hr)
Location	Virtual session: ● Online on Google Meet In-person session: ● In-person at Tommy Douglas Burnaby Public Library, Community Room 1
Format	Virtual session: ● A workshop with large group discussions, breakout groups, interactive google documents In-person session: ● A workshop with large group discussions, world cafe small groups, interactive post-its and large papers, and an online google doc For both groups, we sent a survey to ask which topics they'd be interested in discussing, and we selected topics that had the highest interest. We also sent the translated backgrounders and information sheets to participants beforehand.
# of Participants	Virtual session: ● Registered: 22 ● Attended: 17 In-person session: ● Registered: 25 ● Attended: 19
Summary of Promotions *(optional)*	We posted on: ● Social media - Instagram, Instagram stories, Facebook, Twitter ● Once in our community telegram group ● Once in our community email All these efforts reached a total of over 3600+ people.



Participant feedback/Input

Virtual Session Meeting Notes

Topic of Focus: Promote confidence in recycling systems

"What was said notes" is a huge 33-page document and can be found linked in the Appendix as the [redacted].

- What each person said or contributed was documented as a separate bullet point.
- It is near impossible to translate line-by-line, hence we have offered a summary of the responses below the bulleted text in both languages.
- The summary is listed below.

Topic/Question Addressed	*What was said*

Warm up: **What are the main actions you already take to eliminate waste?**	**Summary of discussion:**
	
	What are the main actions you already take to eliminate waste?
	• Shopping and Food Choices:
	  ○ Reduce shopping and avoid over-purchasing food or items with excessive packaging.
	  ○ Use thrift stores, Facebook Marketplace, and community swap groups to give and obtain secondhand items.

	○ Purchase refillable products and eco-friendly packaging options. ○ Utilize food-saving apps like "Too Good To Go." ● Reusable Items: ○ Bring shopping bags, eco-friendly lunch boxes, utensils, and cups. ○ Use personal containers for takeout. ● Recycling and Upcycling: ○ Sort and recycle paper, plastics, and soft materials properly. ○ Upcycle old clothing and DIY items like pet toys. ○ Reuse water (e.g., washing rice/vegetables) for watering plants. ● Donations and Libraries: ○ Donate items to thrift stores. ○ Borrow books or video games from libraries or buy eBooks instead of physical copies. ● Community Efforts: ○ Participate in local "free item" exchange platforms and initiatives where neighbors share usable items. ● Other Notes: ○ Recycling soft plastics and foam is easier at London Drugs compared to depots.
Today's Topic of Focus: Promote confidence in recycling systems **Question:** **As Metro Vancouver updates the plan, what ideas and actions can build on their success to promote confidence in recycling systems?**	**Summary of discussion:** Increase Transparency and Accountability: ● Ensure recyclables (especially plastics) are truly recycled and not exported to developing regions, avoiding pollution transfer. ● Share detailed metrics about recycling processes, including depot input and export data, through public dashboards and real-time updates. ● Provide a "waste journey map" to show the flow of recyclables, their destinations, and processing facilities, enabling accountability. Educational and Awareness Initiatives: ● Create videos and social media content explaining the recycling process and environmental impact of proper waste management. ● Establish public-friendly display points at recycling facilities (e.g., like WEEE Park in Hong Kong) to showcase operations. ● Organize events or tours of recycling centres for citizens, schools, and volunteers to raise awareness and trust. Highlight Success Stories: ● Showcase products made from recycled materials, including their origins and processes (e.g., Taiwan's model for recycled textiles). ● Increase exposure of recycling facilities that produce new products from waste to demonstrate tangible benefits.

	Strengthen Oversight: ● Form citizen watchdog groups to monitor recycling processes and improve public confidence. ● Regularly update citizens with feedback mechanisms and educational visualizations to maintain transparency. Engage Stakeholders and Corporates: ● Partner with retailers to create and showcase sustainable initiatives using recycled materials. ● Utilize corporate collaboration to drive accountability and innovation in recycling practices.
Identifying Barriers and Key Challenges **Question:** **What do you see as the primary challenges or barriers we face in promoting confidence in recycling systems? What could Metro Vancouver do to address these challenges?**	**Summary of discussion:** Primary Challenges and Barriers: ● Governmental Coordination and Bureaucracy: ○ Poor collaboration between municipal, provincial, and federal levels decreases system efficiency. ● Limited Accessibility and Infrastructure: ○ Inadequate infrastructure for waste management, including a lack of recycling depots and composting centers. ○ Recycling depots are often inaccessible and require long travel distances. ● Public Awareness and Education: ○ Confusion about waste sorting, such as compostable bags and solid waste categories. ○ Inconsistent recycling practices across cities and supermarkets create additional challenges. ○ Newcomers and diverse populations struggle with waste disposal systems due to lack of multilingual education materials. ○ Civic education is insufficient and does not reach communities effectively. ● Enforcement and Compliance: ○ Lack of enforcement measures like CCTV to ensure proper recycling behaviors. ○ Honor systems are less effective in diverse communities without clear consequences. ● Transparency and Communication: ○ Lack of accessible information about recycling processes and the journey of waste. ○ Minimal coverage of recycling-related news and updates on social media, leaving residents uninformed. ● Lack of Incentives: ○ Recycling systems are not engaging or rewarding enough to encourage participation. ● Specialized Waste Management Issues:

	○ Difficulties in disposing of electronics, appliances, and beauty packaging. ○ Residents often find it easier to discard such items into garbage due to depot inconvenience. ● Environmental Risks: ○ Illegal dumping of waste in unauthorized areas, causing pollution and public health risks. Proposed Solutions: ● Enhance Coordination and Infrastructure: ○ Streamline collaboration between government levels to ensure policy alignment. ○ Increase the number and accessibility of recycling depots, especially in high-traffic areas. ● Expand Education and Awareness Campaigns: ○ Develop multilingual guides and visuals tailored to diverse communities, including newcomers. ○ Implement workshops and civic education for both adults and students. ○ Use gamification apps to incentivize recycling by offering points and redeemable rewards. ● Ensure Consistency and Transparency: ○ Align recycling practices across all Metro Vancouver cities and supermarkets. ○ Create a public dashboard to provide real-time updates on recycling processes and achievements. ● Introduce Enforcement Measures: ○ Use CCTV or other enforcement tools to deter non-compliance. ○ Introduce waste diversion KPIs for local councillors to drive motivation and accountability. ● Promote Accessibility for Special Waste: ○ Simplify disposal processes for electronics and appliances by enhancing depot sorting systems. ○ Offer mobile recycling units for hard-to-reach communities. ● Highlight Recycling Benefits and Best Practices: ○ Recognize businesses with sustainable practices using a rating system (e.g., badges). ○ Promote examples of products made from recycled materials to show tangible benefits. ● Reduce Illegal Dumping: ○ Increase monitoring and penalties for illegal dumping while promoting accessible disposal options.
Collaboration Opportunities	**Summary of discussion:** Collaboration Opportunities: ● Community-Based Incentives and Recognition:

Question: **In what ways could Metro Vancouver collaborate with others to more effectively promote confidence in recycling systems?**	○ Establish recognition programs for neighborhoods or households demonstrating commitment to waste reduction through friendly competitions. ○ Develop a zero-waste business certification program to acknowledge businesses minimizing waste, offering promotional support through Metro Vancouver channels. ○ Collaborate with residential complexes to create incentive programs that improve recycling accessibility and participation. ● Integration into Daily Lives: ○ Partner with transit systems (e.g., SkyTrain) to integrate recycling practices into public spaces for convenience. ○ Promote and improve accessibility to recycling apps like "VanCollect" to help residents sort and locate proper recycling bins easily. ● Collaborate with Local Businesses: ○ Work with local recycling companies to build trust and improve recycling accessibility. ○ Encourage supermarkets to revive collection points for recyclables, similar to pre-COVID practices. ○ Partner with green businesses to handle heavy recyclables, such as furniture, or promote reusable packaging like plastic boxes for pastries instead of mixed materials. ● Industrial Symbiosis Initiatives: ○ Facilitate collaborations between industries to reuse by-products and waste materials as resources, reducing costs and environmental impact. ○ Promote eco-industrial parks and government policies that support resource sharing and sustainable practices. ● Collaborations with Educational Institutions: ○ Work with universities (e.g., UBC, SFU) and schools to incorporate waste management education. ○ Organize visits to recycling centres and landfills to help students and the public understand the recycling process and benefits. ● Event and Festival Partnerships: ○ Collaborate with festivals and events to provide reusable utensils for rent and return. ○ Encourage restaurants and events to reduce waste by adopting similar practices. ● Cultural and Creative Initiatives: ○ Partner with artists to create innovative and creative products from recycled materials, making recycling more fun and engaging. ● Public-Private Collaboration for Packaging Solutions:

	○ Work with supermarkets, stores, and producers to minimize and standardize packaging, making it easier for citizens to recycle. ○ Promote the use of recyclable materials for packaging, such as plastic over styrofoam for meat and paper over plastic for bakery items. ● Support for Newcomers: ○ Collaborate with immigration departments and newcomer organizations to host events and workshops on recycling systems tailored to diverse communities.
Wins **Question: Let's flip the script: thinking of the current system, what is working well and should not be changed when thinking of promoting confidence in recycling systems?**	**Summary of discussion:** Current System Successes: ● Accessible Recycling Facilities in Residential Areas: ○ Condos and apartments generally provide adequate recycling facilities with sufficient categories. ● Monitoring and Enforcement: ○ Some condos have monitoring systems and fines for improper sorting. These measures encourage proper recycling practices and foster trust in the system. ● Financial Incentives for Beverage Containers: ○ Deposit return programs for drink containers effectively motivate people to recycle, even when the containers do not belong to them. ● Clear Labelling on Recycling Bins: ○ Compared to other regions (e.g., the U.S.), bins in Metro Vancouver have clear labels, bullet points, and images to help residents sort waste correctly.
Knowledge Gaps and Communications **Questions:** **What types of information would be most helpful for you in furthering your understanding of [promote confidence in recycling systems]? Meaning — do you have any questions about this topic that Metro Vancouver may be able to answer for you?** **What are some ways to engage with Metro Vancouver residents on**	**Summary of discussion:** Information Needs: ● Transparency on Recycling Processes: ○ Clear information on what happens to waste from collection to processing, and where it ends up. ○ Details on whether recycling is processed locally or sent abroad, and how the quality of recycling is maintained. ○ Data on Metro Vancouver's performance in recycling compared to other regions. ● Accessible Educational Materials: ○ Booklets or leaflets available at libraries and community centres. ○ Simple, unified posters explaining recycling systems for newcomers and residents like during COVID. ○ Public dashboards or real-time updates on recycling progress to build trust. ● Technological and Operational Insights: ○ Information about technologies and methods used in sorting and processing recyclables.

[promote confidence in recycling systems]?	○ Examples of innovative recycling practices and methods. ● Recycling Standards and Tips: ○ Consistent and simplified guidelines across all cities in Metro Vancouver. ○ Detailed packaging information indicating recyclability. ○ Tips for reducing waste in everyday activities like cooking. Engagement Strategies: ● Community Outreach and Workshops: ○ Hold workshops at workplaces, libraries, and community centres. ○ Host community forums at public libraries to engage diverse groups. ● Partnerships and Collaboration: ○ Partner with influencers and content creators on platforms like YouTube, Instagram, and Spotify. ○ Collaborate with diverse communities, schools, and artists to create culturally relevant content and products. ○ Work with local housing and condo boards to display mandatory posters and materials. ● Promotions and Incentives: ○ Introduce gamified apps to make recycling fun (e.g., sorting games with rewards). ○ Provide small incentives like discounts, prizes, or tax reductions for recycling efforts. ○ Expand the deposit return system to other materials and offer greater financial rewards. ● Advertising and Awareness Campaigns: ○ Use public transit platforms, social media, and public spaces to advertise recycling programs and apps like "VanCollect." ○ Create memorable slogans and visuals (e.g., “Yellow for cans, Blue for paper, Brown for bottles”) to aid recycling education. ● Simplify the System: ○ Make the recycling system less complex for newcomers with straightforward materials like a “101” guide. ○ Standardize recycling practices across Metro Vancouver to reduce confusion.
Closing discussion **Questions: Is there anything else you’d like to add to the conversation on this topic?**	**Summary of discussion:** Additional Insights and Suggestions: 1. Focus on Waste Reduction Policies: ○ Recycling, particularly plastic recycling, is not a long-term solution. Advocate for stronger waste

	reduction initiatives, such as a Producer Responsibility System (PRS) and stricter policies on banning single-use plastics. 2. Food Waste Solutions: ○ Weekly green bin collection creates issues like odours, pests, and the need for delicate plastic bags. Consider: ■ Offering subsidies or allowances for individuals or buildings to purchase/share food waste processors. ■ Enabling citizens to use processed food waste as fertilizer for gardens or local farms, reducing collection burdens. 3. Equity in Recycling Systems: ○ Highlight disparities between condos and houses: ■ Recycling in condos is more convenient than for houses, which face longer collection intervals (once or twice a week). ■ Advocate for standardized recycling systems across housing types. 4. Community-Based Initiatives: ○ Organize item exchange events to reduce waste generation and provide incentives for hosts and participants. ○ Host more inclusive community workshops and discussions like this, reaching diverse ethnic backgrounds through public forums or organizations like HKHouse.
In-Person Session Meeting Notes ***Topic of focus: Increase participation and reduce contamination in green bin and recycling program***	
"What was said notes" is a huge 35-page document and can be found linked in the Appendix as the [redacted] ● What each person said or contributed on post-its were documented as a separate bullet point. ● It is near impossible to translate line-by-line, hence we have offered a summary of the responses below the bulleted text in both languages. ● The summary is listed below.	
Topic/Question Addressed	***What was said***
***Warm up:* What are the main actions you already take to eliminate waste?**	**Summary of discussion:** Question: What are the main actions you already take to eliminate waste? ● Reuse and Reduce: ○ Bring reusable items like shopping bags, lunch boxes, utensils, and water bottles.

	○ Use refillable products instead of buying new ones. ○ Minimize the purchase of single-use items like saran wrap or garbage bags by repurposing existing items. ○ Avoid Christmas gift wrapping or use minimal packaging. ● Waste Reduction in Daily Practices: ○ Reduce online shopping and takeaway orders to avoid excess packaging. ○ Save and reuse food waste as fertilizer. ○ Use rechargeable batteries and digital versions instead of printed copies. ○ Plan purchases carefully, buying only what is necessary. ● Sustainable Food Practices: ○ Reduce food waste by storing it better and consuming items near expiry. ○ Choose vegetarian or whole-food diets to lower environmental impact. ○ Bring personal containers for dining out to reduce leftovers and packaging. ● Community and Sharing: ○ Borrow tools or items from friends instead of buying new ones. ○ Repurpose and extend the life of items by reselling, donating, or gifting them. ● Recycling and Composting: ○ Recycle diligently, including plastics, Ziploc bags, and chip bags. ○ Compost food waste to create fertilizer for personal or community use. ○ Practice home sorting for better recycling efficiency.
Today's Topic of Focus: Increase participation and reduce contamination in green bin and recycling programs **Question:** **As Metro Vancouver updates the plan, what ideas and actions can build on their success to increase participation and reduce contamination in green bins and programs?**	**Summary of discussion:** As Metro Vancouver updates the plan, what ideas and actions can build on their success to increase participation and reduce contamination in green bins and programs? ● Educational Initiatives: ○ Start education from primary school to build lifelong habits and knowledge. ○ Teach the importance of reducing and reusing, not just recycling, to minimize waste. ○ Educate property management (e.g., strata), businesses, and organizations to provide consistent, correct recycling information to the public. ○ Use culturally relevant messaging to reach diverse communities (e.g., framing sustainable practices as cost-saving for Hong Kongers). ● Improving Clarity and Transparency:

	○ Provide clear, consistent guidelines on what can and cannot be recycled. ○ Address discrepancies between recycling centres, municipalities, and businesses regarding what is accepted. ○ Make the recycling system more transparent, showing where waste goes and how it's processed. ● Ease of Access and Convenience: ○ Simplify the recycling process by standardizing bins, composting rules, and product labeling. ○ Introduce barcodes or QR codes on products to indicate recycling instructions. ○ Expand the number of recycling depots and make them more user-friendly, clean, and safe. ○ Partner with supermarkets to allow bottle returns and offer coupons as incentives. ● Incentives and Engagement: ○ Create incentive programs for recycling, such as supermarket discounts, coupons, or cost reductions for consistent recyclers. ○ Increase costs for garbage disposal to encourage recycling and proper sorting. ○ Gamify recycling through apps or programs that reward participation and good practices. ● Addressing Miscommunication and Barriers: ○ Clarify rules around compostable bags and kitchen waste; many are confused about their acceptability. ○ Ensure consistent messaging across all levels, from strata to recycling depots, so residents have accurate information. ○ Reduce barriers caused by the complexity of recycling processes and user experience issues. ● Social Media and Public Awareness: ○ Leverage social media and age-appropriate platforms to promote recycling awareness. ○ Use campaigns that highlight the consequences of poor recycling practices to create urgency. ○ Encourage staff and businesses to set better examples and follow proper recycling practices.
Identifying Barriers and Key Challenges **Question:** **What do you see as the primary challenges or barriers we face in to increase participation and**	**Summary of discussion:** Challenges and Barriers: ● Lack of Clear and Accessible Information: ○ Recycling instructions are unclear or inconsistent, especially for newcomers. ○ Many products lack clear labeling on recyclability, leaving people unsure where items should go.

reduce contamination in green bin and recycling programs? What could Metro Vancouver do to address these challenges?	○ Recycling information is not centralized, and each strata or location provides different instructions. ○ Online education is available but not easily accessible or culturally relevant to all communities. ● Inconvenience in Accessing Recycling Facilities: ○ Recycling depots are far away and inconvenient, and many residents are unaware of locations like London Drugs that accept certain items. ○ Green bins and Return-It depots are insufficiently located and often poorly maintained. ● Hygiene Issues and Cost Barriers: ○ Green bins are often dirty and smelly, discouraging people from using them. ○ The cost of purchasing compostable bags and managing organic waste adds financial strain. ● Inconsistencies Across Municipalities: ○ Different municipalities and facilities accept different items, creating confusion. ○ Rules and definitions for solid waste and recycling vary significantly, leading to contamination and improper disposal. ● Lack of Enforcement and Incentives: ○ No enforcement mechanisms are in place to ensure compliance with recycling rules. ○ Incentives are insufficient to encourage the use of environmentally friendly products or proper waste sorting. ● Low Civic Awareness and Education: ○ Many people, including younger generations, lack awareness about the importance of recycling and reducing contamination. ○ Insufficient education on composting, especially for those concerned about odors and storage issues. ● Packaging Design Issues: ○ Product packaging is not designed for easy recycling, adding complexity for consumers. Proposed Solutions: ● Improve Information Clarity and Accessibility: ○ Use consistent and centralized guidelines for recycling and composting across all municipalities. ○ Print clear recycling instructions (e.g., barcodes or QR codes) on packaging. ○ Provide multilingual, culturally relevant education materials and campaigns. ● Enhance Convenience: ○ Increase the number of recycling depots, green bin locations, and Return-It facilities in easily accessible areas.

	○ Partner with businesses to offer drop-off points or incentives for proper recycling. ● Address Hygiene and Cost Issues: ○ Provide residents with clean, functional green bins and approved liners to reduce confusion and costs. ○ Add features like pedal-operated lids to improve usability for seniors and reduce contact with dirty bins. ○ Educate residents on odor management and composting techniques. ● Promote Consistency Across Municipalities: ○ Standardize recycling and solid waste disposal rules across municipalities to simplify the process. ○ Implement consistent protocols for large-item disposal to prevent illegal dumping. ● Introduce Enforcement and Incentives: ○ Introduce enforcement mechanisms like fines for contamination and rewards for proper sorting. ○ Offer financial incentives for buying eco-friendly products or participating in recycling programs. ● Increase Public Awareness: ○ Leverage social media, building posters, and strata communication to educate the public. ○ Host workshops, particularly for newcomers, to build understanding of the recycling system. ○ Focus on education in schools to instill civic awareness from a young age. ● Improve Product and Packaging Design: ○ Collaborate with businesses to design recyclable and minimal packaging. ○ Provide discounts for using reusable cups, containers, or other sustainable packaging.
Collaboration Opportunities **Question:** **In what ways could Metro Vancouver collaborate with others to more increase participation and reduce contamination in green bin and recycling programs?**	**Summary of discussion:** Collaboration Opportunities: ● Partnerships with Community Organizations: ○ Collaborate with newcomer organizations (e.g., IRCC, HK House, SUCCESS) to provide culturally specific education and awareness programs. ○ Partner with local community centres, neighbourhood houses, and schools to host workshops, recycling days, and competitions. ○ Set up booths at community events and festivals (e.g., Pride Parade, Greek Festival, Christmas Market) to engage residents. ● Engagement with Schools and Educational Institutions:

	○ Work with schools to integrate recycling education into the curriculum, ensuring consistent learning for students from Grades 1-9. ○ Organize school-wide recycling or zero-waste days to teach students hands-on practices. ○ Partner with universities and colleges to host sustainability campaigns or events. ● Collaborations with Businesses and Brands: ○ Partner with major brands (e.g., Lululemon, Starbucks) to offer incentives like discounts or coupons for recycling, reusing, or reducing waste. ○ Work with local merchants to enforce ESG (Environmental, Social, and Governance) efforts, such as promoting reusable cups or clothing donations. ○ Create business ecosystems for reusing waste materials (e.g., unsellable BC farm products going to food banks instead of landfill). ● Advertising and Outreach: ○ Increase advertisements in accessible locations (e.g., malls, transit stations) and social media to share clear recycling instructions. ○ Reach out to community chat groups (e.g., Champlain Chat, Nextdoor) and Facebook groups to disseminate information. ○ Use influencers, KOLs (Key Opinion Leaders), and celebrities to promote recycling and turn sustainability into a social trend. ● Unified Policies and Accessibility Improvements: ○ Standardize recycling policies across all cities in Metro Vancouver to eliminate confusion. ○ Introduce mobile recycling stations for easier disposal of large items. ○ Partner with local businesses to create convenient recycling drop-off points. ● Incentives and Enforcement: ○ Provide financial incentives or coupons for participating in recycling programs. ○ Impose fines for improper recycling or contamination to encourage better practices. ● Culturally Specific Engagement: ○ Tailor communication and outreach to cultural values, ensuring information is linguistically and contextually appropriate. ○ Leverage festivals or events specific to cultural communities to spread awareness. ● Second Harvest and Food Waste Collaboration:

	○ Partner with organizations like Second Harvest and foodwaste.ca to redistribute surplus food to community kitchens, reducing food waste.
Knowledge Gaps and Communications **Questions:** **What types of information would be most helpful for you in furthering your understanding of increasing participation and reducing contamination in green bin and recycling programs ? Meaning — do you have any questions about this topic that Metro Vancouver may be able to answer for you?** **What are some ways to engage with Metro Vancouver residents on increasing participation and reduce contamination in green bin and recycling programs?**	**Summary of discussion:** Information Needs: ● Clarity and Transparency: ○ Provide clear, simple instructions for recycling and green bin use, especially for newcomers and non-native speakers. ○ Increase transparency about where recycling fees and eco-fees are spent and how they impact the environment. ○ Share examples of infractions and their consequences, helping residents understand the importance of proper recycling practices. ● Visualizing the Impact: ○ Use visual tools and media (e.g., showing the life cycle of reduce-reuse-recycle) to make the benefits of waste reduction more tangible. ○ Highlight long-term consequences of not recycling through compelling visuals, like ocean pollution from plastics. ● Broader Scope of Education: ○ Provide detailed instructions about less common recyclable items, not just bottles for Return-It depots. ○ Educate on composting options, including technologies like "Lomi" for home use. ● Cultural and Contextual Relevance: ○ Include recycling education in newcomer workshops and resources. ○ Make content culturally relevant and provide targeted messaging for different demographic groups. Engagement Strategies: ● Early Education: ○ Start teaching children about recycling and waste reduction at daycare and preschool levels with fun slogans and simple systems. ○ Organize school field trips to recycling centres and green bin facilities for hands-on learning. ● Community Outreach and Partnerships: ○ Partner with schools, community organizations, and newcomer services to integrate recycling education into existing programs. ○ Collaborate with festivals, local events, and volunteer activities to promote waste reduction and proper recycling practices.

	● Use of Media and Influencers: ○ Partner with KOLs (Key Opinion Leaders), YouTubers, and celebrities to promote reduce-reuse-recycle messages and green bin use. ○ Leverage social media algorithms to target specific audiences with educational and promotional content. ● Incentives and Accessibility: ○ Offer subsidies for eco-friendly practices, such as purchasing composting equipment or participating in recycling programs. ○ Improve the aesthetics and accessibility of Return-It depots and green bins to encourage usage. ● Integrate into Daily Processes: ○ Provide recycling and green bin instructions in newcomer welcome kits and workshops. ○ Ensure that waste reduction messaging is part of routine interactions, such as utility bills, online portals, or public announcements. ● Holistic Approach: ○ Highlight that recycling should be the last resort, focusing first on reducing and reusing. ○ Share success stories and case studies to inspire and motivate residents to take action.
Wins **Let's flip the script: thinking of the current system, what is working well and should not be changed when thinking of increasing participation and reducing contamination in green bin and recycling programs**	**Summary of discussion:** Key Successes in the Current System: ● Increased Awareness and Participation: ○ There has been notable progress in public awareness, with more residents actively recycling. ○ Frequent lineups at zero-waste centres indicate growing engagement. ○ Recycling has become part of the culture in Vancouver, with many residents understanding its importance. ● Economic Incentives: ○ Programs like Return-It, which offer monetary rewards for recycling, are effective motivators. ○ Awareness that some supermarkets accept recyclable items, though clarity can be improved. ● Helpful Infrastructure and Staff: ○ Recycling centres like those in Coquitlam have helpful staff and accept a wide variety of items, making recycling easier for residents. ● Engagement Opportunities: ○ Workshops and community engagement events like today's are valuable for fostering dialogue and gathering public input.

	○ Metro Vancouver's openness to feedback and willingness to host discussions is appreciated. ● Sustainable Practices Among Immigrant Communities: ○ Many Asian immigrants already practice sustainability as part of their lifestyle, such as reusing plastic bags and cookie trays or growing herbs, often framed as cost-saving measures. ○ These habits align with sustainable goals and contribute positively to waste reduction.
Closing discussion **Questions: Is there anything else you'd like to add to the conversation on this topic?**	This question was not discussed, and no additional feedback or suggestions were provided via post-its.
Virtual Session Participants Feedback (engagement evaluation)	
Participants were generally positive about the session's inclusivity, facilitation, and online format. Suggestions for improvement centered on session logistics, depth of engagement, and pre-session materials. In terms of the waste management plan, transparency, public education, and simplification emerged as critical areas for focus.	
In-Person Session Participants Feedback (engagement evaluation)	
Workshop feedback highlighted strengths in engagement, inclusive discussions, and convenient locations. Participants valued the structured format, use of tools like sticky notes, and opportunities to share in their mother tongue. However, many felt sessions were too short and suggested longer durations, better preparation materials, and improved resources like Wi-Fi. Recommendations included broader public engagement, targeted focus groups, enhanced education across demographics, and increased promotion via social media and TV.	
Narrative Summary (Your brief reflections on the engagement)	
Goals and objectives	Our primary goal for this engagement activity is to encourage greater participation from the Hong Konger, immigrant, and Cantonese diaspora communities in local civic engagement processes. Historically, these communities have been underrepresented in such consultations. We also aim to foster awareness and involvement in environmental issues that impact community well-being, ensuring their ideas and voices are recognized and valued.
Results achieved	We achieved our goal of fostering civic engagement by creating a space where participants were genuinely interested in the topics and actively shared their perspectives. The sessions were not only enjoyable but also highlighted barriers many face in accessing information and understanding

	the solid waste system. This feedback gives us a valuable opportunity to amplify their voices and work toward greater inclusion and awareness in environmental initiatives.
Challenges and issues addressed	To effectively reach our audience, we invested significant additional effort in translating and adapting materials to ensure accessibility. This included not only preparing workshop content to align with the preferences of our community but also translating all materials and the discussions that took place during the sessions. The time and effort required far exceeded what was reflected in the honoraria, underscoring the substantial work involved in creating an inclusive and meaningful experience for second-language and diaspora communities.
General feedback	Participants expressed appreciation for having a space where their voices could be heard, describing the experience as both meaningful and enjoyable. Many shared frustrations with the system, particularly as newcomers, citing challenges in accessing clear, intuitive, and transparent information. Several participants noted that the allotted time for discussions felt insufficient because they were deeply engaged in the conversations. They also expressed a desire for Metro Vancouver to play a more visible role in their daily lives, emphasizing the need for improved communication about the utilities and services provided. Many pointed out that current outreach efforts often fail to reach them effectively.

METRO VANCOUVER SOLID WASTE MANAGEMENT PLAN ENGAGEMENT SESSION REPORT – OCTOBER 26, 2024

Activity Information

Activity Date – Saturday, October 26 2024
Organization Name – Ocean Wise
Time – 10am – 1pm
Location – Cates Park, North Vancouver
Format – Focus Group / Shoreline Cleanup
Participants Registered – 9
Actual Participants – 8
Summary of Promotion – Shared the clean up details through social media, including paid ads.

Participant Feedback / Input

Discussion Questions: Notes

Warm up: How do we eliminate waste?

I.	Reuse and use of Facebook marketplace and habitat for humanity and urban repurpose. Although sometimes they do not accept certain items.
II.	Going to Bulk Barn.
III.	Works offices and encouraging to bring own cutlery.

1. What do you see as the primary challenges or barriers we face in addressing waste reduction?

1.	Leftover waste/garbage after shopping. Give packaging back to facilities for reuse.

2. More recycling and accessibility. Many people must go to the depot and not many folks want to do that.
3. We need packaging that has less plastic. We should use more paper.
4. Having to take packaging from workplace as an individual action.
5. Common recycling areas in condos and having it accessible to folks in this housing.
6. Soft plastic could get messy if we tried to incorporate in single dwellings.

2. What could Metro Vancouver do to address these challenges?

We need more regulation – example. straws & single use plastic.
Need for groups to educate folks. Immigrant exposure and need for education in new environments/processes.
Need for clarification in schools. Kids tend to put things in the wrong bins.
In school no one tells us where to put things and the pictures are confusing.

3. What roles do businesses, the waste management industry, not-for-profits, community organizations, and others play?

New Immigrant Groups could support in teaching newcomers about recycling.
Rotary clubs and lion's clubs. It would be good to have an ocean leader to explain to volunteers and educate them. Need for collaboration between community groups and service groups.

4. In what ways could Metro Vancouver collaborate with others to more effectively to advance waste reduction?

1. Government programs. Education on recycling and how environment works. Having a program to educate immigrants.

2. Guest speakers and presentations in schools on how to separate.
3. It would be good to have design in place for separating waste in buildings.
4. Guidelines change in different areas. Regulations are different in different cities which can be confusing.
5. Public, private, need for implementation for all municipalities.
6. Need to work with retailers.
7. You can bring bottles back to retailers. Some people do not know that.
8. Packaging at hot lunch in schools. Government to have say on packaging.
10. Some Schools have kids take trash home. Need for a system to support parents obtaining sustainable packaging.

5. Let's flip the script: thinking of the current system, what is working well and should not be changed when thinking of waste reduction? What is going well and could be expanded on?

1. Express bottle return system works well
2. Deposit and paid return system
3. Accessible containers placed around
4. Japan does a good job
5. Simple scheduling for different waste pick up
6. Incentives work well for individuals not companies
7. Curb side pick up works well

7. What types of information would be most helpful for you in furthering your understanding reduction? Meaning – do you have any questions about this topic that Metro Vancouver may be able to answer for you?

Campaign and signs for parks. Party décor and expectations for after parties. Waste removal metro van needs leadership and signs.

Narrative Summary (Your brief reflections on the engagement)

Goals and objectives

The goal of doing outreach coupled with a shoreline clean up was to get people thinking about the waste found on the shoreline, and how waste is managed in public, and then thinking about that in relation to waste reduction.

Results achieved

We ended up with a diverse set of 8 participants, including 2 children, approximately 50% men and 50% women, from different municipalities. During the shoreline cleanup portion, a variety of different materials were found, including food and beverage packaging and party supplies. This set a good baseline for the participants to think about the role that Metro Vancouver plays in the waste management system.

Challenges and issues addressed

Unfortunately there was a weather warning for wind and rain the night before the event, which may have kept some potential participants away. In the end, the weather was great for the event. There seemed to be generally some confusion about the role that Metro Vancouver plays in waste management, as some of the suggestions were more suited to the jurisdiction of the provincial or federal governments.

General feedback

Participants enjoyed the session and were happy to provide their ideas for the SWMP.

451-3045 Robie Street, Unit 5
Halifax, NS
B3K 4P6

Post-Engagement Report Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall.

Engagement Activity Summary

Activity:	
Activity Date	The event took place in person on Saturday, November 30, and virtually from December 5th-8th
Organization/group name	Mind Your Plastic
Time/Duration	Saturday, November 30: 11am-2pm Virtually: December 5th-8th
Location	In person: Pacific Centre, Vancouver Public Library, Adler University. Online: Community Facebook Groups (See Appendix A)
Format	In person surveys, virtual surveys
# of Participants	158
Summary of Promotions *(optional)*	We did not promote this, aside from sharing on Community Facebook groups (Groups are listed in Appendix A)

Participant feedback/Input	
Meeting Notes	
Include any notes from the engagement activities. These are "what was said" notes and should be as close to verbatim as possible. Use one bullet point per speaker (i.e., start a new bullet when a new person starts speaking.)	
Topic/Question Addressed	***What was said***
Q1: **How often do you do the following to reduce waste?** [Always, often, sometimes, rarely,	**The behaviours that ranked as most popular (Always, Often) amongst respondents were:**

never, don't know/not applicable] **(Randomize items)** ● Bring your own reusable cup, dishes, or utensils for takeout ● Reuse or repurpose items rather than dispose of them (wrapping paper, food containers, plant pots, etc.) ● Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of them ● Buy or trade second-hand items ● Pass down or donate unwanted clothes, or participate in clothing swaps ● Compost organic waste including food scraps and yard trimmings (e.g. backyard composting or green bin pick-up) ● Meal plan to avoid food waste ● Bring your own reusable shopping bags	1. 93.7% - Compost organic waste including food scraps and yard trimmings (e.g. backyard composting or green bin pick-up) 2. 84.1% - Meal plan to avoid food waste 3. 75.8% - Bring your own reusable shopping bags 4. 75.8% - Reuse or repurpose items rather than dispose of them (wrapping paper, food containers, plant pots, etc.) **The behaviours that ranked as least popular (Rarely, Never) amongst respondents were:** 1. 42.7% - Bring your own reusable cup, dishes, or utensils for takeout 2. 20.3% - Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of them 3. 20.3% - Buy or trade second-hand items The results can be further broken down below: ● ***Top 3 Rankings for Always:*** 1. 74.7% - Meal plan to avoid food waste 2. 63.3% - Compost organic waste including food scraps and yard trimmings (e.g. backyard composting or green bin pick-up) 3. 41.4% - Bring your own reusable shopping bags ● ***Top 3 Rankings for Often:***

	1. 46.5% - Reuse or repurpose items rather than dispose of them (wrapping paper, food containers, plant pots, etc.) 2. 44.3% - Pass down or donate unwanted clothes, or participate in clothing swaps 3. 34.2% - Bring your own reusable shopping bags 4. 34.2% - Buy or trade second-hand items 5. 34.2% Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of ● ***Top 3 Rankings for Sometimes:*** 1. 46.5% - Reuse or repurpose items rather than dispose of them (wrapping paper, food, containers, plant pots, etc.) 2. 32.3% - Bring your own reusable cup, dishes, or utensils for takeout 3. 28.5% - Buy or trade second-hand items 4. 28.5% - Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of them ● ***Top 3 Rankings for Rarely:*** 1. 21.5% - Bring your own reusable cup, dishes, or utensils for takeout 2. 12.7% - Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of them 3. 12.7% - Buy or trade second-hand items ● ***Top 3 Rankings for Never:*** 1. 21.5% - Bring your own reusable cup, dishes, or utensils for takeout

	2. 7.6% - Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of them 3. 7.6% - Buy or trade second-hand items
Is there anything else not listed here that you always or often do to reduce waste?	The key themes from respondents are listed below: ● **Reduce Consumption:** Buy only what is needed, limit impulse purchases, and avoid overpackaged products. ● **Reuse and Refill:** Use reusable items, opt for refillable products, and upcycle materials creatively. ● **Buy in Bulk:** Choose bulk shopping to minimize packaging waste. ● **Recycle Responsibly:** Recycle soft plastics, Styrofoam, and other materials at designated facilities. ● **Compost and Repurpose Food:** Compost at home and repurpose food scraps to reduce waste. ● **Advocate and Share:** Share items in the community, join reuse programs, and encourage businesses to reduce packaging. ● **Conserve Resources:** Practice energy and water-saving habits in daily life.
Q3: **How confident are you that the items you recycle are being recycled into new products instead of ending up in disposal? (i.e. garbage, landfill?** ● Very confident ● Mostly confident ● Neutral ● Slightly confident ● Not at all confident ● I don't know	Respondents were split on this question with an almost even distribution between Positive and Negative responses: ● 38.2% - Positive (Very and mostly confident) ● 37.6% - Negative (Slightly and not at all confident) ● 22.9% - Neutral ● 1.3% - I don't know

Q4: **To what extent do the potential barriers below prevent you and your household from participating more actively in waste reduction and recycling efforts?** ● Not a barrier ● Slight barrier ● Moderate barrier ● Significant barrier ● Don't know **(Randomize items)** **Potential Barriers:** ● Cultural or language barriers ● Not sure where to drop off recyclables ● Not enough information about reuse and repair options ● Low availability of products that use less packaging or reusable packaging ● Waste reduction and recycling is not a priority for me ● Not enough or overflowing recycling and green bins in multi-family residence ● Not feeling welcomed at facilities and recycling and waste drop-off points ● Time constraints ● Uncertainty about what materials are accepted for recycling in curbside pickup ● Safety and cleanliness at facilities or recycling and waste drop-off points	**The potential barriers that were identified as "Not a barrier" amongst the most respondents were:** 1. 87.9% - Cultural or language barriers 2. 87.2% - Waste reduction and recycling is not a priority for me 3. 73.2% - Not feeling welcomed at facilities and recycling and waste drop-off points 4. 73.2% - Not enough or overflowing recycling and green bins in multi-family residence **The potential barriers that were identified as having barriers, (Significant, Moderate and Slight) amongst the most respondents were:** 1. 85.4% - Low availability of products that use less packaging or reusable packaging 2. 72.5% - Not enough information about reuse and repair options 3. 66.8% - Safety and cleanliness at facilities or recycling and waste drop-off points 4. 57.3% - Uncertainty about what materials are accepted for recycling in curbside pickup

Q5: **Are there any other barriers not listed here that prevent you and your household from participating in waste reduction efforts?**	The key themes that were prevalent from respondents are: ● **Inaccessibility of Recycling Facilities** Challenges for individuals without vehicles or with mobility issues to access recycling depots or transfer stations. ● **Limited Multi-Family Recycling Options** Insufficient services for apartments or condos, including lack of curbside pickup for certain items like soft plastics and appliances. ● **Lack of Clarity and Confidence in Recycling Systems** Uncertainty about what happens to recycled items and frustration over contaminated bins reducing effectiveness. ● **Space and Storage Constraints** Difficulty storing recyclables in small living spaces until they can be dropped off. ● **Inconvenience and Complexity** Multiple locations for different materials, time-consuming processes, and insufficient centralized systems. ● **Cost Barriers** Higher costs for zero-waste products, repair services, and recycling supplies like compost bags. ● **Policy and Systemic Gaps** Desire for systemic changes, such as banning single-use plastics and offering comprehensive curbside recycling. ● **Community Participation Issues** Frustration with non-compliant neighbors and lack of incentives for proper waste sorting in shared living spaces. ● **Disabilities and Accessibility Concerns** Limited accommodations for individuals with disabilities at recycling facilities and within building systems. ● **Need for Clear Communication and Resources** Insufficient information on where and how to recycle items not accepted curbside.

Q6: **How well do you think current waste management programs and services work for everyone in the community?** ● They work very well for everyone ● They work well for most community members but not for everyone ● They only work well for some community members but are difficult to manage for most ● They do not work for the majority of community members ● Don't know	Most respondents felt positively about the current waste management programs with 65.8% selecting either *"They work very well for everyone"* (10.2%), and "*They work well for most community members but not everyone"* (55.4%). 28.3% of respondents selected "*They only work well for some community members but are difficult to manage for most"* (24.8%), and *"They do not work for the majority of community members"* (2.5%) 7.0% selected "Don't know"
Conditional question based on previous response *Q7:* **Which community members** do you think may be having a difficult time with the current programs and services?	Responses fell into the following categories (organized by most frequent-least frequent): ● Elderly ● Those without reliable transportation (lack of car, rely on transit) ● Disabled ● Immigrants/Newcomers ● Low Income ● Limited Time ● Unhoused ● Those living in multi residences ● Those living in rural or remote areas
Q8: **What can be done to make the programs and services more inclusive so that they work for everyone?**	Responses fell into the following categories (organized by most frequent-least frequent): ● Better Communication/Outreach ● Increased Items Allowed in Collection ● Residence Pick Up ● Better Bin Design and Accessibility ● More local drop off points ● Multi-Language Approach to Resources ● Hold Sellers/Manufacturers Accountable
Q9: **What should be Metro Vancouver's top priorities for the future when it comes to solid waste management? Please select your top two.**	The top 2 responses were:

● Reducing and preventing overall waste ● Delivering regional solid waste services in a cost effective way ● Using new technology and other forms of innovation to improve waste management ● Collaborating with governments and manufacturers to reduce packaging ● Developing new facilities or drop-off points for recycling, reusables, and waste ● Providing services that are easy to use for all residents ● Enhancing education programs and campaigns ● Lowering carbon emissions through new technology and practices ● Enhancing reuse and recycling opportunities at businesses and multi-family properties	1. Collaborating with governments and manufacturers to reduce packaging 2. Reducing and preventing overall waste
Q10: **Are there other priorities that Metro Vancouver should be considering that are not listed above?**	The common themes are listed below: ● **Corporate Accountability -** Tax corporations, mandate waste reduction programs, and promote circular economy practices. ● **Improved Infrastructure -** Expand public waste facilities, enhance recycling systems, and develop local markets for recycled materials. ● **Policy Enforcement -** Increase fines for improper disposal, incentivize reuse, and improve labeling for waste sorting. ● **Education and Community Engagement -** Promote early education, repair cafés, and community reuse initiatives. ● **Source Reduction -** Reduce packaging and overproduction of goods like fast fashion.

Q11: **Where do you live?**	• 51.6% - Vancouver • 12.1% - Port Moody • 10.8% - Burnaby
Q12: **How old are you?**	• 27.4% - 25 to 34 years • 22.9% % - 35-44 years • 15.3% - 45-54 years
Q13: **What type of home do you live in?**	• 49.7% - Apartment/Condo • 27.4% - Detached House • 15.3% - Townhouse
Q14: **What type of language is typically spoken in your home?**	• 87.3% - English • 2.5% - Punjabi • 1.9% - Mandarin • 1.9% - Cantonese

Engagement Questionnaire Results

If you have conducted a questionnaire, please include a summary of the results here. You are welcome to share the data results from your survey with Metro Vancouver for better feedback analysis.

See Appendix B for detailed results summary

Efforts to Reduce Barriers to Participation (Optional)

For the in person component, we attended a variety of locations to gather data from diverse groups, including the Vancouver Public Library, Adler University and Pacific Centre. With our digital outreach, we selected groups on Facebook that were local to Metro Vancouver but represented broad interests.

Participants Feedback (engagement evaluation)

n/a

Narrative Summary (Your brief reflections on the engagement)

Goals and objectives	Our goal was to gather valuable data for Metro Vancouver to help shape the Solid Waste Management Plan Update. We aimed to get diverse responses from as many people as possible.
Results achieved	We received 158 completed questionnaires ahead of our deadline (12/08). Some responses did come in after that date but were not included in the analysis.
Challenges and issues addressed	The in-person component was more challenging than anticipated. Initially, we hoped to do this at UBC, similar to last year, but their booking process

	was time consuming and confusing. This caused significant delays and ultimately was cancelled as a result. As a pivot, we decided to do something similar, but in more public places to diversify our audience. We felt that the locations we chose represented broad demographics of Metro Vancouver citizens. We were challenged with low participation, perhaps because of the time of year (Black Friday weekend, many folks were either tourists, or too busy). There were also some challenges that stemmed from MYP logistics, mainly the coordinator, Natasha, not being able to be there in person.
General feedback	The support provided from Metro Vancouver is incredible. The toolkits are detailed and provide everything we need. Brooke has been incredibly helpful in ensuring we have everything that we need to be successful.

Metro Vancouver Solid Waste Management Plan
Idea Generation

Collaborative Engagement
Final Report to Metro Vancouver

Introduction

The Recycling Council of British Columbia (RCBC) has partnered with Metro Vancouver in their collaborative engagement process to increase the reach of consultations taking place to inform the Idea Generation phase of the Solid Waste Management Plan update process. In order to do so, RCBC has sought to consult with RCBC Members in the non-profit and business/industry sectors that interact with and are impacted by solid waste management in the Metro Vancouver region, as well as residents who interact with RCBC Information Services (such as the BC Recycling Hotline, and RCBC website). This consultation has taken the form of a targeted survey, constructed to enable these stakeholders to provide feedback that is specific to their sectors and areas of work, and a general public survey for interested residents.

Survey Design

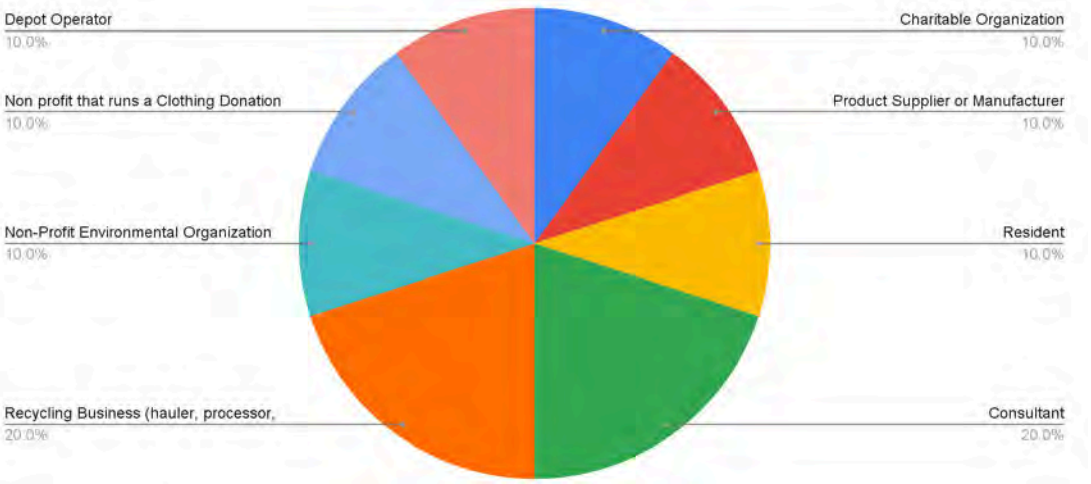
The surveys were developed based on the public survey materials provided by Metro Vancouver. For the RCBC Member survey, some questions were omitted or altered in order to ensure that they were relevant to the target member audience. The public survey was created as a duplicate of Metro Vancouver's public survey.

On November 13, 2024 the tailored survey was distributed to RCBC Member contacts in the Industry and Non-Profit sectors operating in the Metro Vancouver region, totaling 112 recipients. The survey closed on November 29, 2024, and reminders were sent both one week and one day prior to the close of the survey. Simultaneously, a public survey was conducted through RCBC's Information Services channels to reach members of the public who engage with RCBC programs and services. The link to the public survey was provided on the RCBC website, and also included in email responses to residents in the region at the discretion of RCBC Environmental Advisors.

The Member Survey received ten responses, a 66% increase from the 2023 survey in the Vision & Guiding Principles phase of engagement. The public survey received seven responses.

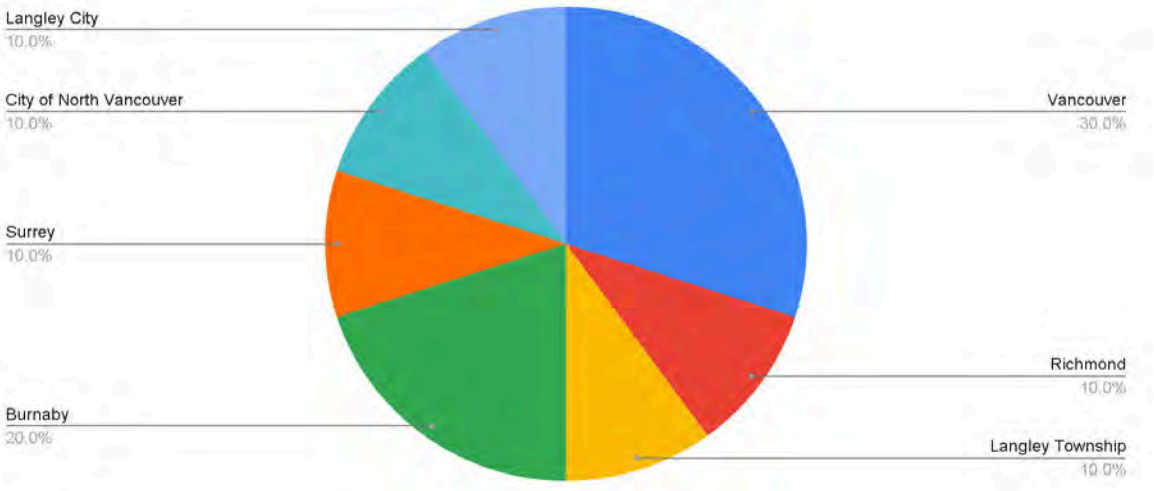
Member Survey Results

Member Survey respondents represented a wide range of organization types. Two identified themselves as Consultants, two as Recycling Businesses like haulers, one as a Product Supplier or Manufacturer, one as a Charitable Organization, one as a Resident, one as a Depot Operator, one as a Non-Profit Environmental Organization, and one as a Non-Profit organization operating clothing donation bins.



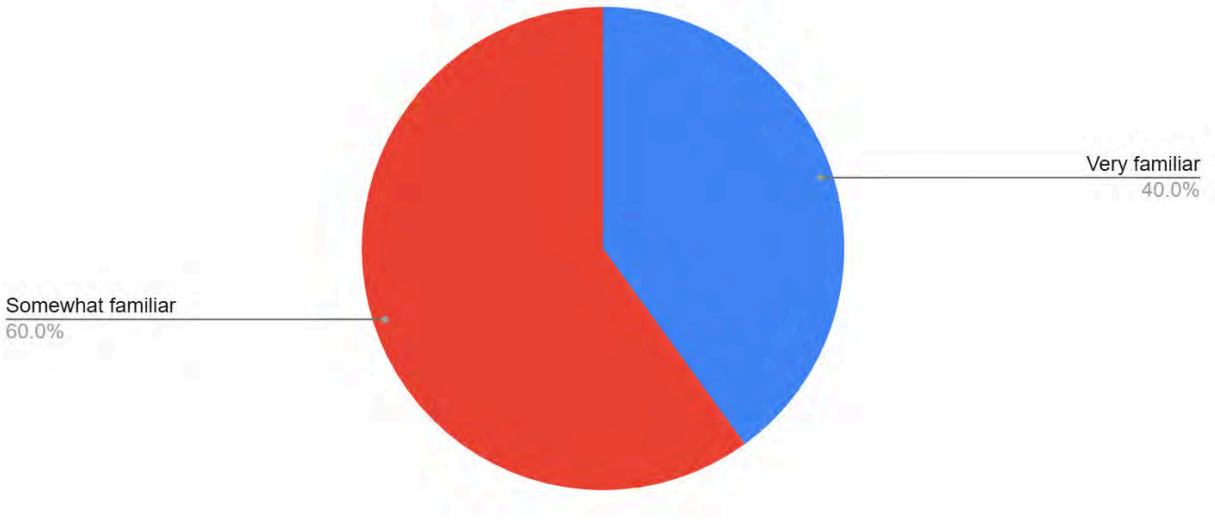
This represents a split of 60% for-profit enterprises, 30% non-profit or charitable organizations, and 10% residents.

Respondents were geographically distributed throughout the Region, with the largest share (30%) based in the City of Vancouver. Two respondents were located in Burnaby, and one in each of Richmond, Surrey, Langley City, Langley Township, and the City of North Vancouver. Of these respondents, eight of ten indicated that they also operate outside of the Metro Vancouver Region.



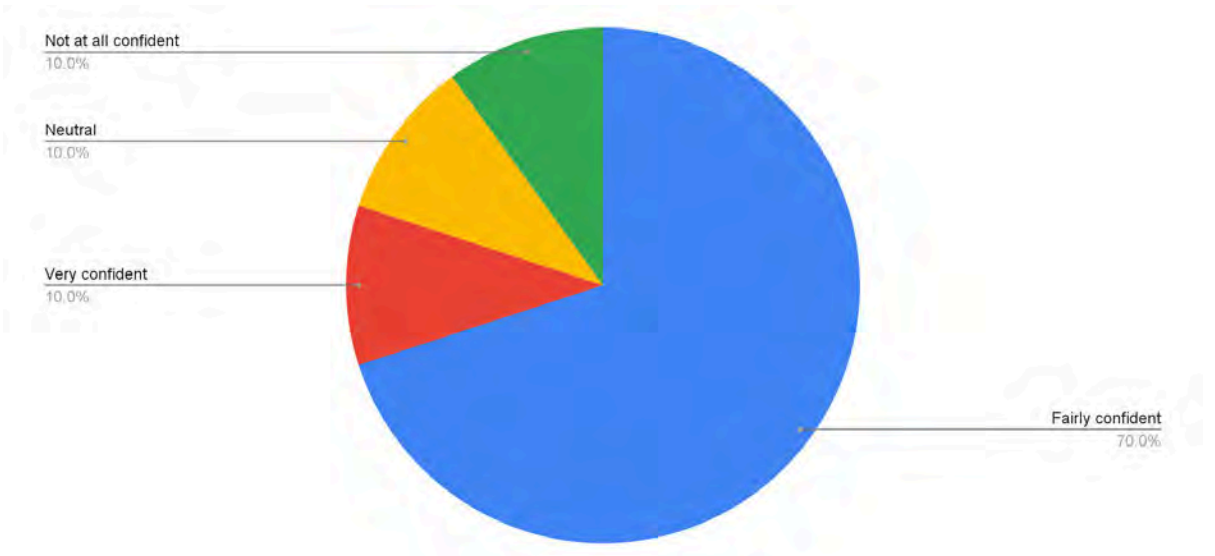
Who manages waste in the region?

Of the Member Survey respondents, four self-identified as being “very familiar” with Metro Vancouver’s role in waste reduction, recycling, and garbage management. Six self-identified as “somewhat familiar.”



Confidence in the waste system

Respondents are generally “fairly confident” that items recycled in Metro Vancouver are being recycled into new products instead of ending up in disposal, with seven of ten respondents choosing that option. One respondent was “not at all confident”, one “neutral” and one “very confident”. This suggests that even within organizations actively engaging with solid waste management in the region, there is some uncertainty as to whether collected recyclables are actually recycled into new products.



In response to the question “How well do you think current waste management programs and services work for everyone in the community?” responses were evenly split between “Work well for most, but not for everyone” and “Work well for some, but difficult to manage for most”.

In response to, “What could be done to increase confidence in the current recycling system?” the following responses were submitted:

- *“Show examples of how this is being done and why it is not higher than 75%”*
- *“Knowing where the various materials go after they are collected or dropped off at facilities.”*
- *“tv advertising showing lifecycle of our recyclables”*
- *“Share stats via marketing channels.”*
- *“Public Education”*
- *“if CI recyclables were brought in under the Recycling Reg and managed by Recycle BC”*
- *“More promotion/education on the matter”*
- *“Equip Return-It Centres with educational materials to engage and inform the public effectively. Foster greater transparency across all levels of the recycling process, including depots, Producer Responsibility Organizations (PROs), and the Extended Producer Responsibility (EPR) system. Advocate for recycling to become a federal responsibility, ensuring a unified and robust approach to waste management nationwide.”*

Accessibility and inclusion

A number of potential barriers were presented, and ranked from “not a barrier” to “significant barrier”, the results follow:

	Not a barrier	Slight barrier	Moderate barrier	Significant barrier	Don’t know
Not feeling welcomed at facilities and recycling and waste drop-off points	5	1	4		
Low availability of products that use less packaging or reusable packaging	2	1	2	5	
Cultural or language barriers	2	1	5		2
Not sure where to drop off recyclables		3	3	4	
Not enough information about reuse and repair options			4	6	

Uncertainty about what materials are accepted for recycling in curbside pickup		2	3	4	1
Time constraints	1	1	5	2	1
Safety and cleanliness at facilities or recycling and waste drop-off points	4	3	3		
Not enough or overflowing recycling and green bins in multi-family residence		5	3	2	
Waste reduction and recycling is not a priority for me	6				

In response to, “Are there any other barriers not listed here that you feel prevent residents, businesses, and organizations from participating in waste reduction efforts?” the following responses were submitted:

- *“Lack of bins for recycling or donating a multitude of items like clothing and household items in residential buildings”*
- *“In our apartment building the space is not welcoming and it's not fun to navigate the small (and sometimes unsafe) room in the parkade to separate materials, etc. Many people want to get in and out quickly and that could mean more is ending up in the garbage. Signage could be more clear as well”*
- *“effort to bring EPR materials (or flex plastic, styrofoam) to a depot”*
- *“Lack of information at recycling sites for people to follow”*
- *“Incentives, lack of awareness”*
- *“It starts at the top... The government must take a more active role in governing the Extended Producer Responsibility (EPR) system. Proper regulation is essential to ensure all levels of the system operate in harmony, creating a fair and equitable framework. Producer Responsible Organizations (PROs) must be held accountable to the public, as they manage funds collected through deposit and recycling management fees. Greater transparency, enhanced public education, and fair remuneration for all stakeholders should be priorities.”*
- *“Return-It depots, excluding consolidators, have faced rising costs and systemic neglect for decades. These hardworking business owners, who interact directly with the public, play a critical role in the success of the recycling network. Their influence and dedication deserve recognition and fair treatment.”*
- *“It is time to shed light on the state of recycling, modernize the EPR system, and position it for lasting success. By addressing inefficiencies and bringing the system into the present day, we can create a robust and effective framework that benefits everyone involved."*

In response to, “Which community members do you think may be having a difficult time with the current programs and services?” the following responses were submitted:

- *“people who live in residential buildings as trend is not to own a car any longer”*
- *“multi family buildings, homeless, uninformed.”*
- *“Anyone with a language barrier or people that aren't as mobile (e.g. don't have a vehicle, so seniors).”*
- *“those without vehicles”*
- *“Newcomers to Canada.”*
- *“MF residents/seniors/recent immigrants”*
- *“Seniors, citizens with ESL, people with disabilities”*
- *“Residents in Multi-Unit Dwellings, Lower-Income and Less-Educated Households, Small Businesses, Elderly Population”*

In this area, respondents identified marginalized groups, seniors, newcomers, and those with mobility limitations as likely to have a difficult time accessing current programs and services.

In response to, “What can be done to make the programs and services more inclusive so that they work for everyone?” the following responses were submitted:

- *“Provide convenient recycling and donation program in residential buildings”*
- *“Better education and promotion of the benefits of reduction and recycling.”*
- *“Consistency - similar programs across the region, accessible by everyone, in various languages”*
- *“collection of EPR materials in more locations, Bulky Item collection at all MFs in all municipalities”*
- *“Better information at the site”*
- *“Include various segments of the population in planning programs”*
- *“Go to the depots... They are (in) direct contact with their communities. They have good knowledge of what the public is complaining about”*

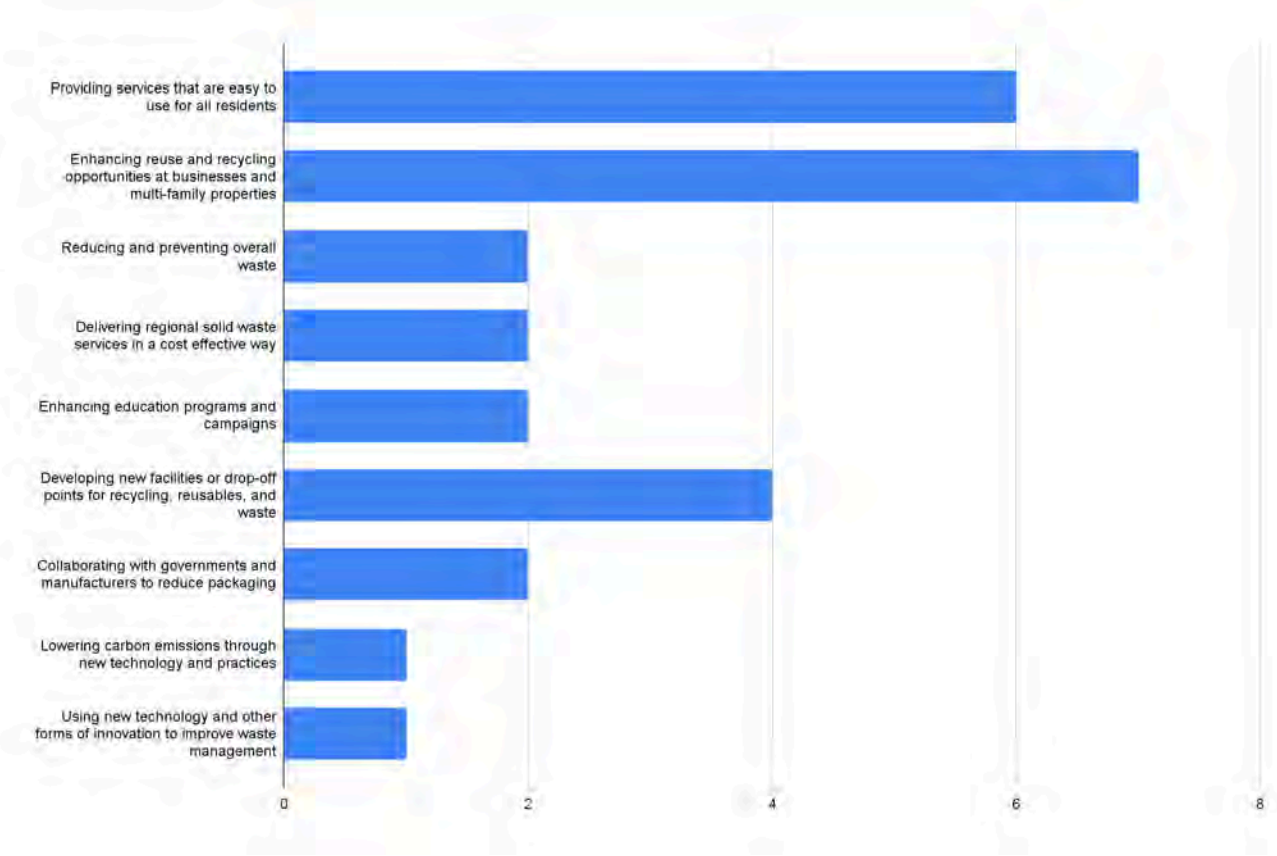
These responses identify improved convenience and education as priorities to improve inclusivity of programs.

Looking to the Future

In terms of priorities for the future, there were three of the nine proposed priorities that received more than two votes:

- “Enhancing reuse and recycling opportunities at businesses and multi-family properties: 7 votes
- Providing services that are easy to use for all residents: 6 votes
- Developing new facilities or drop-off points for recycling, reusables, and waste: 4 votes

Note that some respondents did select more than two options.



When asked which of the above themes were most important to their industry or sector, the following additional responses were received:

- *"Enhancing reuse and recycling opportunities at businesses and multi-family properties; more and more people do not have cars and use car-sharing programs therefore it is expensive for them to go to Metro Van recycling centers - multi-family properties program needs to include bins for clothing and small household items. Many local charities provide pickup services for these items free of charge. "*
- *"Providing Services - need access to better bins at curbside (light items blowing away)"*
- *"Most people want to reduce waste or do the right thing but might lack awareness or understanding of best practices. The cost of living is high too, so finding a balance between providing great services and lessening the tax burden. Would like to see Metro Vancouver undertake an overall efficiency review to determine if there are potential cost savings in programs, staffing and services."*
- *"enhancing reuse and recycling opportunities"*
- *"opportunities to divert at MF/ICI properties - no accountability and just dumped in garbage - no one wants to bring foodwaste or recycling to garbage room"*

- *“Enhancing a reuse program because we’re using is the best form of recycling”*
- *“New facilities - we are in the textile circularity business”*
- *“Reduce packaging at the source - manufacturers should be forced to use recyclable and reusable packaging. Planned obsolescence should be eradicated!”*

Additional suggestions for priorities for Metro Vancouver were:

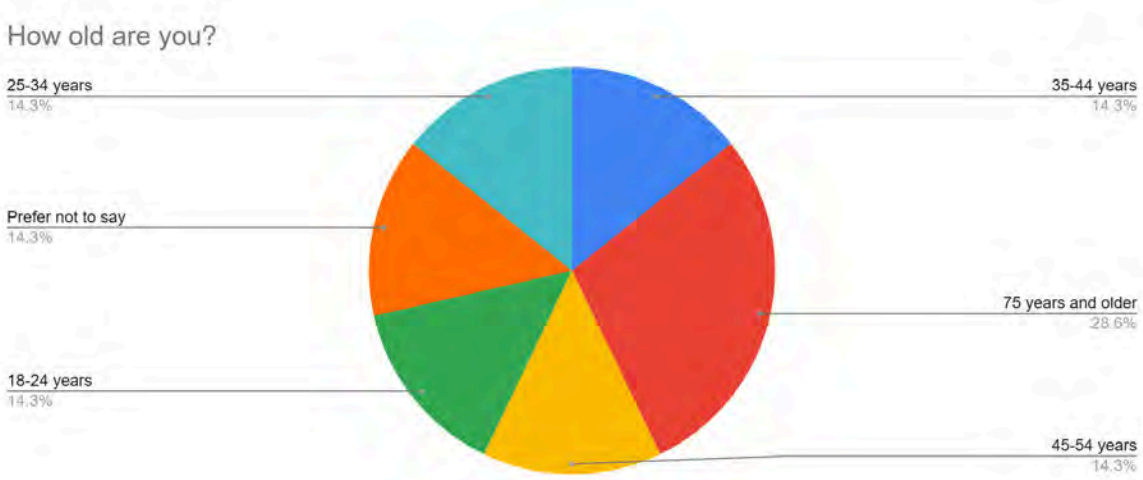
- *“Working with Stratas to expand number of materials that are collected in the recycling rooms to prevent them from entering the landfill stream”*
- *“Clean ups of waterfront.”*
- *“Focus is always on residents, but businesses and the construction industry are big generators. Focus on reducing waste in these areas as well (look at the low hanging fruit, e.g. wood waste?)”*
- *“Supporting nonprofits in the community because they are the only mechanism to direct materials back to the community”*
- *“There is already a fully established depot system that could be used in a better way with more opportunity to serve the communities they are already in close touch with. create more programs and offer the depots to facilitate them”*

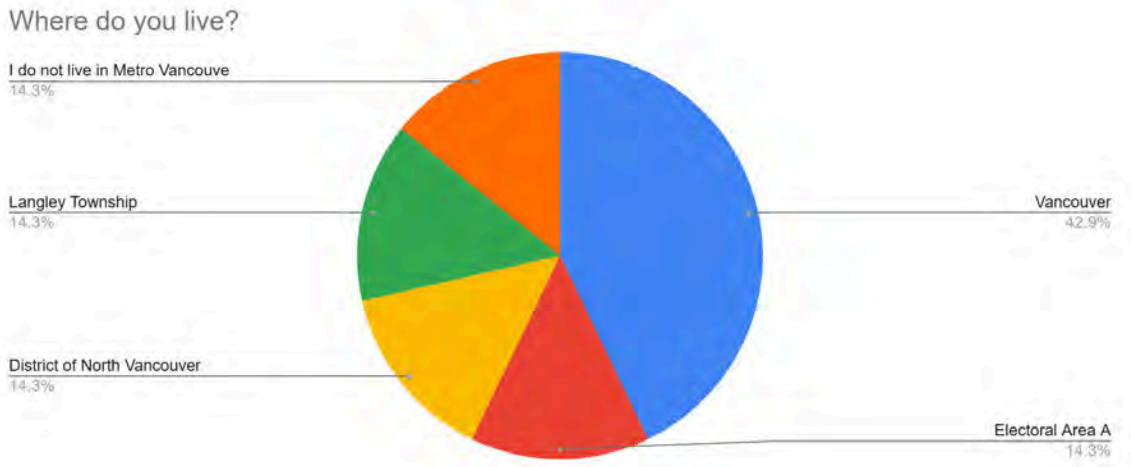
Further ideas provided were:

- *“Use free services that local charities provide to collect multitude of items that can currently are going into garbage”*
- *“Enforce penalties for non-compliance.”*
- *“Focus more on reusing of materials and less on recycling”*
- *“More awareness/education campaigns on the matter”*
- *“A fully established depot system is already in place, presenting an opportunity for more effective utilization. These depots are deeply connected to the communities they serve, making them ideal for expanding services. By creating additional programs and empowering depots to facilitate them, we can enhance their role and better address community needs.”*

Public Survey Results

The public-facing survey received seven total responses. Of the respondents, 100% indicated that the primary language spoken in their home is English. Four of five respondents lived in Apartments or Condos, and three of seven in detached homes. The breakdown of age groups and municipalities represented are presented below:

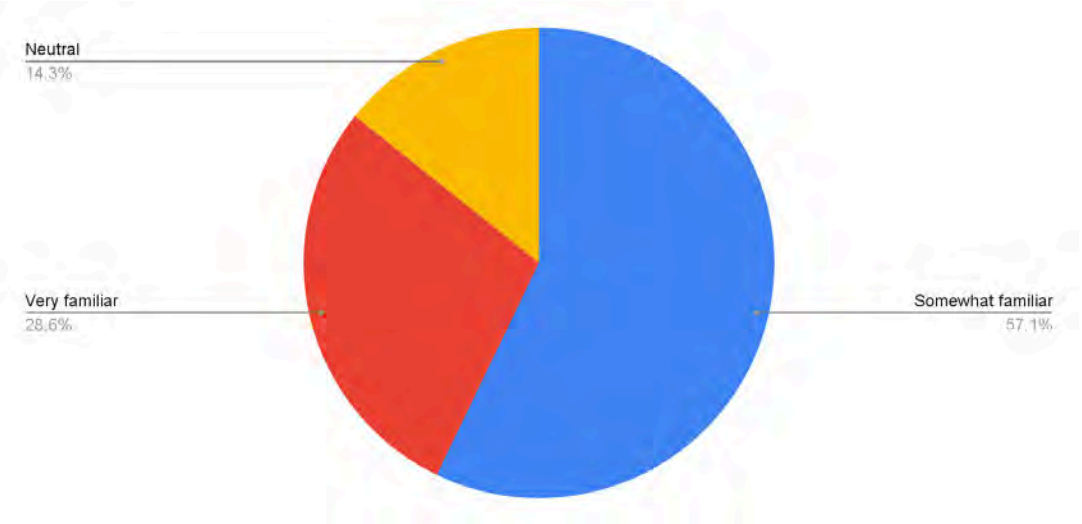




These results show that six different age groups, and five different municipalities were represented by respondents.

Who manages waste in the region?

When asked “how familiar are you with Metro Vancouver’s role in waste reduction, recycling, and garbage management?” most respondents self-identified as “somewhat familiar” with Metro Vancouver’s role in waste reduction, recycling, and garbage management.



Reducing waste

Respondents indicated how frequently they perform several actions. All respondents reported bringing reusable shopping bags “always” and in only one case, “Bring your own reusable cup, dishes, or utensils for takeout” did one respondent indicate that they never engage in that action.

Action	Always	Often	Sometimes	Rarely	Never	I don’t know
Bring your own reusable shopping bags	7					
Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of them		3	4			
Reuse or repurpose items rather than dispose of them (wrapping paper, food containers, plant pots, etc.)	4	1	1	1		
Buy or trade (exchange) second-hand items	2	3	1	1		
Meal plan to avoid food waste	6		1			
Compost organic waste including food scraps and yard trimmings (e.g. backyard composting or green bin pick-up)	6	1				
Pass down or donate unwanted clothes, or participate in clothing swaps	6	1				

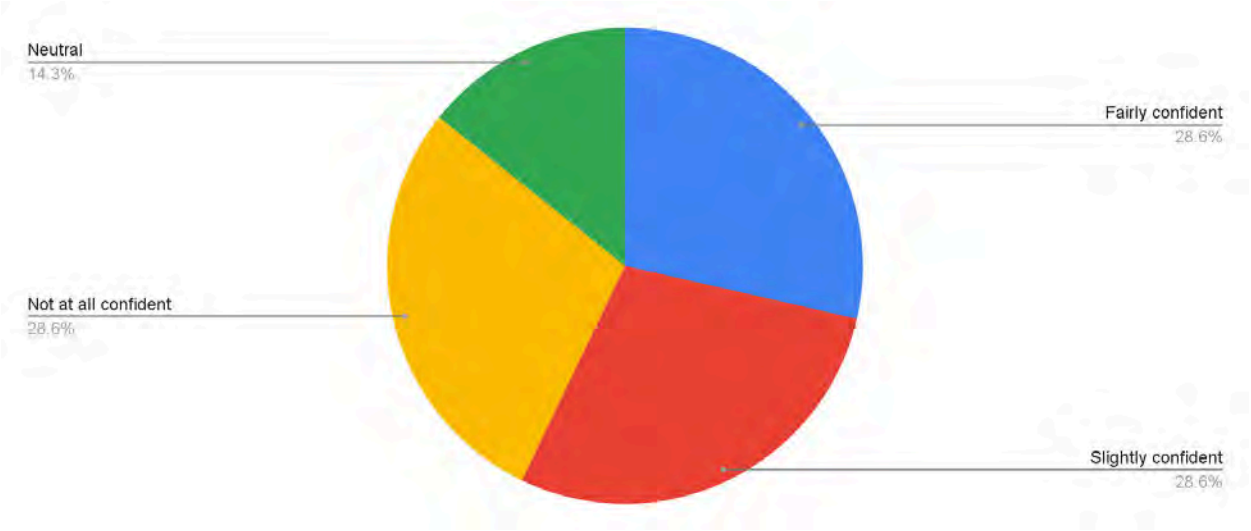
Bring your own reusable cup, dishes, or utensils for takeout	2	1	1	2	1	

Additional actions provided by respondents were:

- *"Buy food at zero-packaging stores or from minimal-packaging bulk food sources"*
- *"Mindful of purchasing items in recyclable containers"*
- *"Buy higher quality goods so they don't break or wear out as quickly. Try to buy less and keep the items that I already own"*

Confidence in the waste system

In response to "How confident are you that the items you recycle are being recycled into new products instead of ending up in disposal (i.e., garbage, landfill)?" respondents showed a generally lower confidence that recycled items were recycled into new products, with only two of seven indicating that they were "fairly confident" and none that they were "very confident".



In response to "Are there any items collected for recycling that you don't think are being recycled into new products?" the following responses were provided:

- *"Items contaminated by other people in the same building putting unacceptable items in the bin"*
- *"We have single stream recycling that we pay for."*
- *"paper and foil composites"*
- *"Plastic containers and metal containers"*
- *"Plastics, electronics"*

"What could be done to increase your confidence in the current recycling system?" yielded the following responses, which emphasized the importance of education and system transparency.

- *"Increase drop off to double stream"*
- *"education & promotion of facts - as I have heard people say that the recycling is just put in with the regular garbage in a dump"*
- *"Get more information about where how recycling is handled so consumers know why is happening"*
- *"no sure right now"*
- *"More accessible information and urgency on what is and isnt recyclable and what happens to recycled materials and what happens when people try to place non recyclable materials in the recycling bins"*

Accessibility and Inclusion

A number of potential barriers were presented, and ranked from "not a barrier" to "significant barrier", the results follow:

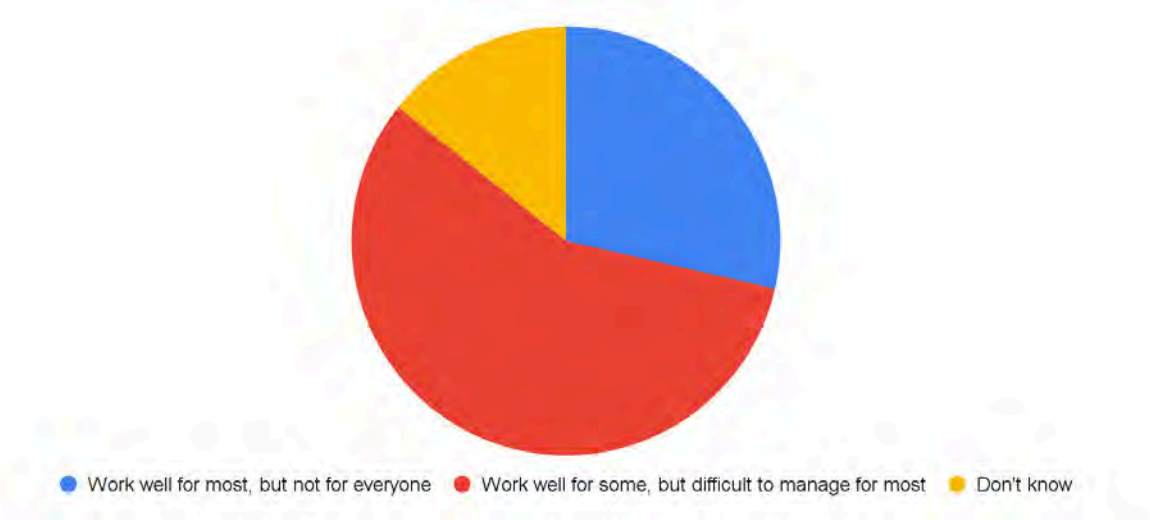
	Not a barrier	Slight barrier	Moderate barrier	Significant barrier	Don't know
Not feeling welcomed at facilities and recycling and waste drop-off points	4	1	2		
Low availability of products that use less packaging or reusable packaging	1		3	3	
Cultural or language barriers		6	1		
Not sure where to drop off recyclables	1	4	1	1	
Not enough information about reuse and repair options		4		3	
Uncertainty about what materials are accepted for recycling in curbside pickup	3	2		2	
Time constraints	4	1	2		
Safety and cleanliness at facilities or recycling and waste drop-off points	4	1	2		
Not enough or overflowing recycling and green bins in multi-family residence	4	1	1		1
Waste reduction and recycling is not a priority	6	1			

for me					

Additional barriers identified are:

- *“specifically location of recycling facilities in Vancouver”*
- *“Depots are too far”*
- *“recycling toothbrushes, lipstick tubes, lighters, old frypans, wax paper”*
- *“No”*

When asked “ow well do you think current waste management programs and services work for everyone in the community?” four of seven respondents indicated that they felt that current programs “work well for some, but difficult to manage for most”, two of seven that they “work well for most, but not for everyone” and one responded “don’t know”.



Responses to “which community members do you think may be having a difficult time with the current programs and services?” noted challenges relating to mobility, distance, and familiarity with systems:

- *“People who don’t live, or regularly travel, near a location that accepts things not accepted for pickup (e.g. who don’t live or work near the Zero Waste Centre or a Return-It depot). People who have physical difficulty carrying heavy loads to a Return-It location or the Zero Waste Centre.”*
- *“The disenfranchised”*
- *“I am often surprised by the amount of people who do not recycle and separate and dispose of food waste properly - I want to think that it's education but at times it seems related to effort when I see what people put into recycling bins in apartments”*
- *“It seems that some people don’t care . Possible difficulty for people with mobility issues”*

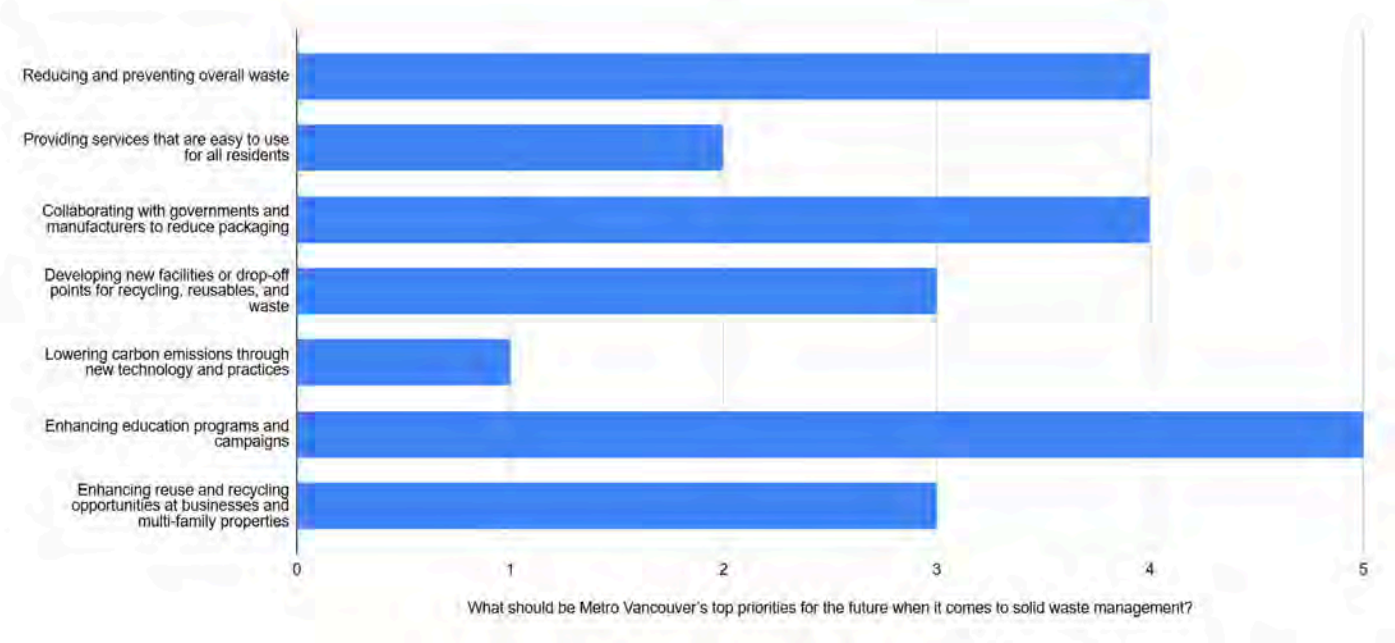
- *"seniors possibly"*
- *"Lower income people, newly immigrated people and their families"*

Respondents provided several suggestions for "what can be done to make the programs and services more inclusive so that they work for everyone?"

- *"Make as much as possible recyclable by household pickup rather than only dropoff at specific locations."*
- *"education & possibly consequences - I know from friends who live there how strict the garbage disposal is in Switzerland I know in some municipalities in BC that if people put the wrong thing in their recycle bin that nothing is collected and they are given a warning I know that in some cities they threaten fines but I have seen myself people not use the food waste properly which makes me think that there is no consequence"*
- *"Education & more signage about expectations and or closest depot"*
- *"More public awareness and education on it, better labels/instructions, incentives, enforcement for non compliance. I have noticed positive changes in these areas already so keep it up!!!"*

Looking to the future

When asked "what should be Metro Vancouver's top priorities for the future when it comes to solid waste management?" most respondents indicated "enhancing education programs and campaigns" as a priority, with 5 total selections. Four respondents identified "reducing and preventing overall waste" and "collaborating with governments and manufacturers to reduce packaging" as priorities. Only one selected "lowering carbon emissions through new technology and practices". Note that several respondents selected more than 2 options.



Other priorities suggested by respondents are:

- *"Reduce the complexity for users. I should not need an 11-page PDF and a PhD in materials science to figure out what something is made of and whether it's recyclable or not. We need simple rules like "all plastic is accepted"."*
- *"Developing new facilities or drop-off points for recycling, reusables, and waste In Vancouver"*
- *"Incentives for companies that follow practices and penalties for those that don't"*

One further idea was shared:

- *"Metro Vancouver is moving in the right direction. Some cities do a better job at it and some really don't. So Sharing knowledge, technology, policies, and helping out the rest of BC and collaborating with governments and securing better paths for waste management and recycling"*

Observations & Recommendations:

Engagement in this process was improved compared to the 2023 survey on Vision & Guiding Principles, which may be reflective of the more advanced stage of the Idea Generation phase of the engagement process. While respondents represented a wide range of age groups, municipalities, and organization types in the case of the RCBC Member survey, it was noted that in the public survey 100% of respondents selected English as the primary language spoken at home. This suggests that the reach of the public survey was limited to those for whom English is the primary language, and did not reach some of the groups identified in survey responses as less likely to engage with waste management programs, like newcomers to Canada.

Conclusions:

This survey aimed to solicit feedback both from RCBC Members in the Business/Industry and Non-Profit sectors and from members of the public who interact with RCBC Information Services. Overall, survey responses centre around two core themes: education, and ease of use/access. In both the RCBC member survey and the public survey, respondents identified that enhancing education programs, making it easier to reuse & recycle at multi-family properties, and improving access to recycling opportunities for all residents were important priorities. Additionally, barriers such as lack of information about reuse and repair options, low availability of products that use less packaging or reusable packaging, and uncertainty about what materials are accepted for recycling in curbside pickup were identified as significant barriers by both groups of respondents.

Engagement Activity Summary - Metro Vancouver Solid Waste Management Plan Update

Activity: Workshops and Survey with Master Recycler Vancouver	
Activity Dates	October 16, 2024 and December 5, 2024
Organization/ group name	Master Recycler Vancouver, a program of the Society Promoting Environmental Conservation
Time / Duration	6:00 pm to 7:30 pm / 90 minutes (both dates)
Location	Workshop virtual via Zoom + Survey via Google Forms
Format	Workshop & Engagement Survey
# of Participants	16 workshop participants (12 on October 16 and 4 on Dec 5) 76 via engagement survey
Summary of Promotions	6 Emails to mailing lists: SPEC newsletter, Zero Waste team, and MRV participants 18 Social media posts - across Instagram (7), Facebook (8) and LinkedIn (3)

Participant feedback/Input

Meeting Notes

Topic: Rethink and reduce waste in the first place

Include any notes from the engagement activities. These are "what was said" notes and should be as close to verbatim as possible. Use one bullet point per speaker (i.e., start a new bullet when a new person starts speaking.)

Notice to reader: All point-form notes are participant comments reported as heard, other than spelling corrections, removal of identifying details like names, and insertion of selected words for clarity, in parentheses. Italicized, non-bulleted points are commentary from the facilitators.

Topic/Question	What was said		
How familiar are you with Metro Vancouver's role in waste reduction, recycling solid waste in the region?	**Option**	**Oct 16**	**Dec 5**
	Very familiar - I could explain it to others	**4**/11	0/4
	Somewhat familiar - I have a rough idea	**6**/11	**3**/4
	Not familiar - I need an explanation	**1**/11	**1**/4

Opening Discussion

- We've implemented Extended Producer Responsibility. Maybe we need to do Extended RETAILER responsibility, so retailers have incentives to seek packaging-free products!
- Great thoughts and points. For me, one way I try to combat this frustrating reality is to 'vote with my wallet', recognizing my privilege of choice. So if I see tomatoes in a clamshell, or loose, I lean towards the ones which are loose. I like to think that if the retailer sees that the clamshell options aren't selling, they'll procure options which are loose.
- I will shoot out a friendly rebuke to that… consumers and retailers all know the goal is waste reduction and have been given every opportunity to make it happen. Here we are, in 2024, and we are deep into a climate emergency. My thinking has shifted; voluntary action has had its day in the sun and we need regulation.

Opening Discussion
○ I totally agree, we need more government regulations in terms of what packaging can be used, and also preventing over packaged products from being sold. ● I totally agree, regulation and enforcement are key missing components to me. However, in the meantime, I do believe that my individual actions (and sharing reasonings for those actions with others) is what I have control of currently.

SWMP Guiding Principles	● What are the implications when they say 'resilient to climate change and future challenges'? What does it really mean? Does it mean the solid waste is away from water as it creeps inland? ● (another participant responded) I like to think that the fact that landfills produce methane and GHGs speaks to how waste is related to climate change. ○ To put it very simply, burning fuel creates emissions that cause climate change, but landfills also create those emissions in a different way.
Questions and Clarifications	● Where does C&D waste go? ○ *We discussed, there are wood waste upcycling facilities, and also dedicated construction and demolition waste landfills. We discussed that wood products can become fibreboard, concrete becomes road fill, lots of different uses!* ● Is it true that each municipality can choose its own hauler? YES ○ *We discussed that municipalities have responsibility for managing their own waste contracts, and depending on the available infrastructure, may also choose between multi-stream or single-stream. They can even use different systems within the same municipality.*
Today's Topic of Focus *(Rethink and prevent waste in the first place)*	● Are there other groups talking about the 6 other topics? *Facilitators shared what we knew of other groups hosting engagement on the other topics. We discussed how "rethink and reduce first" ties into the other items.*

Warm Up - What you do to prevent and reduce waste
Key takeaways: (1) reuse packaging, (2) reduce consumption through conscious shopping, (3) reuse dog waste bags, (4) donate clothing and other still-useful items, (5) avoid takeout and delivery food, (6) reuse bags, bottles, period panties, mugs, etc, (7) buy in bulk. ● First speaker: ○ Buy less. ○ Have a list when I go shopping. ○ Don't impulse buy; don't buy processed foods. ○ Avoid restaurants (there is a lot of food waste there). ○ Cooking with what you have in the home. ○ Buying locally made products. ○ Wear out our clothes. ○ Reuse and recycle used textiles. ● Reusable mug, reusable bottle, reusable period panties ● When I think about my relationship with waste, I have three thoughts ○ I try to buy less

Warm Up - What you do to prevent and reduce waste

    - As a foodie, I focus a lot of my time/money/energy around food - I prioritize making my own meals a lot. Cooking lentils and beans from bulk beans rather than in packaging.
    - I prioritize going to package-free grocery stores. I know that's not an option for everyone, everywhere, but I offset that by prioritizing that over some other activities.
    - On social connectedness - being a constant person in the group or family who's reminding people to be aware of their relationships with waste; try to impart a bit of wisdom and knowledge while I have conversations and interactions with others.
- Favourite item to reuse is dog waste bags
    - She did make reusable dog waste bags as her master recycler project, but you don't need to go through that effort - she does have them, and other participants were fantastic supporters of her going through that, but you can just reuse the plastic ones if you're caught, because in Metro Vancouver we're encouraged to flush dog waste.
    - She has two dogs, they go for walks twice a day, she could be using at least 4 if not more bags a day, and she doesn't. She uses either the bags she made or will reuse a plastic bag for weeks and weeks, instead of having four bags a day going to waste, she has very few
    - (another participant asks) What do you do to reuse the same bag?
        - Dog poops, flush it in the toilet, rinse the bag as she flushes, then hang it upside down
- Retired but does a lot of gardening and volunteering at Riley Park community garden. She's in charge of the composting section up there.
    - She has a great connection with a guy at Metro Vancouver who regularly sends packs of 'here's the dirt' leaflets, which she distributes to people whenever she gives a composting talk, and the worms leaflet too.
    - Her favourite thing to reuse is spreading coffee grounds around, so they never get wasted. They go on the roses or the pot plants who like them. And they seem to like it. So good, healthy plants.
- He reuses his paper garbage bags, and he uses an olive oil can as the garbage bin
    - The paper bag is probably a year old now, just emptying into their garbage can, and out in the lane.
    - They do, in their kitchen, his wife and he only, the kids are grown up, they have various waste baskets around the house, and when it comes close to garbage day, every 2 weeks, they aggregate the bins into 1 place, and sometimes he can just empty that directly into their big bin out in the lane
    - Sometimes the bag goes out with the rest of it, and then they use a new, small kitchen bag, which they used to reuse their shopping bags. Since those don't exist anymore, they do buy a roll of bags, it seems to last like 5 years.
- Her daughter doesn't get home until 7 in the evening. They've taken to using the Hello Fresh delivery system. So you get the ingredients for a meal in a brown paper bag which fits perfectly into her kitchen caddy under the sink, so she's reusing those. And they have a slight element of a lining inside, which makes them relatively waterproof. So they're absolutely perfect for lining the food bin, and you can pop them into the green bin.
- He likes to reuse EVERYTHING , because he made a commitment more than 10 years ago that he doesn't buy anything new. The only things he buys new are food, bicycle brake pads that require replacing, and the head of his Sonic toothbrush is replaced roughly once a year, and is made of plastic.
- She's done a whole lot of stuff to do with improving her own recycling at home, and participating in zero waste events, since doing the MRV course in 2015.
- A constant struggle, realizing that things she consumes will end up in landfill, despite me recycling. She's trying to reconcile that difference.

Warm Up - What you do to prevent and reduce waste

    - I try to make sure whatever recycling or composting I do, I'm doing it well.
    - If I'm composting a container, I take out everything that is not compostable.
    - Anything that is recyclable, I separate all the components.
    - Also, I come from a culture (Pakistan) where waste is not a concept; we use everything over and over again. So it's ingrained in my upbringing to never throw it out. The idea of mindfulness.
    - Understanding how my individual action can impact the recycling process; if I put my pizza box that's stained in the recycling container, it can spoil the whole bale if it has grease.
    - You need to understand how your actions matter. The conversation around this usually blames others for why systems aren't working; we have to reframe and think about what we are doing to make it work.
- She takes individual actions, but also feels very frustrated by the manufacturers; if all the foods are in these clamshells, then what can we do to change that habit? I don't know if it IS up to the individual to change these things.
    - I find it really frustrating that you can't buy anything that isn't in those hard plastics.
- Trying to be more waste-free by changing buying habits like switching to shampoo bars instead of bottles.
    - You really have to seek out refillable containers for beauty products. Some companies are better than others.
    - I go above and beyond to collect my soft plastics.
    - I've contacted companies to ask them to change their packaging - there are some things I don't buy anymore
    - If you tell people they have to spend 2x or 3x as much money to buy a product because it's locally sourced, reusable or has recycled content, it's hard for people to do.
    - Where can you make the biggest difference?
    - If I look in my garbage bin, you can't do much else with that
    - Dust, when i'm cleaning - what else am i throwing out - and I'm surprised by how much plastic I can accumulate over a month
    - But you find something inside a package that you don't expect.
    - the thing that makes me sad post Covid is only one major grocery store chain locally (Save on Foods) seems to have bulk foods still, others have shut down that option to consumer causing more buying than necessary
        - *Other participants chime in and she clarifies what she considers a major chain*
- Being from Hong Kong, coming to Vancouver to study is her first time (using multi-stream recycling). In Hong Kong the recycling system is not as good, so she's happy to see the number of different bins, including on campus.
    - Adding to the point about shampoo bars, her environmental awareness is influenced by my mom; so I encourage soap bars instead of liquid soap in bottles
    - Before that, I never realized how much plastic that one little bottle produces
    - It's very hard for people to adapt to a new way of using resources, even if it's simple to switch from liquid to bars.
- I like to bring Tiffin containers, or reused plastic containers to the bake shop and get them filled. There can be a hygiene issue, but we manage to take our reusable coffee mugs to coffee shops, etc, so that is an option.
    - As a retiree I'm lucky to be able to do all sorts of volunteer work in the recycling and repairing business. That's my main focus of trying to keep the planet from burning up.
- Reusable food packaging
- Bringing takeout foodware to restaurants

Warm Up - What you do to prevent and reduce waste

- Reusable cups
- Reusable bags - hyper-portable
- When done with a clothing item or not using it, will put it on the buy nothing site - pretty active on the local buy nothing; she uses it a LOT
- Use Facebook Marketplace second hand items
- Being a conduit for local schools, for family members (to take items to donation or depots)
- Talk to families about clothing-share. We just think that (and I was guilty of this too!) we think to dump unused items off at the Salvation Army or any other thrift store, e.g. SPCA, but we still have a lot of that stuff not getting resold in the Lower Mainland, it's garbage or sent overseas, so been trying to encourage people to share with cousins, and work with that, that's a big thing
- Volunteer at the repair cafes, helping to eliminate waste by repairing people's clothing items so they can keep using them
- Buy used items for grandchildren at MacGillycudy's Children's consignment store at 33rd and Mckenzie
- Recycle everything possible
- She's a zero waste artist who uses recycled and leftover items in her art.
    - The main thing she uses these days is obsolete 1970s and 1960s polyester double knit fabric. She studied in a fashion design program, so she uses couture methods to make the waste fabric into something that is other than what it started out to be, really awful stuff.
    - Also, her daughter has a cognitive disability and a number of health issues, so over the last 8 years they have eliminated everything from their life that could possibly contribute to various illnesses and problems, and ended up with pretty much nothing in the way of bodycare and food items.
    - They've developed a bunch of bodycare products and are in a business program for people with disabilities, going to launch a line of skincare products in the spring.
    - They grow everything and produce the raw materials for it, they forage and have a garden, so they make basically all the botanicals and make the products themselves
    - She wants their packaging to be an example of what they can do, not just a compromise. They want the packaging not to be greenwashed in any way, actual zero waste packaging. She doesn't even want it to be recycled, she really wants to give something that can be reused, so they're using proper canning jars for the packaging
        - They don't want glue or stickers so she's developed a way of making everything work, and a printer who can do what she needs to be done. It's hard to find anyone to make a circle for you that's not a sticky circle
        - She wanted to be an example of what they can do, not just a compromise - yes, it's recyclable, and therefore it's environmentally friendly - even though that's not environmentally friendly in my books, that's another part of the problem
        - I wanted to appeal to people who actually grow their one food and use their own food and preserve their own food
        - If someone ever gives me a canning jar, they know not write on my gravestone - never say no to a canning jar; something that can go in a hot water or a freezer

Warm up - What people would like to do or have thought about doing:

- *(Learn from the past).* The Victorians always recycled everything, before plastic was invented, we should do some research into their practices

Warm up - What people would like to do or have thought about doing:

- Clothing swaps - they want to host them; start the conversation with their community about textile waste
- Implement reusable toilet paper at home; 'family cloths'
- Bring take-out foodware when I go out for dinner.
- "I have a will and an urge to be more interactive with my neighbours, which I don't do"
    - It's even hard for me with my roommates, who tend to be young and everything comes from Amazon every day.
    - They have to recycle and compost because they live in the same house that I am, but even my neighbour from upstairs, I'm many times looking into the communal baggage and opening bags, recycling a lot of containers and stuff.
    - For my whole neighbourhood, like most other neighbourhoods, I go and look through garbage, and it's not simple, there's contamination.
- Convince my friend who doesn't see the value in composting because she's thinking individual action doesn't have any impact, that composting every little food scrap DOES matter.
- *(Create bite-sized, digestible and appealing scripts to encourage the desired behaviours)* Have a BETTER, brief by-line, a better way of trying to explain WHY we CAN do individual contributions - something in the back of our heads to reach for whenever the opportunity comes up
- More information sharing about the repair cafe, spreading the word more
- The past three years she's been part of a food redistribution service. They get donations from a grocery store that are just about expired; with her neighbours they sort it and distribute it among different people in their neighbourhood.
    - She likes that because she finds a lot of excitement in using what's on hand. She never buys or goes out and gets something to use, she uses what comes to her naturally.
    - So this food she's grateful for, but at the same time, she's generating way more waste this way, prior to receiving all this bounty and abundance being diverted from landfill.
    - So, the styrofoam, the plastic packaging, makes her feel torn
    - Glad to have the food and to divert it, but still carting off a whole lot of plastic and a whole lot of styrofoam, don't know what the solution is there.
- Haven't been doing it, but in the past she's written to stores to STOP SELLING STYROFOAM
    - So yes, Metro Vancouver should say that we can no longer SELL styrofoam at all, that we can no longer sell them, so we can't get them at the store
    - You can't get them at the coffee shop but you can buy 24 of them when you're having a picnic. Metro should stop allowing that.
- Would like the Zero Waste Center to have a spot for canning jars. You're not supposed to paw around in their bin of glass, but they kind of turn a blind eye. Let's actually have a section where people can put useful stuff where people can reuse and recycle.
- City of Vancouver used to have a once a month time where they let people exchange things. But the zero waste depot, it would be great if they would let people go in and share things.

Identifying Barriers and Key Challenges - What do you see as the primary challenges or barriers we face in tackling the goal to rethink and prevent waste in the first place?

Key takeaways from the conversation: (1) the focus on recycling prevents people from reducing and preventing in the first place, (2) there is disillusionment with recycling that prevents people from participating, (3) many people just don't know how to properly recycle, (4) individuals can only do so much, when everything we can buy is packaged, prevention has to happen before products get to the store shelves.

Identifying Barriers and Key Challenges - What do you see as the primary challenges or barriers we face in tackling the goal to rethink and prevent waste in the first place?

- People don't know much about how recycling works, so they don't put their bins out.
- It's very hard to sort at the home; it's too confusing
- It's disheartening that organics and recycling sometimes get incinerated
- I would like to see on everything that can't be recycled, have a small blue dot for blue bin, black dot for black bin, green dot for green bin. It's easy, anyone can see that.
- Behaviour change; people not following the right actions; we need to be letting them know what they can do.
- Lack of information, lack of awareness. People sometimes want to do more, but they don't know what they could be doing. Information and sharing the possible alternatives for consumer behaviour would be a very important pathway to follow.
- For her, she knows there's a multiplicity of packaging and everything; she laughs when she goes into places where you're supposed to dispose of your own stuff from eating or drinking, and you have all these choices - is this for compost, for garbage, for recycling? And, everybody sort of stares at these things and has no idea where to put everything! So everything gets mishmashed.
    - How can we create a system that is CONSISTENT? Through different locations. It also means maybe the materials have to be consistent.
- Construction and demolition waste is banned from landfill in MetroVan. But it still sneaks in in black bags. Ban the black bags!
    - Also, fine the haulers at the tipping places … it's already happening, but I support larger fines.
- We need to focus on advocacy and what goes where - half the people don't know how to sort waste. Not one-way information; like how we have the signs up against garbage areas. We need to do some leverage of social media and outreach and make it appealing and interactive
- When it comes to prevention, I go back to the guiding principles a bit here and thinking about the guiding principle that speaks to incentivizing retailers
    - If the options are unsavoury - do I really want to OWN this piece of packaging right now? I really don't, I would like another option please
    - A way to regulate or restrict packaging at a retail level, and incentivize retailers to ensure there are package-free options that are readily available
    - That would go a long way to giving those of us who are willing or seeking to make the package-free choice; go a long way to that reduction and prevention in the first place
- Multi family buildings have contamination
- Lack of education for people - the very existence of recycling programs makes people complacent (about prevention and reduction); okay, I'll chuck it in there, I've done my part.
    - People don't know that things are not properly recycled, that when you put greasy stuff in it just contaminates something. People don't even know what is supposed to go in the blue bin
    - So, there should be more education about what can and cannot be recycled.
- Education by itself is usually not enough, it has to come with involving kids in schools, showing examples on the streets, in the shops, in the grocery stores,
    - There needs to be a lot of different things, messages, programs and places.
- Different cultures, different languages
- Health conditions and situations - for some people, it's very hard for them to drive to a depot, to the zero waste center or to depots
- Lack of continuity of waste bins. Sometimes, they're not always available. It is Complex, we've even done things with events in the summer where you're explaining where things go, which bin, but it's also the confusion of - you're standing in front of four bins, and you're like WHERE DOES THIS GO?

Identifying Barriers and Key Challenges - What do you see as the primary challenges or barriers we face in tackling the goal to rethink and prevent waste in the first place?

    - Even when they have the pictures on them, it takes brain power that people don't necessarily want to take the time to figure it out
- Would love to see compost bins, but a little smarter, not just bins, in the streets of Vancouver. It's going to take years for people to get used to it
    - At the beginning, it will be a contamination show, people will just dump everything in there. But every change, every behaviour change takes time, takes a process, and in Europe there are a few and maybe more than just the EU, there are new innovative ideas on how to approach that.
    - I would like to see a compost bin by every garbage bin, and a recycle bin next to it
    - It's been experimented with to a degree, but usually not with compost
    - There are new ideas, new things that can be done to make it more accessible
    - Most of us, in a single family house, we're doing a reasonably a good job, in multi family not as good. I would love to see some work on that.
- Conundrum in my mind; we talk about waste reduction, but in the same talk we're talking about recycling, which is really just doing something different with the waste, so it's not really PREVENTING waste in the first place. So, the focus on recycling, and recycling better, is a barrier.
- We're talking about plastics and the 9% recovery figure, and RecycleBC claims its much higher in BC, and that they make something with the plastics, using Merlin Plastics
    - They claim they can make soft plastics and make a usable product they can resell
    - But it would be really nice to SEE that, talking about transparency, maybe more people would be interested if they actually saw something in their media feeds that told them that was happening, or commercials in regular television
    - At London Drugs where they accept the flexible plastics, and the City Zero WAste center, they're the only places u can do that
    - Would be nice if EVERY PUBLIC BUILDING was doing that; I don't know if they have a special deal with London Drugs (LD). Did LD agree to subsidize the program?
    - Every community center, every library, city hall, they should have those kinds of waste receptacles. But still, that's all recycling, that's not preventing waste.
- How inaccessible it seems to actually prevent waste, because we encounter packaging and products once they're already designed to be wasted
- The notion Master 'Recycler' was misnamed, because you don't really want to recycle these things, you want to not create them in the first place
- I'm prepared to accept the world as it is and not the way it could be, and say; what do we do with this stuff, as opposed to changing everyone's behaviour?
    - If you charge them for it - we now have a system for it. There's all these things on which there's a 10 cent deposit. There are many things that are identical that you don't have a deposit on, like a Litre carton of milk, a litre carton of cream does not, but it's the same kind of thing in terms of the waste at the end of it.
    - The Litter Act deposit law, originally in Vancouver, was thinking of things you might use away from the home and use on the street, that would be leftover. The deposit is a leftover of that thinking from 40 years go
    - Some identical packaging, and some have a deposit and some don't
    - Of course, if you put the refundable stuff out in the lane, together with the blue box or separately to make it easier for people to get them, the binners take them away
    - Was starting to think of this as - the way miners think of ore concentrators and smelters; the ore is all this stuff spread out in the lanes of the city, and the concentrators are the binners, they dig all the stuff and take it in one giant bag to get

Identifying Barriers and Key Challenges - What do you see as the primary challenges or barriers we face in tackling the goal to rethink and prevent waste in the first place?

back a dime, and they concentrate them at the depots, which then sorts them into aluminum, glass, etc.

- Why are there never any recycling bins at public parks and farmers markets locations?
    - They're PRIME places where people are buying coffee from the vans, takeaway food they're eating there, and there's nowhere to put that. A lot ends up in my compost bins at Riley Park, which is really frustrating.
    - It's something that well, it could revolutionize things, couldn't it? Farmer's markets every weekend, and parks with children and families playing, and picnics, there's nowhere for them to put the waste products
- The ferries have bins - they have bins marked compost, newspaper, and cans and bottles
    - My observation is that there's an incredible amount of contamination. You would need someone to sort it afterwards, and then it becomes cost prohibitive in terms of what you get out of it in the end. If you valued waste reduction more highly somehow, it would become more cost effective.
- Other idea, is put the 10c deposit on almost every kind of container, and then A) people would notice it and start to think, maybe i should start to buy this stuff in something reusable, and B) the binners would get richer; they would have more things to take to the depots, which would be the concentrators where they can
    - The milk cartons; don't know what happens to them, to glass, etc. If there were 10x as much of it, then someone would figure out some way to repurpose it
- That there are SO Many different materials. It is hard to make the best use of recycling with so many materials.
- Contamination is a big barrier.

Identifying Barriers and Key Challenges - What could Metro Vancouver do?

Key takeaways: (1) Eliminate single use plastics in the design of products, (2) make sorting / recycling easier, reduce the complexity of materials upstream, (3) increase the number of depots, make them more available to communities e.g. host them in public buildings, (4) ensure new constructions have large enough waste rooms for all the bins, (5) mandate composting and recycling at events, (6) pilot streetside recycling and compost.

- Metro could make it a lot easier for people to sort, and realize what needs to be sorted
    - The single use water container is a plague; it can't be reused, it's too thin. Eliminate it! He sees it in the news; what a disaster, they ship in thousands of these single use water bottles, but there are the water supply companies that deliver in the large containers - ship those out, and use small reusable permanent water bottles. That in itself would save a huge amount of waste.
- A lot of companies that make plastic develop new plastics for patent purposes; the government should restrain that and say, if you come up with a new plastic, you have to demonstrate that it can be economically recycled, otherwise you can't make it. That would help a lot
    - Eliminate single use plastics
    - Create an education system about how plastics can be reused safely
    - E.g. 3D printing uses plastics; if they make items like hard shell cases that can be ground up and used in 3d printers, that'd be great
    - Plastic itself is not evil, it's that our waste of it is bad.

Identifying Barriers and Key Challenges - What could Metro Vancouver do?

- There aren't enough people at transfer stations to catch folks who are poorly operating - the transfer station is just one point; the haulers are bringing in waste from multiple buildings, so there's a bit of a MISS there.
    - Accountability - it's hard when there's no MEANS of putting the accountability back on the individual within a multi-family building / strata. It seems to be missing something in that equation.
- I think Metro already is beginning this campaign, but my suggestion is to reinforce in the mindset of the public that materials that go in your Recycle BC bin DO get properly recycled. The CBC report that came out 2 years ago that shows material is not recycled has grown wings and lives on in the minds of Canadians still, even though it's not true for BC's bales of material. That report turned many people from active participants in the recycling program into people who are ambivalent and half-heartedly participating (if at all).
- In ALL new buildings the waste sorting area should be built sufficiently large
- Provide more targeted education on what can and can't be recycled
- Provide multilingual education about proper recycling
    - I do think that; you know, we said we have a few little advertisements, like the think thrice textiles campaign;
    - Well, can we get similar things into our multicultural local channels and things like that, because we want EVERYBODY to know
- Educating the children, getting it in the school system, so that kids can educate their families
- Support programs for depot deliveries / help
- Fund pilots for streetside / curbside organics bins
- Host depots in public buildings
    - Encourage other public buildings to be waste depots; increase the number of depots
- Promote expansion of EPR programs so that all items are covered
- Mandate recycling, compost at public events
- What is Metro Vancouver's authority in regulating the sale of goods? And the province, what are the barriers they have in sales prevention for different items? E.g. fast fashion, plastics. Prevent the sale of wasteful products.

Collaboration Opportunities

Key takeaways: (1) Repair Cafes and Buy Nothing groups, (2) community events with food vendors, (3) multi-family buildings to improve consistency across them and between work and home, (4) community centers, libraries, public buildings, parks (for consistent sorting / more drop-off locations) (5) other cities/regions around the world who've implemented things Metro Van is considering, (6) mandate reusables for items like coffee cups, require that both use-there and takeaway cups are reusable.

- Repair Cafes
    - I'd like to see more of those offered on a donation basis, or organized by places that sell products.
    - I went to Salvation Army and saw tons of kitchen appliances - instead of people putting things in the back alley, why isn't there a better system to give it to some place and they'll try to match it up with someone who will want it - if it's broken, can it be fixed before it goes into the landfill?
    - Places don't fix it because there are no more parts in this thing; it's cheaper to buy a new one, and it's unfortunate that is the mentality - oh i need a new one of these things because buying a used one, isn't feasible. People need to shift that - I give

Collaboration Opportunities

away a lot of things that are useful for other people, but if people don't have that mentality, it just goes in the bin.

- The Buy Nothing Groups are wonderful for redistributing stuff we no longer need
- One thing about the composting system - evidently, there is packaging that is mixed, like the supposedly compostable bags - but that cannot go into the composting system.
    - There could be some system that could compost them. Could we prioritize creating systems that actually can manage these materials?
- An area we could really have a larger impact, with a lot of people, is community events
    - I see large-scale community events where there's a lot of food vendors, lots of thins going on, and even though there are recycling stations at many of the events, at the end of the day it's always a huge amount of garbage because of things being sold and used in doing these events
    - As she mentioned, she's trying to do at Trout Lake Community Center, they've been pushing to rethink how they do community events, by asking people if they provide food at an event, they'll think about food that's not requiring plates and utensils and bowls. This is something we could push for on a community level, and/or something to bring awareness of the kind of trash we create.
- We need to support good coordination for events to have good diversion. With managed waste coordination, you can get 70 to 80% diversion.
- Consistency - sometimes things are not consistent between companies, and between buildings. In our multi family building it seems like we get different information from time to time, and it seems like different buildings have different rules, so some kind of consistency would be really helpful.
- Organizations that regularly host events
- Farmer's markets
- Public parks, parks board
- Libraries
- Community centers
- Can Metro Vancouver work more with the upcoming or reuse cups - the reusables, the Sharewares, that concept that you put it into much more of a have-to-use?
- One of the things I'd really love Metro to do is look at what's working in other places. When we were talking about Sharewares, in NYC, there's bins outside subways where you pop the sharewares things - it's so convenient to use the reusable cups for coffee, because you can drop them everywhere.
    - In Vancouver, we drink a lot of coffee - but make it more of a process that (the stores) have to use (reusables). Like, everybody has to use reusable inside, and a percentage of your outgoing cups have to be reused; make it a requirement for companies.
- Even if it's made of wood, everything has to be reusable.
- How is it working worldwide? Where is it working well, and let's learn from them.

Wins - what's going well and shouldn't be changed?

Key takeaways: (1) the blue box system for packaging, paper, glass and plastic, (2) the curbside organics program / organics ban in landfill, (3) EPR programs in BC are world-leading (4) Maple Ridge's curbside pickup for Other Plastics stream as of January 1, 2025, (5) garbage pickup being weekly but compost every other week, (6) provision of home compost bins (encourage home composting more!)

- A fantastic blue box system for packaging and paper and glass and plastic;
- The composting mandate - organics ban to landfill

Wins - what's going well and shouldn't be changed?
● In general, BCs EPR programs are numerous and dare I say robust. There are a good number of drop-off locations but one could argue we need more. ● The recycling collection is working well - she works in an apartment building which has a variety of bins beyond blue box - but not everyone is working in a MF building ○ Not everyone is able to drop off recyclables to the facility; because of transportation issues, in bulk, or traveling in cars. ○ Having more DROP OFF STATIONS or PICK UP LOCATIONS would help more people to get into the action, especially for seniors who may have mobility issues and accessibility issues. ○ This is another thing they've been doing at Trout Lake - volunteer-run pickup and drop off weekly; so they can collect things like styrofoam, plastic, batteries, electronics; and their volunteers, neighbours who can drop off once a week, and volunteers take it to the recycling station - that could be expanded on ● The EPR program has funded so much great infrastructure. MURFs, processors, collectors etc. ● The organics ban made us all switch to composting with relative ease , residentially and commercially. ● As of January 1, 2025, Maple Ridge and Pitt meadows will have curbside pickup for Other Plastics. Remple is the hauler for this. ● Garbage picked up weekly, but compost every other week. It helps people understand they have to cut back on their garbage because the cans are getting full. It's a good system to use ● In my area, there are even some seasons where compost is only every 2nd week as well, which I think is good. The fact they're taking compost in the first place is amazing. ● The compost being taken away is good for folks who can't compost but I fill my compost bin every week, it's full to the top ○ I have 7 composters in my backyard, and 3 worm composters. Mind you, I've got a community garden in my backyard so we do have more stuff come in. ○ I think providing GOOD QUALITY COMPOSTERS to people in their own yards, would be great. The ones we get right now don't last very long. They're great at first but parts of them come off, can't tell you how many I've gone through the past 20 years. ○ I LOVE the idea of there being composting happening all over the place ● Can we have a composter in parks? Have a compost bin and let people fill it up. Even though I know how much plastic and garbage ends up in there. ● My goal is to have every house to have a compost bin in its backyard ● The green bin is a wonderful system, and it has definitely diverted a tremendous amount of stuff from landfill, but it has STOPPED people from composting their green waste and garden waste in their own yards, which is a shame ● Generally, in Metro Vancouver, we have one of the best systems of collecting, recycling, composting in the world ○ Not first not the greenest area, but we probably are one of the top municipalities in Canada, and possibly in North America, so we've got a good system, we just can't let go of the gas, we have to keep on making new ideas and new innovations

Wins - what's going well and should be expanded on?	● Metro Vancouver's reusables superhero social media campaign is compelling; this could be circulated with other groups and posters put up around town; also it could be expanded into recycling sorting ● More drop off stations ● Some areas collect soft plastics in along with the recycling, I'd like to see Metro Vancouver add this to our collections ○ (response from another person) I absolutely love the idea of flexible plastics being curbside (and foam, and lightbulbs, and

	batteries, etc.) but I fear the major hurdle will be lack of space in the older buildings to accommodate more streams. It would probably work better in single family first? ● Ban of single use plastics - bags, straws used to be bane of my beefs at restaurants, throw away utensils.
Knowledge gaps and communication - **What types of information would be most helpful for you in furthering your understanding of rethinking and preventing waste in the first place?**	*Takeaways: (1) education for newcomers to the region, (2) statistics on the effectiveness of waste diversion.* ● This project / initiative is part of the larger initiative of the Zero Waste Conference - her organization is going to present to Metro that there needs to be ways in which we can communicate to newcomers to Canada; first generation immigrant Canadians. When she came here 8 years ago she had no idea about recycling, waste management, or the entire concept around what recycling was. ○ There has to be some content that is delivered, keeping in mind different cultural sensitivities and different language ○ There are barriers faced by people not related to this land ○ And people who've been here for 20 to 25 years not acquainted with this system - we have to close that gap ○ One way Metro can ease that is by collaborating with those communities ● Not only international newcomers, Canadians coming to BC from other provinces where recycling/composting is not as strong as here ● I would like to see really good statistics, all the time, every year - how much we collected, how much ended up, where, how much money did it bring, how much money did MV make from the transfer stations, how much money was made by compost facilities to sell back compost to people all over? A LOT of statistics!
Knowledge gaps and communication - **What are some of the ways to engage with Metro Vancouver residents on rethinking and preventing waste in the first place?**	***Takeaways: (1) In person at events, at schools. (2) Messaging across platforms has to be fun, entertaining. (3) Education needs to be provided to teachers to influence students. (4) Waste haulers have a role in providing information in person.*** ● Not everyone is on social media! ● Messaging needs to be fun as well. We created a postcard for Trout Lake Community Centre's Green Committee's "No Balloon" campaign, and also posted them on social media, which received the most views. ● In person from the waste hauler. They're already coming to the building; if they're able to provide information to a resident, a strata council, a property manager first hand - here's some flyers, put them up, or waste haulers coming to a building to provide more outreach ○ Building on waste haulers - one of the challenges is there is not much accountability from them, they're just providing a service to get trash from here to there, there's not necessarily - some of them are there to make money first, they're not there to be the best movers and shakers in waste; so, somehow metro vancouver, the BC government, to put more responsibility and accountability to be a PART of the solution rather than just a part of the problem ● Not just one avenue, we need to attack it from different ways.

<table>
<tr><td></td><td>

The idea of people being OUT at more EVENTS explaining our waste system. Having people HAVE a table at those farmers markets, HAVE a table at our repair cafes, have people EXPLAIN what works and what doesn’t work. At the Diwali Festival, why don't we have tables?

Tables at schools and highschools, especially because those are the ones who will become the adults of the future
We have to teach the teachers

I am always having to teach the teachers, it drives me CRAZY how many adults do not know. There’s a lot of people I would give up on at this point.

Closing Discussion

Key takeaways: (1) Move the focus upstream onto the design of products and packaging to reduce and prevent waste in the first place, (2) Provide education both on proper recycling AND on ways to reduce waste from individual choices too, (3) improve confidence in recycling systems by sharing the success stories for our region, compared to statistics people hear from a more national and global level, (4) tell people how much it costs to handle their garbage, more than just on their property tax bill.

- Reinforcing; leaning on retailers - they’re one of the chains of custody of waste materials, recycled materials, they’re the ones that seem to be the least engaged, least incentivized, least motivated. All the other stakeholders have made so many efforts to engage and incentivize them, and provide a pathway to choose packaging free or reduce waste in general, maybe that’s the one stakeholder that we still have that really hasn't been engaged.
    - I love seeing them pop up, but in the recent years, many of them have gone out of business - not enough people are supporting them - the bulk stores like Refilleries and Nada Grocery
- A question - a few years ago, Metro Van or CoV were going to have an app that you could put in and check if this thing is recyclable; not sure if that still exists - is there something LIKE that? Now that technology and AI are big
    - She’s been to Globe many times and there’s often a machine that will sort recycling for you - but maybe using some of that technology in those ways
- There are options like https://recyclebc.ca/what-can-i-recycle/, VanCollect, and RCBCs Recyclopedia, 311
- What was just said about the blue bin being a barrier to people actually making better decisions about what they buy -
    - What was said about getting STATISTICS, for ME, seeing the statistics about how POORLY we are doing with the amount of recycling, and how recycling is NOT the answer - I think this makes people think twice about what they buy

Closing Discussion
○ If we are giving statistics that say ; ah, this much is recycled, isn't that great? Then people will be buying things that are recyclable because they think it's getting taken care of ○ But if i see a static that says 9% or even 20% and THEREFORE please don't buy things that are plastic, i might look for another option, look more strongly for another option • One thing - the COST of garbage collection is hidden from people. You only find out about it if you have a property tax bill, you can see buried under the MV part there, there's an amount for garbage collection based on the size of container you have, which is for a single family dwelling. It would be good if that was this reminder MORE than once a year! • They could make - there are 3 sizes of garbage bins - for a single family house - maybe there could be a fourth one, you pay even less if you waste less ○ The size sets the expectation for how much you waste, so include an even smaller one • If you don't put garbage out for 3 different collection dates, you get a rebate. That could take a lot of management, though. • I think for me - educate kids and look around the world to see what's working in other places • We need to be more aware of what actually happens with our waste; how little is recycled, how degraded recycling quickly becomes, how much it costs us, individually, AND what alternate options are available, then I would expect that people might vote with their wallet by making better choices about the products that they buy.

Demographics Summary	• City of Vancouver (majority) • New Westminster (1 person)

Engagement Questionnaire Results

Topic/Question	What was said
How familiar are you with Metro Vancouver's role in waste reduction, recycling, and garbage management?	How familiar are you with Metro Vancouver's role in waste reduction, recycling, and garbage management? 76 responses 
How often do you do the following to reduce waste?

NOTE the colour coding on the next eight pie charts is the same:

Dark blue = Always
Red = Often
Orange = Sometimes
Green = Rarely
Purple = Never
Light Blue = Don't know / not applicable

Meal plan to avoid food waste	Meal plan to avoid food waste 76 responses Bring reusables for takeout (cups, dishes, utensils)	Bring reusables for takeout (cups, dishes, utensils) 76 responses Compost organic waste including food scraps and yard trimmings (e.g. backyard composting, green bin pickup)	Compost organic waste including food scraps and yard trimmings (e.g. backyard composting, green bin pickup) 76 responses Pass down or donate unwanted clothes, or participate in clothing swaps	Pass down or donate unwanted clothes, or participate in clothing swaps 76 responses 
Repair items, bring items to repair cafes, or pay to have them repaired rather than disposing	Repair items, bring items to repair cafes, or pay to have them repaired rather than disposing 76 responses Reuse or repurpose items instead of disposing (wrapping paper, food containers, plant pots, etc)	Reuse or repurpose items instead of disposing (wrapping paper, food containers, plant pots, etc) 76 responses Buy, gift, receive or trade second-hand items	Buy, gift, receive or trade second-hand items 76 responses Bring your own reusable shopping bag	Bring your own reusable shopping bag 76 responses 
Is there anything else not listed here that you always or often do to reduce waste? (optional question)

39 responses

One respondent said 'No' to this question. The remaining responses have been grouped into the following themes, in order of the most responses:

- *Reduced packaging consumption, especially plastic packaging (16 responses)*
- *Consciously reducing overall consumption and consumption of specific unnecessary items (15)*
- *Food waste prevention and reduction (12 responses)*
- *In-home reuse activities / replacing single-use household items (9 responses)*
- *Advocacy (5 responses)*
- *Diversion efforts (4 responses)*
- *Prioritize durability (3 responses)*
- *Salvage (1 response)*
- *Suggestion for Metro Vancouver to do an input survey for school children (1 response)*

Response wording is either provided exactly as the respondent stated or slightly abridged. If a response describes activities falling under more than one group, the response has been split accordingly.

Reduced packaging consumption, especially plastic packaging (16 responses)

- Buy in bulk
- Avoid online shopping to reduce all the packaging that comes with items
- *Bring reusable shopping bags, including*
    - mesh or paper for produce
    - Use reusable produce bags and avoid the use of plastic whenever possible.
    - I bring my own vegetable bags.
    - Reusable container to butcher to avoid pre-packaged raw meat
    - Reuse plastic produce bags if necessary (or avoid using all together),
- Never buy take-out to avoid the fabric bags they come in
- Say no to free bags
- Tell stores you don't want disposable cutlery, plastic bags, straws,
- buy things with less packaging
- Ask for bakery items 'for here' to be put on a napkin instead of branded paper bags
- Buy food as packaging free as possible / bulk and reduce or stop buying take out to avoid containers.
- select products to avoid packaging waste to begin with, buy local instead of online to avoid packaging waste
- *Do not buy*
    - Disposable food wrap
    - Wrapped produce

Consciously reducing overall consumption and consumption of specific unnecessary items (15)

- Avoid purchasing unneeded things.
- Buy less stuff!
- try to reduce our overall consumption (best solution to most environmental issues I believe).
- Don't buy unnecessary items.
- Think about waste before buying a new item. Do I need it? Can I get one that's not new but still good?
- Stop and think before purchasing. Try to shop in zero waste shops (eg Soap Dispensary on Main St) or buy in bulk when possible
- Avoid purchasing what I do not need
- Do not buy or take unnecessary goods/gifts;
- avoid buying products that a re-purposed item could fill the need of

Is there anything else not listed here that you always or often do to reduce waste? (optional question)

- Reduce consumption of stuff.
- Buy fewer things
- Refuse buying things and waiting for a bit to see if I really need or want it.
- Ask for papers not to be stapled
- I don't eat out
- avoid ordering food delivery/ takeout

Food waste prevention (12 responses)

- Google recipes to use up food stuffs in the house
- Divert some of our waste food to a worm bin
- Gardening to grow food
- Regrow vegetable scraps
- Save seeds
- Convert food scraps into vegetable stock, including dehydrating
- Make my own products rather than buying (yogurt, oat milk, sprouts, etc)
- Return batteries and electronic waste to recycling depots
- Participate in a food redistribution program
- Participate in surplus food recovery programs (Vancouver Food Runners, Neighbourhood House, Too Good To Go)
- Give away excess garden vegetables
- Grow my own herbs so I don't have to buy herb packs
- I don't eat out, I google recipes to use up food stuffs in the house,

In-home reuse activities / replacing single-use household items (9 responses)

- Reuse Bath water for plants.
- Using pee cloths rather than toilet paper
- Using plates, not plastic wrap, to cover food.
- Flush dog waste and rinse to reuse waste bag
- Wash and reuse many consumer-packaged-goods containers (ziploc bags, glass bottles, glass jars)
- Reuse plastic bags for small home garbage
- Borrow or share items
- I give away things I find in the back alley/at work/on my walks on a weekly basis
- Nest containers, as so they take up less volume

Advocacy (5 responses)

- Talk to others about how I reduce waste, and lobby my school to stop selling single use bottled water!
- Advocate for better systems
- Advocate waste reduction at community events
- Volunteer at Thrift Shop that prioritises waste reduction.
- Help others become aware of the difference between an item's 'end of use' vs. 'end of life'

Diversion efforts (4 responses)

- Bring items to the Zero Waste Centre
- Use retailer-provided recycling (London Drugs, Staples, opticians)
- We recycle as much as possible (GoGreen Depots, Municipal),
- Recycle everything.

Prioritize durability (3 responses)

- Buy quality products that should last longer
- Purchase quality products that last a long time
- Keep vehicle for >10 years

Is there anything else not listed here that you always or often do to reduce waste? (optional question)

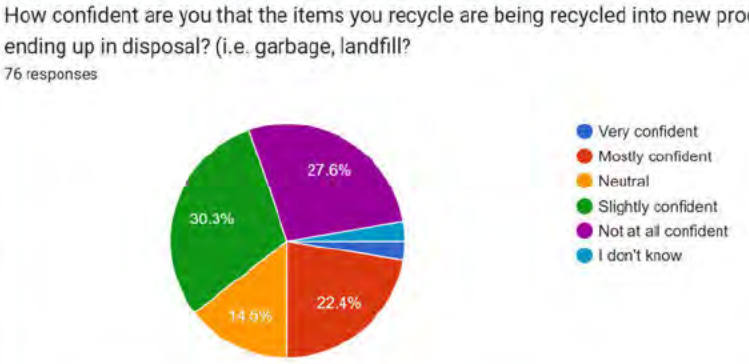
Salvage (1 response)

- Save plants and garden decor from sites where houses are being torn down

Suggestions for Metro Vancouver - make an input survey for school children (1 response)

- Please make a kid friendly survey to send to schools!

How confident are you that the items you recycle are being recycled into new products instead of ending up in disposal? (i.e. garbage, landfill?

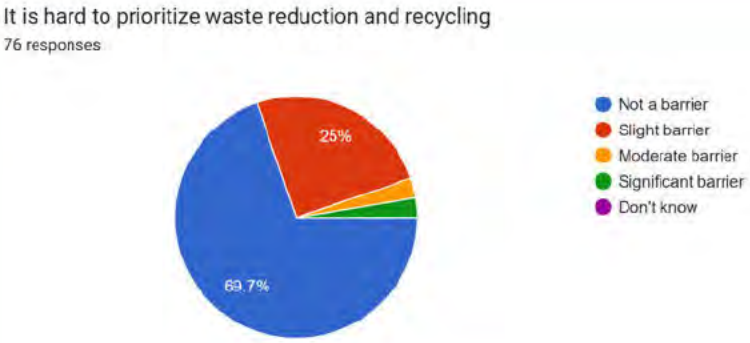


To what extent do the potential barriers below prevent you and your household from participating more actively in waste reduction and recycling efforts?

NOTE the colour coding on the next eight pie charts is the same.

Dark blue = Not a barrier
Red = Slight barrier
Orange = Moderate barrier
Green = Significant barrier
Purple = Don't know

It is hard to prioritize waste reduction and recycling



Not enough information about reuse and repair options	Not sure where to drop off recyclables	Not feeling welcomed at facilities and recycling and waste drop-off points	Cultural or language barriers	
Safety and cleanliness at facilities or recycling and waste drop-off points	
Not enough or overflowing recycling and green bins in multi-family residences	Low availability of products that use less packaging or reusable packaging	Uncertainty about what materials are accepted for recycling in curbside pickup	
Time constraints	
Are there any other barriers not listed here that prevent you and your household from participating in waste reduction efforts? (optional question)

38 responses

One respondent said 'No'. The remaining responses are grouped into these themes:

- *Depot drop-off is difficult (10 responses)*
- *Diversion options lacking for many materials (5 responses)*
- *Curbside pickup is preferred over depot drop-off (4 responses)*
- *Diversion messaging is mixed, not unified, or could be improved (3 responses)*
- *Cost (3 responses)*
- *Space constraints (2 responses)*
- *Contamination in multi-family buildings (2 responses)*
- *Suggestion to improve support for and frequency of repair cafes (2 responses)*
- *Bears prevent composting (1 response)*
- *Cultural stigma (1 response)*
- *Culture of focus on individual behaviour change detracts from prevention (1 response)*
- *Diversion options lacking at work (1 response)*
- *Hard to reach consensus in a strata (1 response)*
- *Physical limitations to accessing bins (1 response)*
- *Time constraints (1 response)*
- *Volume of packaging is hard to reuse (1 response)*

Wording is provided as the respondent stated, except where a response describes multiple thoughts falling under different themes, in which case the response is divided accordingly.

Depot drop-off is difficult (10 responses)

- no car, not gonna transit or car share to drop waste off at the waste depot. London Drugs accepting non-curbside waste is EXCELLENT for convenience.
- Do not have a vehicle so transport to depots can be logistically challenging
- My full-time employed adult child also lacks the time and vehicle to make special trips to her closest zero waste and recycling depots.
- Not having another comprehensive drop-off depot similar to the Vancouver Zero Waste Centre in the downtown core is a barrier because the current Zero Waste Centre is significantly out of the way for those of us who live downtown
- You basically need a car to carry heavy metals to a recycling depot
- How to transport larger items to recycling stations when you don't have access to a vehicle to take them.
- Our household garbage fills regularly with flexible plastic packaging such as bread bags, fresh pasta packages, bags of rice, and the wrapping on meat, vegetables, and cheese. I have been unwilling to

Are there any other barriers not listed here that prevent you and your household from participating in waste reduction efforts? (optional question)

collect all this soft packaging and drop it off at London Drugs, our local collection site, so into the trash it goes. I lack the motivation or enthusiasm to recycle soft plastic packaging because the amount of it seems overwhelming.
- It is a barrier to get to the Zero Waste facility to recycle soft plastics and other items not taken at curbside.
- I don't have a car to get much of my stuff to depots
- (Need) More Convenient drop-offs for styrofoam, metals, razors, electronics, textiles.

Diversion options lacking for many materials (5 responses)
- There are no options for many materials or products that could be recycled (books, car seats, furniture, etc.).
- Not enough depots that accept certain recyclables (i.e. plastics); not enough recycling bins in malls, parks, schools, etc.
- Lack of options to recycle some items (i.e. Textiles, shoes..) the waste wizard mostly directs to "bin" these items
- Items where there are no recycling options, for example: 1. silicone (so many products made of silicone now - snack bags, oven mitts, baking dishes, and no where to take them to recycle when they are at end-of-life), 2, paper bags with plastic liners (eg paper/plastic coffee bags (like JJ Bean), Que Pasa chip bags)
- More complex items (including electronics, furniture, multi-material goods) that have reached the end of their functional life, without valid repair options, and too worn down as to not warrant a donation/trade/sell in the secondhand market, are often difficult to dispose of without outright landfilling them, as it is difficult to break down and properly recycle their different components.

Curbside pickup is preferred over depot drop-off (4 responses)
- Plastic packaging bags should be collected at the curb. At our 4-people household, we produce 4x the volume of packaging (plastic) than actual trash being sent to the landfill. So, maybe have an extra bin for pickup?
- Soft plastics not collected at the curb
- Would like there to be a bag for collecting soft plastics, alongside other recycling
- Never having a reuse pickup day at my curb

Diversion messaging is mixed, not unified, or could be improved (3 responses)
- I'm hearing mixed messaging about compostable single use items (eg coffee cup lids)
- Each municipality accepts different items in curbside recycling, better signage
- Lack of regulation for biomaterials. Clear definitions on biodegradable, compostable, home-compostable, etc.

Cost (3 responses)
- Cost of glass vs plastic
- Lack of knowledge about how to repair and high cost of repair and high cost of more durable alternatives
- …the cost for repair on these items (complex items like electronics, furniture, multi-material goods) is often not worth the extended life out of them, as they have been sufficiently well used and carry a low percentage of their initial value, or have been rendered obsolete in the current market.

Space constraints (2 responses)
- For my adult child's household, space constraints are a barrier to storage of non-curbside recyclable materials.
- I am concerned that densification is reducing the amount of green space per household, reducing the opportunities for reusing compost on our own land and for growing our own food.

Are there any other barriers not listed here that prevent you and your household from participating in waste reduction efforts? (optional question)

Contamination in multi-family buildings (2 responses)

- Other members in multi-family unit who mis-use bins
- Others in my condo building put un-recyclable and un-compostable items in blue and green bins.

Suggestion to improve support for and frequency of repair cafes (2 responses)

- I'd like the city to take a more active approach to supporting repair cafes and mending groups. This includes advertising to households so we know where to go and what's out there.
- More frequent repair cafes

Bears prevent composting (1 response)

- Living in North Van, we do not compost due to the prevalence of bears. We even build bear bins for our waste bins and the risk is not worth recycling organics. We have regular issues with bears.

Cultural stigma (1 response)

- Cultural stigma regarding used items

Culture of focus on individual behaviour change detracts from prevention (1 response)

- Why is the onus always on the individual? manufacturers and businesses should be doing much more to prevent waste in the first place (reduce it is second, preventing it is my first concern).

Diversion options lacking at work (1 response)

- Work (Park Royal store) doesn't have facilities to recycle drink containers, plastic bags, paper, plastic food containers, paper or compost. Only cardboard or garbage is collected. I have to take it home if I want to "do the right thing".

Hard to reach consensus in a strata (1 response)

- barriers in getting agreement amongst strata unit owners

Physical limitations to accessing bins (1 response)

- I'm short and have arthritis and the massive yard waste and recycling bins at my housing co-op are hard for me to access.

Time constraints (1 response)

- Time, specifically having to work to survive, means poor work life balance so circular economy / repairing items / shopping used/secondhand is too much work for the time available. 40 hour work weeks, cost of living, reduction is community support , etc. Etc. means less time on thriving & focusing on what is best long term, or even the future outside (or during...) our lifetime.

Volume of packaging is hard to reuse (1 response)

- Such a high volume of packaging & short-lifespan items that are a part of everyday goods, particularly food (despite a dedicated effort to avoid it), makes it nearly impossible to repurpose it all, and depend on recycling.

How well do you think current waste management programs and services work for everyone in the community?

Which community members do you think may be having a difficult time with the current programs and services?

69 responses

Responses are grouped by the following themes, in order of the number of responses which mentioned it.

- *People without a car (13 responses)*
- *Multi-family residents (12 responses)*
- *People with language barriers (12 responses)*
- *Seniors (11 responses)*
- *People who don't care or aren't interested (9 responses)*
- *Newcomers / immigrants (8 responses)*
- *People with illness, disabilities or mobility barriers (7 responses)*
- *Those lacking education / exposure to recycling (7 responses)*
- *Busy households, families (6 responses)*
- *People in poverty or who are unhoused (6 responses)*
- *Those who lack time / are overwhelmed (4 responses)*
- *People lacking access to services/programs, including students and rural residents (3 responses)*
- *Low income people and families (3 responses)*
- *Space limitations in households (2 responses)*
- *People with bigger issues than waste (2 responses)*
- *Young people and young families (3 responses)*
- *People lacking enforcement (2 responses)*
- *Food service workers abiding by regulations (1 response)*
- *People who hoard (1 response)*

Wording is provided as the respondent stated, except where a response describes multiple thoughts falling under different themes, in which case the response is divided accordingly. Where multiple responses are exactly the same, the number of responses with that wording is provided.

People without a car (13 responses)

- members that do not have a car.
- households with no vehicles and little storage space.
- those without a car to take things to zero waste centre
- Those without cars, newcomers, multifamily building occupants
- Those without a car, who don't speak English, who don't have disposable time to spend on accessing programs and services
- It's hard to access recycling for more complex items like batteries and electronics without a car
- People without cars accessing the returns for 10 cents
- no vehicle, disabled

Which community members do you think may be having a difficult time with the current programs and services?

- Also it's hard for people without cars to get to the Zero Waste Center that we can drive to.
- and people that don't have vehicles. Ie: Electronic recycling places are in areas that are not near bus or transit.
- People without reliable transport preventing them from bringing non-curbside pickup items to depots.
- those without vehicles
- (Community members that lack) transportation
- people without a car to travel to recycling centers

Multi-family residents (12 responses)

- Condos
- multi residential
- Multi residential community
- Multi family residences / residents (3 responses)
- Multi unit housing
- people in multi-family dwellings
- multifamily developments with high turnover of residents and staff;
- Apartment dwellers, housing instability
- I have heard that some multi-family recycling processes are not great.
- People who live in apartments,

People with language barriers (12 responses)

- People who only speak Chinese
- Folks with language barriers might have a tough time recycling with all the particulars of what can and can't be recycled.
- non-English speakers;
- people with English as a second language,
- Members who don't speak English
- People who do not read English well
- Not reading English. — lack of previous familiarity with recycling bins
- English Language Learners or immigrants
- Non-English speaking, people with disabilities, low income persons
- ESL & people new to Vancr who can't read the info or aren't familiar
- people with low literacy rates and/or limited English
- folks with language barriers;

Seniors (11 responses)

- Seniors (7 responses)
- Elderly (2 responses)
- Elderly who can't travel with heavy recyclables
- Possibly older folks of immigrants whose language is not English. Our disposable society often is ingrained in the younger generation.

People who don't care or aren't interested (9 responses)

- those who don't care about the environmental impacts of creating garbage
- I don't think proper sorting/cleaning of recycling is a priority for most people
- Uninterested, uncooperative residents
- Wealthy people because they just don't care and they don't prioritize learning about how to reduce waste properly
- People who don't care, don't have time, don't have vehicles

Which community members do you think may be having a difficult time with the current programs and services?

- Drop off to zero waste for soft plastics -people don't bother with because we're told it's being burned.
- Lazy non-recyclers.
- Some are just not interested or don't understand the benefits of recycling.
- Many people that have the perception that effectively managing and reducing their personal waste is overly complex and time consuming, and more expensive. The ease and ubiquity of disposable items and packaging, the speed at which we use and turn-over goods, even with the existence of second hand markets and services, is embedded in our convenience and consumption based culture. It is a foundational problem that makes widespread waste reduction (and not just waste diversion) a significant challenge.

Newcomers / immigrants (8 responses)

- Immigrants
- New/recent immigrants (3 responses)
- Immigrants from countries with non-existent recycling who are used to throwing everything away.
- newcomers; newcomers to Metro Vancouver (2 responses)
- Newcomers/immigrants unfamiliar with recycling entirely or in this community

People with illness, disabilities or mobility barriers (7 responses)

- Disabled. (2 responses)
- People with mobility issues, people who don't have access to easy transportation of bulky stuff
- Anyone with mobility challenges, multi-family residences may not be as careful about sorting the recycling (contamination) at least in my building
- folks with disabilities & mobility restraints;
- disabled people who can't travel with heavy recyclables,
- maybe those confined to their home through illness or incapacity

Those lacking education / exposure to recycling (7 responses)

- I know a few people that do not separate their waste at all. They put everything in the landfill, even compostables. These people should be fined and educated. Enforcement is needed.
- Those lacking experience or education on the topic.
- I think a lot of people still don't understand recycling needs to be clean, or what can go into a compost bin.
- people who don't understand what can go into the different bins and how the items should or should not be broken down before putting in the bin.
- People(who) don't know, don't understand
- (Community members that) are uneducated on the programs/resources in place
- People who aren't used to recycling and composting. Each municipally issued bin should be labelled with what can go in.

Busy households, families (6 responses)

- households with full-time employed adults and dependent children;
- People with busy lifestyles
- single parents
- people with multiple part time jobs;
- large families.
- Professionals

People in poverty or who are unhoused (6 responses)

- Homeless (2 responses)
- unhoused folks

Which community members do you think may be having a difficult time with the current programs and services?

- Underhoused individuals
- Community members in poverty
- Areas of Metro where there is a high level of poverty and crime, such as the Downtown Eastside. There is also a growing incidence of dumping on to streets and in alleyways in even more affluent parts of the city (our alleyway near 16th and Cambie, and recently a load of car tires dumped off Ontario St near Langara Golf Course).

Those who lack time / are overwhelmed (4 responses)

- Members who lack awareness/ don't have the time
- people (who are) generally overwhelmed
- People (who) don't have time to think about material separation.
- Community members that lack time

People lacking access to services/programs, including students and rural residents (3 responses)

- (Community members that lack) accessibility to services/programs,
- people who live in more rural areas not close to recycling depots,
- students at schools that don't have adequate recycling programs

Low income people and families (3 responses)

- Low income families.
- Low income families for whom transportation is difficult
- ow wage earners with long commutes etc

Space limitations in households (2 responses)

- People with small spaces who don't have space for sorting/separating garbage from recycling/compost or living in a household that doesn't prioritize it.
- (People with) limited access to kitchen space who rely on takeout/delivery.

People with bigger issues than waste (2 responses)

- those who have larger issues in life than worrying about how to separate their waste
- big-city single people who are hustling to pay rent

Young people and young families (3 responses)

- Many young people, especially new Canadians, do not know enough about recycling.
- Young families for whom this is not a priority for their limited time and energy
- Young working couples

People lacking enforcement (2 responses)

- apartment buildings where residents don't have a say in waste management practices
- Those not provided with multiple separated bins, and those who do not have anyone checking whether the separation has been done correctly and calling out those who offend.

Food service workers abiding by regulations (1 response)

- food service workers having to follow food safety guidelines,

People who hoard (1 response)

- people with hoarding problems

What can be done to make the programs and services more inclusive so that they work for everyone?

69 responses

Three respondents indicated they did not know. One respondent said this is a good question. The remaining responses are grouped in the following themes:

- *More education and information (including seniors programs, youth) (23 responses)*
- *Increase drop-off locations (10 responses)*
- *Increase what's accepted for curbside recycling (8 responses) two responses specify soft plastics*
- *Make depots / recycling hubs more accessible (7 responses)*
- *Improve services for multi-family buildings (7 responses)*
- *Provide multilingual signage and educational materials (6 responses)*
- *Provide temporary pick up services (5 responses)*
- *Support reuse centers and repair cafes, offer door-to-door repair and reuse (4 responses)*
- *Improve packaging labeling and consistency (4 responses)*
- *Shift cultural norms (4 responses)*
- *Increase standardization/consistency of recycling infrastructure and collection (3 responses)*
- *Work with and recognize the role of community organizations (3 response)*
- *Expand / extend EPR, apply higher deposit fees (2 responses)*
- *Enforce bans, levy fines (2 responses)*
- *Support payment for volunteers organizing relevant events (2 responses)*
- *Encourage retailers to reduce packaging (2 responses)*
- *Simplify (1 response)*
- *Improve accessibility of curbside bins (1 response)*
- *Subsidize the use of compostable packaging for take-out restaurants (1 response)*
- *Promote home composting (1 response)*
- *Support food donation for businesses (1 response)*
- *Encourage foraging (1 response)*
- *Reduce fees (1 response)*

Wording is provided as the respondent stated, except where a response describes multiple thoughts falling under different themes, in which case the response is divided accordingly. Where multiple responses are exactly the same, the number of responses with that wording is provided.

More education and information (including seniors programs, youth) (23 responses)

- More education (2 responses)
- Info sessions for new arrivals
- More information and enforcement.
- help from youths and education / Educate the youth at school / School education programs before grade 5
- Regular flyers and advertising about what can go in.
- Senior programs
- Education and incentives
- Zero Waste info as part of newcomers welcome package,
- Translate notices into other languages.
- Provide community self-organize toolkit
- More education & outreach
- Info sessions educating citizens, city based requirements.
- International students and new Canadians need more instruction on recycling.
- More education and incentives
- Education ; assistance to those groups *(already doing education)*

What can be done to make the programs and services more inclusive so that they work for everyone?

- That's unclear, likely greater education on the broader systems importance and impact while simplifying the recycling process for the individuals to make it easier.
- Raise awareness, increase marketing
- incentives, education, more accessible, postings on municipal websites, public buildings
- frequent reminders of the guidelines. I can't remember the last time I saw a guide to City recycling. Are we still supposed to flatten cans? Is it true that we should not crush dairy cartons? Are egg cartons containers or paper? Can take-away coffee cups go into the recycling? Does a missorted item result in an entire load of recycling being taken to landfill?

Increase drop-off locations (10 responses)

- More locations to drop off recycling.
- Have more recycling drop-off points available;
- Arrange neighbourhood drop off points
- Ensure neighbourhood-scale recycling drop off options.
- Create more drop-off spaces so people don't have to travel far from their residence,
- Community recycle centres, rather than far flung
- Have more recycling bins in public places, schools, apartment buildings, malls, etc
- Community hubs/centres with options for recycling that doesn't get picked up by the city
- Host free public community events in educating the public on waste reduction in parks, schools, community centres, etc.,
- Having more drop off centres for things that are not picked up, or networks of partner organizations like London Drugs.

Increase what's accepted for curbside recycling (8 responses) two responses specify soft plastics

- increase the number of items accepted in the blue bins
- offer curbside collection for more types of waste (mattresses, electronics, soft plastics, styrofoam etc),
- curbside pickup for more recyclables,
- Make recycling tricky items more convenient i.e. collect more recyclables curbside and sort them at a facility
- more categories of curbside collection;
- expand options for recycling
- Find a solution for soft plastics- a way to reuse them so more people will recycle them- maybe include it in home pick up.
- Pick up soft plastics at curbside, send out a flyer 1x year with details to help reduce contamination

Make depots / recycling hubs more accessible (7 responses)

- more *safe* walking/cycling infrastructure in areas with services so folks without cars can get there safely
- Provide more places within walking distance to recycle items not picked up at the curb
- Wider range of hours; locations more easily accessible by public transit
- More accessible options for all people (who have difficulty accessing depots)
- Make the recycling centres more friendly. Also the people who work there look like they live on the street
- Increase accessibility and convenience,
- Make recycling more convenient, New Westminster closed its recycling centre, now many people don't bother sorting.

Improve services for multi-family buildings (7 responses)

- more recycling options in multi residential buildings,
- more services available for people *not* living in single family homes (ie. Apartment buildings, etc.);

What can be done to make the programs and services more inclusive so that they work for everyone?

- building code for multifamily and for commercial and retail that specifies a high standard of space and workforce dedicated to waste management ;
- More multi-family specific education/outreach, media coverage & PSA's,
- Monitoring, fining of building residents
- Ensure every multifamily building has all the recycling/composting options.
- Better management of programs in multi-family buildings? Definitely not the expert on this one.

Provide multilingual signage and educational materials (6 responses)

- More multilingual signage on bins
- signage in multiple languages
- Include multiple languages
- Translate materials and have multicultural education
- More resources in other languages. Important to have outreach to different communities to explain why recycling is important.
- More pictographic sign., more signs in other languages.

Provide temporary pick up services (5 responses)

- Have occasional pick up services or additional local drop point options for special recycling needs
- Have a day that larger items (electronics or small appliances, mattresses) can be picked up from residences. I believe Burnaby municipality has this type of option.
- provide certain days so that certain "non-curbside recyclables" can be put out for pickup at the curbside
- Double down on existing programs like Meals on Wheels and offer recycling pick up at the same time for those who cannot make it to depots on their own.
- pick up service for all recyclables

Support reuse centers and repair cafes, offer door-to-door repair and reuse (4 responses)

- creative reuse centres and free stores where reusable materials can be accessed by the public
- More gov't (city, metro area, provincial, federal) funding & support to organize & run repair cafe's, clothing exchanges, swap meets, etc.;
- I think the city should encourage and support free stores and free libraries so people don't have to dumpster dive for perfectly good items.
- More repair cafes
- Offer reuse and repair options in a door-to-door (or at least throughout the community) distributed manner just like garbage and recycling options are conveniently offered door-to-door.

Improve packaging labeling and consistency (4 responses)

- packaging should not be so complicated, congruency across products.
- other packaging (like bread bags, ice cream cartons, frozen berries pouches) should also have recycling symbols for where it goes, not just 1/2/4/5 containers
- enforcement of penalties for contamination
- "Recyclable container" - whether of glass, plastic or metals - is a greenwashing campaign by Big Industry aimed to make consumers feel better about participating in the polluting of our water, land, animals, bodies and air through the production, transportation and disposal of the products that Industry produces for us to buy and consume. And we should call it what it is. It's bad enough that so little of what we throw into the bin actually gets recycled - about 9% annually, according to various sources. And that, in the case of plastic, the quality deteriorates with each recycling to the point that we are ultimately creating more "trash." In my opinion, the reality that we, as stewards of the earth, have to wrap our heads around, is that "single use" - regardless of the material of the container - is, by definition, the opposite of "green." The solution to stop further pollution of waters, land, air, animals and people is not the continued mass manufacture of yet a greater variety of things for us to

What can be done to make the programs and services more inclusive so that they work for everyone?

use once and then discard of - whether that's by chucking it into the trash, the blue bin, or just straight out the door. It's for us, as individuals, to recognise the fraud. And then, to whatever degree we each are able, to decrease our participation in a system that normalises the production of waste as being inevitable when, with a little creative thinking and a small adjustment in attitude, we can find ways to meet our needs that don't rely upon the production of more waste, necessarily, at all.

Shift cultural norms (4 responses)

- You need to make it not socially acceptable to throw items away that can be reused, repaired or recycled. Reference the "Participaction" campaign in the seventies that got a generation of Canadians moving and investing more in their own health
- build social norms and apply community-based social marketing principles to create a reuse, recycling, circular culture, making that the default option by making it cheaper and easier to do
- Promote simple, and not costly or financially restrictive shifts in consumer behavior to reduce possible waste products at the source, before it reaches the household.
- promote conversations that instill the values of waste reduction as a community responsibility and benefit.

Increase standardization/consistency of recycling infrastructure and collection (3 responses)

- standardize containers
- Ensure that the items collected both from residential and commercial entities are consistent with each other. This also includes being consistent in all of the municipalities that fall within Metro Vancouver. People easily get confused and frustrated when a guidelines they are supposed to follow at home are different than when they are at work or out in the public.
- Make it simpler, clearer instructions, consistency across every communities across BC and provinces.

Work with and recognize the role of community organizations (3 response)

- Community organizations need to step up, and do the work that churches used to do
- Support causes like The Binners Project and other community initiatives that have presence at events with high public visibility
- partner with local waste reduction and environmental organizations to promote and encourage waste reduction.

Expand / extend EPR, apply higher deposit fees (2 responses)

- + have deposits on everything, including styrofoam + metal + electronics.
- Enact stricter policy at the producer and supplier level beyond EPR rules to create a phase-shift in the amount of waste-ready products in the market (single use, food packaging, and beyond)
- have EPR programs pay for pickup of larger items

Enforce bans, levy fines (2 responses)

- Law enforcement, fines probably
- Enforcement. People who do not dispose of their waste properly should be fined after being warned.

Support payment for volunteers organizing relevant events (2 responses)

- more people support from gov't levels (city, metro area, provincial, federal) in actually running events so that volunteers don't get burned out from lack of support;
- paying folks for their time organising events that work towards (reduction and prevention)

Encourage retailers to reduce packaging (2 responses)

- I think there needs to be more to encourage retailers. I can't believe the number of shoppers in the grocery store that still use plastic bags which are provided free for fruit and veg (rather than use their own mesh holder or a tupperware which I bring for soft fruit) and I am always asked or not even

What can be done to make the programs and services more inclusive so that they work for everyone?

asked by the checkout clerk who starts to use a plastic bag to wrap things. Many shops are still keen to put your purchases into their brand bags.
- work with high waste businesses like restaurants to plan out waste reduction strategies,

Simplify (1 response)
- The easier it is = the more compliance there will be.

Improve accessibility of curbside bins (1 response)
- Bins would be too high for a wheelchair user.

Subsidize the use of compostable packaging for take-out restaurants (1 response)
- Subsidies for food establishments to use compostable packaging for takeout,

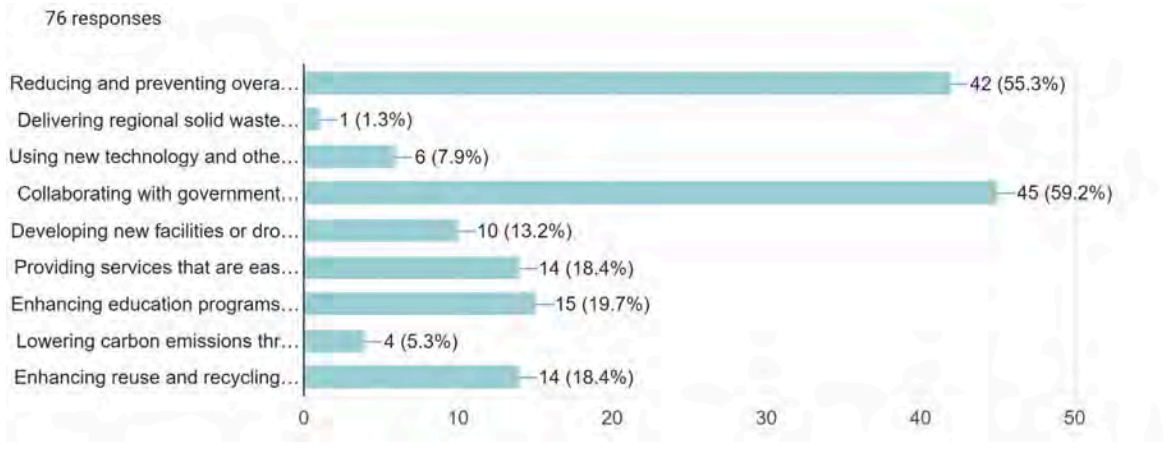
Promote home composting (1 response)
- I would like to see more emphasis put on home composting. I am happy to talk to groups using your excellent leaflet "Here's the Dirt" on the pros and cons, including rats. I'm a Master Composter/Recycler and do regular talks to groups such as garden clubs

Support food donation for businesses (1 response)
- I think the city should support food businesses more in donating their surplus food or reducing their surplus (1 in 9 households in BC are food insecure while something like 48% of food is thrown away). More support for surplus food recovery is a must. Other big cities have it, while Vancouver nonprofits are picking up the slack the municipality creates in this part of the food supply chain. Time to step up

Encourage foraging (1 response)
- encourage use of locally sourced edibles like foraging tea leaves from local plants

Reduce fees (1 response)
- reduce service fees

What should be Metro Vancouver's top priorities for the future when it comes to solid waste management?



Are there other priorities that Metro Vancouver should be considering that are not listed above?

36 responses

This question had the widest spread of responses, i.e. the most independent or unrelated replies.

One respondent said no. One respondent acknowledged that all the previously mentioned initiatives were important. The remaining responses have been grouped into the following themes:

- *Improve construction and demolition waste recovery / disincentivize demolition (4 responses)*
- *Create more drop-off spots for recycling (3 responses)*
- *Create more drop-off spots for recycling (3 responses)*
- *Increase recycling transparency (3 responses)*
- *Force retailers and manufacturers to recycle (3 responses)*
- *Stop the use of single use plastics (2 responses)*
- *Educate on clothing recycling and return systems (2 responses)*
- *Localize recycling (2 responses)*
- *Regulate incoming products (2 responses)*
- *Improve biomaterials acceptance (2 responses)*
- *Champion repair cafes (1 response)*
- *Close the incinerator (1 response)*
- *Improved monitoring and enforcement of contamination limits at transfer stations (1 response)*
- *Collaborate on recycling targets nationwide or worldwide (1 response)*
- *Create specific goals (1 response)*
- *Incentivize companies to not use single-use 'so-called' compostable items (1 response)*
- *Make compliance compulsory; enforce recycling requirements (1 response)*
- *Recover and redistribute surplus food (1 response)*
- *Differentiate reuse and recycling, focus on reuse (1 response)*
- *Improve access to repair cafes - expand hours (1 response)*
- *Reverse the cost differential between reuse and single-use (1 response)*
- *Design better alternatives to single use before pushing regulations on retailers for impractical replacements (1 response)*
- *Create more disincentives for food processing waste (example of fish skins) (1 response)*

Response wording is either provided exactly as the respondent stated or slightly abridged. If a response describes activities falling under more than one group, the response has been split accordingly.

Improve construction and demolition waste recovery / disincentivize demolition (4 responses)

- Reduce the amount of construction materials going into the landfill
- I have just watched the obliteration of several multi story apartment blocks in North Surrey. Little was salvaged, just the big power shovels breaking and crushing. Old lumber tends to be denser, straighter and stronger, but harder to work with. How to remove nails and other metal?
- Our construction industry is booming, and waste along with it I would assume. Isn't everything they use packaged, wrapped, or contained in something? What about broken and surplus tools, parts, and construction material? Does the construction industry take responsibility for managing this in a responsible way, or do they chuck it all to lower their costs? I would investigate and track this industry specifically. The average citizen/consumer can only do so much, and they get most of the attention it seems.
- tackle construction and demolition waste as a priority! lots of organics and recoverables in the landfill from that

Create more drop-off spots for recycling (3 responses)

- Installing more recycling bins at public places, e.g., at Farmers Markets such as Riley Park

Are there other priorities that Metro Vancouver should be considering that are not listed above?

- Neighbourhood drop-off points for soft plastics, styrofoam, metal, electronics, razors, etc.
- More divided (recycling, compost, landfill) receptacles on the streets. Improving signage on these bins so people can sort and dispose of items appropriately

Increase recycling transparency (3 responses)

- more transparency on recycling
- Education in schools and neighbourhood groups
- Finding a solution (other than burning) to reuse soft plastics. Even people in my house throw it in the garbage and I have to go through it to separate and drop it off at zero waste. They say "what's the point?! It's just being burned and polluting the air!"

Force retailers and manufacturers to recycle (3 responses)

- Make Starbucks and other vendors recycle their cups. Since covid they've stopped sorting their waste and so have a lot of other businesses
- Fines for manufacturing waste.
- Enforcement on wasteful manufacturers and citizens.

Stop the use of single use plastics (2 responses)

- Eliminate single use plastics.
- Stop the use of plastic all around, including packaging, wrapping vegetables in plastic- such waste.

Educate on clothing recycling and return systems (2 responses)

- Now older and retired, I am buying much less clothing or material to sew clothes, however, old very worn out clothing, towels and sheets are my biggest nonrecyclable impact. What is fantastic to see are the repair services offered by outdoor companies like Pategonia and Arc'teryx, because it's horrible to toss out a lovely item with many years left, just because the zipper broke.
- Educating on clothing quality drop, across the board, so folks realize buying new is actually not a good deal

Localize recycling (2 responses)

- Metro Vancouver should be working to do as much recycling in house as possible. What would it take to build a glass recycling facility, or a plastics recycling facility?
- Keeping recyclable materials local and processing them here

Regulate incoming products (2 responses)

- help to change policy/ laws for products entering Vancouver; standardize all shopping bags to be one material so it is easier to recycle (no guessing)
- really lobby manufacturers to stop avoidable packaging (e.g. half-full packets of pasta or small granola bars inside wrappers that could easily fit 2)

Improve biomaterials acceptance (2 responses)

- Finding ways to accept biomaterials through innovation. Developing clear guidelines on waste categories on what is recyclable, compostable, home-compostable, etc.
- Accepting biodegradable compost bags in compost and in takeout containers/bags with film

Champion repair cafes (1 response)

- Championing, & materially supporting, repair cafés, clothing swaps, etc. That has an actual concrete effect on reducing the consumption of new items & repair of used items.

Are there other priorities that Metro Vancouver should be considering that are not listed above?

Close the incinerator (1 response)

- Shut down the Burnaby incinerator

Improved monitoring and enforcement of contamination limits at transfer stations (1 response)

- Increased inspector at transfer stations across Metro Vancouver. Too many illegal items are making their way to our landfills because there aren't enough inspectors catching those who aren't abiding. This, in tandem with allowable contamination rates being too high and fines are too low to proactively deter any bad behavior. In summary, improved and more frequent enforcement should be prioritized.

Collaborate on recycling targets nationwide or worldwide (1 response)

- Working nationally or globally similar to GHG reduction levels, set targets.

Create specific goals (1 response)

- Above goals are really vague. What is needed is specific programs, not vague goals.

Incentivize companies to not use single-use 'so-called' compostable items (1 response)

- incentivize businesses and companies to lead by example and not offer single-use so-called compostable items,

Make compliance compulsory; enforce recycling requirements (1 response)

- I think for some people this topic is just not top of mind or they don't see it as important regardless of all the education efforts from the government, so I think some penalties or charges or compulsory education sessions should be required to enforce the importance of it.

Recover and redistribute surplus food (1 response)

- Surplus food recovery/redistribution

Differentiate reuse and recycling, focus on reuse (1 response)

- Split the thinking and listing of recyclables and reusable. For example, in the question above where I was asked to pick two, recycling and reusables are mixed in the same item. To be clearer, these need to be separated. Encouraging, reuse and repair which extend the life of the items is extremely different than recycling, which comes at the item's end of life.

Improve access to repair cafes - expand hours (1 response)

- Repair cafes offered on weekdays or weeknights. I notice they are always held on weekend days but I have to work my retail job on the wknd so can't go. I feel like the repair Cafe hours are targeted to people who have full time Mon-Fri jobs.

Reverse the cost differential between reuse and single-use (1 response)

- make the wasteful stuff expensive and the clean stuff more cost effective (e.g. caterers making clients pay for washable reusable plates, cups, cutlery and not pay for single use items - this should be reversed)

Design better alternatives to single use before pushing regulations on retailers for impractical replacements (1 response)

- I think the transition to lower waste options that are inconvenient or impractical replacements (soggy straws, flimsy paper lids, leaky to-go containers) have created push-back to the important work of transitioning to a zero waste model. Despite the difficulty, I wonder if working with manufacturers etc, to develop better options before forcing policy on businesses and consumers

Are there other priorities that Metro Vancouver should be considering that are not listed above?

would be worth considering. It's a time sensitive issue and just starting it and then working our the kinks is understandable. However, for many residents, they then lump current issues and become disillusioned. Stakeholder engagement is challenging and I hold no criticism but, preaching to the converted is one thing. Incentivizing and bringing in the holdouts is likely where a large opportunity lies.

Create more disincentives for food processing waste (example of fish skins) (1 response)

- There is too little disincentive for food processing waste. I have a circular economy business and I purchase fish skins from processors doing skin-off processing. I must pay more for them than my European or even Icelandic competitors because those places make waste reduction required, incentivized by financial penalty for throwing out. Not so in Canada. Worse, many processors just don't want to be bothered -even if they are paid - because it is easier to waste it. Also, there is not even any measurement of fish waste in Canada: NONE! Even my compatriots in Africa have estimates of waste but nothing in Canada. We are shamefully behind in this. A fillet is only ~50% of a fish.

Do you have any further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in our region?

41 responses.

Two respondents said no. The remaining responses are grouped into these themes:

- *Focus on zero waste / reduction and recovery (9 responses) - above recycling (3 mentions) of packaging (4 mentions), in general (1 mention), and of food (1 mention)*
- *Incentivize reduction (6 responses)*
- *Improve access to repair services (3 responses)*
- *Apply pressure upstream; to manufacturers (3 responses)*
- *Work with businesses (2 responses)*
- *Ban wasteful and harmful products (2 responses)*
- *Education (2 responses)*
- *Reuse fish byproducts (2 responses)*
- *Encouragement for Metro Vancouver (2 responses)*
- *Support educational initiatives (1 response)*
- *Implement compost-friendly take out containers (1 response)*
- *Increase options for furniture donation (1 response)*
- *Provide tours of waste facilities (1 response)*
- *Don't host wasteful events (1 response)*
- *Localize plastic recycling (1 response)*
- *Improve confidence in recycling (1 response)*
- *Encourage municipal pick up dates for hard to recycle items (1 response)*
- *Charge for recycling at purchase (1 response)*
- *Streetscape recycling bins (1 response)*
- *Deposit Fees (1 response)*
- *Site diversion infrastructure near transit stations (1 response)*
- *Promote innovation (1 response)*
- *Engage politically (1 response)*
- *Address illegal dumping (1 response)*

Do you have any further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in our region?

- *Make products easier to repair (1 response)*

Response wording is either provided exactly as the respondent stated, or slightly abridged. If a response describes activities falling under more than one group, the response has been split accordingly.

Focus on zero waste / reduction and recovery (9 responses) - above recycling (3 mentions) of packaging (4 mentions), in general (1 mention), and of food (1 mention)

- Surplus food recovery/redistribution
- Really embrace zero waste
- reduce/ eliminate excessive packaging
- We need further reduction of wasteful plastic packaging. Literally need governments to turn off the taps.
- We need to reduce packaging and recycle more plastics because it's everywhere in the environment and we should not be producing more of it
- I don't believe that we can effectively reduce the waste we produce without lowering our consumption; a radical notion indeed. Even recycled material can only be recycled so many times before it too becomes landfill. Waste is waste; it serves no purpose and will ultimately harm the environment in some way by producing greenhouse gases, or depositing forever chemicals and plastics into land, sea, and air.
- Reducing waste at the source, enforcing manufacturers, producers so they don't create so much wasteful products, excessive plastic packaging, etc.
- We need a paradigm shift: recycling is not a panacea because it only works if there is a market for it and it often involves shipping our waste overseas, shift the mindset towards preventing and avoiding the creation of waste in the first place (target ZERO WASTE) instead of the mindset of just reducing waste once it's already produced.
- Add Recover to Reduce, Reuse, and Repair. Build systemic barriers to people throwing perfectly usable items into the landfill when their use is done, but the item has plenty of life left. For example, “intercept” items for reuse before the items go for recycling or the landfill.

Incentivize reduction (6 responses)

- Reward companies and small businesses that reduce packaging.
- develop a program initiative to reuse suitable construction materials from structures that are to be torn down,
- Work more with elementary school students and teachers to have the children help make changes to their household habits
- 2) Encourage and financially support businesses that drive packaging and waste reduction (such as incentives for bringing your own cup or reducing take away containers or that use apps like “too good to go” to reduce food waste). Financial incentives work on people and businesses.
- Work with federal and provincial governments to incentivize circular business models. Collaborate and become aligned with the EU's Ecodesign for Sustainable Products Regulation (ESPR) and the mandate for Digital Product Passports (DPPs) which will enable and empower businesses to adopt circular business models and to take more responsibility and accountability for their own products, rather than shifting/downloading the end-of-life product and materials burden to municipal governments and waste management services.
- Create incentives such as rebates and subsidy programs for businesses, commercial and residential buildings to more actively participate in recycling and reducing overall waste.

Do you have any further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in our region?

Improve access to repair services (3 responses)

- Provide government funded and operated repair centres for small appliances, umbrellas, electronics, microwaves, toasters, hair dryers, watches, computers, TV, monitors, etc... The repairs should be a free service or very inexpensive. Most people throw away these items because they are too expensive to repair and cheaper to just buy a new one.
- Education and use libraries for fix programs, regular dates for fix programs and include info about reducing, reuse and for recycling. I get confused about plastic bags and Styrofoam. Was there a change?
- Offer and support more repair cafes. Support SPEC's Master Recycler Program to engage more people in educating others

Apply pressure upstream; to manufacturers (3 responses)

- Put the pressure on manufacturers to produce less waste & reusable or refillable options.
- Focus on the root of the problem. Stop business from excessive packing or plastic use. Stop grocery stores in plastic wrapping vegetables.
- increasing the amount of materials that can be recycled, re-used, re-purposed. i.e. - old shoes, bicycles, all plastics

Work with businesses (2 responses)

- Work with food safety authorities to discuss about reducing waste while maintaining food safety,
- Work with high single use waste businesses like Party City on switching to renewable goods

Ban wasteful and harmful products (2 responses)

- Banning a number of products that are harmful, toxic, such as glitter, balloon, etc.
- Ban or advocate for a ban on non-decomposable, tiny product materials like glitter

Education (2 responses)

- More intelligent education at the primary school level, grades 3 to 7. Inspectors that will call out people who offend in terms of contaminating recycle streams etc.
- Make the public more aware somehow of how you repurpose the recycling (bottles/plastics) so they are encouraged to do more.

Reuse fish byproducts (2 responses)

- For more info on the potential to use fish byproduct instead of wasting it: https://sjavarklasinn.is/en/iceland-ocean-cluster/100-fish/
- A good calculator we use for (the) impact of fish waste we divert. (We plug in fish and meat.) https://insights-engine.refed.org/impact-calculator

Encouragement for Metro Vancouver (2 responses)

- Keep up the good work! / Keep at er

Support educational initiatives (1 response)

- I was just at the city of Vancouver zero waste Recycling Ambassador class. I thought it was quite useful.

Implement compost-friendly take out containers (1 response)

- I wish more restos had take out containers that were compost-friendly (i.e. not plastic)

Do you have any further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in our region?

Increase options for furniture donation (1 response)

- Make more places available where we can donate furniture. It should not go to landfills as many people can use it.

Provide tours of waste facilities (1 response)

- Would be fun if there were tours of facilities, i.e. compost, thrift shops behind-the-scenes (i.e. Salvation Army).

Don't host wasteful events (1 response)

- Stop hosting prestige events like the World Cup that result in a lot of promotional crap.

Localize plastic recycling (1 response)

- Plastic Recycling facilities in BC to make new products from used soft / hard plastic.

Improve confidence in recycling (1 response)

- Show statistics that recycling efforts are not gone to waste; demystify mindset of "they are not going to do what they said they will do to recycle so why bother recycling"

Encourage municipal pick up dates for hard to recycle items (1 response)

- Some cities have a day where residents can put out large items for the city to pick up. I wonder how well this works - it seems like a good opportunity for neighbours to get new stuff before it goes to landfill.

Charge for recycling at purchase (1 response)

- All products should have a recyclable fee added to the purchase price. For example, in Metro Vancouver you have to pay a fee to a private company to recycle an infant/child car seat, therefore most people will just throw it away. We should be able to (recycle it) for free.

Streetscape recycling bins (1 response)

- Recycling bins on major streets would help so the cans and food wrap doesn't just get thrown down on the street.

Deposit Fees (1 response)

- More refundable fees on other products besides drink packaging

Site diversion infrastructure near transit stations (1 response)

- Plan to build new recycling and waste facilities walking distance from transit stations.

Promote innovation (1 response)

- Promote innovation for truly compostable packaging (not the type of packaging that says it's compostable but needs special non-existing facilities)

Engage politically (1 response)

- Political engagement

Address illegal dumping (1 response)

- Work with municipalities on preventing illegal dumping

Do you have any further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in our region?

Make products easier to repair (1 response)

- Tongue in cheek-- perhaps -- reduce or eliminate the computer technology that drives most (all?) household appliances. I am shocked to be told by a company they don't have "the part" or the software "fix" so they are going to give me a new item (dishwasher, laundry machine, chainsaw battery ETC) and take back the nonfunctional item. In "the good old days" it was frequently possible to rewire a toaster or otherwise figure out and replace things like the heating element in your hot water heater, not so when everything needs a display panel and service board. And it is a hard battle to fight the "planned obsolescence" of the appliance and other industries.

Efforts to Reduce Barriers to Participation

These activities were not designed to reduce barriers for specific underrepresented or equity-denied populations. However, we did deliberately hold the workshops virtually to reach folks who would have difficulty commuting to an in-person session, especially considering shorter days and earlier nights for traveling in the dark. We also set expectations in the session that being on or off camera and audio is okay, and provide avenues for participants to engage in the chat in lieu of with a microphone if needed.

Participants Feedback (engagement evaluation)

Of 16 participants across the two workshops, 12 completed the feedback survey. The following provides an overview of responses. All longform responses are abridged unless they are in quotations.

How did people hear about the event? (required question)

- 5 SPEC emails / newsletters
- 3 email (sender not specified)
- 1 MRV email
- 1 LinkedIn
- 1 Social Media (source not specified)
- 1 Metro Vancouver social media

To what extent did respondents agree with the following statements? (required question)
All responses were either Strongly Agree, Agree, or Not Sure. Applying a rating scale to these answers *(2 for Strongly Agree, 1 for Agree, 0 for Not Sure)*, the following table summarizes how well participants scored each statement.

To what extent do you agree with the following statements?	Strongly Agree	Agree	Not Sure	Percent of max rating
I feel this workshop was a good use of my time.	9	3		88%
I feel the format of this workshop was effective to have my feedback and input included.	9	3		88%
I had the information I needed to fully participate.	9	2	1	83%
I felt that everyone was able to participate.	10	2		92%
I felt comfortable and able to share my perspectives, even if they were different from the majority.	10	2		92%
The workshop facilitators were unbiased.	10	2		92%

What worked well? (required question)

- Wonderful, great, a friendly and approachable opportunity for input
- The format and delivery
- Lots of ideas were generated; a good discussion, with productive comments
- Everyone was encouraged to give their opinion; ideas were respected
- Setting expectations at the start of the meeting helped it go smoothly

What could be improved? (required question)

- Three respondents said they couldn't think of anything to improve on, that it was good as is!
- Morning timing would be preferable
- Three people mentioned more people, one included a longer time (the workshop was 90 minutes). This feedback was in both the workshop with 12 people attending, and the one with 4.
- A concern that input is ignored; asking for evidence from Metro that the input produces results.
- Get into the content without waiting or pausing for late arrivals.
- At times, a better use of the raised hands feature
- More specific information on recycling of products like textiles

Any other ideas for rethinking and preventing waste to share here? (optional question)
Eight of twelve respondents answered this question.

- Give specific guidance for textiles
- Encourage people to reuse for Christmas decorations and plant a tree instead of decorating one
- Up the enforcement on recycling contamination, especially multi-family and commercial sources
- Consult people who don't recycle, ask them what they need to engage
- Collect soft plastics at the curbside, and provide recycling bins at communal events and places like Farmers' Markets and Community Gardens
- Provide multilingual resources; this is especially relevant in Metro Vancouver
- There are "so many more aspects" (i.e., too many to list here)

Additional feedback on the idea generation phase (optional question)
Seven of twelve respondents answered this question.

- Enforce EPR and inform consumers of how it is implemented.
- Improve recycling labeling and increase the deposit fee to $1 to encourage recycling
- Engage retailers, and require them to participate in waste prevention.
- "I love that Metro Vancouver has created space for conversations and idea generation like this, from common folks!"
- Regulate the retail sale of items banned for commercial use, e.g. Styrofoam cups
- Encourage the public to compost at home, the curbside green bin has replaced home composting.
- One respondent said they can't think of anything, and one said there's too many to mention!

Narrative Summary

Goals and objectives	The engagement exercises were intended to engage the SPEC and Master Recycler community with Metro Vancouver's Solid Waste Management Plan Update. We set out to: ● Orient the community to the Solid Waste Management Plan process ● Give folks the opportunity to provide input directly ● Foster conversation about ways to prevent and reduce waste across the region ● Select a workshop topic which aligned with our community's interests and expertise (we selected "prevent and reduce waste in the first place") In 2023, we had 41 survey respondents, and 9 workshop participants . We set goals for 2024 based on these numbers of: ● 10 participants over 2 workshops (20 workshop participants total), and ● 60 survey respondents

Results achieved	Overall, we are satisfied with the results. We engaged: ● 16 total workshop participants (4 short of our target) ● 76 survey respondents (16 over our target) The feedback on the engagement activities was positive. Each of the outreach avenues we used proved to attract one or more of our participants. We were also pleased with the depth and variety of input provided by respondents to the survey. The survey did not itself prioritize the 'prevent and reduce waste in the first place' theme, but this was pointed out in survey responses. This confirmed for us that choosing this as the overarching theme for our idea generation was a good match for our community.
Challenges and issues addressed	**Challenges** ● Adopting the multiple choice questions provided by Metro Vancouver to our survey software (Google Forms) ● We had higher registration than attendance at both workshops. We could have done more one-on-one outreach had we expected attrition at this rate. We will conduct outreach differently for any future engagement opportunities. ○ 60% (12 of 20) in October ○ 44% (4 of 9) in December **Issues addressed** ● The Collaborative Engagement Toolkit had a few sections that were unclear in the first version that was sent out. Brooke was extremely helpful and responsive in clarifying these points and updating the Toolkit.
General feedback	Between what we read in the feedback survey and heard real-time during the workshop, we understood: ● It was educational to hear both the presentation given, and the dialogue between participants ● It's unclear to participants how the input provided is going to translate into actionable outcomes in the SWMP. Participants want the report Metro Vancouver produces from the Idea Generation phase to draw clear connections between the inputs from the engagement activities and the outcomes for the planning process.

Post-Engagement Report

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall.

Engagement Activity Summary

Activity:	
Activity Date	November 19, 2024
Organization/group name	Surrey Board of Trade
Time/Duration	9 am – 11 am
Location	101-14439 104 Ave Surrey, BC
Format	*Focus Group*
# of Participants	5
Summary of Promotions ***(optional)***	

Participant feedback/Input	
Meeting Notes	
Include any notes from the engagement activities. These are "what was said" notes and should be as close to verbatim as possible. Use one bullet point per speaker (i.e., start a new bullet when a new person starts speaking.)	
Topic/Question Addressed	***What was said***
What are the main actions you take to eliminate waste?	• **Reduce consumption** • **Use reusable bags/utensils, etc.** • **Be mindful of what you purchase - get things that are not single use**
✓ *What do you see as the primary challenges or barriers we face in addressing Plan for future infrastructure and systems for waste management across the region?* ✓ *What could Metro Vancouver do to address these challenges?*	• **Unity between the member districts is essential (Langley program vs Surrey program)** • **Metro Vancouver waste disposal can be profitable and needs to be addressed - waste to energy, reusable items, organics that can be used as fertilizers** • **Reduction in costs for consumers (homes) and businesses (construction and demolition)**

	o Quantifying what is being disposed of is made available and transparent o Logistics cost of bringing materials, people, carting away waste materials, has an enormous impact. Is that shared, is there public goals/? Do people know the cost? ▪ Engagement needed ▪ Reward system for businesses going in the right direction? If they are reducing waste produced vs the industry sector, they should get incentives to do that - Waste to energy - district energy system - Metro Vancouver can select rural areas to implement waste to energy facilities o Surrey does have District Energy - Right now just at Surrey City Centre. o Burning waste in a furnace will increase environmental flu gas emissions and noise. • China has a lot of big cities where waste to energy is very common. • Bio-gas system o Fotis BC does have this in place.
✓ *In what ways could Metro Vancouver collaborate with others to more effectively to advance Plan for future infrastructure and systems for waste management across the region*	• Municipalities, private businesses and NFP that handle recycling and collection • Advocacy - reaching out like these engagement sessions • Public spaces where groups are collecting opinions (splays and plans) to increase awareness and collecting feedback • Look to gold star regions to learn (France). Cross industry engagement - learn from businesses that have effectively and efficiently advanced their recycling/waste reduction plans and provide that information to the industry groups locally

	• Metro Vancouver can hold a regular committee/meeting and invite professionals, experts, consultants to discuss their plans and implementation strategy • Look at Sweden • Attend community/business events as exhibitors to showcase what they are doing and further community education

✓ *Let's flip the script: thinking of the current system, what is working well and should not be changed when thinking of Plan for future infrastructure and systems for waste management across the region?*
 	
✓ *What is going well and could be expanded on?*
	• Plastic bag regulations is working well- need provincial intervention/regulations. Changing behaviours through legislation.
	• Awareness is important and is being expanded upon
	  o One semester/class for university/colleges on how to protect the environment. Get them young -
	• New York ran out of money for garbage collection, and they left piles of garbage. We are fortunate. In a lot of respects, we are doing an excellent job in managing waste.
	• Room for improvement - generate less waste.
	• Do not place onus on the consumer, it needs to be incentivized through policy change - cost is the number one driver of household decision for those within a certain means (equity)
	• Cost needs to be universal
	• Infrastructure and systems must be equitable and must consider the cost of the end user of the system - need A.B. testing and competition within it
	  o Businesses make use of private sector, and evaluate them based on the market. Innovation occurs through competition.
	  ▪ Becomes more affordable and easier.
	  ▪ Remove the worst offenders one at a time.

	• Waste can be a profit centre - things that can be reused and recycled can be - put things back into the circular system o Electronics recycling for materials in it. • Things needs to be circular by design • A lot of communication is needed. • Good job of adding more things that can be recycled, and adding in what municipalities can be recycled curb-side. Langley they let you recycle glass, not in Surrey. • Incentivize beverage containers (milk containers can now be recycled and money given back). Confusion does still exist
✓ *What types of information would be most helpful for you in furthering your understanding of Plan for future infrastructure and systems for waste management across the region?* ✓ *Meaning — do you have any questions about this topic that Metro Vancouver may be able to answer for you?*	• Need to understand the cost of facilities - costs and time it takes to build are increasing • What is planned? There is minimal understanding. o Where do the electric batteries go? Are they incentivizing automotive dealers? Is there a recycling deposit? • What is the benefit of the plastic bag waste ban? Need transparency on the effectiveness on these legislative changes? • Cost is very important - need to allow communities to know the benefits of the plan • We think about organics in household waste but we seldom care about the construction and demolition facilities - concrete bricks - need companies to handle this type of waste as there is. A lot of volume. Need information on how we are handling these types of waste. Need to understand where this waste is happening the most. • Need to understand the landfill capacity, are we at capacity? There are odour issues that will impact communities around the fill. • There was a recycling program for textiles for a year but they took it away -

	kids go through clothes that cannot be reused.
✓ *What are some ways to engage with Metro Vancouver residents on Plan for future infrastructure and systems for waste management across the region?*	• Apps to connect people to Metro Vancouver - know what is going on in Metro Vancouver, new information, reminders. • Be where people are - meet them where they are - malls, parks, business parks, business community events o Inform people so they feel better about the taxes that they pay • Use traditional media platforms - news, papers, online articles • Social media posts - education and engagement in general • Inform people what you can recycle through the holidays • Leaders to come out and speak and get feedback directly • All of this to inform people to feel a source of pride. • Online system where you can type in what you can and can't recycle. Current systems are limited.
✓ *Is there anything else you'd like to add to the conversation on this topic?*	• Frustration with the many different ways of managing waste between municipalities o It is different and confusing • Carpet cleaner type of waste disposal is hard to find. How cities manage this type of waste is hard. • Calgary - fire stations there is chemical waste collection. Included not only paint but everything. • Collection locations that include everything - one place to drop everything off at • Ensure that all waste is covered in all municipalities - consistency and harmonization of policy • Textile disposal - the better that we can do for textiles - big brother does it, but microfibre is an issue as they are made with plastic components that can get into the water system and become an issue.

	We consume in North America where they enter our waste system but it I manufactured outside of North America.
	• Drop off points need to be accessible, better advertised.
	• Fast fashion - generated a lot of waste.
	• There was a recycling program for textiles for a year but they took it away
	• Every time we talk about waste management we should put reuse as the first point and most important point because we talk about how to reuse in industries because not only can we protect environment but businesses can save money
	  ○ Plastic bags can be reused many times
	  ○ Iron stills and plastics can be reused many times and can save a lot of money.
	• Saving money to be able to handle the waste for the system
	• Waste to energy:
	  ○ A lot of work goes into classifying the materials. Use magnet to collect steel from the system or it breaks the furnace
	• Densification/smaller units for homes makes it difficult to sort through recycling at home.
	• Needs to be accessible/walking distance of where people live for recycling depots.
	• Make sure that you are teaching residents young - be mindful and conscious of what you are doing
	• Auto-sorting is needed - it is time consuming
	• Switch to reusable
	• No waste management plan for businesses
	  No organics plan

Efforts to Reduce Barriers to Participation (Optional)	
Description of efforts made to reduce barriers to participation for underrepresented or equity-denied populations (if applicable).	

Participants Feedback (engagement evaluation)	
In general, those that attended felt like they were given an opportunity to learn and provide ideas in a safe environment free of judgement. There were some suggestions like having Metro Vancouver staff present so they could ask more in-depth questions. Additionally, questions for the Provincial government also came up that needed to be answered as well.	
Narrative Summary (Your brief reflections on the engagement)	
Goals and objectives	The primary goal of this engagement activity was to contribute to the development and refinement of Metro Vancouver's solid waste management plan. Specifically, the activity aimed to: 1. **Identify Opportunities for Waste Reduction:** Explore strategies to minimize waste generation, increase reuse, and enhance recycling practices to move towards a circular economy. 2. **Address Challenges in Waste Management:** Discuss barriers to effective waste reduction and reuse, including financial constraints, legislative gaps, and operational inefficiencies. 3. **Encourage Collaboration:** Foster dialogue between municipalities, private businesses, and non-profit organizations to promote unified and scalable waste management solutions. 4. **Highlight the Role of Education and Awareness:** Stress the importance of public education, awareness campaigns, and clear communication to drive behavior change and community participation in sustainable waste practices. 5. **Gather Feedback for Policy Development:** Collect diverse perspectives from participants to inform legislative priorities, ensure cost considerations are equitable, and support the development of practical, community-focused solutions. This session also sought to build consensus on the need for systemic changes and continuous engagement to align waste management practices across the region effectively.
Results achieved	• The engagement activity successfully identified critical insights and actionable recommendations aligned with the initial goals of the solid waste management plan update: **Results and Key Outcomes:** 1. **Opportunities for Waste Reduction:** Participants emphasized strategies to reduce waste, including switching to reusable materials, adopting auto-sorting technologies, and promoting the circular economy by reusing and recycling items such as plastics, textiles, and electronic materials. 2. **Challenges Highlighted:** Key barriers discussed included inconsistencies in waste management practices between

	municipalities, lack of transparency on costs and landfill capacity, and limited access to recycling facilities for specialized waste like textiles and batteries. 3. **Collaboration Needs:** Participants advocated for cross-sector engagement, such as regular meetings among experts, businesses, and government entities, to exchange best practices and advance waste reduction and reuse strategies effectively. 4. **Importance of Awareness and Education:** Continuous education for residents and businesses was emphasized, including campaigns, app-based information sharing, and feedback collection to foster participation and behavior change. 5. **Legislative Recommendations:** Participants supported legislative actions to incentivize businesses reducing waste, enhance recycling systems, and address high-cost barriers for both consumers and businesses. 6. **Infrastructure Suggestions:** Ideas included centralizing waste drop-off locations, harmonizing policies across municipalities, and implementing waste-to-energy initiatives in rural areas while addressing environmental impacts. **Alignment with Initial Goals:** • These results align closely with the initial objectives of the engagement activity: • The focus on reducing waste, increasing reuse and recycling, and moving toward a circular economy directly corresponds to the discussions on waste reduction strategies and infrastructure improvements. • The identification of barriers and advocacy for legislative and collaborative solutions reflects the goal of addressing challenges in waste management. • Emphasis on education and awareness campaigns
Challenges and issues addressed	Key barriers discussed included inconsistencies in waste management practices between municipalities, lack of transparency on costs and landfill capacity, and limited access to recycling facilities for specialized waste like textiles and batteries.
General feedback	Doing these sessions is of real value - opportunity to put forward their opinions and get good information (fact sheet) is helpful for lots of businesses.

Appendix

Please Include the following in the appendix:

- ✓ **Digital files and photos from the engagement activities** (*Please include any digital files and/or photos of workshop products, such as visual brainstorming activity boards)*
- ✓ Engagement Survey data, preferably in editable form (i.e. word document or spreadsheet)
- ✓ Participants demographic information (optional)
- ✓ Participant evaluation forms

METRO VANCOUVER SOLID WASTE SERVICES

COLLABORATIVE ENGAGEMENT REPORT
IDEA GENERATION

DECEMBER 2024

Prepared by
VANCOUVER FOOD RUNNERS

Prepared for
METRO VANCOUVER

About Vancouver Food Runners - Engagement Partner

Vancouver Food Runners (VFR) is a Metro Vancouver food recovery organization and registered charity. VFR uses app technology and a team of volunteer drivers to redirect surplus food from 150+ businesses to 170+ nonprofit partners operating community food programs. Since March 2020, VFR volunteers have delivered 4.5+ million pounds of food to the community; and this has mitigated 7.6+ million pounds of CO2eq from the environment. VFR provides a free, flexible, and accessible food recovery program for all businesses in the Metro Vancouver region.

VFR has a bi-monthly e-newsletter circulated to 1751 readers (primarily VFR volunteers interested in food waste reduction, sustainability, and food security); and we did a feature on Terry Fulton, Senior Project Engineer at Metro Vancouver and the Metro Vancouver Solid Waste Management Plan update in the Saturday, November 9, 2024 newsletter.

This feature was done to increase our community's understanding of what the Metro Vancouver Solid Waste Management Plan Update is, build an understanding of the issues and opportunities within the solid waste system, and outline how to participate in the engagement process. We also showcased the recent Solid Waste Management Plan Collaborative Engagement Initiative video.

Following the feature article, readers were encouraged to take action and complete the public survey.

The open rate for this newsletter was high at 56.3% (985 readers opened the newsletter). Social media posts featuring the article were also shared on VFR's social media channels: 283 accounts were reached through Instagram and 79 accounts were reached through Facebook.

FEATURE ARTICLE

VFR: Terry, tell us about yourself and your journey leading up to your current role as a Senior Project Engineer of Solid Waste Services at Metro Vancouver.

Terry Fulton: My first engineering role out of university was actually in contaminated sites investigation, but I agreed to help out with a waste audit that my firm's solid waste team was working on, and I was hooked!

Actually seeing and feeling (and smelling!) the crazy amount of waste our society produces inspired me to take action. I eventually joined my firm's solid waste team, and when the opportunity arose, took on a position with Metro Vancouver.

VFR: What do you find particularly interesting about working on the issue of solid waste?

TF: So many things! One in particular is how solid waste is a part of every person's life. Everyone creates waste and interacts with it in some way, and everyone has an opinion on it. If I mention I work in zero waste at any sort of family gathering, I am inundated by story's about people's experiences (which lately seem to be focused on paper straws).

VFR: Please provide a high-level overview of Metro Vancouver Solid Waste in terms of mandate, services, planning, and management of solid waste in the region.

TF: Metro Vancouver's solid waste services division operates a series of facilities that enable residents and businesses to reuse, recycle, and dispose of materials they no longer need. We also are responsible for planning for less waste in the region, which is where the solid waste management plan comes in.

VFR: What are some of the success and challenge areas for Metro Vancouver Solid Waste over the last decade?

TF: Organics collection was a huge step forward for our region. Metro Vancouver implemented an organics disposal ban in 2015, and efforts by residents since then to make sure organic material goes in their green bins has led to a significant reduction of organics in the garbage. The disposal ban has also helped to increase the amount of material that can be turned into marketable soil amendment.

The challenge now is to shift that focus to reducing organic waste before it even gets composted - i.e. preventing food waste wherever possible, and we appreciate the work Vancouver Food Runners is doing in that area!

VFR: You're in the process of updating your Solid Waste Management Plan, and you're in the "Idea Generation Phase". Tell us about the update and this specific phase.

TF: The updated solid waste management plan will guide our actions for the next decade and beyond. This update is a unique opportunity to shape the programs and policies of the future. The Idea Generation phase is the chance for everyone to share their great ideas for what actions we can take to reduce waste and associated greenhouse gas emissions, and transition to a circular economy.

VFR: Why is collaborative engagement so important to this update process?

TF: It's so important that our plan is based on feedback from everyone in the region – not just those who participate in traditional webinars or fill out questionnaires. The collaborative engagement process allows us to hear from groups that might have previously been underrepresented.

It also enables us to gather input from more people in the ways that make the most sense to them. This approach helps us tap into networks that go beyond our own mailing lists and contacts. Thanks so much for being part of this process — you can also take the survey.

VFR: As someone who is passionate about reducing waste, can you provide us with 3 straightforward (and impactful!) tips for reducing waste in our everyday lives.

Terry's Tips:

Tip #1. Ask yourself: Do I really need this?
Reducing consumption can be a tough sell, especially with everything just a button click away. However, when you take a step back and ask yourself this question before clicking "buy," it helps screen out impulse purchases and ultimately reduces your waste footprint (and saves you money).

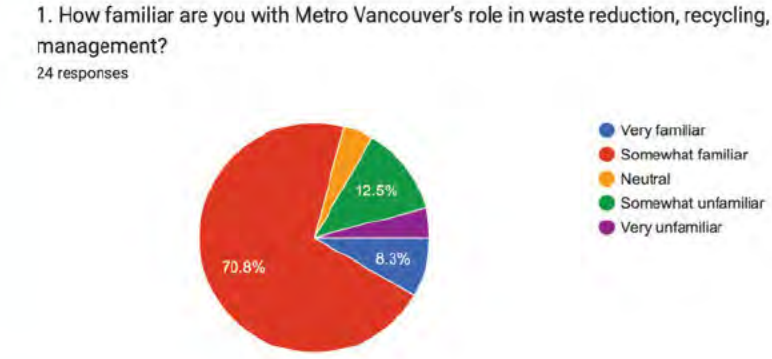
Tip #2: Fix what you've got! I've recently realized just how easy it can be to make simple repairs, like mending clothing, and how accessible the skills and knowledge of others are for more complicated repairs. Repair cafés are growing in popularity in the region, providing the perfect opportunity to keep your stuff out of the landfill and avoid buying something new. Win-win! To learn about repair cafes in Vancouver click here.

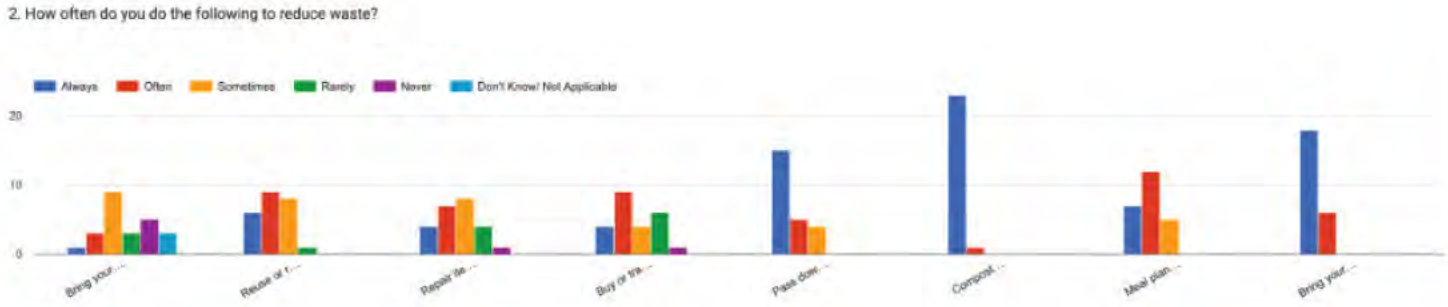
Tip #3: Share the love. Not just with your own items when you're ready to donate them or sell them on a marketplace, but also before rushing out to buy something. Consider whether a neighbour, local library, or share shed already has what you need. Not only does this prevent waste, but it also strengthens local communities — an added bonus!

VFR: Finally, why is composting (using your green bin) so important?

TF: When food waste goes in the landfill, it creates methane gas, a potent contributor to climate change. Each kilogram of material that goes in your green bin saves more than 0.4 kg of CO_2 from being emitted to the atmosphere and can be used to create either valuable soil amendments for growing more food, or renewable energy to power vehicles and more.

FEEDBACK FROM THE PUBLIC SURVEY: Through VFR's newsletter outreach, 24 individuals completed the Metro Vancouver public survey (idea generation phase).





Question 2: How often do you do the following to reduce waste? Most frequent responses for each sub-question:

2.1 Bring your own reusable cup, dishes, or utensils for takeout: **9 indicated "sometimes"; 5 indicated "never"**

2.2 Reuse or repurpose items rather than dispose of them (wrapping paper, food containers, plant pots, etc.): **9 indicated "often"; 8 indicated "sometimes"**

2.3 Repair items yourself, bring items to municipal repair cafes, or pay to have them repaired rather than dispose of them: **8 indicated "sometimes"; 7 indicated "often"**

2.4 Buy or trade second-hand items: **9 indicated "often"; 6 indicated "rarely"**

2.5 Pass down or donate unwanted clothes, or participate in clothing swaps: **15 indicated "always"; 5 indicated "often"**

2.6 Compost organic waste including food scraps and yard trimmings (e.g. backyard composting or green bin pick-up): **23 indicated "always"**

2.7 Meal plan to avoid food waste: **12 indicated "often"; 7 indicated "always"**

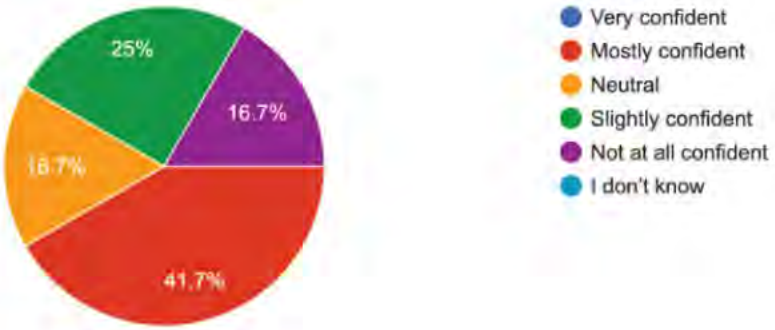
2.8 Bring your own reusable shopping bags: **18 indicated "always"; 6 indicated "often"**

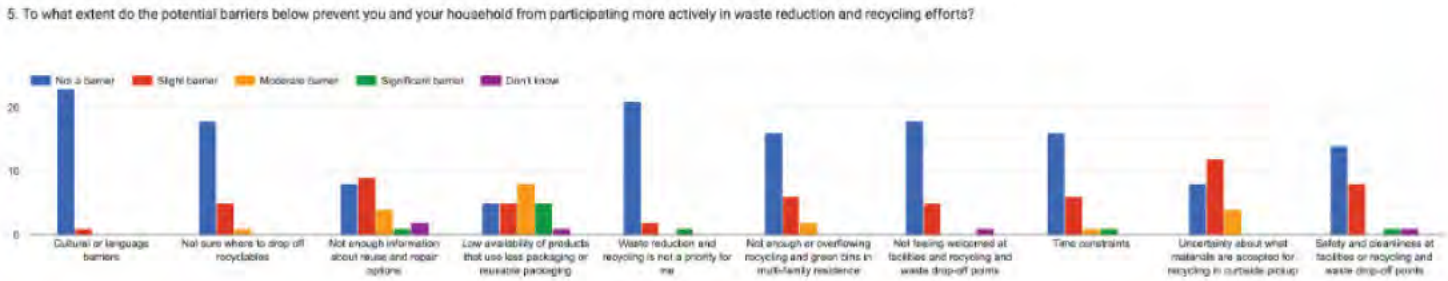
Question 3. Is there anything else not listed here that you always or often do to reduce waste?

- **Our household is trying to only buy what we need (also trying to instil this value in our kids)**
- **Volunteer with Vancouver Food Runners**
- **Pay similar amount for smaller portions to avoid waste; and pay more for less impactful comparable products**
- **Buy less, buy bulk, buy items with less packaging, buy items with more sustainable packaging**
- **Established broad recycling in our co-op housing, and implemented good onsite composting**
- **Participate in local online "buy nothing" groups**
- **Buy my cleaning products, and some food, at the Soap Dispensary (bringing my own packaging)**
- **Carry a mug**

4. How confident are you that the items you recycle are being recycled into new products instead of ending up in disposal? (i.e. garbage, landfill?)

24 responses





Question 5: To what extent do the potential barriers below prevent you and your household from participating more actively in waste reduction and recycling efforts? Most frequent responses for each sub-question:

5.1 Cultural or language barriers: 23 indicated "not a barrier"

5.2 Not sure where to drop off recyclables: 18 indicated "not a barrier"; 5 indicated "slight barrier"

5.3 Not enough information about reuse and repair options: 9 indicated "slight barrier"; 8 indicated "not a barrier"

5.4 Low availability of products that use less packaging or reusable packaging: 8 indicated "moderate barrier"

5.5 Waste reduction and recycling is not a priority for me: 21 respondents indicated "not a barrier"

5.6 Not enough or over flowing recycling and green bins in multi-family residence: 16 respondents indicated "not a barrier"; 6 indicated "slight barrier"

5.7 Not feeling welcomed at facilities and recycling and waste drop-off points: 18 respondents indicated "not a barrier"; 5 indicated "slight barrier"

5.8 Time constraints: 16 respondents indicated "not a barrier"; 6 indicated "slight barrier"

5.9 Uncertainty about what materials are accepted for recycling in curbside pickup: 12 respondents indicated "slight barrier"; 8 respondents indicated "not a barrier"

5.10 Safety and cleanliness at facilities or recycling and waste drop-off points: 14 respondents indicated "not a barrier"; 8 indicated "slight barrier"

6. Are there any other barriers not listed here that prevent you and your household from participating in waste reduction efforts?

- **The recycling bags for paper cardboard boxes are not big enough for household use to recycle**
- **Ready access to places that take specific items, like used batteries, used oil, technology, etc.**
- **Many items must be taken to transfer station for recycling (e.g., foam packaging)**
- **Some cost for beyond the blue box items through private recyclers**
- **Soft plastic is the thing I don't know what to do with, other than take it to London Drugs**
- **Returning soft plastics and other recyclables that are not accepting in blue bins is a challenge.**

7.1 Which community members do you think may be having a difficult time with the current programs and services?

Respondents mentioned:

- **Recent immigrants (e.g., education, cultural differences, language accessibility)**
- **Individuals who are disabled**
- **Climate change deniers**
- **Seniors**
- **Individuals with mobility issues (e.g., wheelchair)**
- **Individuals with a low income (e.g., time and not a priority)**
- **Individuals in apartments or high-rise buildings**
- **Individuals without a car**
- **Anyone who does not have access to current recycling information**
- **Busy parents**

7.1 (con't)

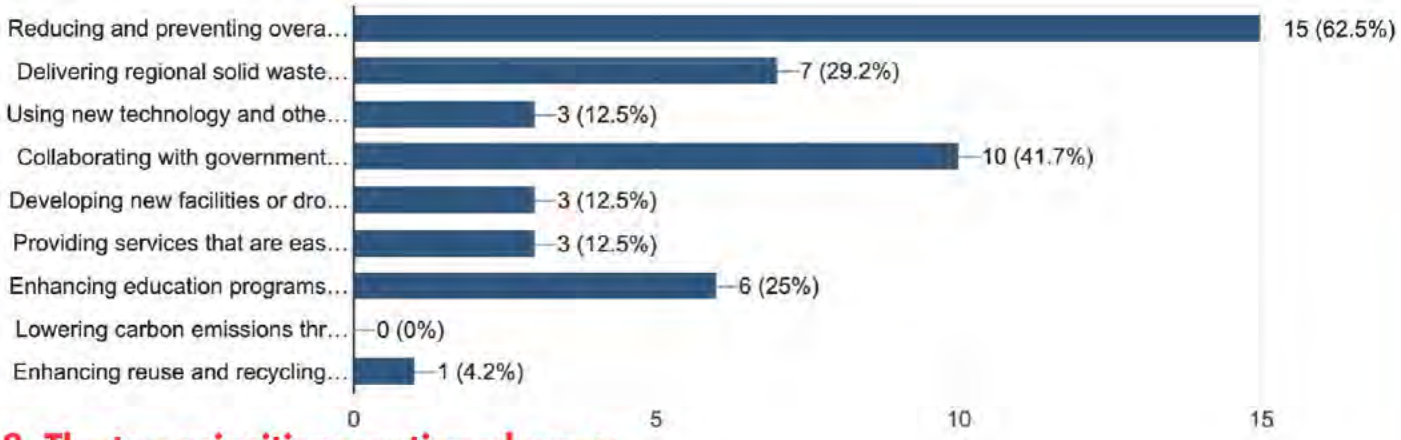
We we know that some charities have issues with composting on site (even though they're running a food program). On the food donor side, stores (particularly grocery stores) have a lot of items packaged in recyclable containers that are not sold each day (bakery, deli, processed food, etc.). If a food recovery organization does not collect the food items, they are often thrown directly into the garbage. Staff at the stores do not have time to recycle the items. Also, food recovery organizations are doing a huge service to the community and environment by collecting all the surplus food from hundreds of stores each day (4 organizations -- Vancouver Food Runners, Food Stash, Quest Market, and CityReach -- together collected approximately 5 million pounds of surplus food in the last 12 months in Vancouver); but we are provided with no financial support from the municipal government. There is some funding at the provincial level, but it is very limited and not guaranteed each year, plus funding eligibility criteria excludes certain organizations (e.g., Vancouver Food Runners). Food recovery organizations are struggling to stay afloat, even though the demand for their recovery services is growing in the food industry (which is positive). More food businesses are wanting to reduce their waste and donate their surplus.

7.2 What can be done to make the programs and services more inclusive so that they work for everyone?

- Language translation to make information accessible for newcomers
- Free workshops/programs hosted by schools, community centres, "Welcome to Canada" orientations
- Some type of funding mechanism for food recovery organizations to maintain their operations
- More education and incentives for businesses around food waste reduction and food donation options
- The biggest impact would come from cultural norms and teaching them
- Increase accessibility for programs (e.g. near main transit stations)
- Education on the importance of keeping things out of landfill -- the costs and benefits
- Focus on making everything convenient and free
- Recycling collection option for those that do not have a vehicle
- More flexible scheduling for programs
- Apartments have monthly collection for soft plastics and things that cannot go in bins
- More compostable containers available

8. What should be Metro Vancouver's top priorities for the future when it comes to solid waste management? Please select your top two.

24 responses



8. The top priorities mentioned were:

- **Reducing and preventing overall waste**
- **Collaborating with governments and manufacturers to reduce packaging**
- **Delivering regional solid waste services in a cost effective way**
- **Enhancing education programs and campaigns**

9. Are there other priorities that Metro Vancouver should be considering that are not listed above?

Help figure out a funding mechanism for food recovery efforts/orgs; and put more resources into education and awareness around the benefits of food waste reduction for businesses (e.g., saves them money [lowers food and hauling costs], better for the environment, builds team morale, supporting nearby charities with donations, etc.). Also, increase awareness of the Food Donor Encouragement Act (liability protection for businesses and organizations that donate their surplus food).

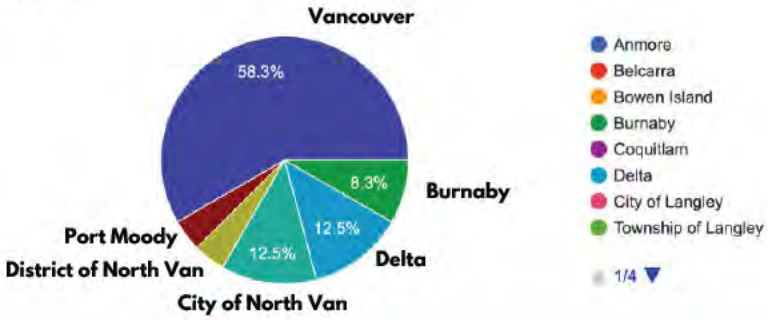
10. Do you have any further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in our region?

- **Please continue enhancing current services while communicating out the benefits to all who are participating**
- **Study who is not using these services and why before doing anything**
- **Recycling has created a whole new fleet of trucks that emit carbon. It makes me question what is actually saved. How can recycling be done more efficiently?!**
- **Proving more information to households on reducing food waste**

DEMOGRAPHIC PROFILE OF RESPONDENTS

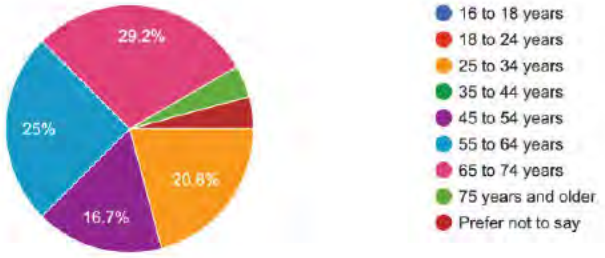
11. Where do you live?

24 responses



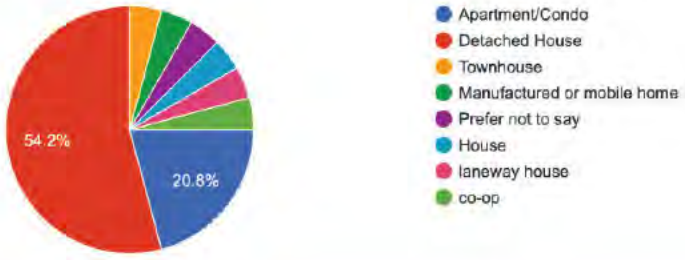
12. How old are you?

24 responses



13. What type of home do you live in?

24 responses



14. What language is primarily spoken in your home?

24 responses

Post-Engagement Report

Engagement Activity Summary

Ac#vity:	
Ac#vity Date	Devember 4th 2024
Organiza#on/group name	Women Transforming Ci#es
Time/Dura#on	1.5 hours
Loca#on	Zoom
Format	*Focus group*
# of Par#cipants	10

Par#cipant feedback/Input	
Meeting Notes	
Include any notes from the engagement activities. These are "what was said" notes and should be as close to verbatim as possible. Use one bullet point per speaker (i.e., start a new bullet when a new person starts speaking.)	
Topic/Question Addressed	***What was said***
What are the main actions you take to eliminate waste?	• i carefully wash everything that goes in the recycling bin • compost • recycling • reusable bags at the grocery store • produce bags • building has free or buy nothing group • second hand furniture and electronics • meal plan to reduce food waste • compost • use re-use/free groups • bring reusable coffee cup

As Metro Vancouver updates the plan, we will be focusing on the following seven key areas and the actions that can build on the current success of achieving one of the best recycling rates in North America. As Metro Vancouver updates the plan, what actions can build on our success to expand inclusive programs and services.	• apartment buildings don't have enough waste op#ons, they get full really quickly • how do you access electronics or clothes zero waste centers if you don't have a car? Make this a more accessible service. Curbside or local business op#ons that takes electronics and clothing • beVer access by transit for those without a car • in argen#na they have huge receptacles in major parks for baVeries. That was a cool ini#a#ve that made it easy to eliminate things that are harder to recycle on day to day • people don't think to go to the metro van website for informa#on on this - we need to get informa#on to them other ways • all of my neighbours were Iranian and they weren't going to get info on the metro van website in Persian. It needs to be on the bins to match the access needs for the people in the area • place based informa#on • if a building is consistently doing the wrong thing there needs to be a no#ce about that. Bin going into landfill and going to waste because they don't understand what goes where, so ac#on needs to be taken in advance. S#cker on the bin that says what the contamina#on was so that it doesn't happen again

Let's expand on the list of potential actions and strategies that have been mentioned so far. What do you see as potential barriers in achieving inclusive programs and services? (If they mention the same ones already discussed, probe for new/other/more specific examples)	• people moving between municipali#es where rules are different is a barrier • it takes #me to go through the correct informa#on, there's no #me to read a novel about recycling • when I rinse out a container to recycle, it is cleaning, thus using the natural gas that my water is heated with, is that not as harmful as just not recycling it? • the emissions used to drive to waste areas, does it cancel out the recycling? • those bins that look separated but all actually end up in the same bin • maybe some stats that they can share? But no one else is gonna collect that data
What roles do businesses, the waste management industry, not-for-profits, community organizations, and others play?	• tax the huge corpora#ons and not the individual • do more than us at the individual level, they're the ones who contribute the most. We do all this effort but they produce products that contribute to the waste • more in charge of taking back their products and dealing with repurposing them and cleaning them
In what ways could Metro Vancouver collaborate with others more effectively to advance inclusive programs and services?	• give their money to organiza#ons that are doing good things (the binners project) you hire them for events but need to do more by giving them funding • work with businesses as well to raise awareness with them

Let's flip the script: Thinking of the current system, what is working well and should not be changed when thinking of inclusive programs and services? What is going well and should be expanded on?	• glass container recycling, separate items for binners to pick up • allowing people to make some income from waste management is good • the van collect app is so great and tells you when your days change and what is being collected, the tech form is really helpful
What types of information would be most helpful for you in furthering your understanding of inclusive programs and services? Meaning—do you have any questions about this topic that Metro Vancouver may be able to answer for you?	• what percentage of recycling is ending up in landfills • give people the data • every household gets an odorless dry powder food waste machine • the data gets people excited, in a dream world people would be well informed and communi#es would know what % of waste is going in which areas • feeling like what you're doing doesn't make a difference, ini#a#ves needs to be paired with stats and accountability and support them in le_ ng them know their behaviour is making a difference • this is what i haven't wasted, this is how i've transferred my waste service. It's fun when you can make it a challenge. Reducing, and doing something with your waste. Make it fun and sa#sfying in doing the ac#on. The data is inspiring

What are some ways to engage with Metro Vancouver residents on inclusive programs and services?	• reaching out to organiza#ons to do engagement • what organiza#ons are they engaging with and where is that being discussed? What communi#es are they reaching out to and who are they hearing from? • neighbourhood houses are a good fit for these kinds of things • who are the people that face the most barriers to this? Time, money, language, knowledge. What services are they engaging with and how can they get to them? Why should they care if they're working 3 jobs and living in poverty, what's in it for them? • don't assume people are mo#vated by reducing landfill • engage with unions. Recycling and zero waste has a classist fit to them. Status symbol. Lifestyle flex. People feel ashamed because they don't have the #me or can't afford to make those lifestyle changes. How to engage with those that don't have a lot of resources • because people are busy working they use more single package and single use things • providing a receptacle or something small and odorless for compost. I use a container because I have the #me to refill it and I keep it in my freezer. Ge_ ng small containers that people can have on their counter.
Engagement Questionnaire Results	
If you have conducted a questionnaire, please include a summary of the results here. You are welcome to share the data results from your survey with Metro Vancouver for better feedback analysis.	
Topic/Question Addressed	***What was said***

How familiar are you with Metro Vancouver's role in waste reduction, recycling, and garbage management?	• Very familiar: 5.3% • Somewhat familiar: 36.8% • Neutral: 15.8% • Somewhat unfamiliar: 31.6% • Very unfamiliar: 10.5%
How often do you do the following to reduce waste?	• 31.6% of respondents said they oj en bring their own reusable cups, dishes, or utensils for takeout • 57.9% said they oj en reuse or repurpose items rather dispose of them • 31.6% said they some#mes repair items themselves, bring them to minicipal repair cafes, or pay to have them repaired • 63.2% said they oj en buy or trade second-hand items • 47.4% said they always pass down unwanted clother, or par#cipate in clothing swaps • 73.7% said they always compost organiz waste including food scraps and yard trimmings • 36.8% said they some#mes meal plan to avoid food waste • 84.2% said they always bring their own reusable shopping bags
How confident are you that the items you recycle are being recycled into new products instead of ending up in disposal?	• Very confident: 0% • Mostly confident: 10.5% • Neutral: 10.5% • Slightly confident: 21.1% • Not at all confident: 52.6% • I don't know: 5.3%

To what extent do the potential barriers below prevent you and your household from participating more actively in waste reduction and recycling efforts?	• 100% of respondents said culture or language were not a barrier • 52.6% said not knowing where to drop off recyclables was a slight barrier • 36.8% said not enough informa#on about reuse and repair op#ons was a slight barrier • 47.7% said low availability of products that use less packaging or reusable packaging was a significant barrier • 89.5% said waste reduc#on not being a priority for them was not a barrier • 42.1% said not enough or overflowing recycling and green bins in mul#-family residence was not a barrier for them • 57.9% said not feeling welcomed at facili#es nd recycling and waste drop-off points was not a barrier for them • 47.4% said #me constraints was a slight barrier • 31.6% said uncertainty about what materials are accepted for recycling in curbside pickup was a moderate barrier • 36.8% said safety and cleanliness at facili#es or recycling and waste drop-off points was not a barrier
How well do you think current waste management programs and services work for everyone in the community?	• They work very well for everyone: 0% • They work well for most community members but not for everyone: 52.6% • They only work well for some community members but are difficult to manage for most: 36.8% • They do not work for the majority of community members: 5.3% • Don't know: 5.3%

What should be Metro Vancouver's top priorities for the future when it comes to solid waste management? Please select your top two.	• Reducing and preven#ng overall waste : 57.9% • Delivering regional solid waste services in a cost effec#ve way: 10.5% • Using new technology and other forms of innova#on to promote waste management: 10.5% • Collabora#ng with govenment and manufacturers to reduce packaging: 42.1% • Developing new facili#es or drop off points for recycling, reusabes, and waste: 10.5% • Providing services that are easy to use for all residents: 47.4% • Enhancing educa#on programs and campaigns: 31.6% • Lowering carbon emissions through new technology and prac#ces: 15.8% • Enhancing reuse and recycling opportuni#es at bussinesses and mul#-family propre#es: 21.1%
Are there other priorities that Metro Vancouver should be considering that are not listed above?	*Yes, compost in multi family buildings and businesses as most don't utilise it. Many households don't compost as it's not enforced even though it's so called mandatory*
Do you have any further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in our region?	• Best prac#ces for diy compos#ng without aVrac#ng rats & wildlife • Provide incen#ves - like 25 cent cup fine! • I have really liked the educa#onal ads I get on Youtube, I find them super clear/effec#ve
Where do you live?	• Vancouver: 78.9% • New West: 5.3% • City of North Van: 5.3% • Districs of North Van: 5.3% • Surrey: 5.3%
How old are you?	• 25 to 34 years: 84.2% • 35 to 44: 5.3% • 18-24: 10.5%
What type of home do you live in?	• Apartment/Condo: 57.9% • Detached House: 21.1% • Townshouse: 15.8% • Laneway House: 55.3%
What language is primarily spoken in your home?	• English: 94.7% • Cantonese: 5.3%
Narrative Summary (Your brief reflections on the engagement)	
Goals and objec#ves	My goal and objec#ve with this was to collect data on people's understandng of waste management in Metro Van. What is working, what needs imporvement, and what is missing. As well as what they're passionate about, what makes them angry, what keeps them interested/caring about waste.

Results achieved	A lot of the results were predictable. When it comes to waste management, those who don't have the informa#on in front of them, aren't in spaces or surrounded by community that is also not only knowledgable on waste but has the #me for it will most liekly not do more than the bare minimum. If we want to improve the way people arrpoach waste at the individual level, we need to make informa#on on waste as accessible as possible. Do not rely on people to seek out this informa#on, instead bring it to them! In a consise, easily digestable, and non-#me consuming way. Another thing that was brought up in the focus group and that I oj en hear, is that a lot of wsate issues should be handled more at an ins#tu#onal level, and not an individual level. Large coorpora#ons that are responsible for most of the waste should be making the adequate changes to be more environmentally consious, we should not be pu_ ng this burden on the individuals that consume or purchase these products.
Challenges and issues addressed	It can be difficult to get people to take #me out of their day to fill out a survey or aVend a focus group on waste. Those who engage with this content are usually those who already feel strongly about it, and have some level of knowledge. Reaching the demographic we need to hear from the most was a bit of a challenge but is something that is usually expected when doing this line of work.
General feedback	The general feedback that I received from par#cipants is that they were excited for the opportunity to speak on waste management as it is not an opporunity they had been presented with before and they wanted their voices to be heard.

Appendix

Please Include the following in the appendix:

- ✓ **Digital files and photos from the engagement activities** (*Please include any digital files and/or photos of workshop products, such as visual brainstorming activity boards)*
- ✓ Engagement Survey data, preferably in editable form (i.e. word document or spreadsheet)
- ✓ Par#cipants demographic informa#on (op#onal)
- ✓ Par#cipant evalua#on forms

Idea Generation Engagement Report

Zero Waste BC conducted a workshop and interviews from October to November 2024 to learn more about participants' perspectives to generate ideas and actions for future zero waste infrastructure and systems (including services) for zero waste management across the region. The process and results are shown below in a summary followed by the findings for each and then the appendices with more nuanced detail.

Summary

Workshop

An online workshop was held on October 17 from 11:00am-12:30pm. Invitations were sent to Zero Waste BC members and board members via email, as well as included in the email newsletter. An invitation was also sent to previous workshop participants. The workshop was promoted on Zero Waste BC's website, newsletter and social media via LinkedIn and Facebook, as well as through the WECAN newsletter. ZWBC also cross-promoted other workshop dates for SPEC and CWMA engagement events.

A total of 11 participants attended the workshop. There was a mix of representation from non-governmental organizations (NGOs), local NGOs, green businesses, and other sectors (consulting, research) (Figure 1).

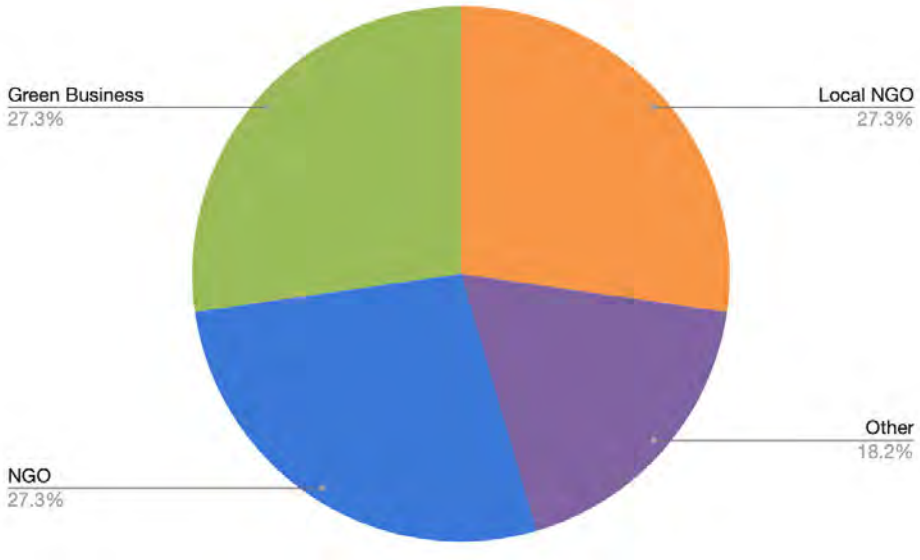


Figure 1. Workshop participants (n=11)

The format of the workshop generally followed the facilitation plan provided by Metro Vancouver. We adapted the topic for the workshop from the provided list to be “Future zero waste infrastructure and systems (including services) for zero waste management across the region”. We added zero waste to focus the topic more on infrastructure and systems that support zero waste and the higher tiers (reduce, reuse) of the zero waste hierarchy. See the attached presentation and facilitation plan.

Interviews

A total of 10 interviews ranging from 30 to 60 minutes were conducted between October 15 to 31. These cross-sector industry leaders represented non-profits (3), business (2), public sector (2), academic (1), elected official (1) and an independent (1). Invitations were sent by email. It was agreed that confidentiality would be maintained by consolidating interview results to ensure interviewees could provide their idea generation inputs in full.

Interviews were conducted using the adapted topic of ‘future zero waste infrastructure and systems (including services) for zero waste management across the region, as done for the workshop. Questions aligned with those provided by Metro Vancouver to address current successes, barriers and areas for improvement, new opportunities including roles and collaboration opportunities, and policies and programs.

Findings - Workshop

Workshop findings are listed below. For a workshop detailed summary see Appendix A. Reporting Workshop.

Boost reuse infrastructure and services

- Need more of it, not just on recycling, but on reuse (current education dominated by recycling, but not upper tiers of zero waste hierarchy).
- Many things going to transfer stations that could be reused (wood, C&D materials).
- Many items can be reused in businesses, but it may need some coordination - return-to-retail can be piloted.

Enable material separation for reuse, repair, and recycling

- One-stop-shop for everything - put areas for salvage before recycling.
- Have seen successes for carpets - when the facility is set up for separation and contractors are engaged, they will separate.
- Storage needed for these materials, could use civic facilities.
- Institutionalize and make reuse and repair the norm like what exists for recycling.
- Metro Vancouver can help connect materials to those who can use them - enable salvaging at transfer stations, promote neighbourhood buy-nothing groups.

Mitigate greenwashing and ensure environmental justice

- Transparency on data from Metro Vancouver - What is counted as diversion? How does it change with season?
- Need to account for embodied carbon, especially for C&D materials.
- Carbon reporting with data.
- Air and water quality issues associated with waste (e.g., incineration, burning agricultural plastics, cement kilns) needs to be properly accounted for and mitigated - work with health authority to clarify health impacts and actions needed, especially for people who are most affected by waste management infrastructure.
- Larger entities (big corporations) need to be held accountable for their actions so the burden of reducing waste and doing the right thing is not pushed onto the consumer or smaller players who have no power.
- Technologies may be just reinforcing overconsumption.
- Use one planet living/doughnut economy.

Findings - Interviews

Interview findings are listed below. For the interview summary see Appendix B which offers more detailed information. Reporting Interviews. Key themes and approaches linked to zero waste infrastructure and systems (including services) were identified throughout interviews as follows:

- Integrate Key Concepts for Environment / Planetary Boundaries / Climate / Circular Economy
    - Focus on environmental health, doughnut economy approach to meet social needs while staying within planetary boundaries, integrate a circular economy approach that optimizes the value of products and where each output is an input to a new process in an interconnected system, link climate and scope three emissions and consumption-based emissions, and include a social and environmental justice approach as part of seeking waste prevention and reduction solutions.
- Optimize the Pollution Prevention Hierarchy
    - Focus on waste prevention first, then waste reduction including reuse, repair, share, and aim to reduce volume of all materials even if recycled.
- Use a No Burn Approach for Disposal
    - Decommission the aging, expensive incinerator that is not able to keep up with air quality requirements, don't link it to a new district heating program, stop using the cement kiln to burn plastics and other items, don't use chemical recycling or other burning that drains the circular economy and enables poor product design.
- Fund Upstream Solutions and Scale Up Reuse
    - Prioritize and fund upstream solutions and scale up reuse, normalize reverse logistics, and tie into logistics to solve problems.
- Optimize Interdisciplinary and Community-based Solutions

    - Build cross disciplinary multi-sector teams to create an interdisciplinary approach to solid waste solutions; local governments can play a convener role and add resources. Build partnerships and relationships to scale up solutions.

Interview outcomes captured several options and ideas for consideration as the Solid Waste Management Plan is developed. Interviewees spoke to system successes, barriers/challenges, and opportunities for zero waste infrastructure and systems (including services). They also spoke to related policies, programs, advocacy efforts, and monitoring and measuring specific to waste prevention and reduction.

- Infrastructure and Systems
    - Reuse infrastructure with existing facilities
    - Reuse infrastructure in new locations
    - Repair infrastructure
    - Reuse systems and funding
    - Single use item reduction infrastructure (returnables)
- Policy and Regulations
    - Deconstruction bylaws, salvage reuse, tax incentives, repair policy and purchasing practices, upstream direction setting, procurement policies, single use reduction (e.g., dine in reusables, mandatory to accept refillables), mandatory source separation at the regional district level, disposal ban to landfill, air quality relations for disposal infrastructure, and fee differential and financial incentives.
- Programs
    - Link campaigns to behaviour change programs.
    - Business engagement/coaching/technical assistance for waste prevention including single use item reduction
    - School education and funded field trips to facilities.
- Advocacy
    - Advocate to and coordinate with senior governments for mandatory reuse and repair targets in product stewardship programs, Recycling Regulation update to increase percentage of recovery and program access, keep stores involved through return to retail and deposit systems, integrate reuse in programs and policies, add carbon reporting for largest emitters and link to waste measuring, and support right to repair.
- Monitoring and Measuring
    - Track progress using consumption-based greenhouse gas emissions.
    - Measure and set targets for reuse.

Section	Questions asked by Participants	Feedback heard
Strategy: Build on and foster an inclusive and collaborative circular economy **Action ID: 023** Continue working with textile waste reduction organizations to develop tools for the fashion industry to design low waste, circular clothing. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	● What is the goal of these organizations? ○ Stop textiles from going into the landfill? Why? Money/space. ○ Businesses are not going to do it unless there is a monetary benefit ○ Have to make connection to the bottom line of the company ○ If Metro Van is going to continue this work/develop this tool - having more people coming into the industry (new talent) with this already in mind - educate	● Who is from a textile waste reduction organization: 4 out of room (unclear on definition) ● Non-profits don't have the capacity - more grassroots and at educational level - not organizational level ● This should fall onto designers - not the textile waste reduction organizations, designer should have the responsibility to make them low waste, not another organization ● Direction is top down - owner is doing it because it's the right thing to do ● Top down as in owner to down and allow facilitating this ● From Aerospace design: ○ "What does that look like?

	those who have already been in the industry ○ Has been in front of CEOs and Presidents - tried to show they need a more sustainable way of business response: what is the easiest thing to do and how much money will I save? That is the only way they do it ● From Fashion Revolution: ○ “What even is a textile waste reduction organization: what does that mean? Who is that?” ● There are firms and designers that take waste and do something it ● Cobbling shop? Are they? ● Whose job is it?: ○ Job of the people who are teaching the designer	Someone comes down and walks through, email? Brochure? The companies exist, but that tech is not accessible to everyone”(cost , labour) ● Education: How many textile waste reduction organizations are there? We don’t know and.. Is it their job? ● Beyond scope of not for profits ● If they (nonprofits/textile waste reduction companies) ARE willing to develop the tools - please send them out - works in education happy to share with students ● From Fashion Revolution: ○ “What even is a textile waste reduction organization: what does that mean? Who is that?” ● There are firms and designers that take waste and do something it ● Cobbling shop? Are they?

	○ Social media influencers ○ Mandatory law for stats - end of life - MANDATING ● Metro Van is talking about continuing to work with these companies - who has had direct communication with them?: ○ Collaborated with KPU, they are engaging with education and using this - it is happening - this connection with BCAG is an example	● Our Social Fabric (OSF), Fabcycle, Debrand ● OSF, Fabcycle get brought in afterwards rather than before ● Whose job is it?: ○ Job of the people who are teaching the designer ○ Social media influencers ○ Mandatory law for stats - end of life - MANDATING CHANGE ● Metro Van is talking about continuing to work with these companies - who has had direct communication with them?: ○ Collaborated with KPU, they are engaging with education and using this - it is happening - this connection with BCAG is an example ● How much will companies LOSE - so providing charging ● In 5 years time: law, reward or a fine

Strategy: Build on and foster an inclusive and collaborative circular economy **Action ID: 023** Continue working with textile waste reduction organizations to develop tools for the fashion industry to design low waste, circular clothing. What should Metro Vancouver consider to support your participation with this action?		

Strategy: Build on and foster an inclusive and collaborative circular economy
Action ID: 023
Continue working with textile waste reduction organizations to develop tools for the fashion industry to design low waste, circular clothing.
 	
How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?
Is there anything else you'd like to add to the conversation on this ACTION?
		• Priority:
		  ○ Low - 10
		  ○ Medium - 2
		  ○ High- NONE
		• ONLY BECAUSE OF THE QUESTION FRAMING
		• Question doesn't have teeth

Section	**Questions asked by Participants**	**Feedback heard**
Strategy: Make recycling easier and more effective by reducing confusion and improving convenience **Action ID:131**	• Question makes them feel there is an assumption that these things are not easily accessible - wants to know what the	• Aerospace textiles: "No facilities near by everything gets landfilled - cost to dispose - as a company - individual

Improve access to textile donation and recycling collection services. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	feelings are as to why they think they aren't accessible.	better - HUGE problem for industry" ● Simply Merino: "Biggest impact would be recycling from production level" ● Clothes are NOT easily recyclable if not re-sellable/reusable ● Collecting waste from production is low hanging fruit ● Diverting from landfill at production is huge ● 7 agree out of 16 agree for individual it is is accessible ● 0 believe from a business standpoint ● What would make it easier for businesses: ○ Big bins out back for pick up ○ Sorting is fine - not an issue ○ Or having a place to drop it off that is close ○ Making it FREE ○ No cost or same as landfill to persuade the owners
Strategy: Make recycling easier and more effective by reducing confusion and improving convenience **Action ID:131**		● Cost is the biggest concern ● Money needs to come in to invest in infrastructure that

Improve access to textile donation and recycling collection services. What should Metro Vancouver consider to support your participation with this action?		allows recycling for polyester and nylon ● **Question from facilitators:** Who agrees that we need to invest in accessible recycling of our own materials LOCALLY: show of hands Everyone! ● Aerospace: ○ “Having to ship is fine - transparency that it is actually being recycled - want to know it’s actually being recycled” ○ Want faith it’s not just getting shipped somewhere else to go to a landfill ○ Textile means so much - so transparency is key ○ BETTER to throw away locally instead of shipping off because at least methane gets collected - worse to recycle something if we don’t know where it’s

		going/shipped out of country
Strategy: Make recycling easier and more effective by reducing confusion and improving convenience **Action ID:131** Improve access to textile donation and recycling collection services. How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		● Show of hands: ○ Low: ○ Medium: ○ High: 13
Other Strategies/Actions engaged on?		● Have they considered subsidisation programs to help with technology that helps with efficiency that eliminates waste ● Increasing efficiency = decreasing waste ● Merino Wool: "Different municipalities mandates cardboard/bins - where is that mandate/legislation pushing through this for textiles - specifically productions - ADD TEXTILES and easy to collect"

		• Make textile recycling mandatory • Incentives - mandatory lands be standard • Competition for scraps
Next Steps	• **What indigenous organizations are they speaking with? Confirm this is happening - not an assumption.**

SERVICES AND SOLUTIONS FOR A LIVABLE REGION

Consultation #1

Session Date: Wednesday, September 17, 2025
# of Registered Participants: 10
# of Actual Participants: 6
# of Event Promotions: 3

Section	Questions asked by Participants	Feedback heard
Strategy Number: 3.5 Increase access to reuse, refill, and repair **Action ID: ID059** Support community-based waste reduction and reuse programs for schools, non-profit organizations, and community groups. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? *If difficult, what is it that makes your participation easier?*		Binner 3: Programs might not have the people to initiate and connect with for these programs. Binner 6: Non-profit organizations should be the focus and priority. There are a lot of organizations doing great work. Binner 2: City needs to provide more receptacles for waste.
Strategy Number: 3.5 Increase access to reuse, refill, and repair **Action ID: ID059** Support community-based waste reduction and reuse programs for schools, non-profit organizations, and community groups. What should Metro Vancouver consider to support your participation with this action? How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		
Strategy Number: **Action ID:**		

Is there anything else you'd like to add to the conversation on this ACTION?		
Other Strategies/Actions engaged on?		
Additional comments		

Section	Questions asked by Participants	Feedback heard
Strategy Number: 2.1 Collaborate with businesses and institutions to reduce waste at the source **Action ID: ID100, ID101 Action ID100:** Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations **Action ID101:** Increase in person education where residents, business and others can talk directly with experts on how to reduce waste. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? *If difficult, what is it that makes your participation easier?*		Binner 1: For businesses, it's all about their dollars. If it's going to cost them money, then they might not be incentivised to go. How can you get businesses involved? Tax breaks? Binner 3: 2-3 minute presentation would be helpful. Keep it short and sweet. Binner 5: A challenge for someone could be, if they are reliant upon single use, then you could add some environment incentive/education to get people invested. Binner 2: Create posters, make an event at the local community centre. Get the word out. If we invite 5,000 people, 10% will show up! Binner 6:The education would need to be a community event, it wouldn't be a good turn out if you went by residence. More targeted advertisement is needed to make it successful.
Strategy Number: 2.1 Collaborate with businesses and institutions to reduce waste at the source **Action ID: ID100, ID101 Action**		Low priority - 0 votes Medium priority - 0 votes

ID100: Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations **Action ID101:** Increase in person education where residents, business and others can talk directly with experts on how to reduce waste. What should Metro Vancouver consider to support your participation with this action? How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		High priority - 6 votes
Strategy Number: 2.1 Collaborate with businesses and institutions to reduce waste at the source **Action ID: ID100, ID101 Action ID100:** Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations **Action ID101:** Increase in person education where residents, business and others can talk directly with experts on how to reduce waste. Is there anything else you'd like to add to the conversation on this ACTION?		
Other Strategies/Actions engaged on?		
Additional comments		
Strategy Number: 2.2 Support residents adopting waste prevention habits **Action ID: ID104** Expand education tools to help **multi-family residents** to reduce waste, increase		Binner 3: Provide residents with containers to transport waste from their home to the big bins in the building.

participation, and comply with evolving waste reduction regulations. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? *If difficult, what is it that makes your participation easier?*		
Strategy Number: 2.2 Support residents adopting waste prevention habits **Action ID: ID104** Expand education tools to help **multi-family residents** to reduce waste, increase participation, and comply with evolving waste reduction regulations. What should Metro Vancouver consider to support your participation with this action? How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		Low priority - 0 votes Medium priority - 0 votes High priority - 6 votes
Strategy Number: 3.7 Encourage and celebrate residents and businesses that prioritize reuse and refill practices **Action ID: ID076** Provide education for residents on affordable actions they can take to prevent waste through everyday activities. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it?		Binner 1: If they had incentivised motives, to come and sit through a recycle/reuse program, then people would be more interested to come. Binner 2: It would all be in the building. Binner 5: Refund incentives. I heard from friends on refunds. Binner 6: Relatively easy! Explore partnerships that incentivise people e.g lime scooter free minutes. Social media education is another good way of reaching people.

If difficult, what is it that makes your participation easier?		
Strategy Number: **Action ID:** What should Metro Vancouver consider to support your participation with this action?		
Strategy Number: **Action ID:** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		Low priority - 0 votes Medium priority - 0 votes High priority - 6 votes
Other Strategies/Actions engaged on?		
Additional comments		Binner 1: I'm eager to go! Binner 6: In person education is the way to go. Learn together! You make friends, and can have a good conversation. You can relate on your issues, and feel supported. Binner 4: I feel more informed since joining Binners' Project on issues like this. Before joining, I had no idea about this solid waste plan, and wasn't really sure on how to get involved. Binner 1: Metro Vancouver seems to have access to lots of resources. In my building, they had a program where they were giving away containers, but I did not receive any. This was an early exposure for me to learn about waste management, before I joined Binners' Project. I've learned so much more about waste,

		since joining. I'm trying to be a speaker for Binners' Project to help educate people in the community. I enjoy trying to motivate people! Binner 5: In-person education is appreciated. In my building, we are learning to recycle, and they asked me to help. I thought it was helpful; you and others get to know how things work, and it was a good opportunity for me to teach.

Post-Engagement Activity Summary Template

Consultation #2

Session Date: Wednesday, September 24 2025
# of Registered Participants: 10
# of Actual Participants: 9
# of Event Promotions: 4

Section	Questions asked by Participants	Feedback heard
Strategy Number: 4.1. Promote design for recyclability and the use of recycled content in products and packaging. **Action ID: ID112** Enhance partnerships with the provincial government, industry, academia, and community groups to research and develop solutions to overcome barriers to reuse and recycling and opportunities to incorporate recycled content into new products. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? *If difficult, what is it that makes your participation easier?*	Binner 6: Who actually approves the plan for Metro Vancouver? Binner 1: Are we answering this as a binner or a citizen? Binner 3: Where does the environmental fee go?	Binner 6: When I used to do the surveys, the number one item was furniture being dumped around, especially electronics. If people are paying binners, even a buck to take that TV in, people would do that. So TVs won't be sitting in the alleys. Or couches. 65% of the increase comes from increased recycling – it seems like that's where we'll make the most difference. People are just throwing mattresses, and couches, and TVs, and everyday they have to come and deal with that. They are way more expensive than binners. For us, hopefully that's what we can make a difference is. **If there is a deposit system with the electronics, it would be completely easy for us to participate in it.** Binner 1: Because everything is recyclable (clarification: not everything), but to put a refund on any item, you can put a refund on anything. Binner 7: Reduce packaging of multi-use recycled items. Recycling can be done by using a points system. Binner 2: Financial compensation, especially if we have to sort it ourselves. **If there is an incentive, we will work more collaboratively.**
Strategy Number: 4.1. Promote design for recyclability and the use of recycled content in products and packaging.		Binner 7: **Exchanging our efforts for daily necessities and food.** Garbage dumps everywhere have machines to recycle food, turning it into water and letting it flow immediately. This

Action ID: ID112 What should Metro Vancouver consider to support your participation with this action? How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		is good for hygiene. Binner 3 and Binner 9 agrees. Binner 3: Create sorting areas that are run by the community. Because I don't have a car, it takes a lot to take a whole way via bus. There's no incentive for me to take it. Just like BC Housing - one for electronics, etc. I wonder if we can connect an environmental value, and if we can return it, we can get our money back. There are some places where there are no places for electronics. The bottle depot is not accessible – you have to put it in a cart, take 2-3 hours to travel. **Create sorting areas run by our communities that are close/central so you don't have to go on the bus.** Binner 4: If we're doing it for the city, we should be paid more too. The city should also compensate us. **Create more paid opportunities for people who support the collection of recyclable materials.** Binner 9: Electronics are much heavier, especially big TVs, but citizens don't know how to divert them. When people collect old electric materials, the city can give out coupons/vouchers to purchase other things (food, etc.). Binner 6: I think people don't think about composting bins enough. Taking food waste and turning it into something of value. Using all that energy (made of fossil fuels) – instead of using all that energy, they need to be recycled onsite. **A well-sorted stream of organics.** Transporting things far away doesn't make sense at all. If there was a place in the DTES, and hiring people to do the work onsite, the city will save a lot of money. People won't have to go all over the place to move stuff around. In the Philippines, when a TV gets laid around, people will dismantle it and

		get materials (e.g. transistors) out of it. But here, we don't do it because there isn't an incentive – and it takes too much work. For us, it makes no sense to rip apart a TV. **The barrier to using electronics is that there is no place to take them.** There is no money to do it. The city is spending way too much money to process electronics. <u>Priorities</u> Low: 0 Medium: 3 High: 6
Strategy Number: **Action ID:** Is there anything else you'd like to add to the conversation on this ACTION?		
Other Strategies/Actions engaged on?		
Additional comments		

Section	Questions asked by Participants	Feedback heard
Strategy Number: 4.5. Make recycling easier and more effective by reducing confusion and improving convenience. **Action ID: ID134** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it?		Binner 6: I think it's a total waste of time. **Recycling needs to be done by people like us who are already doing it.** If you have a legal problem, you get the lawyers. If you have a garbage problem, you bring in the binners. **Research and develop solutions.** When they say "centralize" information, there will be a library booth that has signage. It is difficult because, if you're looking at long-term change, there are machines that work a thousand

If difficult, what is it that makes your participation easier?		times faster. We are completely different. We are doing on-site sorting. Binner 3: I think that most people care about the environment. And the stewardship is done by individuals like ourselves. I see that when I'm at the beach in the summer. There is a big industry of recycling that is done by people. I think most of the recycling is done by hand. At Car Free Day, I saw that people really care. Binner 4: You can see how much garbage is on the sidewalks or in the alleys. I care, so I would spend time collecting. We have a route, and sometimes we don't even get to finish our route. That's how much there is out there to collect and recycle, especially in this neighbourhood. Binner 7: It is easy for us because, since joining the Binners' Project, I know the basics. **For the public, there should be more promotional material about how to recycle. Or a small book, so we can show people. Even if you forgot, you can remind yourself.** Binner 8 agrees.
Strategy Number: 4.5. Make recycling easier and more effective by reducing confusion and improving convenience. **Action ID: ID134** What should Metro Vancouver consider to support your participation with this action? How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		Binner 4: **Giving people knowledge on how to sort stuff.** In malls, a lot of people don't know what the difference is between plastics. You can't blame people because they don't know the difference. And some people don't care. **People don't know where to find that information.** Binner 1: There should be inclusion of an organization like ours (Binners' Project) to educate the public. Binner 5 agrees. Binner 5: Educate the public. <u>Priorities</u>

		Low: 2 Medium: 2 High: 5
Strategy Number: **Action ID:** Is there anything else you'd like to add to the conversation on this ACTION?

Consultation #3

Session Date: Wednesday, Oct 1, 2025
# of Registered Participants: 11
# of Actual Participants: 11
# of Event Promotions: 5

Initial Comments, Questions & Clarifications

- Binner 2: We all see things that get tossed away that have the most minor scratches/alterations to be made. To say everything that is on the street that is stolen is not true. There were workshops where you can bring in things to be repaired - more of that would be super useful. Repair cafes would be useful. Binner 6, Binner 11 and Binner 9 agree. Binner 9 shares that solid waste that can't be fixed here gets sent off to other countries.

Section	Questions asked by Participants	Feedback heard
Strategy Number: 1.2. Facilitate the transition to a more circular regional economy through waste prevention. **Action ID: ID041** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? *If difficult, what is it that makes your participation easier?*	Binner 2: Will there be additional funding for the solid waste management plan?	Binner 11: Success stories. Creating a story behind a theme is important; perhaps an environmental theme. We live in a concrete jungle – how can we make it even more environmental? Identifying who should be in those events. **When we do our events, we educate people.** Getting Indigenous peoples involved, with potluck. People can come down to a certain area. Binner 7 agrees because it's collaborative. Pop-up stuffs are really important – something at different locations. Advertise, put it on the TV. Binner 9 agrees. Binner 6: (It's not easy.) I don't have that much contact with event organizers and industry professionals myself. **Maybe Binners' Project core staff can organize them; binners can be a part of those events (but not at the logistical/organizational level).**
Strategy Number: 1.2. Facilitate the transition to a more circular regional economy through waste prevention. **Action ID: ID041** What should Metro Vancouver consider to support your participation with this action? How much of a priority is it to you to	Binner 9: Are there different areas included as well (Richmond, etc.)?	Binner 2: Having material incentives when we are involved. Binner 7: If we have our own bins, we don't have to travel far for it. Efficiency is an incentive. Binner 11 agrees, and shares to give more financial incentive. For pop-ups – don't call them "garbage." Binner 3: Including a compost

include this action in the draft solid waste management plan? Low, medium, high?		feature is important. Binner 11 agrees, and shares that if the city picks up the compost, it would be good. For styrofoam, for example, if it disintegrates, we can form it into something else. So reusing it will save the environment. Binner 6: Everything is microplastics now. Binner 11: Donation spots. <u>Priorities</u> Low: 0 Medium: 2 High: 8 *Binner 8 was not present to take a vote as she picked up a call.*
Strategy Number: 1.2. Facilitate the transition to a more circular regional economy through waste prevention. **Action ID: ID041** Is there anything else you'd like to add to the conversation on this ACTION?		
Other Strategies/Actions engaged on?		
Additional comments		

Section	Questions asked by Participants	Feedback heard
Strategy Number: 1.3. Build on and foster an inclusive and collaborative circular economy. **Action ID: ID017**		Binner 9: Some communities still need to learn. Binner 7: People need to know more about what's going on; everything is getting delivered nowadays. They

If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? *If difficult, what is it that makes your participation easier?*		have to be more proactive in the way they manage their waste. We don't know as much as the kids know – now it's gotten to the point that it's really important. All the landfills are full. Rethinking is important, because they have to. Binner 2: So many of us go through the alleys throughout Vancouver; there is so much we wanna take and recycle, but we can't because we don't have a car or a truck. But if there is an organization can support with transporting large items, that will address an enormous amount of large waste that end up not getting picked up. Binner 1: It's difficult if binners are not compensated. Binner 8: It'll be difficult. One-time events are good, but there needs to be more follow-through. Binner 7: Goods and services tax four times a year – the two times a year should involve community events. **Making educational seminars more frequent and local, and incentivize them.** Binner 11 agrees, and it can be a collaboration with **community centres**. Binner 11: Education is important. Making those educational sessions free. Binner 7: It's super easy. I think it would be hard to have binners involved if they're not contracted out.
Strategy Number: 1.3. Build on and foster an inclusive and collaborative circular economy. **Action ID: ID134** What should Metro Vancouver consider to support your		Binner 9: More media representation on the work so people can read it. **Advertising the way to deal with your waste.** Binner 7: Utilize technological advancements to help with waste.

participation with this action? How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		Binner 3: **Fundraisers that support the organizations to get what they need to bring it back into the community.** Binner 9 agrees. Another point: when they cut trees down, there needs to be an environmental solution to what is lost, as it impacts the ecosystem. <u>Priorities</u> Low: 0 Medium: 0 High: 11
Strategy Number: 1.3. Build on and foster an inclusive and collaborative circular economy. **Action ID: ID134** Is there anything else you'd like to add to the conversation on this ACTION?		
Other Strategies/Actions engaged on?

Section	Questions asked by Participants	Feedback heard
RETHINK		
Strategy 1.2: Facilitate the transition to a more circular regional economy through waste prevention		
Action 1.2b: Improve circular economy and recycling education in schools through field trips, hands-on learning, and other innovative school education programs.		
Strategy Number: 1.2 **Action ID: 079** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	I don't know, It seems like you have to be a student for these programs? Would participants to these programs receive an honorarium for their effort on completing these programs? Would an online component make it easier for people to attend?	It will be difficult. I just think the first barrier that I'd think of would be cost if that's a barrier for people or time It can be easy, I guess if it was for a student that wouldn't be so much of an issue probably because it would be hopefully included with their schooling, but if it were like a program for adults or community members to sign up for, I think the cost and scheduling the time would be a barrier and it will make it difficult. It is more likely for programs to offer hybrid components meaning in-person programs and online programs so I have options and I can accommodate and prepare for stressors like finances and scheduling my time with my commitments. This will also allow for community members from different ability levels to participate in these programs.

Section	Questions asked by Participants	Feedback heard
RETHINK		
Strategy Number: 1.2 Action ID: 079 What should Metro Vancouver consider to support your participation with this action?		Metro Vancouver should consider including the opportunity for community members to volunteer for these programs. I think just volunteering here would be enough for me. I think that's the best I could do right now. Maybe Metro Vancouver should consider some kind of incentive for participants. I don't know how like you could but yes a way to incentify participants to complete the programs. Agreed. Honorariums for participants can make it more accessible for people from diverse backgrounds to attend to these programs. Especially to cover childcare, assist people with diverse abilities and more. I think that's also good to hear that Metro Vancouver is looking into potentially implementing this in schools because people can learn and get experience and education can be standardized and normalized at an early stage. What makes the most sense is to educate people at an early age rather than having to do catch up work, right, when they're adults.

Section	Questions asked by Participants	Feedback heard
RETHINK		
Strategy Number: 1.2 Action ID: 079 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	Like for example, batteries or like you know soil like for example I try to plant something and I'm not allowed to throw it in the garbage here because they don't allow us and I don't know where to throw. How are residents supposed to know the best approach to dealing with waste? I agreed. I don't know what to do with other things like, for example, old things like electronics that you used before and now I don't know. You can't throw it in the garbage. Where am I supposed to take these things to ? What about people with physical disabilities? How are they supposed to participate or know of these programs? Are there accessible options for proper disposal of waste for people with limited physical abilities and financial means? How are newcomers and tourists supposed to know how to properly dispose of waste?	High Priority. I think it's a very high priority because as we go into the 21st century the waste is more and more. I think and like what they did now with plastics is a very good idea and I think all other strategies would be good too. Like educating residents and youth. I also think educating schools is good but I think if people can manage online programs sometimes it's a good idea to learn online as people can go at their own pace and adapt to their own abilities, learning style and schedule. Yes, high priority because for example, I am moving out and I am trying to get rid of my stuff, right? If I have no education or understanding of what happens when it goes into the waste or the garbage like if I don't know then it's kind of like ignorance, right? Like I just will throw it away. It's not like a high priority for me. But if I understand the impact on the environment and it's like clogging up the system, then I'm more inclined to like, you know, use buy nothing groups or make an effort, you know. Yes, and these programs have the potential to make residents aware of solutions too because that's what could

Section	Questions asked by Participants	Feedback heard
RETHINK		
		happen to school programs , it is a space where solutions get promoted, you know tips and tricks get shared and people get to learn more experiences. High priority. Efficient waste and recycling systems are necessary for society to function. Education around reduction of waste and circular economy principles are necessary to combat climate change.
Action 1.2c: Develop circular certification programs for businesses to create community pride.		
Strategy Number: 1.2 **Action ID: 088** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	Would there be incentives for businesses and people ? Are businesses going to be encouraged in the process?	I think awareness is key and this can be easy to implement. So like maybe people could go out into the businesses and educate them or we can share with communities to look out for these stamps because if you don't know it just like we see a lot of like marketing nowadays with like green and like vegan or whatever, but like if you don't have the awareness of like what that means, then it's it doesn't really mean anything. Maybe educators can go into the businesses and just give a little lunch and learn or something like that to educate people. It is easy to implement. I also think that it will be good to

Section	Questions asked by Participants	Feedback heard
RETHINK		
		know that businesses are doing this. So it's good to encourage businesses to get certified and some sort of certification process because it tells us where we should be purchasing things and where we should be going for solutions to our problems. I think it's going to be really difficult because you're not only implementing a new concept like you have to change culture in the community. I have learned that to change culture, you have to start really young in the community and do long-term growth. So you have to like to change it with the young people and implement it in their everyday lives so they like to habitualize it. It's like a long-term plan. It doesn't happen overnight. And so maybe this could be implemented in schools for young people. and then that makes the participation easier, maybe over time. It can be easy if we incentivize people and incentivize businesses to do it properly.
Strategy Number: 1.2 Action ID: 088 What should Metro Vancouver consider to support your participation	Is Metro Vancouver considering people with disabilities, newcomers and low-income individuals in this transition?	Metro Vancouver should consider making these actions and processes mandatory for businesses and organizations.

Section	Questions asked by Participants	Feedback heard
RETHINK		
with this action?		Employers should incentify employees through lunch and learning events. We would need more education for residents, businesses and organizations. For them to understand the importance of this action and the role they each play.
Strategy Number: 1.2 Action ID: 088 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		High priority because businesses are the center of the economy where most of the waste is generated. I would like to add, it's a high priority because if you don't have businesses and organizations and the broader community implementing the actions or trying them, you're not going to have progress especially with businesses right where a lot of the waste is generated like yeah it's pretty necessary.
Strategy 1.3. Build on and foster an inclusive and collaborative circular economy		
Action 1.3a: Collaborate with external groups to identify and implement new circular economy initiatives in the community.		
Strategy Number: 1.3 Action ID: 017	Should Individuals and business/organizations be penalized for not adhering to	I think it's difficult because it's not really marketed well. Maybe it could be marketed

Section	Questions asked by Participants	Feedback heard
RETHINK		
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	the plan? Or should we consider extended producer responsibility in every product ? Would the provincial and federal government provide support and incentives ?	better on social media, through influencers. What would make the participation easier would be more marketing, more visibility, more publicity. I think I agree , it is hard to participate when there is not enough marketing, and publicity done. I would recommend things to be marketed with different demographics and keeping the content relevant and inclusive. I just had another thought, instead of trying to educate and stuff maybe penalize like if I put batteries and wrong items in my garbage and I put it on the street maybe there's some sort of like penalty like that I get in trouble for this stuff because right now I just put it all in my garbage and I just cross my fingers and hope that they don't notice kind of thing. For me to collaborate with external groups, things need to be accessible and easy to use. It will make it easier just for example to put an electronics in the recycle bin and it gets diverted from my home step. That way everyone, even people with physical disabilities can participate. Clear strategies to ensure businesses and organizations are compliant with waste

Section	Questions asked by Participants	Feedback heard
RETHINK		
		management plans.
Strategy Number: 1.3 Action ID: 017 What should Metro Vancouver consider to support your participation with this action?		More advertisements in daily life tips and tricks and like more community awareness to implement these new practices.
Strategy Number: 1.3 Action ID: 017 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		For me, this is a high priority. Like we need more solutions advertised and explained to us. We need to be able to see the solutions that we have already existing and we need new solutions to be created for the problems we are facing for example like electronics and other. High Priority, we need to identify the solutions that are working, and stop the ones that are not. It is also good to implement new practices that help us achieve a circular economy. Potentially having initiatives that break the stigma about wearing recycled clothes or reusing recycled items. So, people are more aware of how safe it can be and how to make it safe. External groups will have more insight for Metro Vancouver as they are members of the community and can identify specific needs or concerns.

Section	Questions asked by Participants	Feedback heard
RETHINK		
Action 1.3b: Develop collaborative programs that integrate Indigenous practices into urban sustainability initiatives, such as community composting gardens or permaculture projects.		
Strategy Number: 1.3 **Action ID: 098** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	HOW DO YOU GET INVOLVED IN COMMUNITY GARDENS ETC.?	I feel like those gardens and projects are not advertised properly, but I also feel like they're only for a select few if that makes sense. Like I don't know how to get involved. It kind of feels like there is a community already built and the barrier to get into making a garden is really difficult. So, if it was more welcoming in some way or more accessible like if I walked by the garden there was some information on how to get involved like on the gates or something or online advertising it. Yes, I agreed. Maybe some kind of I don't know as I don't think this exists, but maybe some kind of hub like online that Metro Vancouver could create for those kinds of community spaces, right? And then you could just search or look for whatever you're whatever you're looking for, whether it be community gardens or a tool library or any other initiatives.
Strategy Number: 1.3 **Action ID: 098** What should Metro Vancouver consider to support your participation with this action?		Metro Vancouver should consider more publicity and advertisement of these programs and initiatives. Having a variety of opportunities for engagement will allow participants to

Section	Questions asked by Participants	Feedback heard
RETHINK		
		accommodate their participation into their schedules. Incentives and honorariums for participation would benefit members of the community and create a positive culture.
Strategy Number: 1.3 Action ID: 098 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		For me, this is high because it provides food security. It provides spaces for green areas for people to focus on their well-being and nature and disconnect. It allows people to perform an activity that teaches them how their food is grown. Just like the food and agriculture aspects, waste is a huge factor for implementing this initiative. I guess with the indigenous aspect of it too, it's great to lead by example and setting up ways where people can contribute to reconciliation by transferring knowledge.
REDUCE		
Strategy 2.1. Collaborate with businesses and institutions to reduce waste at the source		
Action 2.1b: Work with different sectors such as the promotional products industry to develop and promote procurement tools and templates for Metro Vancouver and other organizations to buy more sustainable goods.		

Section	Questions asked by Participants	Feedback heard
RETHINK		
Strategy Number: 2.1 Action ID: 028 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	How can we make this attractive for business and users to implement ?	I think it is difficult because it will require a lot of money to implement these tools and a lot of resources. So what will make it easier is to work with the private sector, the public sector and every sector to potentially implement this and to make this visible and attractive for participants and users and businesses because it has to be advertised properly and to a diverse group of participants.
Strategy Number: 2.1 Action ID: 028 What should Metro Vancouver consider to support your participation with this action?		Metro Vancouver should consider better marketing strategies for educational purposes. Provide incentives that motivate users and businesses.
Strategy Number: 2.1 Action ID: 028 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		High priority. Businesses are the center of the economy and large generators of waste.

Section	Questions asked by Participants	Feedback heard
RETHINK		
Action 2.1c: Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations.		
Strategy Number: 2.1 Action ID: 0100 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		In general, you would hope that additional tools and educational tools would help make things easier. Making it easier for all of us, including businesses to participate. These tools should consider a wide range of people, it is important to make these tools accessible to everyone in the community. That would make it easier for everyone to participate.
Strategy Number: 2.1 Action ID: 0100 What should Metro Vancouver consider to support your participation with this action?		Better marketing and getting the word out is important. Providing incentives for businesses and community members to use these tools.
Strategy Number: 2.1 Action ID: 0100 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		High priority. Education and marketing is crucial for an informed citizen.
Strategy 2.3 Prioritize food waste reduction initiatives		

Section	Questions asked by Participants	Feedback heard
RETHINK		
Action 2.3a: Work with business, industry associations, and non-profits to reduce food waste by improving food purchasing, storage, and preparation methods.		
Strategy Number: 2.3 **Action ID: 072** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		I think this is something that is easy to participate in as a resident. It might be more difficult as you scale it up to organizations. I think that's a good idea. That's a very good one because I think you know most things that are wasted are food from food scraps. So it's very good that if we do that it helps a lot of people. It is easy on the individual level, but maybe harder on the businesses and organizations side. Maybe it will be good to provide incentives. Saving food or eliminating waste is a mindset. So if you have a mindset of overconsumption, you just don't really care about these things but once you take responsibility for things like the environment and your life then it becomes more important. So again, switching culture is like maybe shifting the mindset of people like a growth mindset and I don't know how you do that but it's like literally changing your personality, teaching people to regain their self control. It will be also good to work with restaurants and supermarkets to avoid food

Section	Questions asked by Participants	Feedback heard
RETHINK		
		waste ending up in the landfill or in the compost if it has the potential to feed someone else. Togoodto go apps and other initiatives would make participation easier but once again people need to be educated and aware of these tools.
Strategy Number: 2.3 Action ID: 072 What should Metro Vancouver consider to support your participation with this action?		I think also the government like Metro Vancouver and other municipalities, they could subsidize or encourage refill stores and things like that or they could maybe launch their own or something. Incentives and honorariums are a good way to ensure accessibility. Creating a cultural shift and providing for everyone in our region.
Strategy Number: 2.3 Action ID: 072 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		High Priority Food waste is a huge factor that can be prevented. Transforming our food production systems to zero waste and circular economy principles would be very beneficial for our community.

RETHINK		
Strategy 1.2: Facilitate the transition to a more circular regional economy through waste prevention		
Action 1.2b: Improve circular economy and recycling education in schools through field trips, hands-on learning, and other innovative school education programs.		
Strategy Number: 1.2 **Action ID: 079** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	Would this only be available to schools or expanded in the community? Would these programs be limited to certain communities or age groups? What ways could these be made accessible as possible? Would these be youth-led initiatives or a variety of community members?	If you are a student it sounds relatively easy to access these programs if it were included in schooling. However, if you are a member of the community, time and cost could be potential barriers. Many accommodations could be made, like free barrier to entry, flexible learning options such as online and transportation support. These programs should be open to youth and community members at large for the biggest impact and youth-driven.

Section	Questions asked by Participants	Feedback heard
RETHINK		
Strategy Number: 1.2 Action ID: 079 What should Metro Vancouver consider to support your participation with this action?	How interactive would these events be? Would these be inclusive and youth-driven events?	Codesign programs with students and faculty to ensure learning is based in youth interests and sustainability issues in their communities and everyday life. Multilingual support and resources to improve accessibility. Volunteer and youth-based events to promote the widest community and youth engagement. Provide leadership opportunities for students and youth to promote waste reduction in their schools and communities. Promote the events as ways for youth to support their community, while developing their professional and social skills.
Strategy Number: 1.2 Action ID: 079 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	How can these programs be made as accessible as possible, especially for those with disabilities and tight finances? While the youth-driven component is important, I think it is also important to expand these programs to the broader community?	High Priority. In your day to day life it may not seem like a high priority with everything else someone has going on, but with awareness and education it is obvious that these actions are of high priority to our community and wellbeing. We need effective waste and recycling systems to function.

Section	Questions asked by Participants	Feedback heard
RETHINK		
		Educating young people is a necessary long-term approach to fostering a circular economy. Through understanding waste systems early, students develop sustainable habits, which then positively influence their families and communities. This foundation is needed to create systemic change, transforming knowledge into a culture. I would be encouraged to see Metro Vancouver connect these education programs to real initiatives, like student challenges, hackathons, or school recycling competitions, that are active and visible learning. Exciting guest speakers and mentorship opportunities could be initiated by partnerships with local sustainability organizations, like non-profits or green tech startups.
Action 1.2c: Develop circular certification programs for businesses to create community pride.		
Strategy Number: 1.2 **Action ID: 088** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it?	How would businesses and people be incentivized or encouraged to participate? What type of programs would be offered? What would be required for a business to acquire circular	As a youth, it might be a bit difficult for me to participate directly in a business certification program, since it's more geared toward business owners and organizations. Though, I

Section	Questions asked by Participants	Feedback heard
RETHINK		
If difficult, what is it that makes your participation easier?	certification? How easy would this be? How would youth be included in this initiative?	would still be interested in supporting or engaging with certified businesses. For instance, choosing to shop locally at those businesses or helping promote them through social media and community events. Getting the word out is important and doable. Educators could give businesses and communities a learning session about why certification matters. Labels like "green" or "vegan" just do not matter if people do not understand why they are labeled that way. A learning session for businesses would be a great way to spread knowledge. It should be somewhat easy to implement if the requirements are clear and attainable for businesses. It could also encourage people to buy local and support their local economy. It'll be hard to get this new idea off the ground and really change how our community thinks. For lasting cultural shifts, we absolutely need a long-term plan and starting with young people is needed. If we can integrate these concepts into their daily lives early on, even through school, they'll grow up with

Section	Questions asked by Participants	Feedback heard
RETHINK		
		them. Don't expect instant results.
Strategy Number: 1.2 Action ID: 088 What should Metro Vancouver consider to support your participation with this action?	Is Metro Vancouver considering people with disabilities, newcomers and low-income individuals in this transition? Are Indigenous perspectives considered and centered?	Metro Vancouver should consider making these actions and processes mandatory for businesses and organizations. Employers should incentify employees through lunch and learning events. We would need more education for residents, businesses and organizations. For them to understand the importance of this action and the role they each play. Make sure that small and local businesses have the means to participate and are supported through mentorship Including educational components for residents and youth would show how local consumption choices can contribute to circularity. Celebrating and showcasing certified businesses through community events, sustainability fairs and local markets that welcome youth

Section	Questions asked by Participants	Feedback heard
RETHINK		
		participation. Develop youth-led awareness campaigns, perhaps through schools, volunteer programs, or social media collaborations. This would help to build community pride centered around the certification program.
Strategy Number: 1.2 Action ID: 088 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	How would business be supported and mentored? How would this be promoted? How would education be incorporated into this program?	It's possible this initiative could encourage a positive culture shift, as local businesses take pride in being sustainable and residents feel empowered to support them. It would be ideal if the program included youth recognition, such as an award for "Youth-Led Circular Initiatives" or a partnership with student entrepreneurs. A certification program can make sustainability more visible, trustworthy and attainable, especially for younger people who want to see real examples of circular business models in their communities. Residents are not directly involved but this certification program plays a crucial role in shaping the

Section	Questions asked by Participants	Feedback heard
RETHINK		
		local economy and influencing that culture shift. Progress would be limited if you do not have business on board in some way. If they are not reducing waste or adopting principles of circular economy, then there will not be a significant impact.
Strategy 1.3. Build on and foster an inclusive and collaborative circular economy		
Action 1.3a: Collaborate with external groups to identify and implement new circular economy initiatives in the community.		
Strategy Number: 1.3 Action ID: 017 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	Would there be penalties for not adhering to circular economy initiatives? How could it be marketed and generate interest?	Participation might be difficult unless there are clear opportunities promoted in the community. Young people do not often receive this information directly. Social media, school networks or community events would be helpful. Accessible communication and flexible ways to get involved, like surveys, pop up booths, or short volunteer opportunities
Strategy Number: 1.3 Action ID: 017 What should Metro Vancouver consider to support your participation with this action?	How will Metro Vancouver ensure Youth voices are heard? Funding or micro-grants for youth-led projects?	Metro Vancouver should consider creating youth centered spaces like workshops at schools, libraries, or recreation centres. Things like volunteer certificates, community

Section	Questions asked by Participants	Feedback heard
RETHINK		
	How will success be measured?	service hours or small incentives (honouriams) to encourage participation Collaboration with youth councils, local colleges and universities, environmental and sustainability clubs.
Strategy Number: 1.3 Action ID: 017 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	What external groups would be most interested? (schools, libraries, community centres) What groups might be more hesitant? (businesses, real estate etc.) How will these groups be chosen? Open calls to the community? Will there be a clear hub for communication where residents can track initiatives?	HIGH PRIORITY This collaboration with external groups such as schools, non-profits and businesses can help generate that culture shift that we talked about earlier. Metro Vancouver should incorporate mentorship programs or innovation challenges. Youth can co-develop projects with local organizations that are rooted in circular economy principles Transparency regarding initiatives and progress reports from Metro Vancouver would help public trust and motivation
Action 1.3b: Develop collaborative programs that integrate Indigenous practices into urban sustainability initiatives, such as community composting gardens or permaculture projects.		
Strategy Number: 1.3 Action ID: 098 If Metro Vancouver includes this action in the updated solid waste management	Where do you go to get resources on community gardens? What role would Indigenous people or communities play in	Participation could be made easier by hosting Indigenous-led community workshops or learning sessions. Offering school credits or volunteer opportunities to students.

Section	Questions asked by Participants	Feedback heard
RETHINK		
plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	this program? How would youth be encouraged or incentivized to participate?	Creation of online sign up or quick, shorter-term projects so youth can fit these in their busy schedules.
Strategy Number: 1.3 Action ID: 098 What should Metro Vancouver consider to support your participation with this action?	How would Indigenous, First Nations and Metis members be included in the design of programs? Would there be clear education components that focus on the cultural significance and sustainability of Indigenous practices?	Partnerships with local First Nations, Metis and Indigenous groups would be crucial to the success of this program.
Strategy Number: 1.3 Action ID: 098 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	How would Metro Vancouver ensure Indigenous communities are equal creators in this program? Would there be more education opportunities to learn about the history and significance of Indigenous agriculture/permaculture practices? How would Indigenous Youth or youth groups be included in leading and designing the programs? Could year-round designated spaces be created for this initiatives? How would Metro Vancouver make sure that these programs and collaborations are beyond symbolic and encourage partnerships,	HIGH PRIORITY Food and Agriculture presents a massive source of waste. The waste in these sectors must be tackled if we are going to make a meaningful impact in sustainability. There are also many opportunities in the community and as an individual to reduce your food waste. So I feel like this might be one of the easier initiatives to scale up. This program can be done in line with Canada's spirit of reconciliation as outlined by the Truth and Reconciliation Commission It is important that Indigenous communities are co-creators in this program and not just

Section	Questions asked by Participants	Feedback heard
RETHINK		
	respect and reciprocity?	consulted after. Mutual learning is also important I think most youth love the idea of more hands-on community projects such as shared gardens, food forests and composting hubs
REDUCE		
Strategy 2.1. Collaborate with businesses and institutions to reduce waste at the source		
Action 2.1b: Work with different sectors such as the promotional products industry to develop and promote procurement tools and templates for Metro Vancouver and other organizations to buy more sustainable goods.		
Strategy Number: 2.1 **Action ID: 028** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	How would Metro Vancouver make this program appeal to businesses and residents? How to access these procurement programs?	This might be difficult for direct participation as this action centres organizations and procurement processes
Strategy Number: 2.1 **Action ID: 028** What should Metro Vancouver consider to support your participation with this action?	How would procurement decisions be made? What say would the community have in these decisions?	Transparency would be crucial to show residents how procurement decisions are made and what they can do to influence them Education campaigns focusing on the environmental impact of various purchases and how sustainable goods improve

Section	Questions asked by Participants	Feedback heard
RETHINK		
		local economies Supporting local and youth-led business that create eco-friendly products that could be included in the procurement network Partnering with schools through projects, challenges and advisory committees that can brainstorm new potentials for product design and procurement
Strategy Number: 2.1 Action ID: 028 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	How will the environmental impact of new procurement processes be evaluated? Will there be transparency and reports made public on the progress reducing waste? Incentives or recognitions for organizations that use this program?	Medium Priority An average citizen cannot participate directly. However it could have big impacts on the waste produced by consumers. As a young person concerned about climate change and the environment, a sustainable procurement plan for organizations and businesses is an important shift.
Action 2.1c: Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations.		
Strategy Number: 2.1 Action ID: 0100 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in	How will Metro Vancouver include youth and the broader community in this program? How will the tools be made available to everyone to have the most benefit?	Similar to the previous program, this would be a bit more difficult for average people. Youth and community participation in the development of these

Section	Questions asked by Participants	Feedback heard
RETHINK		
it? If difficult, what is it that makes your participation easier?		educational tools could be meaningful. Tools should be made accessible as possible. This could include various languages, formats and online sources. Partnerships with schools, universities and youth organizations to promote and develop tools.
Strategy Number: 2.1 Action ID: 0100 What should Metro Vancouver consider to support your participation with this action?	Recognition or certification programs for businesses that use the tools?	Metro Vancouver should see youth as both consumers and creators/entrepreneurs. Many care greatly about the health of our environment and are also creating small businesses and solutions.
Strategy Number: 2.1 Action ID: 0100 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	How will Metro Vancouver ensure accessibility for all residents? How will low-income and newcomers access this? Could businesses partner with local schools and universities to broaden impact? Successful examples of waste reduction could be demonstrated to the community?	Medium Priority As this is geared toward businesses, there might be less direct impact. But this could have a significant impact on shifting the culture that we discussed earlier. Reducing packaging, reusable options and empowering people to make better purchases would also shift this culture. Maybe if the education tools were open and available to the public the benefit might be greater. Such as some online hub or platform as well as town hall style events.
Strategy 2.3 Prioritize food waste reduction initiatives		

Section	Questions asked by Participants	Feedback heard
RETHINK		
Action 2.3a: Work with business, industry associations, and non-profits to reduce food waste by improving food purchasing, storage, and preparation methods.		
Strategy Number: 2.3 Action ID: 072 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	How will the food industry and grocery stores be supported to reduce food waste? Donate food? Would youth or schools be involved in the programs? How so?	Again this is mainly focused on businesses and organizations. Participation for people might be easier if there were awareness campaigns, food rescues or drives and volunteer events If there were clear hubs or resources that the public could access, like waste reduction workshops, community kitchens or partnerships with schools. That way I would be more motivated to access these programs
Strategy Number: 2.3 Action ID: 072 What should Metro Vancouver consider to support your participation with this action?	Expansion of community composting and gardens? Small grants or recognition for community and youth-led food waste ideas?	As we talked about, educational campaigns and social media events that focus on food storage, recipe planning and waste reduction in the home and garden Partnerships with schools, youth organizations and local celebrities could have an impact Volunteer and internship opportunities offered to youth like food recovery or composting programs.
Strategy Number: 2.3 Action ID: 072 How much of a priority is it to you to include this action in the draft solid waste	How will progress be tracked and reported? Similar to the last action, how will accessibility be ensured for all residents? How will	High priority As highlighted in the Indigenous-led permaculture action, changing our food and agriculture systems can have

Section	Questions asked by Participants	Feedback heard
RETHINK		
management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	low-income and newcomers access this program?	a massive impact on waste reduction. Community fridges, composting and zero-waste cooking would also help shift culture and habits. Creation and support of food-sharing networks like apps that connect people, stores and non profits to redistribute food.

Post-Engagement Activity Summary

Activity: Youth (18-30) Focus Group	
Activity Date	October 7, 2025
Organization/group name	CityHive
Time/Duration	1.5 hrs (90 mins)
Location	CityStudio (1800 Spyglass Place, Vancouver)
Format	Focus group
# of Participants	16 participants 1 staff participant
Strategies and Actions Discussed	Strategy 4.5: Making recycling easier and more effective by reducing confusion and improving convenience ● Action ID131: Improve access to textile donation and recycling collection services. ● Action ID132: Recognize and reward those who recycle well so others are inspired to follow their example. Strategy 4.6: Target recycling education ● Action ID150: Research and target the most confusing items for residents that are often incorrectly sorted.

Appendices

- Appendix A - Focus Group Notes [below]
- Appendix B - Focus Group Photos and Videos [attached]
- Appendix C - Participant Evaluation Forms [attached]

Appendix A - Focus Group Notes

Section 4.5 | Action ID131

Improve access to textile donation and recycling collection services.

Section 4.5 | Action ID131	Questions asked by Participants	Feedback heard

Strategy Number: 4.5
 	
Action ID131: Improve access to textile donation and recycling collection services.
 	
If Metro Vancouver includes this action in the updated solid waste management plan, how **easy** or **difficult** will it be for you to participate in it?
 	
If difficult, what is it that makes your participation easier?
	• Apart from ngos - are there services provided by the cities?
	• What do you mean by easy and difficult?
		• Where to recycle? Knowledge of places to donate
		• Organizations are available for clothing swaps and accepts intimate clothing and socks like threadup - they exist but they are hard to find
		  ○ There's an organization that accepts intimate clothing
		  ○ People wait for events because they are ngos w limited resources and it's not 9-5
		• *If city of vancouver has a website with a list of NGOs too can be helpful*
		• *For clothes, the website said you can find donation bins with no resources*
		  ○ *A google asset map would be helpful, but since there is a lack of information, people usually give to value village which has its own ethical concerns*
		• *Some far off locations are in marine drive, which isn't accessible by transit & we have to pay for larger items*
		• *Wondering if the city can be responsible intermediate*
		  ○ *Things that could make it difficult: time, capacity, proximity, accumulate a large amount which is tedious to take through*

Strategy Number: 4.5
 	
Action ID131: Improve access to textile donation and recycling collection services.
 	
What should Metro Vancouver consider to support your participation with this action?
	• Wondering if they can work with shops to collect recycling - like H&M but not exactly?
	• Does textile also include shoes? Multiple compositions of materials
	• Couch? Car seat?
	• What would push more people to use asset maps and make it more accessible in terms of rules and regulations? What kind of psychological barriers could there be?
	• Wondering how we can target people who just dont wanna recycle? Punish? Penalty?
		• Special textile collection bin: regular green bins go out everyday but sometimes when there extra leaves during fall they have special programs, this could be a special program
		  ○ Seasonally people change their wardrobe so they can pick up every 3 months
		• Donation bin things are picked up but concern for bed bugs and what can and cannot go into a bin, similar to plastics
		• Asset maps for donation bin similar to the [redacted] can be very useful
		  ○ Should include info about time and day that is emptied is useful so it's not a burden on the community it's servicing by being overful/unpredictable
		  ○ Someone commented they live near diabetes canada donation bin and is always overflowing
		  ○ Do not recommend a bin for every house because it gets dirty and not necessary, one for every neighbourhood, always overfull. Plus it promotes more buying by giving individuals the feeling that they are doing enough by recycling.
		• After asset map is created, can identify where there is high concentration and deserts so they can identify where the need is
		  ○ Adding bins to places that already exist - MEC, Uniqlo
		• Rebound effect since recycling is more accessible then people will start buying more since there is a solution to overconsumption - how can we stop before we reach to the recycle stage

		● Concerns about recycling different kind of textiles and materials and how this is difficult ○ Recycling fabric made of different compositions is difficult ● Lack of knowledge of where donation bin clothes end up, value village clothes were tagged and traced to landfill, so it seems performative to donate your clothes. It is problematic, the lack of transparency about where clothes are going ● It would be great if there's in-person places considering age and access/comfort using internet - could be at community centres etc which could include folks that cant access the community centres ● If people dont wanna go to community centres, pamphlets and brochures (recycleBC has a visual one that's accessible) Thinking about people who don't care and need a mindset change ● Incentivised plastic bottle recycling also caters to people who don't care ● Building this into textiles too as a business model ● Upcycling too is quite popular and this can be introduced ● Wondering if including a fee at purchase can adversely impact people who buy long term and infrequently ● Cup fees discriminated against low income because price has increased for those folks, who is supposed to take responsibility ● Reward instead for someone who buys second hand, partnering with city of vancouver

		• Mindset change of buying new things is special - people look down at buying second dow • Upcycling useable is intuitive but upcycling goos thats not useable is a bit trickier like scraps of clothes • Individual focused strategy over industry, the organization should take the responsibility and not the end user.
Strategy Number: 4.5 **Action ID131: Improve access to textile donation and recycling collection services.** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?	• None	• 7 for medium • 1 for high
Strategy Number: 4.5 **Action ID131: Improve access to textile donation and recycling collection services.** Is there anything else you'd like to add to the conversation on this ACTION?	• None	• None

Other Strategies/Actions engaged on?	• N/A	• N/A
Next Steps	• **None**	• **None**

Section 4.5 | Action ID132

Recognize and reward those who recycle well so others are inspired to follow their example.

Section 4.5 | Action ID132	Questions asked by Participants	Feedback heard

Strategy Number: 4.5
 	
Action ID132: Recognize and reward those who recycle well so others are inspired to follow their example.
 	
If Metro Vancouver includes this action in the updated solid waste management plan, how **easy** or **difficult** will it be for you to participate in it?
 	
If difficult, what is it that makes your participation easier?
	• Did they include more information about this?
	• How do you measure who recycles best?
		• I know metro vancouver had a master recycling program where you could tell it to your coworkers
		• Could be apartments or workplaces - could be friendly competition
		• Thinking of recycling hall of fame
		• Maybe a stamp card to redeem something for
		• Was designing sustainable hubs program for ubc program, hard to recognize people or reward them if you don't incentivize in first place
		  ○ If you give reason and motivation to contribute to bigger problem would help move the needle
		  ○ Have little steps that lead to something and broken down could be something
		• It's interesting to ask how easy or difficult it will be
		  ○ More time it takes to do something will make it harder
		  ○ Honoraria could incentivize
		  ○ Different housings might make a difference ex. Coop or townhouse
		• When i went to a recycling center they turned me away because i didnt have a car
		  ○ Making it easier for youth who don't have cars would make it easier
		• Could work, lots of research that shows

		stories ○ Difficulty could make it harder for normal people to participate ○ Should be accessible, should be something that isn't insanely difficult, being a good citizen ● The area that metro Vancouver takes care of is so large, hard to imagine how much of an impact it will make ○ On an individual scale not realistic, maybe neighborhood, community more realistic ○ Champions that represent a certain community - how can i achieve this greater goal ○ There's always people willing to volunteer like biking for fun, maybe something day-related to recycling like earth day using passion and community ○ Bit of a distance between myself and metro vancouver ● By municipality ● Having events or competitions - how much did burnaby recycle? Richmond recycle? ● Having stats to communicate that story, how individual actions led to big result and capturing those pieces ○ Many people feel like their contributions wont be enough or valid ○ Actually seeing how actions make a big action would be incentive ● One thing ive heard from my friends that help is having volunteers at big events to help with sorting ○ People who go there learn something new AND recycling actually gets sorted ● Like a live demonstration or certification, leaders who you can contact and ask

		questions to and act as a point of reference ○ Someone to coordinate and keep track of ○ Don't want to spoon feed ○ Partner with businesses and incentivize with products like a transit pass, something tangible that represents what they re doing ● Refilling glass containers items with soap or shampoo ○ Would represent circular economy values ○ Ideally not in a world where not everything in its own packaging ● Depends on what it looks like ○ If picture on website kind of lame ● Like the idea of moving away from individual to community or collective actions like neighbourhoods or communities ○ Adds an element of fun competition between different neighbourhoods ○ Makes it less difficult to recycle ● A coworker of mine told me that when onboarding to apartment building the concierge will give overview of how to recycle ○ No messes, well sorted
Strategy Number: 4.5 **Action ID132: Recognize and reward those who recycle well so others are inspired to follow their example.** What should Metro Vancouver consider to support your participation with this	● How long does it take?	● Seeing money being invested in whatever program they want to do ○ Triangle says recycling into new products ○ Seeing metro vancouver's logo on partnerships/programs ○ Nothing pops to mind when i think of metro vancouver, unlike city of vancouver ○ Someone is keeping an eye on it to keep it regulated/legitimate

action?		● Time & effort to do these things ○ Everyone is busy ○ How long does it take? ○ Can become a barrier ● Discouraged by people who are 'bad recyclers' ○ When showing downstairs neighbours, got confused how to recycle ● Want to see education efforts to people who are brand new and have been ● Feel like it would be interesting, when doing glass sorting seeing where neighbourhoods it came from ○ For those recycling well, being rewarded with incentives ● Could be a barrier for poor vs rich communities who have time to be involved ○ Using % improvement to compare instead ● Transparency for monetary rewards ○ Sitting down with municipalities with clear systems of how to record recycling ○ Open access for the public, accessing data for school or community research ○ See the numbers, so much power in data ● We've mostly been speaking about individuals but also want to think about events, theres lots of single use items. Some will get recycled but lots will go to land waste ○ If could include sustainability and recycling as criteria for grants and relationships with funders/access to more funds ○ Easier to make larger scale impact on events ○ In stadiums for example or city of

		vancouver events
Strategy Number: 4.5 **Action ID132: Recognize and reward those who recycle well so others are inspired to follow their example.** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?	● None	● Low ○ Feel like in the pyramid is low ○ The action is very broad ○ Can connect with other aspects ○ When it comes to sustainability, not in a vacuum. How can we go back to encourage reduction or waste ○ People might be incentivized to buy more to recycle more, could backfire in theory ○ If metrovancouver actually puts the money into it, it could shift my priority ● Agree in grand scheme ○ Rethink and reuse more important ○ If just thinking recycling, would go medium or high ○ Education is important, but incentivizing is more important ○ People not rinsing their cans before recycling, might be incentivized by trends or fun ● There's always going to be more recycling, focusing on higher parts of triangle better (on hierarchy and goals) ○ We have a piece of puzzle to play even if hate greenwashing ○ Play a role rather than dumping on

		side of the road ● In theory, only change behaviour by incentivizing. Behaviour change happens when punishment happens for wrong thing ○ Wall of fame and wall of shame ○ If people fear embarrassment more than they like being worshipped ○ Example of uni in Amsterdam where they banned recyclable cups then introduced reusable cups ● Don't make it only about recycling ● Make it more feasible for nonprofits to make it easier to support for example community gardens ○ So align with values that they want to reward for it ● Seen places where the recycling all goes into the same bin, its all an illusion ○ Should punish businesses who do it poorly ○ Incentivize those who do it well ● Half the time its only recycle or landfills ● Behind the scenes will be more impactful than rewards ○ More work needs to be done before reaching this action ○ Ex. education ○ Recognition and reward feels like the last part ● Its the cherry on the top, can do a lot before we get there
Is there anything else you'd like to add to the conversation on this ACTION?	● None	● It's really disheartening when recycling all ends up in the same truck even after sorting

Other Strategies/Actions engaged on?	● Where is the recycling going?	● Transparency being last on priorities is not helpful ○ Apathy towards recycling is similar to not wanting to vote
Next Steps **Other questions**	● If every equity-deserving group is only providing feedback on a few uncoordinated actions, how does this impact the waste management plan in the long-term? What changes are possible/expected? ● What are you supposed to do with broken glass?	

Section 4.6 | Action ID150

Research and target the most confusing items for residents that are often incorrectly sorted.

Section 4.6 | Action ID150	Questions asked by Participants	Feedback heard

Strategy Number: 4.6
 	
Action ID150: Research and target the most confusing items for residents that are often incorrectly sorted.
 	
If Metro Vancouver includes this action in the updated solid waste management plan, how **easy** or **difficult** will it be for you to participate in it?
 	
If difficult, what is it that makes your participation easier?
	• Can we recycle plastic-lined aluminum apple sauce lids?
	• Do people recycle differently based on context? Ex. If they live in one city and work in another, how do people recycle at home vs at work? There are differences in access to recycling bins/signage
	• Sometimes there's not many recycling options even if there are bins
	  ○ I know soft plastics are recyclable - is someone taking those to a depot?
		• Most people don't bother to look up what can be recycled
		• People already involved in events like this focus group already have an interest
		• To make it easier, research should be in places where there's a lot of people
		  ○ If people are on their way to something it's hard to get people to stay and talk - will people respond differently if they know they're not selling anything or trying to sign up with anything?
		• There are problems with how businesses handle recycling, like at McDonalds things all end up in one bin

Strategy Number: 4.6
 	
Action ID150: Research and target the most confusing items for residents that are often incorrectly sorted.
 	
What should Metro Vancouver consider to support your participation with this action?
	● What could the format look like? What's Metro Van's capacity? Enough budget? Market research costs money
	● What's the scope/timeframe of the plan if they're looking into these results?
	● This action seems like a "bandaid solution". When are they going to review this and make recycling more streamlined across Metro Van?
	● Richmond doesn't seem to have a lot of people using public programs. Do people from different groups or demographics go to the library?
	● Need multiple strategies to target different groups - all age groups, people in different building types - what if you're in a neighbourhood not a strata or building?
	  ○ Could someone come with or instead of a garbage/recycling truck to talk to people?
	● City websites are confusing to follow - lots of policy and text - where does it go? What is the story?
		● Dot survey (ex. "Which items do you find most difficult to recycle?") would be easy, simple, and quick
		● There was a program, zoning or public park or something, and at a public library in burnaby they had an open 'suggestion box' you could put your thoughts in
		  ○ Consider public consultations where you're not in a rush and can quickly give your input and continue on your way - good way to get to lots of the public
		● People live in a building they recycle in the building - maybe it would be more useful to approach a strata to find out what they're doing as opposed to individuals
		● People picking up recycling are specific that if it's not properly sorted they'll leave it behind
		● Burnaby seems to be one of the most strict - cracks down in terms of enforcement - they have people there that can answer your questions
		● Whoever's in charge of handing out those letters - talking to bylaw officers or working at the recycling depots that get asked the most questions - they could be a good resource. They know what people try to do
		● Talk to the sanitation workers that collect the trash and leave the letters
		● It'd be nice if we could know where things were going
		  ○ Like those impact bracelets where you can scan it and follow a turtle
		● If people knew where materials were going and not just the landfill they'd be encouraged
		● We don't know what happens to stuff once taken to the depot

Strategy Number: 4.6
 	
Action ID150: Research and target the most confusing items for residents that are often incorrectly sorted.
 	
How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?
	● How does this integrate with the other actions? Would it all happen at the same time?	● This seems like the first step but the targeting step is the first thing that takes place
		● It's inconsistent across municipalities so this action should be high priority
		  ○ Long terms goal is that it's streamlined across municipalities
		● If all plastics were recyclable, people wouldn't be as confused
		● All agree it's high priority - it needs to get done closer to beginning of plan being implemented
		  ○ The first step in knowing how to fix a problem is knowing the problem

Strategy Number: 4.6
 	
Action ID150: Research and target the most confusing items for residents that are often incorrectly sorted.
 	
Is there anything else you'd like to add to the conversation on this ACTION?
	● Fundamentally - Metro Van is responsible for the waste - if that's the case, why are things so fragmented?
	● This is supposed to be "Metro Vancouver" but within it different municipalities have different rules - if that's disjointed, then how will the new plan change things? Similar to transit - how bus stops are designed is different in different municipalities
	● What's already happening in the region? There's a lot of tasks and a lot of links between
		● Metro Van handles landfills but municipalities decide how waste is collected - there are differences in how they build laneways - some have crews, some have trucks with claws. Some lanes aren't long enough for a truck so they have to do manual collection
		  ○ Technically all waste is under provincial control - technically Recycle BC handles all recycling - they come out to municipalities and say how to take care of it, but they subcontract it out to waste management and collection services
		  ○ Each private contractor has its own way of collecting, but I'm pretty sure it all goes into the same facility
		● Many (every?) municipalities do a waste audit - so they go into garbage cans/bins, look at what items go into the bins and are they being sorted correctly - what type of waste is ending up in the garbage, and look granularly at what could have

	them ● We spend a long time trying to figure out what goes where but why are we doing that if it's all going into one place anyway? ● Is this work that needs to be done? Is it already getting done? Is it Metro Van that should be responsible for this?	been recycled ○ That data could be a starting point to determine what's often sorted incorrectly. The foundation is there ● Biodegradable things and "compostable" things are actually garbage which is frustrating ● I know there are four streams existing - single family, multi family, industrial like businesses and restaurants, construction and demolition; ○ Industrial has the lowest rate. Target was 40% but they barely met it ● Ocean Ambassadors, a non-profit, had an initiative where you could get them to reach out to businesses to get them to reduce their waste or recycle properly - try to work with businesses to make things more green

Other Strategies /Actions engaged on?	N/A	● N/A
Next Steps	● None	● None of us knew the plan update was happening ● People don't know even though they're actively involved in trying to recycle ● Terracycle - the founder has a book talking about post-consumer recycled materials and the future of recycling ● It'd be good to get updates about how the plan is coming along and what actions were chosen as highest priority ● I don't think there's a way to sign up for updates but there should be. You shouldn't be making people search for the information - if they're interested it should be sent to them "do the work for them"

Metro Vancouver Solid Waste Management Plan Update - Options Analysis
Collaborative Engagement Summary Report

Report Submitted by: Sheila Molloy, Executive Director, Coast Waste Management Association

Submitted to: Brooke Atkinson, Engagement Specialist, Solid Waste Services, Metro Vancouver

Submitted: October 31, 2025

INTRODUCTION

Coast Waste Management Association members are directly or indirectly affected by Metro Vancouver's Solid Waste Management Plan.

We are grateful to have been able to contribute to illustrate some of our challenges, interests, and the needs of various industry sectors so that Metro Vancouver can have the most insightful details to create a comprehensive and innovative plan which will lead the way for the region and across BC.

We were grateful to support this consultation process.

OUR ACTIVITIES

- Two focus groups
  October 21, 2025 | 10:00 - 11:30 AM PST
  October 29, 2025 | 12:00 - 1:30 PM PST
- Focus Group Broader Strategies & Actions Priority Feedback
- CWMA Working Group Meetings General Discussion
- General Questionnaire
- E-newsletter and mailing list promotion for Metro Vancouver's feedback

Engagement Activity Summaries are included in this greater report with all appendices.

THE ORGANIZATION

Coast Waste Management Association https://cwma.ca is a highly regarded, non-profit membership association serving the solid waste industry across British Columbia.

We are comprised of 240 member organizations with over 1300 individual participants engaged in our community and a greater industry network of over 3600.

Our member participants are representative of the broader industry, including corporations of all sizes and sectors, local governments, non-profits, stewardship organizations, and First Nations.

THE ENGAGEMENTS

1) Focus Groups

The primary goal of the focus group sessions was to bring together a cross-section of leaders in the solid waste management industry in British Columbia, representing various sectors, to ensure diverse perspectives and innovative ideas for Metro Vancouver's Solid Waste Management Plan update. We selected a total of 6 action items with a goal of finishing the first 4 and the final 2 if there was time in each discussion.

We also asked focus group participants to send back their top 3 high and low-priority actions.

We found that limiting the conversations to only 4 (or) 6 actions was such a small feedback framework, and we wanted to provide everyone with the ability to give more general feedback applicable to them specifically.

2) Working Group Meetings General Discussion after each meeting/ Individual Interviews

We opened the conversation at our regular meetings for one-on-one feedback for those who were unable to make the Focus Groups. This allowed us to get feedback from individuals who self-selected with an interest in providing thoughts on the overall Strategy. This was an unscripted discussion with only one question. Notes provided for this are a general summary of the feedback.

3) Questionnaire

This was based on Metro Vancouver's more public-facing survey, with the addition of a handful of questions having the survey takers think about what it means to their organizations as well. A separate analysis of the organization feedback has been included.

4) E-newsletter and Mailing List Marketing

To ensure we effectively marketed our engagements to members, we sent out reminders using our weekly e-newsletter and a specific outreach to our Member List. Samples have been included.

5) Promotion of Metro Vancouver Feedback Outreach

Cross-promotion and encouraging everyone to take the Metro-Van Feedback survey were part of our collaborative actions to maximize the reach and feedback for Metro Vancouver.

COMMUNICATION DATES

October 21, 2025 | 10:00 - 11:30 AM PST | [redacted]

Metro Vancouver Solid Waste Management Plan Focus Group Insights GROUP 1

Executive Summary

The session centred on the draft strategies and actions for Metro Vancouver's Solid Waste Management Plan update, with a specific focus on "Rethink, Reduce, and Reuse." Participants included representatives from municipalities, regional districts, non-profits, EPR organizations, and private sector businesses.

The discussion revealed a strong consensus on the plan's high-level vision but identified significant concerns regarding the practicality, clarity, and implementation of the proposed actions.

Four critical takeaways emerged:

1. **Demand for Specificity and Measurability:** A pervasive theme was that many proposed actions are too broad, abstract, and vague. Participants consistently called for clear definitions of key terms ("circular economy," "collaboration," "reuse"), specific examples of intended initiatives, and concrete metrics for success. Vague language was seen as a barrier to implementation, buy-in, and accountability.

2. **Clarification of Jurisdictional Roles and Resources:** There is significant apprehension about unfunded mandates being placed on member municipalities. The group strongly advocated for Metro Vancouver to assume a clear leadership and funding role, acting as a regional coordinator and consultant. Actions that imply new responsibilities for municipalities must be developed in close collaboration with them and be supported by adequate resources.

3. **The Imperative of Building Trust:** A historical trust deficit was identified as a critical barrier to effective collaboration. A participant noted past experiences where stated "zero waste" goals appeared to conflict with actions like planning for new incinerators. For future collaboration to succeed, Metro Vancouver must ensure its funding priorities are transparently aligned with the plan's stated goals and actively work to rebuild trust with community partners.

4. **A Call for Practical, Targeted Business Engagement:** While engaging the business community is viewed as essential, the group cautioned against a one-size-fits-all approach. The most effective strategy would involve developing practical, industry-specific toolkits and framing the benefits of circularity in terms of economic viability and bottom-line improvements. A focus on creating reporting burdens was seen as less effective than providing actionable guidance.

Introduction

On behalf of Metro Vancouver, the Coast Waste Management Association facilitated a focus group to gather feedback on the "options analysis phase" of its Solid Waste Management Plan update. The session brought together a diverse group of professionals from across the waste management sector in British Columbia to evaluate potential strategies and actions.

This report provides an objective analysis of the detailed feedback, overarching themes, and specific critiques that emerged during the discussion.

The plan's updated vision, "A thriving region where nothing is wasted and resources are valued," was presented alongside its seven guiding principles: accountability, transparency, climate change, accessibility and equity, affordability, innovation, and collaboration. The discussion that followed provided a nuanced perspective on how the proposed actions align with these principles.

Overarching Themes and Critical Feedback

Across the detailed discussion of specific actions, several high-level themes consistently surfaced. These represent the group's core concerns and recommendations for strengthening the draft plan. This group took additional time to outline specifics.

1. The Demand for Specificity and Measurability
Participants repeatedly found the language of the proposed actions to be too ambiguous to be effective. This lack of clarity creates challenges for implementation, partnership, and performance measurement.

• **Ambiguous Terminology:** Key terms like "collaborate," "reuse," and "proven successful" were flagged as needing clear, shared definitions. Without this, initiatives risk misinterpretation and inconsistent application.

• **Measurement and Accountability:** The group questioned how progress on vague actions could be tracked. As one participant noted regarding an action to "collaborate with external groups," the term itself is difficult to quantify: "How are you going to say we collaborated?... Is that sharing information? Is that just getting everyone in the same room? Is that... putting money in a pot with somebody else?"

• **Need for Amalgamation:** Several actions were seen as overlapping or redundant. The group was divided, but some felt that amalgamating similar actions and making them more specific would create a more focused and impactful plan.

2. Clarifying Jurisdictional Roles and Responsibilities
A significant point of contention was the perceived creation of unfunded mandates for member municipalities and a lack of clarity around Metro Vancouver's role in executing the plan.

• **Unfunded Mandates:** A participant articulated this concern directly, stating that many proposed actions represent "an unfunded mandate... they're asking us to do more with the same number of resources or... fewer resources." This was identified as a major barrier to participation, especially for municipalities focusing on core services.
• **Metro Vancouver's Leadership Role:** The group strongly advised that Metro Vancouver must position itself as the leader, coordinator, and primary implementer of regional initiatives, rather than simply an entity that creates expectations.

• **Collaboration Hierarchy:** When discussing collaborations with external entities like Chambers of Commerce, municipal representatives emphasized the need for Metro Vancouver to first engage with its member jurisdictions to ensure messaging is aligned and efforts are not duplicated.

3. Building Trust and Ensuring Aligned Funding
Historical context played a crucial role in the group's feedback, with past actions by Metro Vancouver influencing the level of trust in the current planning process.

• **The "Elephant in the Room":** One participant highlighted a critical trust issue stemming from the 2011 plan, which promoted a "zero waste" vision while simultaneously planning for new incinerators.

• **Funding and Priorities:** This historical context led to concerns that major capital projects, such as the existing incinerator, would consume the majority of available finances, leaving little for the circular economy initiatives outlined in the draft actions. To build trust, funding must be transparently allocated to support the plan's stated priorities.

• **Authenticity of Intent:** Participants stressed that for collaboration to be successful, external groups must trust that the initiatives are genuine and not simply "lip service" or a means to collect materials for waste-to-energy processes.

Detailed Analysis of Draft Strategies and Actions

The focus group performed a deep dive into specific actions under the "Rethink, Reduce, and Reuse" categories. The following table summarizes the key feedback, identified barriers, and proposed recommendations for each action discussed.

Strategy & Action Item	Participant Feedback & Priority Rating	Key Barriers & Recommendations
Strategy 1.2: Support the		

transition to a more circular regional economy through waste prevention.		
ID014: Work collaboratively with economic development agencies to implement circular business solutions.	Priority: Medium to High. The action was praised for its potential to create both high-skilled and low-barrier local jobs. A circular economy was viewed as a high priority for local government.	Barriers: Lack of clarity on which agencies would be involved; potential for limited influence by a regional government. Recommendations: Incentivize local processors to create regional end markets; ensure buy-in and a shared understanding of "circular economy" among partner agencies.
ID011: Explore collaborations with entities (e.g., chambers of commerce) to equip small and medium-sized enterprises (SMEs) with practical guidance.	Priority: Mixed (Low to High). Supporters noted SMEs lack the capacity to develop circular models independently. Others saw it as a "nice to do" that could be achieved with smaller campaigns, arguing that other actions are higher priority.	Barriers: An unfunded mandate for municipalities; potential for inconsistent messaging. Recommendations: Metro Vancouver must take a leadership role and collaborate with municipalities *before* engaging external groups; frame circularity in terms of economic benefits made newly viable by technology like AI.
Strategy 1.3: Build on and foster an inclusive and collaborative circular economy.		
ID017: Collaborate with external groups to identify and implement new circular economy initiatives.	Priority: Low. This action was widely criticized as being too broad, vague, and overlapping with other actions, making it difficult to measure.	Barriers: A significant trust deficit based on past Metro Vancouver actions; lack of specificity. Recommendations: This action needs to be made much more specific (e.g., updating zero-waste event guidelines) and must be backed by transparent funding and trust-building measures.

		Barriers: Unfunded mandate for municipalities; businesses are primarily profit motivated.
ID026: Collaborate with agencies to educate businesses on the benefits of circular models.	Priority: Medium. Seen as a more specific version of previous actions. However, the "push" approach to education was questioned.	Recommendations: Metro Vancouver must define its role (e.g., as a consultant); create practical, industry-specific toolkits (e.g., for restaurants); frame circularity in terms of bottom-line benefits.
Strategy 2.1: Collaborate with businesses and institutions to reduce waste at the source.		
		Barriers: Scale of implementation (business-by-business is infeasible); potential administrative burden on businesses
ID102: Develop methods to estimate the waste reduction impacts of everyday actions and communicate back to businesses.	Priority: Mixed. Viewed as potentially valuable but also a massive undertaking. The focus on *estimating* and *reporting* was seen as less useful than providing tools for actual reduction.	Recommendations: Develop industry-specific toolkits for waste reduction rather than focusing on reporting mechanisms; work through service providers who already engage with businesses.
ID002: Continue work with plastics waste reduction organizations... to reduce plastic waste and identify additional hard-to-recycle plastics for elimination.	Priority: High. This action received nearly unanimous and enthusiastic support from the group. It was seen as a clear, actionable, and high-impact priority.	Barriers: None identified; strong willingness to collaborate Recommendations: Prioritize this action; actively partner with expert organizations that are already leading this work and have ready-made solutions.
Strategy 3.1: Support consistent approaches to reuse.		

ID034: Advocate for the adoption of consistent reuse regulations once they're proven successful at the community level.	Priority: Medium. The principle of advocating for reuse regulations was supported.	Barriers: The terms "reuse" and "proven successful" are too vague. Success in one community does not guarantee universal applicability. Recommendations: The plan must clearly define what "proven successful" means and provide specific examples of the types of "reuse" being targeted.

Conclusion

The focus group participants demonstrated a high level of engagement with Metro Vancouver's Solid Waste Management Plan update. There is clear support for the plan's ambitious goals, particularly in advancing a circular economy and reducing plastic waste. However, the feedback indicates a critical need for refinement. To secure the buy-in and active participation of key stakeholders, Metro Vancouver must translate its broad strategies into specific, measurable, and realistically resourced actions. Addressing the core issues of jurisdictional roles, funding transparency, and historical trust will be paramount to transforming this plan from a guiding document into a successful, collaborative regional achievement.

Metro Vancouver Solid Waste Management Plan Priority Insights GROUP 1

Here's a comprehensive summary of all high and low-priority actions from the feedback that was sent following the focus group.

HIGH PRIORITY ACTIONS (Top 3s & Strongly Supported)

Most Frequently Mentioned (2+ votes):

- **ID131** - Improve access to textile donation and recycling collection services (2 mentions)

Education & Outreach:

- **ID101** - Increase in-person education where businesses can talk directly with experts
- **ID104** - Expand education tools for multi-family buildings to reduce waste, increase participation, and comply with regulations

EPR & Policy:

- **ID002** - Continue working collaboratively with national plastics waste reduction organizations
- **ID004** - Work with municipalities across Canada for circular economy regulations (1 top, 1 bottom - mixed feedback)
- **ID118** - Advocate for full EPR funding and expand to small businesses
- **ID120** - Standardize EPR + labelling and enforce anti-greenwashing

Infrastructure & Systems:

- **ID032** - Develop consistent tools/reporting for house relocation and deconstruction bylaws
- **ID039** - Encourage the development of an in-region facility for triaging building materials
- **ID045** - (high priority, no details provided)
- **ID055** - Evaluate feasibility of a regional-scale reusable food service ware system
- **ID067** - Maintain and scale the regional food recovery network
- **ID123** - Explore opportunities to facilitate the siting of private sector recycling activities

Business Support & Digital Tools:

- **ID100** - Business recycling guidance (mentioned with ID134)

- **ID106** - Create incentives for waste/recycling collectors to help customers adopt services
- **ID134** - Business recycling guidance/commercial packaging clarity
- **ID142** - Use digital tools (AI scanning apps) to support EPR and reduce contamination

Other High Priority:

- **ID001** - (top 3, no details provided)
- **ID014** - (high priority, no details provided)
- **ID027** - (high priority, no details provided)
- **ID121** - (top 3, no details provided)

LOW PRIORITY ACTIONS (Bottom 3s & Not Recommended)

Most Frequently Mentioned (2+ votes):

- **ID088** - Develop circular certification programs for business (2 mentions - already exist)
- **ID102** - Develop methods to estimate waste reduction impacts (2 mentions - covered elsewhere)
- **ID177** - Research wildlife impacts of mismanaged waste (2 mentions - indirect impact)
- **ID038** - Online marketplace for C&D materials (1 bottom + 1 "do not proceed" = 2 mentions)

Education & Behavioural Programs:

- **ID127** - Tools/tips to reduce odours/"yuck factor" with green bins
- **ID129** - Promote worm bins and backyard composting
- **ID151** - Gamify recycling education (won't change non-recyclers' minds)

Engagement & Events:

- **ID040** - Hold breakfast meetings (just tell them the rules instead)
- **ID081** - Limited municipal resources make it difficult to scale
- **ID157** - Tours (provide education materials instead)

Product & Material Specific:

- **ID024** - Clothing sector initiatives (sectors rarely willing to reduce sales)
- **ID025** - Encourage brands to take back garments (international issue)
- **ID109** - Research the recyclability of plastic-lined paper products (focus on reuse instead)

Vague or Redundant:

- **ID012** - Bring together cross-sector ideas for circular economy solutions (vague/redundant)

Implementation Challenges:

- **ID052** - Incentivize compliance (just enforce instead)
- **ID076** - Resources already available for these programs
- **ID133** - Uncertain how to implement at the regional level

Do Not Proceed:

- **ID096** - (do not proceed, no details provided)
- **ID132** - (do not proceed, no details provided)

Mixed Feedback:

- **ID004** - Work with municipalities across Canada (1 top, 1 bottom - one participant felt local action is faster)

KEY INSIGHTS

Clear Consensus on High Priority:

- Multi-family and business education/support
- EPR expansion, standardization, and funding
- Infrastructure for textiles, food recovery, and building materials
- Digital tools for contamination reduction
- Incentive alignment for service providers

Clear Consensus on Low Priority:

- Programs that duplicate existing services (ID088)
- Research with indirect/long-term impact (ID177)
- Complex coordination for niche streams (ID038)
- Voluntary behavioural programs with low impact potential (ID129, ID151)
- Actions already covered elsewhere (ID102)

Actions Needing Clarification: Several IDs mentioned as high priority lack details: ID001, ID014, ID027, ID045, ID121

Engagement Activity Summary

Activity:	
Activity Date	October 29, 2025
Organization/group name	Coast Waste Management Association
Time/Duration	12:00 – 1:30 PM
Location	Virtual / Webinar
Format	Focus Group Roundtable
# of Participants	13
Strategies and Actions Discussed	***Strategy 1.3. Build on and foster an inclusive and collaborative circular economy*** **ACTIONS:** • ID017 Collaborate with external groups to identify and implement new circular economy initiatives in the community. • ID026 Collaborate with regional economic development agencies and others to educate business on the benefits of circular business models, invite industry to share their ideas on how to accelerate adoption of circular business models and update existing circular economy resources. ***Strategy 2.1. Collaborate with businesses and institutions to reduce waste at the source*** **ACTIONS:** • ID102 Develop methods to estimate the waste reduction impacts of everyday actions and communicate back to businesses how they are doing. • ID002 Continue working collaboratively with national plastics waste reduction organizations, businesses, non-profits and member jurisdictions to reduce plastic waste and identify additional hard-to-recycle plastics for elimination. ***Strategy 3.1. Support consistent approaches to reuse***

	ACTIONS: • ID034 Advocate for the adoption of consistent reuse regulations once they are proven successful at the community level. • ID063 Update the regionally harmonized approach for single-use item reduction bylaws to include reuse requirements.

Metro Vancouver Solid Waste Management Plan Focus Group Insights GROUP 2

Executive Summary

The discussion, involving a diverse group of stakeholders from municipalities, First Nations organizations, non-profits, and the private waste management sector, centred on specific draft actions related to the circular economy, waste reduction, and reuse.

Overall, the focus group demonstrated a deep engagement with the plan's objectives and a clear desire for ambitious, well-defined, and actionable strategies that can meaningfully advance the region's waste management goals.

Four primary themes emerged:

1. **Overwhelming Support for Circularity and Reuse:** Participants unanimously endorsed the plan's strategic direction towards a circular economy and enhanced reuse systems. Actions promoting collaboration, new business models, and consistent reuse regulations received high-priority ratings, with stakeholders viewing them as essential next steps for the region.

2. **Demand for Stronger, Harmonized Regulation:** A consistent call was made for Metro Vancouver to move beyond collaborative or educational initiatives toward clear, enforceable, and harmonized regulations. Stakeholders emphasized that a "level playing field" for businesses, supported by consistent policy, is critical for accelerating the adoption of circular practices and ensuring compliance.

3. **Critical Concerns Regarding Implementation ("The How"):** While strategic goals were widely supported, participants expressed significant skepticism about the practical implementation of certain actions. The proposal to develop methods to estimate and report business waste reduction (ID102), for instance, was met with questions about feasibility, methodology, scope, and the resources required, highlighting a need for more detailed planning before such actions can be fully endorsed.

4. **Emphasis on Targeted and Nuanced Collaboration:** The value of collaboration was a recurring point, but participants stressed the need for a more targeted approach. This includes engaging specific entities like the economic development arms of First Nations, understanding the unique challenges of different business sectors, and ensuring educational resources are designed to support concrete policies rather than stand alone.

Introduction

On behalf of Metro Vancouver, a focus group was convened to analyze and discuss potential draft strategies and actions for the updated Solid Waste Management Plan.

The session is part of the "options analysis" phase, building on earlier engagement around the plan's vision: "a thriving region where nothing is wasted and resources are valued."

Participants included representatives from a range of organizations, providing diverse perspectives from municipal government, regional districts, First Nations initiatives, non-profit recycling operations, and private sector waste management and technology firms.

The discussion was structured around three pre-selected strategic areas, with participants evaluating specific action items based on the ease of participation, necessary support from Metro Vancouver, and overall priority level.

Overarching Themes and Critical Feedback

1. Strong Support for Circular Economy and Reuse Initiatives
There was universal agreement on the importance of fostering a circular economy. Actions aimed at collaboration with external groups (ID017), educating businesses on circular models (ID026), and establishing consistent reuse regulations (ID034 & ID06) were met with enthusiasm.

2. Call for Clear, Consistent, and Enforceable Regulation
A dominant theme was the need for regulatory frameworks to drive change. Participants argued that collaboration and education alone are insufficient.

3. Critical Questions on Implementation and Feasibility (The "How")
While the strategic intent of many actions was praised, their practical feasibility was frequently questioned. This was most evident in the discussion of Action ID102, which proposed developing methods to measure and report business waste reduction.

4. The Importance of Targeted and Nuanced Collaboration
Collaboration was seen as a key pillar of the plan, but participants provided specific guidance on how to make it effective.

Detailed Analysis of Draft Strategies and Actions

The facilitator selected three strategic areas for in-depth discussion, focusing on a total of six specific action items.

Strategy & Action Item	Participant Feedback & Priority Rating	Key Barriers & Recommendations
Strategy 1.3: Build on and foster an inclusive and collaborative circular economy		

		Barriers: Difficulty stimulating circular economy due to limitations in the *Local Government Act* regarding funding support. A big disconnect exists between written plans and implementation in Metro Vancouver First Nations communities that outsource waste management to haulers. Private recyclers struggle with achieving a profitable transaction; lack of necessary profit hinders participation. Initiatives often sit on the periphery and must be normalized across all sectors. Lack of public awareness regarding the recycling operations of external groups Recommendations: Metro Van needs to invest resources in education within First Nations communities. Needs a province-wide approach and collaboration across regional districts. Local governments need to explore creative approaches (funding, land, space, or convening roles) to provide support without directly funding the private sector. Metro Van should provide guidance for consistent literature and promotion/education across all municipalities. Must help private organizations find ways to manage profitable transactions. Need openness to emerging technologies despite challenges with performance guarantees.
ID017: Collaborate with external groups to identify and implement new circular economy initiatives in the community	Priority: High. Identified as positive and celebrated by external groups (e.g., First Nations Recycling Initiative). Easy for municipal staff to participate, especially when modeling existing best practices like repair cafes and libraries of things. Easy at face value for private recyclers. Great action, but difficult to execute.	
ID026: Collaborate with regional economic development agencies and others to educate business on the benefit of circular	Priority: Split between Low, Medium, and High. Generally considered an important and necessary task.	Barriers: Concern that industry may not be willing to participate due to focus on dollars/capitalism, even when benefits exist. Logistics are difficult in dense urban areas where space is limited for multiple bins. The linear economy is often the cheapest option, creating a price hurdle. There is overlap between this action and

business models. Invite industry to share their ideas on how to accelerate adoption of circular business models and update existing circular economy resources		other action items. Education alone is insufficient and must support stronger policy or programs. Recommendations: Metro Van needs to approach the economic development arm of First Nations communities, rather than public works, to engage on business models. Implementing a regulatory framework that levels the playing field for all businesses can help clear the cost hurdle. Finding and disseminating industry best practices is crucial.
Strategy 2.1: Collaborate with business and institutions to reduce waste at the source		
ID102: Develop methods to estimate the waste reduction impacts of everyday actions and communicate back to businesses how they are doing	Priority Rating (Collective): Split between Low, Medium, and High. High Support (if feasible): If successful, this action item could make a huge difference and "move the dial". Gathering statistics and data is invaluable for creating a pathway and measuring progress. Useful for motivating people to do the right thing and comparing performance against peers.	Barriers: Significant challenge in determining *how* to measure the impact of everyday actions and implement the reporting mechanism. Some private organizations may be hesitant to share data due to concerns about trust and privacy regarding sales/pipelines. Risk of information being used for "recycle shaming". Harder to implement the same kind of impact in First Nations communities. Recommendations: The methodology must be explained before participation can be assured. Need to establish standardized methods for estimation to ensure a level playing field. Findings should be reported quarterly to inform businesses about seasonal waste reduction and make the data meaningful. Focus on specific streams or sectors as an achievable starting point. Metro Van should host a specific roundtable for First Nations

		business leaders to secure unified buy-in.
ID002: Continue working collaboratively with national plastics waste reduction organizations, businesses, nonprofits and member jurisdictions to reduce plastic waste and identify additional hard to recycle plastics for elimination	Priority Rating (Collective): Split between Low, Medium, and High. High Support when focusing on high-value and hard-to-recycle commodities benefits their material recovery facilities (MERFs). Supports helping packaging designers reduce quantity and bias toward highly recyclable materials.	Barriers: Participation is challenging for organizations focused on thrift where materials are already unpackaged. Industry participation is often "touchier" than non-profits. The hard part of waste reduction comes from the design side of packaging. Recommendations: Need to look beyond packaging waste and include construction plastic waste. Consider introducing stronger regulatory language (e.g., "regulate") instead of just "collaborate". Focus should include reducing virgin plastics flowing into the system. The initiative should highlight reuse initiatives, such as the deconstruction and reuse of building materials.
Strategy 3.1: Support consistent approaches to reuse		
ID034: Advocate for the adoption of consistent reuse regulations once they're proven successful at the community level	Priority: High. This action is the exact nature of the work done by the Salvation Army (reduce, recycle, reuse, salvaging). High support, especially as consistency ensures easier compliance for the public. Advocacy is important, as government mandates demand for products. Priority Rating (Collective):Split between Low, Medium, and High.	Barriers: Ambiguity regarding *who* Metro Van is advocating to (e.g., federal or provincial regulators). The clause "once they're proven successful at the community level" may be unnecessary since proof of concept already exists. Recommendations: Define the specific advocacy target (e.g., who regulates the right-to-repair legislation). Although supporting the action, some suggested editing to remove the *once they're proven successful* clause, though others argued proof is necessary for political support. Need to manage risk and consider how adopting reuse affects hauling logistics and business models.

ID06: Update the regionally harmonized approach for single-use item reduction bylaws to include reuse requirements	Priority: High. This is the natural next step and the best way to reduce single-use items. The harmonized approach is supportable, though one participant noted the need for finding a balance. Priority Rating: High.	Barriers: Regulations or bylaws are ineffective if there is no enforcement to change behavior (e.g., fines, tickets, or incentives are needed). Finding the balance between eliminating single-use items and recognizing scenarios where single-use items may still be necessary (e.g., forgetting a reusable bag). Recommendations: Must create community infrastructure (e.g., central washing stations) to support broader reuse. The term "regionally harmonized approach" must be clearly defined and compatible with all districts, including those outside of Metro Van.

Conclusion

The focus group participants demonstrated a high level of engagement with Metro Vancouver's Solid Waste Management Plan update. Across all key areas, implementation challenges were identified, revolving primarily around the need for greater regulatory clarity and policy strength to create a level playing field for all businesses and overcome the cost hurdles. Specific feedback included the necessity of investing resources in education and engaging the economic development arm to ensure equitable participation from First Nations communities; the demand for Metro Van to provide standardized methods to estimate waste reduction impacts, ensure data integrity, and report findings frequently (e.g., quarterly) to make data meaningful; and the crucial need for robust enforcement mechanisms, such as fines, to ensure compliance with reuse regulations and drive lasting behaviour change.

Metro Vancouver Solid Waste Management Plan Priority Insights GROUP 2

Here's a comprehensive summary of all high and low-priority actions from the feedback that was sent following the focus group.

HIGH PRIORITY ACTIONS (Top 3s & Strongly Supported)

Most Frequently Mentioned (2+ votes):

- **ID044** - Advocate for federal/provincial funding to scale recycling infrastructure and innovation for challenging materials (3 mentions)
- **ID075** - Advocate for federal/provincial funding for businesses to scale up food reuse, food recovery, gleaning, and remanufacturing (2 mentions)
- **ID111** - Support recycling markets by purchasing recycled products, including compost (2 mentions)
- **ID131** - Improve access to textile donations and recycling collection services (1 mention)

Business & Economic Development:

- **ID026** - Collaborate with economic development agencies to educate businesses on circular business models
- **ID027** - Investigate how to maximize low-barrier employment opportunities in circular economy roles (1 mention)
- **ID106** - Create incentives for waste/recycling collectors to work with customers (1 mention)

Infrastructure & Building Materials:

- **ID039** - Encourage development of in-region facility for triaging building materials (1 mention)
- **ID043** - (related to increasing use of used building materials)
- **ID062** - (related to increasing use of used building materials)
- **ID122** - (related to expanding organics recovery, processing and beneficial use)
- **All of 3.2** - increased use of used building materials

Policy & Regulations:

- **ID001** - Advocate for federal/provincial regulations to prohibit non-essential, non-recyclable products/packaging (1 mention)

- **ID023** - Continue working with textile waste reduction organizations to develop tools for the fashion industry (1 mention - with suggestion to strengthen, like France's EPR)
- **ID034** - Advocate for adoption of consistent reuse regulations (2 mentions - with suggestion to amend to focus on Metro Van municipal implementation)

EPR & Recycling Systems:

- **Section 4.2** - Enhance EPR programs (all actions supported)
- **ID04.1** - (top priority, no details)
- **ID04.2** - (top priority, no details)
- **ID04.5** - (top priority, no details)

Missing/Should Add:

- **Rechargeable battery recovery** - explicitly noted as missing and should be added as a priority

---

LOW PRIORITY ACTIONS (Bottom 3s & Not Recommended)

Most Frequently Mentioned (3+ votes):

- **ID088** - Develop circular certification programs for business (3 mentions - already exist)

Most Frequently Mentioned (2 votes):

- **ID080** - Develop methods to estimate waste reduction impacts of everyday actions and communicate to residents (2 mentions)
- **ID095** - Explore new technology that could help with data collection (2 mentions)

Waste-to-Energy / Recovery (Section 5.0):

- **ID168** - (recover section, not specified)
- **ID169** - (recover section, not specified)
- **ID172** - (recover section, not specified)
- **Section 5.1** - Recover materials and energy from non-recyclable materials (waste-to-energy concerns)
- **Note:** Strong opposition to waste-to-energy solutions due to concerns about:
    - Diverting focus from upstream circular solutions
    - Creating a feedstock dependency that locks in burning infrastructure
    - Risk of burning recyclable/salvageable materials

Resident/Consumer Focused:

- **ID025** - Encourage brands to take back garments for reuse and repair (1 mention)
- **ID036** - Encourage residents to incorporate used building materials into renovations (1 mention)
- **ID089** - Develop and implement annual recognition program for businesses (1 mention)

Data & Diversity:

- **ID096** - Look at ways to include diversity, equity and inclusion data in solid waste data (1 mention)

Disposal Ban & Textiles:

- **ID105** - Review and expand Metro Vancouver disposal ban program to include textiles (1 mention - concern about shipping textiles overseas)

Composting:

- **ID128** - Compostable plastics (suggestion to eliminate - should be banned)

Other Low Priority:

- **ID01.1** - (bottom priority, no details)
- **ID01.2** - (bottom priority, no details)
- **ID03.4** - (bottom priority, no details)
- **Section 4.8** - Prevent litter and illegal dumping (suggested lower priority)

KEY INSIGHTS & THEMES

Strong Support For:

- Federal/provincial funding advocacy for infrastructure and food systems (ID044, ID075)
- Building materials reuse and triaging infrastructure (Section 3.2, ID039, ID043, ID062)
- EPR enhancements (Section 4.2)
- Purchasing recycled products to support markets (ID111)
- Circular business model education and low-barrier employment (ID026, ID027)
- Textile industry regulation (ID023) - with call to strengthen like France's approach

Strong Opposition To:

- Waste-to-energy/recovery solutions (entire Section 5.0)
- Duplicate certification programs (ID088)
- Compostable plastics (ID128)
- Data collection technology exploration without a clear purpose (ID095)
- Residential behaviour tracking systems (ID080)

Recommendations for Improvement:

- Add rechargeable battery recovery as an explicit priority
- Move Strategy 2.4 to Section 4.0 Recycle (better alignment)
- Consolidate overlapping actions
- Emphasize actions that "truly move the dial" vs. fluffy "encourage" actions
- Strengthen ID023 with France-style EPR and fast fashion penalties
- Amend ID034 to focus on Metro Van municipal implementation of reuse regulations
- Address concerns about ID105 resulting in overseas textile shipping

Engagement Activity Summary

Activity:	
Activity Date	Sept 11 - Island, Rural & Remote Communities Sept 16 - LFG Field & Flare Operators Sept 17 - Landfill Operators Working Group Sept 18 - Plastic Waste Reduction Working Group
Organization/group name	Coast Waste Management Association
Time/Duration	15 minutes following each meeting
Location	Virtual / Webinar
Format	Interview / General Discussion
# of Participants	9
Strategies and Actions Discussed	1.0 RETHINK 1.1. Advocate for circular economy policies 1.2. Support the transition to a more circular regional economy through waste prevention 1.3. Build on and foster an inclusive and collaborative circular economy 1.4. Collect and enhance data to track progress toward a circular economy 2.0 REDUCE 2.1. Collaborate with businesses and institutions to reduce waste at the source 2.2. Support residents adopting waste prevention habits 2.3. Prioritize food waste reduction initiatives 2.4. Enhance approaches to Metro Vancouver's disposal ban 3.0 REUSE 3.1. Support consistent approaches to reuse 3.2. Increase reuse of used building materials 3.3. Foster the broad adoption of reuse, refill, and repair 3.4. Work with event organizers, businesses and institutions to increase reuse 3.5. Increase access to reuse, refill and repair

	3.6. Scale efforts to recover food 3.7. Encourage and celebrate residents and businesses that prioritize reuse and refill practices 4.0 RECYCLE 4.1. Promote design for recyclability and the use of recycled content in products and packaging 4.2. Enhance EPR programs 4.3. Encourage the development of new recycling infrastructure 4.4. Improve participation in green bin programs and alternatives for multi-family residents and businesses 4.5. Make recycling easier and more effective by reducing confusion and improving convenience 4.6. Target recycling education 4.7. Increase transparency of what happens to materials from recycling and green bin programs 4.8. Prevent litter and illegal dumping through public space recycling initiatives 5.0 RECOVER 5.1. Recover materials and energy from non-recyclable materials

Appendix A: Working Group Meeting Feedback Individuals

Metro Vancouver Solid Waste Management Working Group Meeting Feedback

This summary includes feedback from 9 individuals following our regular working groups:

Sept 11 - Island, Rural & Remote Communities

Sept 16 - LFG Field & Flare Operators

Sept 17 - Landfill Operators Working Group

Sept 18 - Plastic Waste Reduction Working Group

A single discussion question was asked: ***In review of the Metro Van Options Analysis strategies, what are the positives and the critical feedback or gaps that need filling?***

This distills the most significant points of consensus and concern that emerged from the 9 people who gave feedback for refining the Solid Waste Management Plan.

Only handwritten notes were taken for each of these discussions.

POSITIVE STRENGTHS

Comprehensive Circular Economy Framework The plan follows a strong hierarchy (Rethink → Reduce → Reuse → Recycle → Recover) that aligns with best practices and prioritizes waste prevention over end-of-pipe solutions. This is exactly the right approach.

Strong Upstream Focus Strategies 1.0-3.0 emphasize prevention, reduction, and reuse—the most impactful interventions. This shows strategic thinking beyond just managing waste streams.

Multi-Stakeholder Approach The plan recognizes the need to engage businesses, residents, institutions, and event organizers across multiple strategies, which is essential for systemic change.

Infrastructure + Behaviour Change Good balance between physical infrastructure (recycling facilities, green bins) and education/behaviour change initiatives.

CRITICAL FEEDBACK & GAPS

1. Missing Enforcement & Accountability Mechanisms

- Where are the compliance measures, penalties, or regulatory teeth?
- How will you ensure businesses/residents participate?

- Strategy 4.8 mentions preventing illegal dumping, but what about enforcement for non-compliance with recycling requirements?

2. Vague Action

Many strategies are high-level aspirations without clear, measurable actions:

- "Foster an inclusive and collaborative circular economy" (1.3) - How exactly?
- "Enhance approaches to Metro Vancouver's disposal ban" (2.4) - What enhancements?
- "Encourage and celebrate" (3.7) - Nice, but what are the tangible mechanisms?

3. Limited Metrics & Targets

- How will success be measured for each strategy?
- What does "enhance" or "improve" mean in quantifiable terms?

4. Funding & Resources

- No mention of budget, funding sources, or resource allocation
- Who pays for infrastructure development (4.3)?
- How are education programs funded (4.6)?

5. Commercial Sector Underrepresented

- Commercial waste is a huge portion of the waste stream
- Limited specific strategies for the commercial/institutional sector

6. Food Waste Recovery Prioritization Unclear

- Strategy 3.6 "scale efforts to recover food" and 2.3 "prioritize food waste reduction initiatives" seem to overlap
- Is the focus on preventing food waste (higher priority) or recovering surplus food? Both are important, but require different approaches

7. Limited Innovation/Emerging Technologies

- No mention of AI/digital tools for sorting/education
- No mention of chemical recycling or advanced materials recovery

9. Regional Collaboration

- Strategy 1.2 mentions supporting "the transition to a more circular regional economy" but limited detail on how jurisdictions will work together or standardize approaches across the region

Engagement Activity Summary

Activity:	
Activity Date	October
Organization/group name	Coast Waste Management Association
Time/Duration	Oct 20, 2025 – October 29, 2025
Location	Questionnaire
Format	Focus Group Roundtable
# of Participants	18
Strategies and Actions Discussed	This followed the same detail and questions as provided in the Metro Vancouver Collaboration Template plus it included additional questions related to the respondent organizations.

Appendix B: Questionnaire Appendix Questionnaire Results / Google Forms Simple Output

Appendix C: Questionnaire Appendix Questionnaire Results / Data and Charts

metrovancouver
SERVICES AND SOLUTIONS FOR A LIVABLE REGION

CWMA MV Questionnaire Insights

SURVEY OVERVIEW

Total Responses: 18 participants **Survey Focus:** Waste reduction behaviours, recycling habits, and interest in circular economy programs

---

KEY FINDINGS

Demographics

Geographic Distribution:

- **Outside Metro Vancouver:** 13 respondents (72%)
- **Metro Vancouver (various cities):** 5 respondents (28%)
    - Vancouver, Coquitlam, North Vancouver, Langley

Housing Types:

- **Detached house/duplex/triplex:** 14 (78%)
- **Apartment/condo:** 3 (17%)
- **Townhouse/multi-unit:** 1 (5%)

Age Distribution:

- 25-34: 4 respondents
- 35-44: 7 respondents (highest)
- 45-54: 4 respondents
- 55-64: 3 respondents

Language: All respondents speak English at home

PURCHASING BEHAVIOUR

Top 3 Decision-Making Factors:

1. **Cost/Budget:** 14 mentions (78%)
2. **Quality/Durability:** 11 mentions (61%)

3. **Environmental/Ethical Impact:** 9 mentions (50%)
4. **Daily Use/Practicality:** 7 mentions (39%)
5. **Convenience:** 7 mentions (39%)

Other Notable Considerations:

- Sustainability and where it was made
- Joy it brings, locally made, materials
- Second-hand vs. new options
- Delivery/access logistics

LEARNING INTERESTS (Very Likely)

Highest Interest:

- **Choosing better quality items:** 12 "Very likely" (67%)
- **Using reusable items:** 11 "Very likely" (61%)
- **Buying fewer things/mindful buying:** 10 "Very likely" (56%)
- **Gifting experiences instead of items:** 10 "Very likely" (56%)

Moderate Interest:

- **Going to repair events:** 8 "Very likely" (44%)
- **Taking clothing for repair/learning repair:** 8 "Very likely" (44%)

CHALLENGING WASTE TYPES

Most Commonly Cited (in order):

1. **Plastic packaging (food wrappers, plastic wrap):** 16 mentions (89%)
2. **Old clothes or fabric:** 8 mentions (44%)
3. **Electronics (phones, chargers, batteries):** 7 mentions (39%)
4. **Packaging from cosmetics/toiletries:** 7 mentions (39%)
5. **Home renovation debris:** 4 mentions (22%)
6. **Coffee cups and takeaway containers:** 3 mentions (17%)
7. **Food waste:** 2 mentions (11%)

Organizations specifically mentioned challenges with:

- Plastic packaging/overwrap
- Takeout containers

- Electronic waste
- Construction & demolition waste
- PPP (printed paper & packaging) and DLC waste
- ICI (Industrial, Commercial, Institutional) lack of recycling access

---

PROGRAM INTEREST

Most Popular Waste Reduction Programs:

1. **Bulk stores or refill stations:** 15 mentions (83%)
2. **Recycling programs for packaging:** 9 mentions (50%)
3. **Community swap events/buy-nothing groups:** 7 mentions (39%)
4. **Cup/dishware sharing programs (reusable takeaway):** 7 mentions (39%)
5. **Clothing repair workshops:** 6 mentions (33%)
6. **Recycling programs for electronics:** 5 mentions (28%)
7. **Bulk buying groups:** 3 mentions (17%)

MOTIVATIONS FOR REUSE

Top Motivations (respondents could select 2):

1. **Environmental impact reduction:** 15 mentions (83%)
2. **Save money:** 12 mentions (67%)
3. **Reduce clutter:** 5 mentions (28%)
4. **Sentimental value:** 5 mentions (28%)
5. **Enjoy fixing/repurposing:** 4 mentions (22%)
6. **Inspired by local success stories:** 1 mention

Additional motivations mentioned:

- Don't like wasting perfectly good items
- Love for the item
- Sense of satisfaction from extending product life

SHARING LIBRARY INTEREST

Most Desired Items to Borrow:

1. **Tools:** 13 mentions (72%)

2. **Games and puzzles:** 9 mentions (50%)
3. **Books and multimedia:** 7 mentions (39%)
4. **Small kitchen appliances:** 5 mentions (28%)
5. **Sewing machines:** 5 mentions (28%)
6. **Electronics (tablets/laptops):** 3 mentions (17%)
7. **Electric bikes or scooters:** 3 mentions (17%)
8. **Gear for camping/outdoor activities:** 1 mention
9. **Clothes:** 1 mention

One respondent selected "None of the above"

RECYCLING BARRIERS & SOLUTIONS

What Would Make Recycling Easier? (Top 3 selections)

Most Requested:

1. **Clear instructions on what can be recycled and how:** 8 mentions (44%)
2. **More types of materials accepted in residential pick-up:** 10 mentions (56%)
3. **Tips on preparing recyclables (labels, cleaning, etc.):** 6 mentions (33%)
4. **More drop-off locations:** 6 mentions (33%)
5. **More recycling bins in public spaces:** 6 mentions (33%)
6. **Knowing what happens to recycled items:** 6 mentions (33%)

Additional Comments:

- "Education, education, education. Rules change constantly about what is accepted; it's frustrating to try and keep up. And everyone has different rules."
- Need for companies willing to collect materials
- Mandated recyclable packaging requirements
- More bins that keep materials separate by type

Organization-Specific Needs:

- **ICI (Industrial/Commercial/Institutional) recycling access:** Multiple mentions of lack of commercial recycling options, especially for PPP (printed paper & packaging)
- "Without ICI PPP recycling, our organization has no ability to legally recycle unless we bring material home"
- "Having ICI recycling be the same as it is for residential"
- Education about what's recyclable and where
- Expanded regulations on mandatory recycling for healthcare facilities

REPAIR & REUSE BARRIERS

For Individuals:

- If they knew how to repair certain things
- Repair cafes would help
- Need experts to help with repairs

For Organizations:

- Convenient pick-up and drop-off with backup during repair
- "At work it's all about saving time and money, you need to justify the cost/savings ratio"
- Organizational policies
- Having the money to run repair programs
- Large appliance reuse programs
- Visibly implementing repair/reuse in workplace (office furniture, equipment) would influence home behaviour

---

PREFERRED COMMUNICATION CHANNELS

Most Popular (select all that apply):

1. **Social media:** 11 mentions (61%)
2. **Email updates/newsletters:** 8 mentions (44%)
3. **Posters/signs in public spaces:** 9 mentions (50%)
4. **Short online learning sessions/videos:** 6 mentions (33%)
5. **In-person information sessions:** 6 mentions (33%)
6. **Mail/brochures:** 3 mentions (17%)
7. **Radio/streaming ads:** 1 mention

MULTI-FAMILY HOUSING INSIGHTS

Only 3 respondents live in apartments/condos

Food Waste Recycling in Buildings - Suggestions:

- "Waste audits - many people still do not sort"
- "More containers"

- "At this stage our compost container is sufficient"

General Multi-Family Feedback:

- Need clean areas for organics collection (no vectors, no slippery/sticky surfaces)

KEY THEMES & INSIGHTS

Strong Environmental Consciousness

- 83% motivated by environmental impact
- High interest in reusable items, quality products, mindful buying
- Preference for second-hand items

Plastic Packaging is the #1 Challenge

- Nearly 90% struggle with plastic packaging
- Strong interest in bulk/refill stations (83%)
- Desire for reduced packaging at source

Confusion About Recycling Rules

- Repeated requests for clear instructions
- Frustration with constantly changing rules
- Different rules across jurisdictions
- Need to know what happens to recycled materials

Commercial/Organizational Barriers

- Lack of ICI recycling infrastructure
- Commercial recycling not equal to residential
- Cost/time justification needed for organizations
- Policy barriers

Tools & Equipment Sharing Has Strong Appeal

- 72% interested in borrowing tools
- Cost savings is major driver
- Interest spans across age groups

Repair Interest Exists But Needs Support

- Interest in learning repair

- Need for repair cafes and expert help
- Workplace modeling could influence home behaviour

RECOMMENDATIONS BASED ON DATA

1. **Address plastic packaging through:**
    - Expand bulk/refill station programs (high demand)
    - Advocate for source reduction/packaging regulations
2. **Improve recycling clarity:**
    - Standardize rules across jurisdictions
    - Create simple, consistent educational materials
    - Show transparency (where materials go)
3. **Bridge ICI recycling gap:**
    - Expand commercial recycling access
    - Align ICI with residential standards
4. **Leverage high interest in tool sharing:**
    - Pilot tool library programs
    - Focus on most-requested items
5. **Build repair culture:**
    - Support repair cafes
    - Provide accessible repair education
    - Model repair in workplace settings
6. **Use multi-channel communication:**
    - Prioritize social media and email
    - Maintain public signage
    - Offer short online content

Organizational Questions Analysis – CWMA Additional Questions

ORGANIZATIONAL WASTE CHALLENGES

Top Types of Waste Organizations Find Challenging to Avoid:

Most Frequently Mentioned:

1. **Plastic packaging and overwrap** (2 mentions)
2. **Packaging** (general) (2 mentions)

Single Mentions:

- Plastic packaging and overwrap, cleaning products (hazardous)
- Takeout containers
- Electronic waste, construction and demolition waste
- PPP (Printed Paper & Packaging) and DLC waste
- Paper towel & Recycle BC materials (Styrofoam, flexible plastics) - specifically noted as an ICI location
- Small propane bottles
- Electronics
- No challenges

Key Theme: Plastic packaging dominates organizational waste challenges, just as it does for individuals.

WHAT COULD HELP ORGANIZATIONS CONSIDER REPAIR/REUSE MORE OFTEN?

Barriers Identified:

1. **Convenience & Logistics:**
    - "Convenient pick and drop off and a way to have a backup while the repair was being done"
2. **Financial Justification:**
    - "At work it is all about saving time and money; you need to justify the cost/savings ratio"
3. **Policy:**
    - "Organizational policy(ies)"
4. **Funding:**
    - "Having the money to run them" (repair programs)
5. **Infrastructure:**

- "Large appliance reuse programs"

6. **Cultural/Behavioural:**
   - "Visibly implementing repair and reuse at my workplace (i.e. of office furniture and equipment) would likely influence me and others to do more of it at home"

Key Insight: Organizations need clear ROI, convenient systems, supportive policies, and visible modelling to adopt repair/reuse practices.

WHAT WOULD MAKE IT EASIER TO RECYCLE MORE AT ORGANIZATIONS?

Responses:

1. **Service Provider Willingness:**
   - "Companies willing to collect materials"
   - "More convenient services"
2. **ICI Recycling Access (CRITICAL ISSUE - Multiple Mentions):**
   - "Being technically able to recycle. Without ICI PPP recycling, our organization has no ability to be able to legally recycle unless we bring our material home and place it with our household recyclables....which we do as we're small enough that this is not too much of a burden. No private recycling option where we are located that accepts PPP."
   - "Having ICI recycling be the same as it is for residential."
3. **Education:**
   - "Education about what is recyclable and where."
   - "Perhaps more bins that keep things separate by material type."
4. **Regulatory:**
   - "Expanded regulations on the mandatory recycling of uncontaminated materials generated by healthcare facilities."

KEY ORGANIZATIONAL INSIGHTS

1. ICI Recycling Gap is a Major Barrier

- **Industrial, Commercial, Institutional (ICI)** facilities face significant recycling barriers
- Small organizations resort to bringing materials home to recycle with residential programs
- PPP (Printed Paper & Packaging) not accepted in commercial settings
- **Critical quote:** Organizations literally cannot legally recycle certain materials at work

- Need for ICI recycling to match residential options

2. Organizations Lack Clear Guidance

From the priority action feedback document (referenced earlier), one participant emphasized:

- "Many businesses lack clear guidance on where to recycle materials such as cardboard, Styrofoam, and plastics"
- "Common misconception is that Recycle BC accepts commercial packaging, when in fact it does not"
- This contributes to confusion and frustration
- Businesses must independently fund recycling for these materials

3. Cost/Time Justification Required

- Organizations need to prove ROI for any waste reduction/repair initiative
- Unlike households, emotional/environmental motivations alone won't drive organizational change
- Need financial case studies and efficiency data

4. Service Provider Gap

- Organizations need companies willing to collect materials
- Convenient services are essential (can't burden staff with drop-offs)
- Current private sector options inadequate or non-existent

5. Policy & Regulatory Levers

- Organizational policies can enable or block repair/reuse
- Expanded regulations needed (especially for healthcare, other sectors)
- Mandatory recycling requirements could drive change

6. Healthcare Sector Specific

- One respondent specifically mentioned need for "expanded regulations on the mandatory recycling of uncontaminated materials generated by healthcare facilities"
- Suggests untapped opportunity in medical waste management

ORGANIZATIONAL WASTE PROFILE

Types of Organizations Represented (inferred from responses):

- Small businesses/offices
- ICI facilities
- Healthcare facilities
- Organizations dealing with food service
- Construction-related operations
- General commercial offices

Size: At least one mentions being "small enough" to bring recyclables home, suggesting micro/small business representation

---

RECOMMENDATIONS FOR ORGANIZATIONAL WASTE REDUCTION

Immediate Priorities:

1. **Address ICI Recycling Infrastructure Gap**
    - Extend Recycle BC or equivalent to commercial packaging
    - Create affordable private sector collection options
    - Standardize ICI recycling with residential programs
2. **Provide Clear Business Guidance**
    - What can/cannot be recycled in commercial settings
    - Where to access services
    - Clear distinction between residential and ICI options
    - Myth-busting (e.g., Recycle BC does NOT accept commercial packaging)
3. **Develop Cost/Benefit Tools**
    - ROI calculators for waste reduction programs
    - Time savings documentation
    - Case studies showing financial benefits
4. **Expand Service Provider Network**
    - Incentivize companies to collect materials from businesses
    - Make services convenient (on-site pickup)
    - Ensure affordable options for small businesses
5. **Policy & Regulatory Action**
    - Mandate organizational recycling programs
    - Healthcare facility regulations
    - EPR expansion to commercial packaging
6. **Model Repair/Reuse in Workplaces**
    - Demonstrate with office furniture/equipment
    - Create visible examples that influence home behaviour
    - Share success stories

BOTTOM LINE FOR ORGANIZATIONS

The data reveal a need for improvement in ICI waste infrastructure:

- Organizations want to recycle, but literally cannot access services
- Confusion about what's available commercially vs. residentially
- Financial barriers and a lack of convenient options
- Policy gaps preventing progress
- Small businesses are particularly underserved

This represents a significant opportunity for Metro Vancouver to:

- Expand infrastructure
- Clarify guidance
- Advocate for EPR expansion to the commercial sector
- Create supportive policies

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary:

Activity:	
Activity Date	• Thurs, Oct 16
Organization/group name	• Food Stash Foundation
Time/Duration	• 3 pm-4:30 pm; 5:15pm-6:45pm
Location	• 290 E 1st Avenue, Vancouver, BC
Format	• In-person facilitated survey
# of Participants	• 15-20
Strategies and Actions Discussed	• Participants completed the Metro Van survey, with the opportunity to share their thoughts on what would make waste reduction more accessible/easier in their neighbourhoods

Appendix

Please see the links in the body of the email for appendices:

- **Raw data/notes from engagement activities** (i.e. survey data)
- **Engagement survey data**, in editable form (spreadsheet)

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary:

Activity:	
Activity Date	• Thurs, Oct 23 - Wed, Oct 29
Organization/group name	• Food Stash Foundation
Time/Duration	• 3 pm-4:30 pm; 5:15pm-6:45pm
Location	• 290 E 1st Avenue, Vancouver, BC
Format	• In-person facilitated survey (virtual option given to complete at home instead)
# of Participants	• 50
Strategies and Actions Discussed	• Participants completed the Metro Van survey, with the opportunity to share their thoughts on what would make waste reduction more accessible/easier in their neighbourhoods. Option was offered to complete survey in-person or at-home later, using QR code shared in-person.

Appendix

Please see the links in the body of the email for appendices:

- Raw data/notes from engagement activities (i.e. survey data)
- Engagement survey data, in editable form (spreadsheet)

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary:

Activity:	
Activity Date	• Oct 17-27
Organization/group name	• Food Stash Foundation
Time/Duration	• Virtual
Location	• Virtual
Format	• Virtual Google Form survey, completed anonymously
# of Participants	• 50
Strategies and Actions Discussed	• Participants completed the Metro Van survey virtually from home, with the opportunity to share their thoughts on what would make waste reduction more accessible/easier in their neighbourhoods.

Appendix

Please see the links in the body of the email for appendices:

- Raw data/notes from engagement activities (i.e. survey data)
- Engagement survey data, in editable form (spreadsheet)

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary:

Activity:	
Activity Date	• Oct 24-29
Organization/group name	• Food Stash Foundation
Time/Duration	• Virtual
Location	• Virtual
Format	• Virtual Google Form survey, completed anonymously
# of Participants	• 20
Strategies and Actions Discussed	• Participants completed the Metro Van survey virtually from home, with the opportunity to share their thoughts on what would make waste reduction more accessible/easier in their neighbourhoods.

Appendix

Please see the links in the body of the email for appendices:

- Raw data/notes from engagement activities (i.e. survey data)
- Engagement survey data, in editable form (spreadsheet)

Post-Engagement Report

Activity:	
Activity Date	October 29th 2025
Organization/group name	Enviro Club
Time/Duration	11:40am-12:15pm
Location	Templeton Secondary School
Format	Focus group/workshop
# of Participants	21
Strategies and Actions Discussed	Strategy 3.5 Actions: 058, 059, 086, 166, 061

Personal Reflections and "What I heard":

- Large and very engaged group. Lots of great ideas and passion about improving our regional waste management. Would have been great to be able to chat with them a little longer.
- Groups like this could be a great resource because they have connections within the school and they are already stewarding these kinds of initiatives. From what I heard from them, it sounds like they need background support from Metro Vancouver. For example, they have a program to collect soft plastics from students, but it would be helpful if the students had support in driving the collection of soft plastics to the depot. This could be a role for Metro Vancouver.
- In general, youth viewed these actions as quite easy. Metro Vancouver could support the youth by offering repair/reuse/education events where they youth are located (school for example), providing transportation to and from events and recycling facilities, and making sure to do a lot of advertising so that as many people as possible can know about the events and opportunities/actions.

Enviro Club	**Questions asked by participants:**	**Feedback heard:**
Strategy Number: 3.5 **Action** ID058		
What should Metro Van consider to support your participation?		• Dad in Buy Nothing group, post it to facebook and someone picks it up, seems easy • Buy nothing connects community • Shared fridge more difficult or uncomfortable, stewarding fridge could be hard. Who takes care of it? Food waste • Metro van could create a low barrier job for someone to steward the fridge • Buy nothing transportation, how could I do that? Metro Van to coordinate pick ups • Medium issue, buy nothing means people giving up their items but with this economy people are more likely to want to sell it • This requires a culture shift for folks to understand the mutual and collective benefit, rather than just trying to make a buck • Make buy nothing groups neighbourhood based, Implement more of them in smaller areas. Thinking about 15 minute cities, set up this kind of infrastructure
How much of a priority is this to you?		12 high priority 6 medium priority
Is there anything else you'd like to add to the conversation on this action?		

Enviro Club	**Questions asked by participants:**	**Feedback heard:**
Strategy Number: 3.5 **Action** ID059		
What should Metro Van consider to support your participation?		• This is easy because we are already at school, accessible • At school we have run some recycling initaitves. Implementing them has been easy, sustaining them is difficult. • Perhaps Metro Van could fill the gaps regarding sustaining the initiatives. Metro Van can come and pick up the recycling after we have collected it to deliver it to the depot • Metro Van can provide background support • Metro Van can provide a knowledge and education campaign, explain importance • Consistency is important. Don't just do one offs, do this year round for schools
How much of a priority is this to you?		9 medium priority 4 high priority
Is there anything else you'd like to add to the conversation on this action?		
Enviro Club	**Questions asked by participants:**	**Feedback heard:**
Strategy Number: 3.5 **Action** ID161		Most students reflected this would be easy
What should Metro Van consider to support your participation?		RAN OUT OF TIME TO DISCUSS THIS ACTION FULLY

How much of a priority is this to you?		11 medium priority 1 high priority
Is there anything else you'd like to add to the conversation on this action?		
Enviro Club	**Questions asked by participants:**	**Feedback heard**:
Strategy Number: 3.5 **Action** ID086		Most students reflected this would be easy because its happening in your home so its very accessible
What should Metro Van consider to support your participation?		• Difficult because it needs a facilitator. Perhaps this could be another low barrier job creation? Metro Van to provide facilitator. • Book libraries are used all the time and people take care of it themselves, they build community • Easy because most families have a surplus of these things • Eg. Co-op rec room, converted into a "free store" • Metro Van could step into the gap by collecting items that get left behind and no one wants
How much of a priority is this to you?		14 high priority
Is there anything else you'd like to add to the conversation on this action?		

Enviro Club	**Questions asked by participants:**	**Feedback heard**:
Strategy Number: 3.5 **Action** ID166	How can we hear about these events?	Most students reflected this would be easy but also none of the students had attended one before
What should Metro Van consider to support your participation?		• Host them at schools • Often and consistent • Launch a good campaign to raise awareness • More ads • Online and billboards, rent billboards • Buses and bus stops • Stop lights where bikes are waiting • Offer rides from central locations • Host them outside of school and work hours
How much of a priority is this to you?		10 high priority 4 medium priority
Is there anything else you'd like to add to the conversation on this action?		

Post-Engagement Report

Activity:	
Activity Date	October 21st 2025
Organization/group name	Earthworks Environmental Club
Time/Duration	11:15am-12:00pm
Location	Semiahmoo Secondary School
Format	Focus group/workshop
# of Participants	7
Strategies and Actions Discussed	Strategy 3.5 Actions: 058, 059, 086, 166, 061, 060

Personal Reflections and "What I Heard":

- Small group, teacher reflected that there are almost 80 clubs at Semiahmoo this year, so the clubs are smaller than usual
- Because this was a school club engagement session was broken up into 2 sessions. First session was online to introduce the material. Second session was in person for 30 minutes to carry out the engagement on actions. As a reflection I wish I had only done half the number of actions because we did not have enough time to unpack with as much depth as I would have liked.
- Further, I chose different strategies and actions for the 2 different groups at Semiahmoo, to engage on as much actions as possible. As a reflection, I would have stuck to the same strategy for both groups so that I could have used the second group to build off some of the first group's ideas. The idea being that I could have gotten more quality engagement on less actions. Instead, I feel I got less engagement on more actions. I'm not sure is Metro Vancouver would have a preference on this.

Earthworks Sheet 2	Questions asked by participants:	Feedback heard:
Strategy Number:3.5 **Action** ID058 If included, would you participate? If difficult, what would make it easier?	What is a Buy Nothing group?	
What should Metro Van consider to support your participation?		• Make it free • Worried about cost • Make sure fridge is monitored and the food is safe to eat • Make sure who needs access the most gets access • Promote it online • Monitoring ensures people that need it can get it • Put it in a location that people often go • Try to encourage people to reuse, consumption is too pushy
How much of a priority is this to you?		• 4 low priority • 1 medium priority
Is there anything else you'd like to add to the conversation on this action?		• 2 categories of new buyers, 1 wants new objects, 1 wants convenience, need to make it extremely convenient to buy used
Earthworks Sheet 2	**Questions asked by participants:**	**Feedback heard:**
Strategy Number:3.5		

Action ID059 If included, would you participate? If difficult, what would make it easier?		
What should Metro Van consider to support your participation?		• Need to provide education around REUSE and why its important, show examples of how to reuse materials • In school teachers can think of projects using reuse items
How much of a priority is this to you?		• 4 high priority • 2 medium priority
Is there anything else you'd like to add to the conversation on this action?		• Reusing helps foster creativity • For clothing drive we had low participation, how can we increase it? • Spread awareness/education and make announcements
Earthworks Sheet 6	**Questions asked by participants:**	**Feedback heard**:
Strategy Number:3.5 **Action** ID060 If included, would you participate? If difficult, what would make it easier?		
What should Metro Van consider to support your participation?		• Not as relevant to youth

		• Could have indirect impact but not sure exactly how
How much of a priority is this to you?		• 4 low priority • 1 medium priority
Is there anything else you'd like to add to the conversation on this action?		•
Earthworks Sheet 5	**Questions asked by participants:**	**Feedback heard:**
Strategy Number:3.5 **Action** ID061 If included, would you participate? If difficult, what would make it easier?	How would the network connect the reuse/repair initiatives? What is the purpose of having a network?	
What should Metro Van consider to support your participation?		• Want more bike repair initiatives • Sewing/clothing repair important • Network needs to be well promoted so people can be aware of it • Would be good to have opportunities for intergenerational learning at repair initiatives
How much of a priority is this to you?		• 2 high priority
Is there anything else you'd like to add to the		•

conversation on this action?		
Earthworks Sheet 3	**Questions asked by participants:**	**Feedback heard:**
Strategy Number:3.5 **Action** ID096 If included, would you participate? If difficult, what would make it easier?		
What should Metro Van consider to support your participation?		• Need to find a way to encourage people to participate in this • Donation collection to come to the building for pick up often and during non-working hours • Offer service to clean the clothing • Needs to be well managed, consistent and organized • Concern expressed about how much time this action would take
How much of a priority is this to you?		• 2 high priority • 4 medium priority
Is there anything else you'd like to add to the conversation on this action?		•
Earthworks Sheet 4	**Questions asked by participants:**	**Feedback heard:**
Strategy Number:3.5 **Action** ID166		

If included, would you participate? If difficult, what would make it easier?		
What should Metro Van consider to support your participation?		• Have food • Have honorarium • If my friends went, I would go • Can't be far away, can't commute far • Has to be dispersed across the region but also in many locations • Have events at same time and same place, consistency • Support transportation for youth to come • Facilitate pick up so students cant transit without bringing their items for repair (for example: bicycles)
How much of a priority is this to you?		• 4 high priority
Is there anything else you'd like to add to the conversation on this action?		•

Post-Engagement Report

Activity:	
Activity Date	October 21st 2025
Organization/group name	Environmental Science 11/12
Time/Duration	12:00-1:20pm
Location	Semiahmoo Secondary School
Format	Focus group/workshop
# of Participants	23
Strategies and Actions Discussed	Strategy 4.5 + 4.7 Actions: 131, 132, 133, 142, 157, 159

- Action ID133 was rated highest priority, Action ID159 was rated lowest priority
- Youth thought that any actions that required having a cellphone were NOT a barrier because most youth have access to a cellphone
- In general, centralizing recycling facilities and resources was a priority for the youth
- Youth felt strongly about education and awareness campaigns, that more folks would recycle if they understood the impacts
- Youth suggested that these actions could and should be incorporated into the school system
- Youth thought more than just learning about what happens to recycled materials, it would be valuable if they got some hands-on experience of recycling the materials
- Quiet group, teacher suggested grade 8/9s as more talkative and willing to engage

Environmental Sheet 3	Questions asked by participants:	Feedback heard:
Strategy Number: 4.5 **Action** ID133 If included, would you participate? If difficult, what would make it easier?		Majority of class thought this would be easy
What should Metro Van consider to support your participation?		• Trash bins need to have simple graphics on them • Products should have color coding on them so we know where they go • Need to have pictures to know where to put the trash • If we get used to having the pictures, and then some bins don't have pictures, we would feel lost
How much of a priority is this to you?		• 17 high priority • 3 medium priority
Is there anything else you'd like to add to the conversation on this action?		•

Environmental Sheet 1	Questions asked by participants:	Feedback heard:
Strategy Number: 4.5 **Action** ID131 If included, would you participate? If difficult, what would make it easier?	Is there a public available domain that we can look at to check out the status of the actions?	Majority of class thought this would be easy to participate in

What should Metro Van consider to support your participation?		• Put lots of donation boxes that are easy to access and open 24/7 • Come and pick up the textile donation • Combine recycling bin to include other items that now we have to recycle separately • Consistent collection times
How much of a priority is this to you?		• 15 medium priority • 5 high priority
Is there anything else you'd like to add to the conversation on this action?		• In a later action, it was suggested that the public should have an opportunity to engage in the recycling practice. So if folks could see and experience how textiles are recycled and what they can turn into, that would be interesting and perhaps motivating willingness to donate

Environmental Sheet 2	Questions asked by participants:	Feedback heard:
Strategy Number: 4.5 **Action** ID132 If included, would you participate? If difficult, what would make it easier?	Reward sounds very vague. What kind of reward? Souvenir or cash?	Majority of class thought this would be easy to participate in especially if they got a reward

What should Metro Van consider to support your participation?		• Cash reward would be great • Thinking about the bottle depot, can we have a clothes depot? Bring clothes and get money? • Provide students with volunteer hours for their university applications • Give tim hortons gift card as reward • A reward sounds very vague, is it a souvenir or cash?
How much of a priority is this to you?		• 9 medium priority • 2 high priority • 2 low priority
Is there anything else you'd like to add to the conversation on this action?		•

Environmental Sheet 4	Questions asked by participants:	Feedback heard:
Strategy Number: 4.5 **Action** ID142 If included, would you participate? If difficult, what would make it easier?	Questions about whether this action is referencing Artificial Intelligence tools. Would this digital tool be in the form of an app on our phone? Or would it be a digital stationary tool that we could visit... Will this be like the scanners at Walmart that tell you where the item is in the store?	Majority of class thought this would be easy

	If this is AI what will happen with our data?	
What should Metro Van consider to support your participation?		• Concern about if this action requires a cell phone for use • Comment that 99.9% of youth have cellphone or access to device, so not a barrier • Need to keep other options and not just rely on digital tool • Lots of young people are against Artificial Intelligence
How much of a priority is this to you?		• 13 medium priority • 1 low priority
Is there anything else you'd like to add to the conversation on this action?		• We need to have all of the recycling facilities in the same place
Environmental Sheet 5	**Questions asked by participants:**	**Feedback heard**:
Strategy Number: 4.7 **Action** ID157 If included, would you participate? If difficult, what would make it easier?		Some students said that this depends on how close the tours are, some said this would be difficult, some said they wouldn't want to
What should Metro Van consider to support your participation?		• Not much interest about this action • Mandated by school otherwise students wouldn't go • Need something to entice people, they might like it more than they think

		• Have events at the recycling facilities, like art activities or cooking events • Go to learn, have trivia or competitions at the end of the tour to get a prize • Need activities during tour to engage people, e.g allow people to participate in action of material recovery, show how reproduction looks • Give university activity marks
How much of a priority is this to you?		• 8 medium priority • 5 low priority • 1 high priority
Is there anything else you'd like to add to the conversation on this action?		•
Environmental Sheet 6	**Questions asked by participants:**	**Feedback heard:**
Strategy Number: 4.7 **Action** ID159 If included, would you participate? If difficult, what would make it easier?		Most students identified this action as easy, but quite a few said they would not be interested
What should Metro Van consider to support your participation?		• This action should be combined with action 159, seems like the same thing • People don't know about the reuse/recycling resources that are available. Facebook marketplace has

		more impact because it is more popular, metro van should build off the popularity of the systems that already work well
How much of a priority is this to you?		• 18 low priority
Is there anything else you'd like to add to the conversation on this action?		•

Session 1: Post-Engagement Activity Summary

Activity: 廢物事大 **Waste Talk**
Activity Date: October 11, 2025
Organization/group: HK House
Time/Duration: 11:00am - 12:30pm (1.5 hours)
Location: Virtual
Format: workshop/ focus group
# of Participants: 18

Strategies and Actions Discussed

We were only able to cover Strategy 4.5 during our discussions. However, all participants were exposed to Strategies 4.5, 4.6, 4.7, and 4.4, and some shared additional comments on the ones we didn't have time to discuss in our shared document after the session.

- **Strategy 4.5:** Make recycling easier and more effective by reducing confusion and improving convenience
    - Actions include ID131, ID132, ID133, ID134, ID135, ID140, and ID142
- **Strategy 4.6:** Target recycling education
    - Actions include ID144, ID103, ID145, ID146, ID147, ID148, ID150, ID151, and ID152
- **Strategy 4.7:** Increase transparency of what happens to materials from recycling and green bin
    - Actions include ID157 and ID159
- **Strategy 4.4:** Improve participation in green bin programs and alternatives for multi-family residents and businesses
    - Actions include ID125, ID127, and ID129

Session 2: Post-Engagement Activity Summary

Activity: 廢物事大 **Waste Talk**
Activity Date: October 13, 2025
Organization/group: HK House
Time/Duration: 7:00pm - 8:30pm (1.5 hours)
Location: Virtual
Format: workshop/ focus group
# of Participants: 19

Strategies and Actions Discussed

We were only able to cover the below IDs from Strategy 2.2, 3.3 and a few IDs from 3.5 during our discussions. However, all participants were exposed to the strategies below and some shared additional comments on the ones we didn't have time to discuss in our shared document after the session.

- **Strategy 2.2:** Support residents adopting waste prevention habits
  - Actions include ID104 and ID081
- **Strategy 3.3:** Foster the broad adoption of reuse, refill, and repair
  - Actions include ID047, ID083, and ID164
- **Strategy 3.5:** Increase access to reuse, refill, and repair
  - Actions include ID058, ID059, ID060, ID061, ID086, and ID166
- **Strategy 3.7:** Encourage and celebrate residents and businesses that prioritize reuse and refill practices
  - Actions include ID076, ID077, ID078, and ID089

Session 3: Post-Engagement Activity Summary

Activity: 廢物事大 Waste Talk (community leaders and organizers session)
Activity Date: October 13, 2025
Organization/group: HK House
Time/Duration: 9:00pm - 10:30pm (1.5 hours)
Location: Virtual
Format: workshop/ focus group
# of Participants: 9

Strategies and Actions Discussed

We were able to cover the below IDs from Strategy 1.2, 2.3, 3.4 and 4.1 during our discussions, except we didn't get to finish ID165. All participants were exposed to the strategies below and some shared additional comments on the ones we didn't have time to discuss in our shared document after the session.

- **Strategy 1.2:** Support the transition to a more circular regional economy through waste prevention
    - Actions include ID041 and ID079
- **Strategy 2.3:** Prioritize food waste reduction initiatives
    - Actions include ID072
- **Strategy 3.4:** Work with event organizers, businesses, and institutions to increase reuse
    - Actions include ID050, ID053, ID054, ID055, ID056, and ID165
- **Strategy 4.1:** Promote design for recyclability and the use of recycled content in products and packaging
    - Actions include ID112

廢物事大: 第一場
Waste Talk: Session 1

Strategies: Recycle
策略：回收

Strategy 4.5. Make recycling easier and more effective by reducing confusion and improving convenience 策略 4.5 透過減少混淆及提升便利性，令回收更容易、更有效	
Action ID131: Improve access to textile donation and recycling collection services. 行動 ID131：改善紡織品捐贈及回收服務的可及性。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ • Special garments - e.g. women's underwear, only a few lingerie shops will recycle it • Depending on the location of the collection boxes. Should collaborate with grocery stores to set up collection points • It depends on what types of textile are allowed and not allowed, for example underwear or something really personal may not be acceptable. • Depending on if the location has enough recycle boxes and if it is easy to access/identify or not. • Depending on location - if its easy to access, its easy for me to participate and I see attractive as buying clothes these days are expensive. • Easy to donate if things don't have tears to the thrift shop, it's good to have a place to donate them. Anyb we donate any type of textile. • Textile recycling bins near the fire station which is accessible • Tried taking old clothing back to value village but not all value village will take them - so this will help improve access - need more access points If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ • need more access points / near public transit • Include more collection boxes at locations that are easy access such as skytrain or bus station, residential areas and inside malls. • Collection box location should be more accessible e.g. close to skytrain What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ • It would be helpful to know what is happening to what I've donated, I've seen people directly dump stuff at those places. Then we will know if it's better to sell or donate - if we know how it's being treated. Talking us what will happen afterwards will be a good idea.

	● ● More the thrift shop or textile recycling bins in community/ retailer, that it's convenient to donate them ● To make sure residents / office workers in an area to know this action is now happening - e.g. my current recycle knowledge actually came from my last landlord - she taught me the need + how to recycle - I have not came across some more official education on this, as an immigrant - not someone who studied here. ● Make sure to have someone to follow up with the collected textile such as having a specific department to collect the textile week/bi-weekly (so that to make sure the textile is actually recycled instead of leaving them in the box). ● Need to know if synthetics or others can be recycled - need instructions on what is recyclable - for textiles! ● There are numbers for plastics - but for textiles are there labels, is this going to be a difficult part for the person donating, or is sorting done after? **How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?** **你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？** ● High 重要: 10 votes ● Medium 一般: 3 votes ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？ ● One of the reasons that this action is important is because textile/clothing is one of the major consumption in our daily lives, so it would be better to have a more proper way to recycle.
Action ID132: Recognize and reward those who recycle well so others are inspired to follow their example. 行動 ID132：表揚和獎勵做得好的回收者，以鼓勵其他人效法。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● Maybe somewhat difficult - dont think i would like to spend time in tracking my recycling work ● 唔覺得應該獎勵，呢個係公民責任，hard to monitor and provide incentive, better to educate ● I like the point reward system in HK. You earn points based on the weight of your recycled items. The points can exchange to some modest reward e.g. recycled paper towel ● If we have a reward system, it's a lot of resources being spent on these resources and it's not needed, it's our responsibility. ● Easier to incentivize those who don't usually recycle, for those who do, these don't really matter. Policy usually needs to reward or punish. ● 以前香港都有綠在區區回收計畫，獎勵唔一定要畀錢，但係啲小獎勵會motivate到人回收 ● the recycle depot is daunting to go

If difficult, what would make your participation easier?
如果覺得困難，有乜嘢可以令你參與得更加容易？

- The location of recycling point is essential
- If there are more facilities near me it'll be much easier, not everyone is able to drive.
- Maybe to make the "reward" more attractive? - I am not attracted by bringing a full pack of textile and get back a few cents.
- To include tech to the recycling box - e.g. every one scan your QR code to the recycling box and then the box could e.g. weigh the weight textile and automatically add points to your account - so the people do not need to track their effort manually
- Burnaby's sites - even though you can go and get money back, the site you have to deliberately drive to and is not very hygienic, everytime I go I have to "be brave" and it takes effort
- Recycling facilities need to be accessible, and hygenic
- I think it would be better to have a standard to determine or define what does "recycling well" mean
- Vending machines for recycling (to collect plastic bottles) in HK, much easier, don't have to involve manual power and effort.
- People bring bottle recycling because there's a deposit. But for clothing/products can there be an amount up front also so they can bring it back for an incentive too? So these can be recycled and made into new clothing/ products/ beauty care etc.

What should Metro Vancouver consider to support your participation with this action?
大溫地區應該考慮啲乜嘢去支援你參與呢項行動？

- Motivate citizens to participate
- More education
- More community discussion - like this one
- Incentives for companies to provide education/ sites to be open for recycling (lower rents?etc.)
- More promotion (poster/ advertisements)
- More dissemination, for example, TV ad., Social media , leaflets to every mailbox. Let's more people know new actions
- 啲回收點可唔可以收晒所有嘅回收物，咁去一個地方可以recycle 晒所有嘢？
- Encourage companies to use sustainable materials.
- Shouldn't corporations 出多少少力
- Need catalogue and understanding of what can be recycled for children/ elderly etc.
- People don't know where to go and there's not a lot of knowledge about where they can go to recycle

How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?
你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？

- High 重要: 1, 1, 1, 1,1, 1, 1
- Medium 一般: 1, 1, 1
- Low 唔太重要: 1, 1, 1

	Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？ In HK it's very convenient, and it still takes a lot of education resources, incentive and promotion and it just increased by a small margin. It might be a longer term change that can't be measured immediately.
Action ID133: Explore the development of a signage standard and customizable tool to help reduce confusion about what goes in each bin, based on the most common items collected. 行動 ID133：針對最常見回收物去研究制定標準化的標誌及可自訂的工具，從而幫助減少對「垃圾桶應該放咩」嘅困惑。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● I think it will help, but not much, because there are still quite a lot of items that are hard to categorize e.g. contact lens? Paper straw? ● ● Easy - as its effort from the government side, not from the people ● hard to make all cities to adopt standardized approach, Lots of red tape ● easier to standarize ● There should be a clear signage standard so it is easily understood. ● I think is easy to let people know If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● I saw a documentary on tv - the recycling plant was able to sort through all the recyclables from the non-recyclables . That would make the consumer part of thing easier ● fIt seems like recycling needs to be sorted in very specific areas, but 係咪有signage 就可以容易分到呢？ ● Gov can consider developer mobile app with AI to take photo images and tell you if item is recyclable r not ● 如果個system 可以好容易咁colour coded, 一開始可能係難，但係如果熟咗可以好容易一睇到colour就分到 ● 在香港熟知口訣「藍紙黃罐啡膠樽」，但溫哥華公眾地方回收箱與屋苑/屋企回收箱並不是同對應顏色 ● It would be better to also list the things that cannot be put in each bin. (e.g. attached image to each type of recycle bin that crossed out things that cannot be recycle) What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● I've seen students stand in front of the bins to look and understand what should go where. But even if they stood for a while they are unable to know where their waste should go and it ends up in the garbage ● As a consumer, we only care about what we should do… we don't really care whether it is the city or metro Vancouver doing it. We just want clear communication on what they want us residents to do ● ●

	How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要: 1 111,11, 1, 1, 1, 1,1 ● Medium 一般: ● Low 唔太重要:1 Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID134: Centralize information sources to make it consistent and easier for the public to find information and look for resources. 行動 ID134：集中資訊來源，確保一致，亦方便公眾尋找資料和資源。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● Yes this is a good action. Currently there is a Return-it app that I sometimes use to see whether something can be recycled. But sometimes it is not accurate - some private bodies actually help recycle some items that the city said cannot be recycled. ● Yes. It is the fundamental action to push the recycling rate. ● If there's a centralized app or website it will be much easier ○ And people need to know about it ● ● Yes. It would be way easier so that ppl will know where to access the most updated info. ● Difficult - just that even the info is centralized, it should be more publicized If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● Ads, spend some time on promotions and make it a big thing so people will know ● The school should pick up responsibilities so it's easier. ● 政府可以去學校open day度加booth, 大人可以從中學習到 (same for universities e.g open day) ● 考慮吓會唔會整啲歌詞或者容易記嘅嘢, colour code 加歌詞, education 會好啲 ● 可以教小朋友做屋企嘅recycle hero, taking responsibility to do all the recycling in their home ● 對小朋友 - circle time, 整啲歌或者 poster, 咁每日都會接觸到咁就有深刻印象 ● ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● Make the information accessible1

	● 考慮從學校教育入手, 當學生有足夠回收知識，可以教育上一代及下一代 ● More in person boothing in different fairs & festivals e.g. HK Fair, Taiwan fest etc. ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要:1,11,1, 1, 1, 1,1, 1 ● Medium 一般: 1, 1 ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID135: Provide clear, consistent guidelines on what can and cannot be recycled. 行動 ID135：提供清晰一致的指引，說明哪些物品可以回收，哪些不可以。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● Easy - as the recycle bins at my place now show mostly what could be recycled, but not what could not be recycled - and sometimes i feel confused ● 容易，更加確定可不可以回收，因並不一定所有物品都可以回收 ● Easy and very much needed! ● Ideally, if there is a machine that can scan the product, and the machine can tell us which bin it should go, that would be amazing! ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● 可唔可以喺package 度話畀你知係咪唔可以recycle， 或者喺落邊個bin - that would be super helpful +1+1 ● Not everyone can access technology (think QR code/ have a phone etc). Handwritten/ signs will be very important. ● Within school systems - educating younger students or adolescents to participant or promote healthy recycling habits - parents might not do it unless they see their kids do it. ● Children can teach parents ● Seniors - can do workshops for seniors to educate them ● Workshops can be for everyone ● Have image attached that is easy to understand ● Included different languages/translations (if that's possible) 1 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● 需要考慮所有供應商重新做新標誌，提供支助，鼓勵一同改變 ● ● ●

	● Provide financial support to schools or communities to organise any related workshops. How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要:1.1,1 ,1, 1, 1,1Ye ● Medium 一般: 1, 1, 1 ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID140: Support knowledge sharing of space and access requirements for multi-plex units (6 units or less). 行動 ID140：支援小型多戶住宅（6個單位或以下）在空間及通道要求上的知識分享。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● We can't even understand what this action means to comment on it ● Please avoid using jargon ● Are you talking about strata? If it's about strata, it's about clarity for tenants for resource management ● action ID140 what that means? ● ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● ● Please avoid using jargon ● ● ● ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● ● ● ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要: ● Medium 一般: ● Low 唔太重要: ● Unsure 唔知道: 1,1, 1

	Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID142: Facilitate development of digital tools that allow users to scan waste items and receive clear, multilingual instructions on options for reuse, repair, recycling, or disposal. 行動 ID142：協助開發數碼工具，讓用戶可以掃描廢物，並獲得清晰、不同語言的資訊，說明如何重用、維修、回收或棄置。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● It would be easier for the younger generation. ● Yes easy to participate and will be useful if there is only one single source of truth. ● 困難，需要大量資金去開發數碼工具, , 並不是一兩年可以有完善的資訊 ● Easy for younger people but difficult for older people. If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● Language accessibility - are they willing to be more diversified ● Need to consider people who are not technology savvy and might not have technological devices ● Other than signage (limitations of printing), integrating smarter devices that can scan and assign where products can go, this will be easier ● Not sure how technology/ AI can help to be honest (this was a question) ● (comment) - can scan the packaging and will make it easier than people not reading signs ● (comment) for reuse/ repair don't know how it works ● Scandinavian - have programs for repair and reuse, maybe it needs to be a municipal/ government program ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● Having a space and open workshop in addition to technology, public space that people can learn how to repair ● Might need a research project on that. ● More inclined to have a physical space than digital technology - it is more important and helpful ● Me personally dont use phone that much, if the info is printed on the product / on the recycling bin, its much better ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要: 1 ● Medium 一般:1,1,1,1, 1, ● Low 唔太重要: 1, 1, 1 Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育	
Action ID144: Develop educational resources for businesses, including large waste generators, small and medium sized enterprises, and ethnocultural businesses. 行動 ID144：為商業機構開發教育資源，包括大型廢物產生者、中小企及多元文化社區商戶。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ • Moderately easy to participate if the materials are practical, concise, and available online • Straightforward instructions in the materials would help the businesses understand exactly what actions they need to take, reduce confusion, and increase the likelihood of successful implementation. • If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ • clear summaries, visual guides, and examples that show how waste management practices apply to real operations. • Educational resources should be specific to the industry/ business, rather than general guidelines • What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ • Flexible learning formats/ materials would help, eg toolkits/ videos/ printed materials/ webinars • • How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ • High 重要: • Medium 一般: • Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID103: Develop and deploy improved education for multi-family residents.	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ • Easy. With a well-defined/ specific audience in a building, the

行動 ID103：為多戶住宅住戶設計並推出更完善的教育。	education can be designed to be clear, precise, and easy to understand. ● Easy to deploy as there are existing channels or community space for visuals/ newsletter delivery/ interactive workshops. ● ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● Who would be responsible for execution? Is participation (e.g. workshops/ online training) mandatory for all families or residents? ● ● ● ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● Education content should be concise, appealing, and actionable ● The building/ strata/ property managers should help with promotion and materials distribution in an encouraging environment. ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要: ● Medium 一般: ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID145: Explore collaborations with non-profits organizations to support better education and sorting in apartment buildings. 行動 ID145：探索與非牟利組織合作，加強公寓大廈的教育及分類工作。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● Easy as there are non-profits that already have expertise in community engagement and waste education. ● Can leverage their experience in community outreach, ready-made programs, volunteer support, and credibility ● Direct engagement/ two-way interaction is more effective for residents to participate in recycling than just delivering materials for them to study, as you have someone onsite to help sorting if they have immediate questions.

	If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● Ensure non-profits have sufficient capacity to handle these additional collaborations, so the programs can be sustainable. ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● Funding support, training, and standardized practice across different non-profits would be essential for the success. ● ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要: ● Medium 一般: ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID146: Develop educational resources for people to reduce waste when they are hosting a large gathering. 行動 ID146：開發教育資源，協助市民在舉辦大型聚會時減少浪費。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● ● Easy to participate because guidance on reducing waste—such as using reusable tableware, planning portions, or setting up recycling and compost stations—can be implemented directly by hosts and can have a tangible impact on waste reduction. ● ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● 舉辦大型聚會時, 垃圾桶旁邊會提供多個大型回收桶 ● ● ● ● What should Metro Vancouver consider to support your participation with this action?

	大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● Specific examples or scenarios, eg how much food to prepare, can be given to illustrate how the guidelines apply in real situations, making the instructions more relatable and easier to follow. ● Educational resources alone are not enough. Providing hardware or facility support at the venue can help actually reduce waste—for example, hosting parties at a building's amenities with cutlery provided. ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要:1 ● Medium 一般: ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID147: Improve awareness and access to existing environmental advisors that provide regional waste reduction information services. • 行動 ID147：提升市民對環境顧問服務於提供地區性的減廢資訊服務的認識，並加強其可及性。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● Don't even know there are environmental advisors… so improving awareness and access to these advisors would be helpful ● ● ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● ● ● ● ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● ● ●

	● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要: ● Medium 一般: ● Low 唔太重要:1 Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID148: Expand appeal of recycling messaging by working with artists and community influencers to develop messaging to inspire and motivate people to recycle. 行動 ID148：透過與藝術家及社區意見領袖合作，設計具吸引力的回收訊息，以啟發和鼓勵市民參與。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● ● A bit difficult because the messaging might feel superficial or inauthentic. Not everyone resonates with or interprets the same message in the same way. ● ● Managing collaborations with artists and ensuring consistent messaging across platforms could also be challenging. ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● ● artists and influencers should be involved from the start in shaping the tone and visuals so that messages feel genuine. ● ● They should have the flexibility to create their own messages rather than being given rigid scripts. ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● Art installations in public space and social media campaigns could amplify the impact—making recycling visible, fun, and community-driven while reinforcing authenticity and motivation. ● ● ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要:

	● Medium 一般: ● Low 唔太重要:1 Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID150: Research and target the most confusing items for residents that are often incorrectly sorted. 行動 ID150：研究並針對最容易令人混淆、經常被錯誤分類的物品。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● 容易, 令大家改善一直以來的錯誤分類物品 ● The research could be easy to conduct by the waste mgmt company/ the city and data could be easily collected. eg waste stream audit/ resident surveys and feedback ● Easy because focusing education on high-confusion materials can directly improve sorting accuracy and reduce contamination in recycling and compost streams. ● ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● ● ● ● ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● Simple, visual guides with photos or icons showing correct disposal for each confusing item would already help a lot. ● ● ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要:1 ● Medium 一般: ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？

Action ID151: Gamify recycling and reduction education. 行動 ID151：將回收及減廢教育遊戲化，提高參與度。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● Depends if the gamification system is complex or not. ● Incorporating elements like quizzes, challenges, points, badges, or friendly competitions can make learning about recycling and waste reduction fun and motivating, encouraging ongoing participation. ● ● Might not seem attractive to adults If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● ● There might be risks that some participants may focus more on rewards than the underlying learning, reducing long-term behavioral change. ● ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● ● ● ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要:1 ● Medium 一般: ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID152: Collaborate on the development of how to recycle videos to improve community pride and accuracy of recycling.	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ●

行動 ID152：以協作形式拍攝「如何回收」的短片，以提升社區自豪感和回收準確度。	● ● ● ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● ● ● ● ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● ● ● ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要:1 ● Medium 一般: ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？

Strategy 4.7. Increase transparency of what happens to materials from recycling and green bin
策略 4.7 提升回收及廚餘處理的透明度

Action ID157: Facilitate public tours of recycling facilities so that residents can see what happens to their materials.

行動 ID157：安排公眾參觀回收設施，讓居民親眼見到他們的回收物如何被處理。

If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it?
如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？

- 容易, 可以帶小孩一同去參觀, 一起學習, 了解更多
-
- Easy because tours provide a tangible, engaging way to understand the recycling process and connect individual actions to community-wide impacts.
- Seeing how materials are sorted and processed can increase motivation to recycle correctly
-

If difficult, what would make your participation easier?
如果覺得困難，有乜嘢可以令你參與得更加容易？

- 安排每間學校活動一齊去參觀
- Do it in smaller groups for active engagement as large group sizes may reduce the personal impact of the experience
- Flexible tour hours/ multiple trips to accommodate different people's schedule
- virtual tour options for those unable to attend in person.
-

What should Metro Vancouver consider to support your participation with this action?
大溫地區應該考慮啲乜嘢去支援你參與呢項行動？

-
- partnering with schools, community groups, and local media to promote tours
- integrate interactive elements for engagement
- share highlights on social media to extend the educational impact beyond those physically attending
-

How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?
你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？

- High 重要:1
- Medium 一般:
- Low 唔太重要:

Is there anything else you'd like to add to the conversation on this ACTION?
你仲有冇其他關於呢項行動嘅意見想補充？

Action ID159: Show where waste goes and how it's processed to provide more transparency in the recycling system. **行動 ID159**：展示垃圾的去向及處理過程，增加回收系統的透明度。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● ● Easy to participate as residents only need to engage with educational resources such as videos, infographics, tours, or online tools to understand the journey of their waste. ● Worth to do it because demonstrating where waste goes—from collection to sorting, processing, and final disposal or recycling—can build trust in the system, reduce confusion, and motivate proper waste management behaviors. ● ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● ● Ensure information is presented in a clear format so residences can contextualize the information on how it relates to their everyday actions, i.e. connecting what they do at home with what happens at processing facilities. ● Important to dispatch information at appropriate touchpoints where residents of different age groups could access at all times ● ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● integrating these resources into schools, community workshops, building newsletters, and social media ● ● ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要: ● Medium 一般: ● Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？

Strategy 4.4. Improve participation in green bin programs and alternatives for multi-family residents and businesses

策略 4.4 改善多戶住宅及商業場所的廚餘回收參與度

Action ID125: Review provision of green bins for non-residential properties and work collaboratively to increase participation in non-residential organics programs. **行動 ID125**：檢視為非住宅物業提供綠色廚餘桶的安排，並合作推動非住宅有機廢物回收計劃的參與度。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ • • Could be difficult if properties face logistical challenges, such as space constraints, collection schedules, or additional costs, especially for older buildings and premises • • staff turnover (in the premises/ properties) may reduce engagement as there may be a lack of awareness about the program when newcomers work at the place If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ • provide tailored onboarding support, clear signage, and training for staff, along with resources like posters, bin labels, and educational guides in the public space of the non-residential properties • Green bins collection schedules should match business hours, and they should be collected frequently if there are restaurants/ food-related businesses in the properties to prevent hygiene issues. • Enforcement/ incentives to ensure businesses follow or participate in the green bin programs • What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ • • consider collaborating with property managers, business associations, and environmental advisors • sharing best practices or case studies from successful participants with other building/ property managers to demonstrate feasibility and benefits. • How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ • High 重要: • Medium 一般: 1 • Low 唔太重要: Is there anything else you'd like to add to the conversation on this ACTION?

	你仲有冇其他關於呢項行動嘅意見想補充？
Action ID127: Continue to provide tools and tips to residents to reduce odours and “yuck factor” with green bins. **行動 ID127**：繼續向住戶提供工具和貼士，幫助減少異味和「噁心感」，以提升使用廚餘桶的意願。	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ ● ● Could be difficult; odours and “yuck factor” can be only reduced but not eliminated ● ● Even with guidance, residents may feel hesitant to handle food scraps, or they may lack the time, space, or materials to consistently apply recommended practices. ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● 家居廚餘桶/廚餘袋應該有免費提供, 而不是需要市民自己自付購買 ● compostable liners, odor-absorbing materials, or simple tools for bin cleaning should be provided ● The key is making green bin use feel manageable, safe, and socially reinforced. What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● Increase the frequency of green bin collection. ● The city regularly collects green bins, cleans them, and returns a cleaned bin to residents. ● Offer community demonstrations, workshops, or peer support to normalize bin use. How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要:1,1 ● Medium 一般: ● Low 唔太重要: Is there anything else you’d like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？
Action ID129: Promote and educate residents on worm bins and backyard composting.	If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？

行動 ID129：推廣並教育住戶使用蚯蚓箱及後院堆肥。	● 困難, 因為後院堆肥, 會有異味, 可能引入蛇蟲鼠蟻, 不是很多人能夠接受得到 ● Very difficult because residents would be concerned about space, odor, pests, or the complexity of maintaining compost systems. ● Limited access to materials like bins, worms, or instructional resources could also pose barriers. ● There are more multi-family residences now, and even single-family houses have fewer backyards than in the past. ● If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？ ● ● If green bin programs are still running, which are easier to participate in, why would I even compost at home? ● ● I'm personally very scared of worms, so nothing would help. ● What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？ ● ● sharing success stories to normalize and celebrate backyard composting and worm bin practices. ● partnering with community gardens, schools, or local retailers, offering incentives such as compost bin discounts or free workshops ● How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ ● High 重要: ● Medium 一般: ● Low 唔太重要:1 Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？

Strategy 4.5. Make recycling easier and more effective by reducing confusion and improving convenience 策略 4.5 透過減少混淆及提升便利性，令回收更容易、更有效 Action ID131: Improve access to textile donation and recycling collection services. 行動 ID131：改善紡織品捐贈及回收服務的可及性。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• It's hard for me to figure out if contact lenses are waste or recycling. They generate a lot of waste, but since they're made of plastic, are they recyclable? • If I donate items to certain places, it would be helpful to know what happens afterwards. Do they actually get recycled? I've seen some items being dumped into a big bin. • Is this going to be difficult for the person donating? I.e. Will sorting be	• It should be quick and easy to donate, because I already do donate to thrift stores. But the problem comes in for certain things like socks or items that have a stain or tear in it, then it's good to have a place to collect these. • Simplicity would also be an issue. Do we have to sort out the material, or can you donate any type of textile? • Easier, I've tried taking old clothing to Value Village, but not all items are accepted. Having more textile recycling options would really improve access • It depends on what types of textiles are allowed or not allowed. For example, underwear or very personal items may not be acceptable • It depends on the location of the collection boxes. Metro Vancouver should collaborate with grocery stores to set up more collection points • If the collection points are convenient, it's easy for me to participate, especially since buying new clothes these

	required by the person donating, or is it done afterwards?	days is expensive, so it feels good to donate what can still be used ● More thrift shops or textile recycling bins in the community or at retailers would make it more convenient to donate. ● If the location has enough recycling boxes and they are easy to access or identify, it would be much easier to participate.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	● Is there requirements in terms of what should be recycled or belong to the landfilled (i.e. dishrack) ● We need more instructions of what should be recycled, or will there be contamination. There's a lot of synthetics in textiles - is this recyclable or will it ruin all the other products?	● We need more access points, especially near public transit. ● Include more collection boxes at locations that are easy to reach, such as SkyTrain or bus stations, residential areas, and inside malls ● Collection box locations should be more visible and accessible, for example, close to SkyTrain stations ● There's a lot of those fire stations (and other public utility spaces), if there are collections at all these public spaces, it would be much easier to access ● Educating consumers like us who actually make the effort to donate or recycle. Provide greater transparency around what happens to donated and recycled goods after collection. (This will help build trust and motivate participation) ● Will there be a system for textiles and other products? I.e. for plastics there is a certain number on the bottle. ● There should be a team of people sorting things out after donations (especially for textiles) ● Make sure to have someone to follow up with the collected textiles, such as having a specific department to collect them weekly or bi-weekly. This ensures the textiles are actually recycled instead of being left in the box
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？		In terms of priority: - 10 participants expressed this is high importance - 3 participants expressed this is medium importance - 0 participants expressed this is low importance - 5 participants didn't answer

Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		One of the reasons that this action is important is because textile/clothing is one of the major consumption in our daily lives, so it would be better to have a more proper way to recycle.

Strategy 4.5. Make recycling easier and more effective by reducing confusion and improving convenience
策略 4.5 透過減少混淆及提升便利性，令回收更容易、更有效

Action ID132: Recognize and reward those who recycle well so others are inspired to follow their example.
行動 ID132：表揚和獎勵做得好的回收者，以鼓勵其他人效法。

Section	Questions asked by Participants	Feedback heard
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 啲回收點可唔可以收晒所有嘅回收物，咁去一個地方可以 recycle 晒所有嘢？ 有時最困擾喺收膠樽又喺一個位啦，但係佢又唔收其他嘢。好想可以去一個地方做得晒所有嘢。 *(Translation: Can recycling stations accept all types of recyclables,*	• I like the point reward system in Hong Kong, you earn points based on the weight of your recycled items, and the points can be exchanged for modest rewards, e.g. recycled paper towels and everyone can participate. • Policy 通常都喺carrot and stick 去推動。對啲已經有環保意識嘅人其實佢哋唔需要啲鼓勵去推佢哋一步，但係畀啲環保意識無咁高嘅人，獎勵喺其中一個幾有效嘅推動方法，例如回收膠樽有啲reward 畀返佢哋，其實喺可以推動到一班本身無乜環保意識嘅人去做。Stick 嘅就喺懲罰，如果唔做就收佢哋錢或者其他懲罰。*(Translation: For people who already have high awareness and do recycle, they don't really need the incentive to take action. But for those with lower awareness, rewards can be an effective way to motivate them. For example, giving a small reward for*

	so people can recycle everything in one place? *Sometimes the most frustrating thing is that one site only takes bottles, but not other items. It would be great to have one location where you can do all your recycling at once.)*	*recycling plastic bottles can actually encourage people who wouldn't normally think about recycling to participate. The "stick" part means penalties. For instance, charging fees or applying other punishments for not participating.)* ● 以前香港都有「綠在區區」回收計畫，獎勵唔一定要畀錢，可能要儲一萬分先可以換到卷廁紙，但係小獎勵會 motivate 到人回收，好似我媽咪都無咩特別環保意識，但係因為呢樣嘢，佢都會做。 宜家喺大溫地區如果回收膠樽喺有啲按金可以攞得返， 對我嚟講已經喺一個鼓勵。 有 incentive 喺有用嘅 *(Translation: In Hong Kong, there used to be a recycling program called "Green Community." The rewards didn't have to be monetary, for example, you might need to collect 10,000 points just to exchange for a roll of toilet paper. But small incentives could be enough to motivate people to recycle. My mom isn't very environmentally aware, but because of that program, she still participated. Right now in Metro Vancouver, there's already a deposit you can get back when recycling plastic bottles, for me, that's already an incentive. Having an incentive is useful.)* ● Maybe somewhat difficult, I don't think I would like to spend time tracking my recycling work. ● If there are more facilities near me, it'll be much easier, not everyone is able to drive. ● Maybe make the "reward" more attractive? I'm not motivated to bring a full bag of textiles just to get back a few cents. ● To make things easier, include technology in the recycling boxes. For example, everyone could scan a QR code at the box, and it could weigh the textiles or other items and automatically add points to your account, so people don't have to track their efforts manually. ● In Hong Kong, there are vending machines for recycling plastic bottles. It's much easier and doesn't require as much manual effort.
What should Metro Vancouver	● People bring bottles for	● Making recycling depots easier to access is key. Right

consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	recycling because there's a deposit. Or i.e. H&M used to give you a small coupon if you bring old clothes in. Could something similar apply to clothing or other products? Or could there be a partnership with companies for this? For example, adding a small upfront fee that can be returned when items are brought back for recycling (so they can be made into new clothing, products, or beauty items)	now, they can feel intimidating or inconvenient to visit. Removing these barriers and improving accessibility would make participation much easier. ● 除咗方便之外，宜家喺Burnaby啲recycling site 拎啲嘢去佢可以畀返少少錢，但係佢嘅地方真係幾唔乾淨。每次去都要鼓起啲勇氣，喺好臭呀，好唔想去換幾毫子咁，所以呢個都好重要。*(Translation: In Burnaby, even though you can get a small refund when you bring recyclables in, the sites aren't very hygienic and often require a deliberate drive to reach. Every time I go, I have to "be brave" it smells bad, and it takes effort just to get a few cents back. Recycling facilities need to be both accessible and clean to encourage people to use them.)* ● It would be helpful to have a clear standard defining what "recycling well" actually means ● More education ● Provide a clear catalogue or guide on what can be recycled, designed for children, seniors, and others who may need simpler information ● Many people don't know where to go, there isn't enough public knowledge about where recycling facilities are located ● More community discussions like this one ● More promotion through posters and advertisements ● Broader dissemination, for example, TV ads, social media, and leaflets to every mailbox, so more people know about new recycling actions ● Encourage companies to use sustainable materials ● Corporations should contribute more to these efforts
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to	● Can there be incentives for businesses to promote less packaging or encourage customers to bring in their own containers and packages? Or encourage reuse and recycling?	In terms of priority: - 7 participants expressed this is high importance 3 participants expressed this is medium importance - 3 participants expressed this is low importance - 5 participants didn't answer ****Note - we see an anomaly where people in the recycling focused session think incentives are not necessary, but many in*

add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	• 啲大型公司攢咁多錢，佢哋喺咪應該喺呢方面出多少少力？ *(Translation: Big corporations make so much money, shouldn't they be doing a bit more in this area?)* • 點解有啲嘢IKEA 唔可以recycle 但係London Drugs 可以？ 好多時啲人唔知道可以去邊度recycle所以掠咗 *(Translation: Why is it that some things can't be recycled at IKEA, but can be at London Drugs?* *A lot of times, people just don't know where they can take things to recycle, so they end up throwing them away.)*	*the other two sessions expressed that point systems or rewards will help encourage more participation and get everyone involved. This might be a self-selection bias.* • 不如我用中文講啦，我唔覺得應該獎勵拎啲嘢嚟recycle嘅人囉，呢啲喺公民責任。如果你咁樣做會*(Translation: Let me just say it in Chinese, I don't think people should be rewarded for bringing things to recycle. This is a civic responsibility. If you do that, it would…)* create another can of worms, I think we instead of providing a monetary incentive for people to do that, it would be better to educate people on the importance of recycling • If we have a reward system, it's a lot of resources being spent on these resources and it's not needed, it's our responsibility • Provide incentives for companies to offer education or open sites for recycling (e.g. lower rents or other support) • In Hong Kong, it's very convenient to recycle, but it still takes a lot of education, incentives, and promotion. And even then, participation only increased by a small margin. This suggests it's a long-term change that can't be measured or achieved immediately.

Strategy 4.5. Make recycling easier and more effective by reducing confusion and improving convenience
策略 4.5 透過減少混淆及提升便利性，令回收更容易、更有效

Action ID133: Explore the development of a signage standard and customizable tool to help reduce confusion about what goes in each bin, based on the most common items collected. 行動 ID133：針對最常見回收物去研究制定標準化的標誌及可自訂的工具，從而幫助減少對「垃圾桶應該放咩」嘅困惑。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• What is signage standard and customizable tool? • 宜家唔喺已經有乜？ *(Translation: Isn't this in place already?)* • 咁Metro Vancouver 喺可以做啲乜，呢啲唔喺每個 City 都唔同㗎咩？ *(Translation: So what can Metro Vancouver actually do about this? Aren't these implemented differently in each city?)* • It seems like recycling has to be sorted very specifically, but would clear signage make it easier to tell what goes where?	• I think it will help, but not much, because there are still quite a lot of items that are hard to categorize, for example, contact lenses or paper straws • It would be easy, since the effort comes more from the government rather than the public • It may be difficult to have all cities adopt a standardized approach (there's a lot of red tape) but if it can be standardized, it will make things easier • There should be a clear signage standard so that it's easily understood by everyone • I think it's easy to let people know, as long as the communication is clear • I once saw a documentary showing how recycling plants could automatically sort recyclables from non-recyclables that would make things much easier for consumers • The government could consider developing a mobile app with AI that lets you take a photo to check if an item is recyclable or not • 如果個 system 可以好容易咁 colour coded，一開始可能係難，但係如果熟咗可以好容易一睇到 colour 就分到。 *(Translation: If the system could use simple colour coding, it might be confusing at first, but once people get used to it, it would be easy to sort by colour.)* • 喺香港熟知口訣「藍紙黃罐啡膠樽」，但溫哥華公眾地方回收箱與屋苑/屋企回收箱並不是同對應顏色。 *(Translation: In Hong Kong, everyone knows the chant "blue for paper, yellow for cans, brown for plastic bottles," but in Vancouver, the colours for public recycling bins don't match those used at home or in buildings.)* • It would also help to list the items that cannot go into each

		bin, for example, using attached images with cross marks on non-recyclable items.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		● 我喺學校見到一個比較得意嘅現象喺嗰啲回收桶有好多 items，以啲學生真係企咗好耐，睇咗成一分鐘先分辨到喺應該擺喺邊。喺好事因為學生願意學，願意睇，但有啲 moment 就係佢哋諗完都唔係好分辨到，然後就揀咗落 general garbage。 *(Translation: At school, I noticed something interesting. Students often stand in front of the recycling bins for a long time, trying to figure out what goes where. It's good that they're willing to learn, but sometimes, even after looking carefully, they are unable to tell and they still end up throwing everything into the garbage.)* ● As consumers, we mostly care about what we should do, not whether it's the city or Metro Vancouver managing it. We just want clear and consistent communication on what actions residents are expected to take
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 11 participants expressed this is high importance - 0 participants expressed this is medium importance - 1 participants expressed this is low importance - 6 participants didn't answer ● 事實上喺好難，回收要分到好細先回收到。喺咪有signage 就得？會唔會都好複雜？ *(Translation: In reality, it's quite difficult, recycling needs to be sorted very precisely to be effective. Is having signage enough? Or is it still too complicated?)* ● 要令到個system 好simplified, 可以好簡單咁colour code 咗就知道嗰樣嘢喺點分。 *(Translation: The system needs to be simplified, if it used clear colour coding, people could easily tell how to sort*

		their waste.)

Strategy 4.5. Make recycling easier and more effective by reducing confusion and improving convenience 策略 4.5 透過減少混淆及提升便利性，令回收更容易、更有效 Action ID134: Centralize information sources to make it consistent and easier for the public to find information and look for resources. 行動 ID134：集中資訊來源，確保一致，亦方便公眾尋找資料和資源。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？		• Yes, it would be much easier if people could access the most up-to-date information in one place • Yes, this is a fundamental action to help increase the recycling rate • If there's a centralized app or website, it will be much easier. And people need to know about it. • It could still be difficult if the information, even when centralized, isn't well publicized • Yes, this is a good action. Currently, there is a Return-It app that I sometimes use to check whether something can be recycled. But sometimes it's not accurate, some private organizations actually help recycle items that the city says cannot be recycled.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• Something like a physical thing to each household like the current ones that tell you when garbage and or recycling is picked up • Use ads and spend time on promotions, make it a big campaign so people know about it • Schools should also take on some responsibility to help spread awareness

		• 政府可以喺學校 open day 度加 booth，大人可以從中學習到。（大學都可以，例如 open day） *(Translation: The government could set up booths at school open days so adults who are there with their children or grandchildren can also learn. This is the same for universities.)* • 考慮吓會唔會整啲歌詞或者容易記嘅嘢，colour code 加歌詞，education 會好啲。 *(Translation: Consider using songs or easy-to-remember jingles. Combine colour coding with music to make education more effective.)* • 可以教小朋友做屋企嘅 recycle hero，負責屋企嘅回收，同埋佢哋可以教返爸爸媽媽 *(Translation: Teach children to be "recycle heroes" at home, taking responsibility for sorting recycling for the family. And they can also relay this information and teach their parents)* • 對小朋友，可以喺 circle time 整啲歌或者 poster，令佢哋每日接觸到，印象會更深。 *(Translation: For kids, use circle time to teach with songs or posters so they see it daily and remember it better.)*
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 9 participants expressed this is high importance - 2 participants expressed this is medium importance - 0 participants expressed this is low importance - 7 participants didn't answer

Strategy 4.5. Make recycling easier and more effective by reducing confusion and improving convenience 策略 4.5 透過減少混淆及提升便利性，令回收更容易、更有效 Action ID135: Provide clear, consistent guidelines on what can and cannot be recycled. 行動 ID135：提供清晰一致的指引，說明哪些物品可以回收，哪些不可以。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 咁其實可唔可以直接喺個product packing嗰度有個label 或者colour code 話呢樣嘢喺唔可以recycle嘅？或者喺已經有個colour code 話喺應該落邊個bin *(Translation: Would it be possible to have a label or colour code directly on the product packaging to show whether something is recyclable or not? Or even better, a colour code that clearly indicates which bin it should go into.)* - three others indicated this is helpful	• Easy, the recycling bins at my place already show what can be recycled, but not what cannot be recycled, which sometimes makes me confused. • 容易，更加確定可唔可以回收，因為並唔一定所有物品都可以回收。 *(Translation: Easier, as it helps confirm whether something can be recycled, since not everything can be recycled.)* • Easy and very much needed! • Ideally, if there were a machine that could scan a product and tell us which bin it should go in, that would be amazing. • Not everyone can access technology (e.g. QR codes or smartphones), so handwritten notes or clear signs will still be very important. • Within school systems, it's very important to educate younger students or adolescents to participate and promote healthy recycling habits. Parents might not do it unless they see their kids doing it • Children can teach their parents • For seniors, community centres can offer workshops to help educate them • Workshops can be for everyone • Include clear images that are easy to understand • Include different languages or translations, or even non-

		verbal, easy to understand icons, if possible
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• 需要考慮所有供應商重新做新標誌，提供支援，鼓勵一同改變 *(Translation: Suppliers should be encouraged and supported to redesign their labels and packaging to reflect recycling information.)* • Provide financial support to schools or communities to organize related workshops
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 8 participants expressed this is high importance - 3 participants expressed this is medium importance - 0 participants expressed this is low importance - 6 participants didn't answer

Strategy 4.5. Make recycling easier and more effective by reducing confusion and improving convenience
策略 4.5 透過減少混淆及提升便利性，令回收更容易、更有效

Action ID140: Support knowledge sharing of space and access requirements for multi-plex units (6 units or less).
行動 ID140：支援小型多戶住宅（6個單位或以下）在空間及通道要求上的知識分享。

Section	Questions asked by Participants	Feedback heard
If Metro Vancouver includes this action in the updated	• Are you talking about	• We can't even understand what this

solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	strata? If it's about strata, it's about clarity for tenants for resource management	action means to comment on it
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• Please avoid using jargon
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - All replied they are unsure here

Strategy 4.5. Make recycling easier and more effective by reducing confusion and improving convenience
策略 4.5 透過減少混淆及提升便利性，令回收更容易、更有效

Action ID142: Facilitate development of digital tools that allow users to scan waste items and receive clear, multilingual instructions on options for reuse, repair, recycling, or disposal.
行動 ID142：協助開發數碼工具，讓用戶可以掃描廢物，並獲得清晰、不同語言的資訊，說明如何重用、維修、回收或棄置。

Section	Questions asked by Participants	Feedback heard

If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？		● It would be easier for the younger generation. ● Yes, it would be easy to participate and helpful if there's only one single source of truth ● 困難，需要大量資金去開發數碼工具，並不是一兩年可以有完善的資訊 *(Translation: It would be difficult because developing digital tools requires significant funding and can't be perfected within just a year or two.)* ● Easy for younger people, but difficult for older people ● Beyond signage (which has printing limitations), integrating smarter devices that can scan items, recognize them and identify where they should go would make things easier. ● Scanning the packaging would make things easier for people who don't read or understand signage. ● This will be difficult for reuse and repair, if it's more of a personal or monetary decision
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		● Language accessibility, are they willing to make it more diverse? ● Need to consider people who aren't tech-savvy or don't have access to digital devices. ● Scandinavian countries have programs for repair and reuse; maybe this needs to be developed as a municipal or government-led program
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想		In terms of priority: - 1 participants expressed this is high importance - 5 participants expressed this is medium importance - 3 participants expressed this is low importance - 9 participants didn't answer ● Some commented they're not sure how technology or AI could help, to be honest ● There's a comment that this tool can be in a public space near the collection sites too so people can learn and sort

補充？		it in the right bins. • I would be more inclined to have an actual physical space, it's more helpful

THIS MARKS THE END OF THE DISCUSSION

However, participants have added comments to strategies on recycling that we didn't get a chance to discuss. Please see the notes below.

Strategy 4.6 Target recycling education
策略 4.6 加強回收教育

Action ID144: Develop educational resources for businesses, including large waste generators, small and medium sized enterprises, and ethnocultural businesses.
行動 ID144：為商業機構開發教育資源，包括大型廢物產生者、中小企及多元文化社區商戶。

Section	Feedback
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Moderately easy to participate if the materials are practical, concise, and available online • Straightforward instructions in the materials would help the businesses understand exactly what actions they need to take, reduce confusion, and increase the likelihood of successful implementation. • clear summaries, visual guides, and examples that show how waste management practices apply to real operations. • Educational resources should be specific to the industry/ business, rather than general guidelines
What should Metro Vancouver consider to support your participation with this action?	• Flexible learning formats/ materials would help, eg toolkits/ videos/ printed materials/ webinars

大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育 Action ID103: Develop and deploy improved education for multi-family residents. 行動 ID103：為多戶住宅住戶設計並推出更完善的教育。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Easy. With a well-defined/ specific audience in a building, the education can be designed to be clear, precise, and easy to understand. • Easy to deploy as there are existing channels or community space for visuals/ newsletter delivery/ interactive workshops. • Who would be responsible for execution? Is participation (e.g. workshops/ online training) mandatory for all families or residents?
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Education content should be concise, appealing, and actionable • The building/ strata/ property managers should help with promotion and materials distribution in an encouraging environment.

How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育 Action ID145: Explore collaborations with non-profits organizations to support better education and sorting in apartment buildings. 行動 ID145：探索與非牟利組織合作，加強公寓大廈的教育及分類工作。

If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Easy as there are non-profits that already have expertise in community engagement and waste education. • Can leverage their experience in community outreach, ready-made programs, volunteer support, and credibility • Direct engagement/ two-way interaction is more effective for residents to participate in recycling than just delivering materials for them to study, as you have someone onsite to help sorting if they have immediate questions. • Ensure non-profits have sufficient capacity to handle these additional collaborations, so the programs can be sustainable.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Funding support, training, and standardized practice across different non-profits would be essential for the success.
How much of a priority is it to you to include this action in the draft solid waste management plan?	

你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育 Action ID146: Develop educational resources for people to reduce waste when they are hosting a large gathering. 行動 ID146：開發教育資源，協助市民在舉辦大型聚會時減少浪費。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Easy to participate because guidance on reducing waste—such as using reusable tableware, planning portions, or setting up recycling and compost stations—can be implemented directly by hosts and can have a tangible impact on waste reduction. • 舉辦大型聚會時, 垃圾桶旁邊會提供多個大型回收桶 (translation: During large events, several large recycling bins should be placed beside garbage bins)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Specific examples or scenarios, eg how much food to prepare, can be given to illustrate how the guidelines apply in real situations, making the instructions more relatable and easier to follow. • Educational resources alone are not enough. Providing hardware or facility support at the venue can help actually reduce waste—for example, hosting parties at a building's amenities with cutlery provided.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？	One person came back to the document to mark this as high priority.

Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育 Action ID147: Improve awareness and access to existing environmental advisors that provide regional waste reduction information services. • 行動 ID147：提升市民對環境顧問服務於提供地區性的減廢資訊服務的認識，並加強其可及性。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Don't even know there are environmental advisors… so improving awareness and access to these advisors would be helpful
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION?	One person came back to the document to mark this as low priority.

你仲有冇其他關於呢項行動嘅意見想補充？	

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育 Action ID148: Expand appeal of recycling messaging by working with artists and community influencers to develop messaging to inspire and motivate people to recycle. 行動 ID148：透過與藝術家及社區意見領袖合作，設計具吸引力的回收訊息，以啟發和鼓勵市民參與。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• A bit difficult because the messaging might feel superficial or inauthentic. Not everyone resonates with or interprets the same message in the same way. • Managing collaborations with artists and ensuring consistent messaging across platforms could also be challenging. • artists and influencers should be involved from the start in shaping the tone and visuals so that messages feel genuine. • They should have the flexibility to create their own messages rather than being given rigid scripts.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Art installations in public space and social media campaigns could amplify the impact—making recycling visible, fun, and community-driven while reinforcing authenticity and motivation.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	One person came back to the document to mark this as low priority.

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育 Action ID150: Research and target the most confusing items for residents that are often incorrectly sorted. 行動 ID150：研究並針對最容易令人混淆、經常被錯誤分類的物品。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 容易, 令大家改善一直以來的錯誤分類物品 (translation: Easy, it would help everyone correct the common mistakes they've been making in waste sorting) • The research could be easy to conduct by the waste mgmt company/ the city and data could be easily collected. eg waste stream audit/ resident surveys and feedback • Easy because focusing education on high-confusion materials can directly improve sorting accuracy and reduce contamination in recycling and compost streams.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Simple, visual guides with photos or icons showing correct disposal for each confusing item would already help a lot.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	One person came back to the document to mark this as high priority.

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育 Action ID151: Gamify recycling and reduction education. 行動 ID151：將回收及減廢教育遊戲化，提高參與度。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Depends if the gamification system is complex or not. • Incorporating elements like quizzes, challenges, points, badges, or friendly competitions can make learning about recycling and waste reduction fun and motivating, encouraging ongoing participation. • Might not seem attractive to adults • There might be risks that some participants may focus more on rewards than the underlying learning, reducing long-term behavioral change.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	One person came back to the document to mark this as high priority.

Strategy 4.6 Target recycling education 策略 4.6 加強回收教育

Action ID152: Collaborate on the development of how to recycle videos to improve community pride and accuracy of recycling. 行動 ID152：以協作形式拍攝「如何回收」的短片，以提升社區自豪感和回收準確度。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	One person came back to the document to mark this as high priority.

Strategy 4.7. Increase transparency of what happens to materials from recycling and green bin 策略 4.7 提升回收及廚餘處理的透明度 Action ID157: Facilitate public tours of recycling facilities so that residents can see what happens to their materials. 行動 ID157：安排公眾參觀回收設施，讓居民親眼見到他們的回收物如何被處理。

Section	Feedback
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 容易, 可以帶小孩一同去參觀, 一起學習, 了解更多 (translation: Easy, I can bring my children along to visit, learn together, and deepen our understanding) • Easy because tours provide a tangible, engaging way to understand the recycling process and connect individual actions to community-wide impacts. • Seeing how materials are sorted and processed can increase motivation to recycle correctly • 安排每間學校活動一齊去參觀 (translation: arrange school trips so that each school can visit together) • Do it in smaller groups for active engagement as large group sizes may reduce the personal impact of the experience • Flexible tour hours/ multiple trips to accommodate different people's schedule • virtual tour options for those unable to attend in person.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• partnering with schools, community groups, and local media to promote tours • integrate interactive elements for engagement • share highlights on social media to extend the educational impact beyond those physically attending
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	One person came back to the document to mark this as high priority.

Strategy 4.7. Increase transparency of what happens to materials from recycling and green bin 策略 4.7 提升回收及廚餘處理的透明度

Action ID159: Show where waste goes and how it's processed to provide more transparency in the recycling system. 行動 ID159：展示垃圾的去向及處理過程，增加回收系統的透明度。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Easy to participate as residents only need to engage with educational resources such as videos, infographics, tours, or online tools to understand the journey of their waste. • Worth to do it because demonstrating where waste goes—from collection to sorting, processing, and final disposal or recycling—can build trust in the system, reduce confusion, and motivate proper waste management behaviors. • Ensure information is presented in a clear format so residences can contextualize the information on how it relates to their everyday actions, i.e. connecting what they do at home with what happens at processing facilities. • Important to dispatch information at appropriate touchpoints where residents of different age groups could access at all times
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• integrating these resources into schools, community workshops, building newsletters, and social media
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	

Strategy 4.4. Improve participation in green bin programs and alternatives for multi-family residents and businesses

策略 4.4 改善多戶住宅及商業場所的廚餘回收參與度

Action ID125: Review provision of green bins for non-residential properties and work collaboratively to increase participation in non-residential organics programs.
行動 ID125：檢視為非住宅物業提供綠色廚餘桶的安排，並合作推動非住宅有機廢物回收計劃的參與度。

Section	Feedback
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Could be difficult if properties face logistical challenges, such as space constraints, collection schedules, or additional costs, especially for older buildings and premises • staff turnover (in the premises/ properties) may reduce engagement as there may be a lack of awareness about the program when newcomers work at the place • provide tailored onboarding support, clear signage, and training for staff, along with resources like posters, bin labels, and educational guides in the public space of the non-residential properties • Green bins collection schedules should match business hours, and they should be collected frequently if there are restaurants/ food-related businesses in the properties to prevent hygiene issues. • Enforcement/ incentives to ensure businesses follow or participate in the green bin programs
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• consider collaborating with property managers, business associations, and environmental advisors • sharing best practices or case studies from successful participants with other building/ property managers to demonstrate feasibility and benefits.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	One person came back to the document to mark this as medium priority.

Strategy 4.4. Improve participation in green bin programs and alternatives for multi-family residents and businesses 策略 4.4 改善多戶住宅及商業場所的廚餘回收參與度 Action ID127: Continue to provide tools and tips to residents to reduce odours and "yuck factor" with green bins. 行動 ID127：繼續向住戶提供工具和貼士，幫助減少異味和「噁心感」，以提升使用廚餘桶的意願。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Could be difficult; odours and "yuck factor" can be only reduced but not eliminated • Even with guidance, residents may feel hesitant to handle food scraps, or they may lack the time, space, or materials to consistently apply recommended practices. • 家居廚餘桶/廚餘袋應該有免費提供, 而不是需要市民自己自付購買 (translation: Household food waste bins or compostable bags should be provided for free, rather than requiring residents to purchase them on their own) • compostable liners, odor-absorbing materials, or simple tools for bin cleaning should be provided • The key is making green bin use feel manageable, safe, and socially reinforced.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Increase the frequency of green bin collection. • The city regularly collects green bins, cleans them, and returns a cleaned bin to residents. • Offer community demonstrations, workshops, or peer support to normalize bin use.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	Two people came back to the document to mark this as high priority.

Strategy 4.4. Improve participation in green bin programs and alternatives for multi-family residents and businesses 策略 4.4 改善多戶住宅及商業場所的廚餘回收參與度 Action ID129: Promote and educate residents on worm bins and backyard composting. 行動 ID129：推廣並教育住戶使用蚯蚓箱及後院堆肥。	
Section	**Feedback**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 困難, 因為後院堆肥, 會有異味, 可能引入蛇蟲鼠蟻, 不是很多人能夠接受得到 (Difficult, backyard composting can produce unpleasant odours and attract pests such as insects, rodents, or even snakes, which many people might find hard to accept) • Very difficult because residents would be concerned about space, odor, pests, or the complexity of maintaining compost systems. • Limited access to materials like bins, worms, or instructional resources could also pose barriers. • There are more multi-family residences now, and even single-family houses have fewer backyards than in the past. • If green bin programs are still running, which are easier to participate in, why would I even compost at home? • I'm personally very scared of worms, so nothing would help.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• sharing success stories to normalize and celebrate backyard composting and worm bin practices. • partnering with community gardens, schools, or local retailers, offering incentives such as compost bin discounts or free workshops
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION?	One person came back to the document to mark this as low priority.

Strategy 2.2 Support residents adopting waste prevention habits
策略 2.2 支援居民養成減廢習慣

Action ID104: Expand education tools to help multi-family residents to reduce waste, increase participation, and comply with evolving waste reduction regulations.
行動 ID104：擴展教育工具，協助多戶住宅住戶減少廢物、增加參與度，以及遵守持續更新嘅減廢規例

Section	Questions asked by Participants	Feedback heard
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 擴展教育工具係大約係啲乜嘢？想了解多少少係以乜形式，因為佢都好影響究竟要take up 地方喺幾多同埋係以乜類型？ (translation: What exactly does “expanding educational tools” mean? I’d like to understand a bit more about the format, since that would affect how much space it takes up and what type of	• 如果唔知道啲education activities 係乜format 嘅時候，其實唔知道容唔容易join (translation: if we don’t know what format the education activities will take, it’s hard to tell whether they’ll be easy to join or not) • Should not be too difficult if the education tools are practical • Easy for me as I already try to sort and reduce waste at home. However, it may be challenging when living in a multi-family building where waste rooms are shared and not everyone follows the same system. It depends on how the education is delivered and the level of detail provided. • The action talks about “education tools,” but it’s not clear how the tools for multi-family residents would differ from those for single-family residents.

	activities or materials would be involved) ● 會唔會係townhall, 定係leaflet, 定係由council 幫手promote嘅activities？(translation: would it be in the form of town halls, leaflets, or activities promoted by local councillors?) ● Is there a goal or target?	● It might be quite hard for me to participate since I don't live in a multi-family residential area, there might be less motivation for me to take part ● Recycling locations in Vancouver are not easy to find, and promotion or public awareness is not common ● Easy to participate in general, but it's not convenient to dispose of large pieces of furniture. ● It's hard for some participants who don't always feel comfortable or have the freedom to practice sustainable practices ● 減廢其實係令多啲新嚟嘅知道可以好多嘢都可以recycle. 同埋喺邊度recycle, and also noted in the packaging (translation: waste reduction can help more newcomers learn that many things can actually be recycled, and where to recycle them, as well as include that information on product packaging.) ● 無乜人去宣傳邊啲嘢可以recycle - 喺有resources 但係無人知道, 一直以嚟無好好咁promote (translation: there hasn't been much promotion about what can be recycled. The resources exist, but people don't know about them, and it hasn't been well promoted) ● Better to have a clear goal for residents to participate in, so everyone can work toward something together. ● Easy-to-use mobile apps could show where to find bottle return collection points in each area ● Should be promoted and supported by strata councils. ● Perhaps collaborate with NGOs to make participation more accessible for the community ● Provide "carrots", incentives or recognition for strata councils that achieve good results. ● I think accessibility to recycling tools could be improved. For example, in North Vancouver, paper recycling must go in yellow bags, but they're not easy to find or replace, and can easily blow away on windy days. Some residents give up recycling because it's inconvenient. Maybe Metro Vancouver could consider providing better access or alternatives to these bags

		• 有啲困難去評價呢條ID104或者以下嗰啲措施，暫時睇其實無列名到底大溫地區整體佢有邊啲嘅廢物喺想優先減少。咁目標想減少幾多，佢嘅想用乜措施或政策去介入，咁先至可以畀大家討論嘅時候考慮到自己家居實踐係容易呀定係唔容易。 舉例：飲品樽。 買嘅時候會畀個deposit，而交還嘅時候就會攞得返。呢個政策回收率其實係幾高㗎。呢個屋企可唔可行呢？其實喺屋企呢啲take up 嘅space 有幾多？回收幾耐有一次？咁嘅context底下先可以容易啲理解 呢個政策下面要減少嘅呢類廢物，喺家居真係要罰錢嘅時候，到底係相對容易呀，定係要需要咩資源配合去幫助去達到政策嘅目標？ 但係咁我都理解嘅，成個大溫地區淨係廢物嘅數據量每個地區嘅收集同統計方式都未必一樣，亦未必係超級透明，咁所以某程度上數據會影響到定啲乜目標同埋實行乜嘢嘅措施，而會影響到無論企業又好市民又好就住呢個目標同措施去配合。咁嘅方向係會容易啲進入到個方向討論。 (translation: it’s a bit difficult to evaluate Action ID104 or the following measures, because it’s not yet clear which specific types of waste Metro Vancouver is prioritizing for reduction. The plan doesn’t specify the target reduction amount, or what tools or policies will be used to achieve it. Without that information, it’s hard for participants to assess whether applying these measures at the household level would be easy or difficult. For example, take beverage containers: you pay a deposit when you buy them and get it back when you return them. That policy has a fairly high recycling rate. But when evaluating whether it works at home: how much space would it take up? How often would collection happen? With that kind of context, it’s easier for us to understand the intent of the policy is and what support or resources might be needed if penalties were introduced for non-compliance, and then tell the

		government whether it’s easy to participate or not. That said, it’s understandable that across Metro Vancouver, waste data collection and reporting methods may differ between municipalities and might not be completely transparent. This data quality directly affects how goals and measures are set, thus affecting how businesses and residents can align their efforts to meet those targets and policies. With clearer direction and shared data, it would be much easier to have informed discussions about the overall strategy.)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		● Should we consider providing clear, multilingual educational materials or a website? ● Metro Vancouver could collaborate with large businesses, such as Home Depot or London Drugs, to distribute recycling bags (e.g. yellow bags) or share recycling information ● Consider launching alternative and more sustainable options for recycling bags, such as replacing plastic bags with reusable recycling boxes ● Need clarity on the time and format. For example, will sessions be held after 6:00 p.m. on weekdays, and are they in-person or online? How long is each session, and do participants need to join regularly?
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you’d like to add to the conversation on this ACTION?		In terms of priority: - 9 participants expressed this is high importance - 5 participants expressed this is medium importance - 1 participants expressed this is low importance - 4 participants didn’t answer ● The key is these education tools have to be able to reach the target audience ● 我自己喺度住咗幾年啦。我諗我理解減廢就係減緊一啲我

你仲有冇其他關於呢項行動嘅意見想補充？		哋可能未必recycle到嘅嘢，或者係我哋唔知道可以recycle嘅嘢 。譬如我早幾個星期去home depot買燈，咁就見到有啲box可以recycle燈膽。London drug就有啲箱可以recycle啲電芯咁。對於我嚟講我就係咁啱經過就見到呢啲可以recycle嘅地方，如果唔係我啲燈膽就直接掠落垃圾桶，我唔會特登儲起啲燈膽然後等幾耐先至會去recycle一隻燈膽咁樣囉。所以希望一啲回收嘅地方可以多啲或者令到新嚟嘅人可以知道呢度好多嘢都可以回收。 (translation: I've been living here for a few years now, and my understanding of waste reduction is cutting down on things that either can't be recycled or that we don't realize can be recycled. For example, a few weeks ago I went to Home Depot and noticed they had boxes for recycling light bulbs, and London Drugs has bins for recycling batteries. For me, it's only by chance that I came across these recycling stations, otherwise I'd probably just throw the light bulbs in the garbage. I wouldn't go out of my way to save them up and wait a long time just to recycle one bulb. So I hope there can be more recycling locations, or better information for newcomers, so people know that a lot of things here can actually be recycled. ● 咁淨返唔係能夠可以會收到嘅嘢就唔係我哋啲市民可以控制得到。Reuse 方面皮我哋木筷子可以用多幾次但係最終都會掠咗佢。 (translation: The rest of the things that can't be collected or recycled aren't really within our control as residents. In terms of reuse, we can try to use things like wooden chopsticks a few more times, but in the end, they still end up being thrown away.) ● 其實加拿大係有呢啲咁樣嘅tools㗎，因為我搵緊一個website係有一個google map係有標示到原來濾水壺嘅芯都

		可以回收，但係冇人宣傳到呢個tools。同埋呢個tool會唔會好多人用呢？係咪要去desktop慢慢咁樣碌，慢慢咁study，佢係冇公仔，同埋冇標誌。其實加拿大係有resources，係有platform，但係冇人宣傳。佢個traffic係low，個SEO好差多所以冇人知道。一直以嚟冇宣傳，冇好明顯咁樣去推廣。啲information好難先搵到 (translation: actually, Canada already has tools like this. I found a website with a Google Map showing that even water filter cartridges can be recycled, but no one promotes these tools. And are people really using them? You have to go on a desktop, scroll slowly, and study the map. It has no icons or clear labels. Canada already has the resources and platforms, but they’re not being promoted. The site’s traffic is low, the SEO is poor, and as a result, very few people know about it. There hasn’t been any visible promotion and the information is hard to find.

Strategy 2.2 Support residents adopting waste prevention habits 策略 2.2 支援居民養成減廢習慣 Action ID081: Increase in person education where residents can talk directly with experts on how to reduce waste. 行動 ID081：增加面對面教育，讓居民可以直接向專家查詢點樣減少廢物。		
Section	**Questions asked by Participants**	**Feedback heard**

If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 好好嘅建議，但點做到？ (translation: That's a great suggestion, but how can it actually be done?) • 究竟安排一個人喺現場解答問題，係咪真係feasible (translation: is it actually feasible to have someone stationed on-site to answer questions?)	• 容易, 但長期有專家去詢問, 成本會不會太高? (translation: easy, but if experts are needed to provide consultations, wouldn't the cost be too high?) • Easy. This is already being done at zero waste centres. I can bring items there and ask the staff whether they can be recycled. However, that mainly applies to recycling. When it comes to waste reduction, in-person efforts aren't very cost-effective unless they take place at events with large attendance. It might be more practical to do this through repair cafés or other community events • It would be easy for me to participate since I'm interested in learning directly from experts. However, I wonder if maintaining regular expert sessions could be costly in the long term • 面對面嘅溝通太浪費資源啦，接觸到嘅人亦唔係太多，同埋好多時想去主動搵到資訊嘅時候，我哋會更加希望係我哋日常好容易去到嘅地方，例如其他participant所講嘅supermarket，又或者經常會去到嘅圖書館或者係community centre，咁就可以隨手接觸到呢啲資料，咁可以傳播到嘅機會更加大，而且所花費嘅資源比起不停要搵人兜口兜面咁講其實效率大好多 (translation: face-to-face communication takes up too many resources and doesn't reach a large enough audience. Often, when we want to look for information ourselves, we prefer to find it in places we already visit regularly like supermarkets, libraries, or community centres, as other participants mentioned. If these materials were available in those everyday spaces, people could easily access them, which would spread the message much more effectively. Compared to constantly sending people to talk in person, this approach would be far more efficient and cost-effective) • It might also not be very practical, as not everyone would be able to attend. Sometimes questions come up in daily life, and it doesn't feel helpful to "save them up" for a later session with a professional • It would be hard for me to participate because in-person

		meetings require people to dedicate time, so the challenge is how to motivate them to join sessions with experts. This is the hardest part, as many people may not have the intention to participate, it's a very passive way to educate people ● Educational tools for recycling might not be effective when people's awareness of recycling is low or when they don't see the need to recycle ● 其實如果要去到面對面嘅話，多數都係啲對環保好認真、好投入嘅人先會去。佢哋可能好engaged，但對一般人嚟講，我覺得冇乜必要要同專家面對面傾。好似我自己係新移民，如果要同專家面對面，其實都唔知點問問題。好多問題都係好基本，用一張leaflet已經可以解答。最好啲資料可以隨時睇，例如我執屋、倒垃圾嗰陣想查返啲資料就搵到。對普通人嚟講，要同專家傾係有啲壓力，而且都會覺得呢啲事唔關自己事，唔明點解要特登去了解。 (translation: if it's a face-to-face session, it usually attracts people who are already really passionate about environmental issues and already very engaged. But for regular people, I don't think it's necessary to talk directly with experts. For me, as a newcomer, if I had to meet experts in person, I probably wouldn't even know what to ask. Most of my questions are quite basic and could easily be answered in a leaflet. Ideally, the information should be something we can access anytime, for example, when I'm sorting waste or cleaning my home, I can quickly check what's covered. For most people, talking to experts feels intimidating, and they might also think, "this doesn't really concern me, so why should I learn about it?") ● Not difficult if time and venue is convenient . ● Educational tools for recycling may not be effective if people have low awareness of recycling or don't see the need to do it ● No time, it's hard to reflect deeply or keep track on our

		own. Education needs to be reviewed and reinforced repeatedly. ● 其實簡單直接啲可以喺派傳單。我初初嚟， 我印象中好似只係收過一兩次宣傳單張話去邊度可以回收同埋有乜嘢可以回收。我覺得呢啲係最直接同埋最入屋嘅方式。但係直至到嗰次收到先至知道原來某啲樽係可以回收，同埋知道可以攞去啲deposit centre，咁樣嘅就唔使全部樽要再去分類咁recycle。對於啲屋企唔係好大嘅人嚟講係會容易啲。咁如果真係有個forum好似我哋呢度有20個人，咁淨係可以reach out到20個人，咁reach唔到一棟大廈二百個人咁，或者個community成千人咁。 都係簡單好啲，好似宣傳單張或者啲billboard喺啲超市或者係人多嘅地方咁樣。 (translation: It could be simpler and more direct like handing out flyers. When I first arrived, I remember only receiving one or two pamphlets about where and what to recycle. I think this is the most straightforward and effective way to reach people in their homes. It was only after getting that flyer that I realized some bottles could be recycled and taken to deposit centres, meaning not all bottles had to be sorted again for recycling. For people living in smaller homes, this makes things much easier. If there's an education forum with an expert like this one with about 20 participants, it can only reach those 20 people, not a whole apartment building of 200 residents or a community of thousands. Simple methods work best, like distributing flyers or putting up billboards in supermarkets or other high-traffic areas.)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	●	● Consider the human resources required and explore how some of this work could be replaced or supplemented with online resources ● An online platform or Facebook focus group would be better, peer-to-peer education is often more effective ● Record expert talks or information sessions as videos and

		promote them through social media ● Physical promotion, such as advertisements in public spaces, would also be more practical and far-reaching ● Consolidate the various recycling and waste reduction websites in BC into one central platform, and advertise it so more people know about it
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 1 participants expressed this is high importance - 5 participants expressed this is medium importance - 9 participants expressed this is low importance - 4 participants didn't answer ● I think combining in-person education with online resources, such as videos, infographics, and multilingual guides, would make this action more sustainable. No need for experts! ● 喺香港其實未必有啲專家去教大家點樣回收，不過通常啲回收點會有職員喺度，當你攞回收物去嗰陣，佢哋會即場教你點樣分類、點樣做。透過呢種方式去學，感覺上比較實際同容易做到。 (translation: in Hong Kong, we don't necessarily have experts teaching people how to recycle, but there are usually staff at recycling stations who explain the process when people drop off their items. Learning through that kind of direct, on-site guidance feels much more practical and achievable) ● 其實唔需要樣樣都靠專家，如果教識咗街坊同埋小朋友，佢哋自己都可以再教返身邊嘅人。透過學校或者社區去推動教育會實際得多，亦都更有意義。 (translation: We don't always need to rely on experts. Once local residents and children are educated, they can pass that knowledge on to others in the community. Community education through schools and neighbourhood networks is much more effective and meaningful)

Strategy 3.3 Foster the broad adoption of reuse, refill, and repair
策略 3.3 推動廣泛採用重用、補充及維修

Action ID047: Advocate that the federal and provincial government develop funding programs to support the expansion and development of reuse and repair infrastructure such as "thing rentals" at public libraries, refill at retail, packaging reuse systems, furniture reuse, and a community reuse options database.
行動 ID047：倡議聯邦及省政府設立資助計劃，以支持重用同維修基礎建設嘅擴展及發展，例如公共圖書館嘅「物品租借」、零售商嘅補充服務、包裝重用系統、傢俬重用，以及建立社區重用選項資料庫。

Section	Questions asked by Participants	Feedback heard
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Nope, how can we get the reused items? Are they clean? How do we apply? • I live in Surrey, and it's a big city that covers a large area. Renting items might be difficult — will they be clean? What if they break? It would be hard to keep renting items out if they're not clean or have things like pet fur on them. • 如果可以同社區團體、教會或者宗教組織合作，會唔會容易啲推行？(translation: would it be easier if there were	• I think this could help encourage people to reuse. Sometimes we see something as waste or useless, but someone else might need it, for example, packaging materials from online shopping. For buyers, it's a one-time use and then thrown away, but sellers or people who are moving need boxes all the time. If there's a place where people can donate like-new packaging materials and others can pick them up, that would be great. • Easy for me to participate, I'm already part of Buy Nothing groups, tool libraries, little free libraries, and community fridges • If there's clear information, for example, about rental or lending programs, and if it's run as a city-based system, it would be easy to participate. The first step is knowing where to find this information. • 本人其實唔係幾支持物品租借呢個方向，因為其中一個好困難嘅點就係，到底由乜嘢人去决定、有啲乜嘢物品係準備擺出嚟租借呢？同埋呢啲物品要放喺邊啲地方？好似頭先啲人講，啲site好散。我自己都有經驗，試過想租借一部

	collaborations with community groups, churches, or religious organizations?) ● 至於包裝重用方面，究竟真係乾淨嘅呢？ (translation: for reusable packaging, is it really clean?)	衣車，發現雖然有得租，但係我附近嘅community centre冇，要揸車十幾二十公里去到另一個community centre先租到。咁呢個係咪真係一個合理嘅方向呢？而且呢個方案要幾大嘅資源先做到呢？ (translation: personally, I don't really support the direction of item rentals. One major difficulty is, who decides what items are available for rent, and where these items should be placed? Like others mentioned, the sites are very scattered. From my own experience, I once tried to rent a sewing machine and found that while the service existed, my nearby community centre didn't offer it. I had to drive 10 or 20 kilometres to another community centre just to rent it. So is this really a reasonable direction to take? And how much resource would it require to make it work?) ● Metro Vancouver 入面有好多唔同民族同種族，你係咪可以確保到如果呢個計劃係覆蓋成個地區，啲物品都仲係乾淨嘅呢？因為大家對「乾淨」嘅定義唔同。啲嘢如果爛咗、污糟咗，可能就冇機會再復修。有啲種族或者文化背景嘅人會好介意屋企有冇貓狗或者其他氣味。當有好多唔同文化同宗教嘅時候，有啲物品就未必可以共用，因為可能會觸及禁忌。咁如果 Metro Vancouver 要喺咁大嘅範圍推行共享，係咪會出現呢啲問題？會唔會忽略咗文化差異？可能應該考慮交返畀民間去運作，而唔係由官方統一管理，咁先可以照顧到唔同地區、唔同宗教嘅需要。有啲人對貓毛或者氣味敏感，如果啲傢俬去過有寵物嘅屋企，再租畀其他人可能會有問題。甚至有啲傢俬吸咗唔同氣味、變尖或者污糟咗，咁樣要點樣確保真係乾淨、唔會影響下一個使用者呢？ (translation: In Metro Vancouver, there are many different ethnic and cultural groups. If this program spans across the entire region, how can we ensure that the items remain clean? Everyone's definition of "clean" is different.

		If something becomes damaged or dirty, it might not be repairable. Depending on culture or religion, people care a lot about whether a household has pets or certain items. With so much cultural and religious diversity, some items might not be shareable because of taboos or sensitivities. If Metro Vancouver implements a sharing program on such a large scale, could that cause issues? Would these cultural differences be overlooked? Maybe this should be managed by communities rather than a centralized government system, so it can better reflect different regional and religious needs. Some people are sensitive or allergic to pet hair or odours — if furniture comes from a home with pets, it may not be suitable for others. Furniture might also absorb smells or become dirty, so how can we ensure cleanliness and safety for the next user?) ● For small items that can be borrowed from convenient places like libraries or community centres, it shouldn't be difficult. ● 而家啲資料好散、唔集中，好難搵到啱嘅資訊，應該要有一個集中的平台先方便啲。 (translation: everything's scattered and unorganized right now, so it's hard to find information. There should be a centralized source or platform to make it easier to access.)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	●	● 就算而家真係有啲咁樣嘅租借、重用服務，其實一般人根本唔知道政府已經有做呢啲嘢。好似下個星期 Richmond 都有個 reuse 同 repair 嘅活動，但究竟有幾多人知道 city 有搞呢樣嘢呢？我自己都係因為身邊有朋友講起，問我想唔想一齊去睇，先至知道。其實如果身邊冇呢啲朋友，普通人係完全唔會知道，冇乜途徑會接收到呢啲資訊。如果真係想推廣得更好，應該可以好似頭先有人講咁，喺啲超市或者公共地方宣傳，等更多人容易接觸到，而唔係要特

		登上網 search 先搵到。因為講真，唔係人人都對環保咁關注，大部分人都唔會特登去搵呢啲資料。 (translation: Even if these kinds of reuse or rental services exist, most ordinary people don't know that the government is already doing them. For example, there's a reuse and repair event happening in Richmond next week, but how many people actually know the city is organizing that? Personally, I only found out because a friend told me about it and asked if I wanted to go. If you don't have friends who are aware of these things, you'd probably never find out; there aren't really any channels reaching the general public. If we're serious about promotion, maybe it should be like what someone mentioned earlier, advertise in supermarkets or public spaces so more people can see it, instead of expecting people to search for the information themselves. Not everyone cares deeply about environmental issues, and most people won't go out of their way to look for this kind of information.) ● Ease of access and how long would the rental period be? ● Provide businesses with incentives to encourage reuse. For example, there's a paint reuse program, but when I asked at participating locations, they said they don't actually save the paint for reuse, probably because there's no incentive for them to do so. ● Consider how to ensure rented items are clean and safe to use, there could be issues with hygiene or allergies.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION?		In terms of priority: - 5 participants expressed this is high importance - 4 participants expressed this is medium importance - 5 participants expressed this is low importance - 5 participants didn't answer It's not something Metro Vancouver needs to run directly. There are already enough community groups doing this, such as Buy Nothing groups, tool libraries, and second-hand stores. Metro Vancouver's role should be to promote these existing groups and

你仲有冇其他關於呢項行動嘅意見想補充？		encourage more communities to start similar initiatives.

Strategy 3.3 Foster the broad adoption of reuse, refill, and repair
策略 3.3 推動廣泛採用重用、補充及維修

Action ID083: Work collaboratively with food recovery and reuse organizations and non-profits to develop a where to reuse/refill/repair data set.
行動 ID083：與食物回收及重用組織同非牟利團體合作，發展「重用/補充/維修」嘅數據庫。

Section	Questions asked by Participants	Feedback heard
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 呢個係咪focus 返喺食物回收方面？ (is this mainly focused on food recovery?) • 我嘅理解係，除咗食物之外，呢度講嘅應該係回收機構、例如傢俬回收。咁我係咪理解錯咗呢？ (translation: my understanding is that this isn't just about food, but also about recycling organizations, like furniture recycling. Did I understand that correctly?	• 其實要做呢啲計劃真係好難，因為食物安全嘅問題好重要。我而家喺教會嘅 soup kitchen 幫手，都有收到食物捐贈，因為嗰啲已經確保係乾淨，所以冇問題。坊間其實已經有呢啲做法，但如果要喺更大規模推行，就好困難，特別係安全方面。唔係淨係講衞生，仲要考慮唔同宗教，例如印度教、回教都有唔同嘅飲食規條；食物過敏都係一個大問題。如果製作或者分派食物時唔小心混到致敏成分，例如堅果，可能真係會出事。要安全地運作呢啲計劃，除非係由 soup kitchen 或者有營運經驗嘅餐廳去做，因為佢哋有明確嘅 food safety protocol、分類清楚先安全。如果食物來源太多、唔知道邊度嚟，就會有好多營運上嘅風險。 (translation: it's difficult because food safety is such an important issue. I volunteer at my church's soup kitchen, and we do receive food donations and those are fine because they're properly checked and clean. There are already models like this in the community, but scaling

		them up is challenging, especially when it comes to safety. It's not just about hygiene; you also need to consider different religions: for example, Hindu and Muslim dietary restrictions, and food allergies are another major concern. If food preparation or distribution accidentally mixes in allergens like nuts, it could be dangerous. Programs like this can only really run safely if they're handled by soup kitchens or restaurants with proper operations and food safety protocols. When food comes from too many different sources, or you don't know exactly where it's from, there are a lot of operational risks.) ● Easy, as long as I know about it ● If it's just the database, it should be easy to build, the key is being careful with how food items are categorized ● 如果個模式係針對現有機構、教會，整合好啲資料畀佢哋可以直接向啲 food supply 去申請，其實會好好多。因為佢哋本身已經有經驗、比較專業。咁樣會比起開放畀普通人或者其他唔同來源一齊參加更加實際，否則太多人參與反而會搞亂檔。 (translation: if the model focuses on existing organizations or churches, and consolidates data so they can directly apply to food suppliers, it would work much better. These organizations already have experience and are more professional. That would be more effective than letting the general public or multiple sources join in, which could make things messy and disorganized.) ● 我覺得如果講緊食物回收，大家都會擔心 allergy concerns 呢啲問題。但如果係傢俬回收或者電器回收，其實係幾好嘅方案。因為有啲人，例如新移民，嚟到未必有好多資金去買傢俬或者電器。我記得我當時都花咗好長時間上網搵二手傢俬、睇下有冇啲回收計劃或者家庭可以幫到，但係好難搵到集中嘅資料。如果有一個平台或者資料庫，可以顯示邊一區或者邊啲機構有傢俬或者電器可以回收，對呢

		啲家庭嚟講真係可以減壓，亦都提供到實際幫助。 (translation: I think when it comes to food recovery, people are often worried about allergy concerns. But for furniture or appliance recycling, that's actually a really good idea. Some people — like newcomers — may not have the financial means to buy furniture or appliances when they first arrive. I remember spending a long time searching online for second-hand furniture, recycling programs, or families who could help, but it was very hard to find centralized information. If there were a platform or database showing which areas or organizations offer furniture or appliance recycling, it would really help ease the burden and provide practical support for these families.) ● If it's mainly targeting people who are already participating, then having a dataset would be helpful. ● 其實仲要考慮衛生問題、宗教問題，仲有 Halal 食物嘅需求 We also need to consider hygiene issues, religious concerns, and the need for Halal food
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		● Making the data searchable online or through a mobile app, with clear categories such as refill stations, repair cafés, and food recovery locations, would make participation much easier ● It's also important to consider food allergies, as there could be risks of cross-contamination
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION?		In terms of priority: - 4 participants expressed this is high importance - 7 participants expressed this is medium importance - 4 participants expressed this is low importance - 4 participants didn't answer ● 呢個都好似係源頭減廢嘅概念。我返工嘅地方都有好多食物浪費，不過好多時都因為衞生問題而冇辦法重用。始終

你仲有冇其他關於呢項行動嘅意見想補充？		你唔可能用同一啲食物再去 serve 畀其他人，收錢又好、唔收錢又好都唔得。雖然而家有啲平台，例如 Too Good To Go，可以幫啲冇人掂過、淨返嘅食物再賣出去，但食物始終係一個高風險嘅問題。如果有人食完出事，例如食到肚痛，可能真係會畀人告到賠家產。 (translation: this feels like part of the idea of waste reduction at the source. At my workplace, there's a lot of food waste, but often we can't reuse it because of hygiene concerns. You can't really serve the same food to others again, whether you're charging or not. There are some existing platforms, like Too Good To Go, that help resell untouched leftover food, but food safety is still a big issue: it's too high-risk. If someone gets sick, even a small organization could be sued and face serious consequences.) ● 提倡餐廳預計好一日製作份量, 唔好預太多導致浪費 (translation: encourage restaurants to plan their daily production more carefully so they don't prepare too much and create unnecessary waste) ● The database should be combined with information on reduce and recycling, so there is one centralized database where people can search for information on everything: reduce, reuse, recycle, repair (repair cafe schedules and repair information). ● The government should encourage restaurants to share the leftover ingredients to employees or donate to food bank, because there will be lots of food waste from the commercial kitchens, to increase their intention to reduce food waste and encourage them to share the left over ingredients/food to people in need will be essential ● One area where reuse is badly needed to reduce waste is the construction (demolition) industry, too many reusable material are being thrown out as general garbage. It would be very helpful if there is a way to connect people looking for materials to reuse with the demolition contractors.

Strategy 3.3 Foster the broad adoption of reuse, refill, and repair 策略 3.3 推動廣泛採用重用、補充及維修 Action ID164: Share best practices for incorporating reuse, refill, and repair programs into communities. 行動 ID164：分享將重用、補充及維修計劃融入社區嘅最佳做法。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 呢部分係咪真係講緊傢俬或者電器回收嗰方面嘅內容？ (translation: Is this part actually referring to furniture or appliance recycling?)	• It depends on how the information is shared • It depends on the type of items, it's easier for small, easy-to-carry items that have low hygiene risks • 我覺得呢樣嘢幾好，因為可以延長啲物品嘅壽命，有啲只要輕輕維修一下就可以繼續用。不過中間我會想像到一個比較困難嘅位，就係logistics方面嘅問題。好似我有一張梳化，可能只係要補少少嘢，但我冇辦法自己運咁大張梳化去畀人維修。咁我應該點樣搵到方法將佢送去？如果喺物流方面有支援，呢樣嘢就會比較容易實現；但如果冇，可能就會變得困難。 (translation: I think this idea is quite good because it can extend the lifespan of items since some only need minor repairs to be reused. But I can imagine one major challenge being logistics. For example, if I have a sofa that just needs a small fix, I don't have a way to transport such a large item to the repair location. How would I get it there? If there's logistical support for that part, the idea would be much more feasible. Without it, it might be difficult to implement.) • 我自己以前嘅經驗係，呢啲嘢喺 Facebook community group 入面係做到嘅。如果大家都住喺同一個區，好似

		Marpole 咁，搬張梳化都容易啲，都有人幫手，但如果要搬去好遠，例如去到 Vancouver 其他區，就真係好大挑戰。所以呢啲計劃要睇下規模同埋可行性，或者可唔可以喺社區層面建立一啲民間力量去推動。大家喺自己社區識得對方、熟面口，會安心好多。但如果太分散、太遠，又唔知對方係咩人，好多人都會有猶豫。就算我以前放啲二手嘢出嚟賣，對方都會問到好詳細先覺得放心。我覺得呢啲都係其中一啲文化或者宗教上嘅隔閡，要諗下點樣去解決。(translation: from my own experience, this kind of thing can work through Facebook community groups. If everyone's in the same neighbourhood, like Marpole, it's easier to move a sofa or find someone nearby to help. But if it's far like moving something across Vancouver, it becomes a real challenge. So for this kind of initiative, it depends on the scale and whether there's a way to build local, community-led networks to make it work. When people know each other in their own area, there's more trust and comfort. But if it's too spread out or you don't know who the other person is, many people will hesitate. Even when I've tried to give away items before, people would ask very detailed questions before they felt safe. I think this is one of the cultural or even religious barriers that we need to think about how to address) ● 可以定期舉辦同環保有關嘅活動，用啲軟性啲嘅方法去推廣同教育，例如搞環保主題嘉年華，或者組織市民參觀大溫嘅環保回收系統同回收場 (translation: Regularly organize environmental activities and use softer approaches to promote and educate - for example, hosting environmental-themed fairs or arranging visits to Metro Vancouver's recycling systems and facilities) ● 要考慮重用物品嘅大小，可能要諗下點樣搬運 Consider the size of reusable items, transportation and handling might need to be planned. ● If there's support for transporting items or bringing them to

		repair or reuse locations, it would make participation much easier ● It would also be easier for me to participate if I'm aware of the program
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	●	● Metro Vancouver already has a website on how to repair and alterations, this should be expanded to include more categories. They should also encourage people to share this website.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	● 我想問返一個關於 recycle bin 嘅問題。其實我哋成日出街都會見到好多回收桶，但係平時我哋揀嘢都係照住個分類去扔。不過實際上，入面有幾多真係攞去回收呢？我之前去過一啲市集嗰啲地方，當我分類揀垃圾嘅時候，有個工作人員同我講：「你扔邊個都一樣，我哋唔會理㗎。」咁我就會諗，其實我哋想推動嘅嘢，係咪真係做到？定係雖然而家設置咗呢啲回收桶，但好多公司或者機構為咗方便，最後都忽略咗佢本身嘅意義？ (translation: I want to ask about recycling bins. We often see recycling bins everywhere, and usually	In terms of priority: - 11 participants expressed this is high importance - 2 participants expressed this is medium importance - 1 participants expressed this is low importance - 5 participants didn't answer ● 之前我都喺elementary school搞過啲 reuse 嘅workshop，會叫學生帶自己啲物品，例如膠樽、紙筒之類，教佢哋點樣用創意去將呢啲物件變成新嘅嘢，等佢哋可以延長使用。不過我自己都會question，當我教完佢哋呢啲方法之後，佢哋喺屋企會唔會真係咁樣做呢？或者當佢哋再有啲可以回收嘅物品嘅時候，佢哋會唔會諗下點樣 reuse，而唔係直接攞入回收箱？ 所以我覺得，點樣去延續呢個 reuse 嘅idea、令佢成為一個持續嘅觀念，都係好值得諗嘅方向。 (translation: I ran a few reuse workshops at elementary schools, asking students to bring their own items like plastic bottles or paper rolls, and showed them creative ways to turn those materials into something new to extend their use. But I often wonder: after teaching them these methods, will they actually continue doing it at home? When they have recyclable items later on, will they think

	we sort our waste and throw it into the right bin. But how much of what goes in is actually recycled? I've been to some markets where, when I tried to sort my waste, a staff member told me, "It doesn't matter which bin you use, it's the same" That made me wonder if we are really achieving what we're trying to do? Even though these bins are set up, are many companies or organizations ignoring their purpose just for convenience?)	about how to reuse them instead of just throwing it straight into the recycling bin? That's why I think it's important to consider changing and making it a lasting mindset. • Community groups already organize "Repair Days" to help residents fix small electrical items and household goods. These existing networks have strong community connections and could make reuse and repair activities more accessible and practical for everyone. • More repair cafés and a wider range of repair categories are needed. Workshops at repair cafés could also be offered to teach people how to repair different types of items

Strategy 3.5 Increase access to reuse, refill, and repair 策略 3.5 增加重用、補充及維修嘅可及性 Action ID058: Facilitate more community-based solutions like buy-nothing groups and shared fridges. 行動 ID058：推動更多社區方案，例如「無償分享群組」同共享雪櫃。		
Section	**Questions asked by Participants**	**Feedback heard**

If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 乜係Buy-nothing group? (translation: What is a buy-nothing group?)	• Buy Nothing groups can be too restrictive, some neighbourhoods have long waitlists to join, and group size limits mean fewer people see the items, so they're less likely to be picked up. People should be encouraged to start their own item-sharing groups modeled after Buy Nothing groups but with fewer restrictions • 如果可以每個區都有自己嘅試點，而且容易接觸、門檻低，好似Oh Yes, It's Free Market咁樣，大家就會容易啲參與(translation: If each district had its own test point that's accessible and low-barrier like Oh Yes, It's Free Market, it would make it much easier for people to take part. • Small, easy-to-carry items with low hygiene risk are okay • 我哋之前都講過，其實呢類計劃可以偏向民間主導，而唔一定要由官方去做 (translation: already mentioned earlier that this could be more of a community-led initiative rather than a government-run one)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• Consider religion and allergy issues when promoting reuse and sharing programs. • Some condo residents already have informal sharing areas in their lobbies where people leave items they no longer need. This shows there's real community interest in reuse. Metro Vancouver could help formalize and promote these "mini reuse stations" by providing clear guidelines for safety, hygiene, and cleanliness
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION?		In terms of priority: - 2 participants expressed this is high importance - 10 participants expressed this is medium importance - 2 participants expressed this is low importance - 5 participants didn't answer • I've visited several community fridges, and many were either discontinued or in a very messy state. It becomes a problem when these spaces turn into dumping sites

你仲有冇其他關於呢項行動嘅意見想補充？		

Strategy 3.5 Increase access to reuse, refill, and repair 策略 3.5 增加重用、補充及維修嘅可及性 Action ID059: Support community-based waste reduction and reuse programs for schools, non-profit organizations, and community groups. 行動 ID059：支援學校、非牟利組織及社區團體嘅減廢及重用計劃。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Would it be easier to have these educational booths/ engagement at community events/ fairs/ festivals? •	• 我覺得係好好因為灌輸啲 idea 畀細路會容易過畀大人。喺香港嗰陣，我哋有啲 mascot、有啲好得意嘅公仔會入學校或者去社區探訪，仲會有啲歌，例如「眼闊肚窄呀，唔好你咁嘥呀，唔好曳呀」嗰啲，小朋友聽幾次就記得晒。但我見到呢邊雖然都有好似 Return-It 啲 mascot 咁，但大家都唔知道佢哋係做乜，冇乜性格、冇乜角色，淨係知道佢係個吉祥物，就冇下文。所以我覺得，如果而家現有嘅 mascot 可以畀返佢哋多啲 character、令佢哋有個故事或者功能，會比單純派人落去重複講「recycle、reuse、reduce」有效得多。依家咁樣講太似上堂聽書，聽極都唔入腦。(translation: I think this is great because it's easier to teach children new ideas than adults. Back in Hong Kong, we had mascots, cute characters that would visit schools or communities and they even had songs and jingles, like "don't waste food" or "don't be wasteful." Kids remembered them after hearing them just a few times.

		Here, even though there are mascots like the Return-It one, people don't really know what they do. They don't have much personality or story, people just see them as mascots and that's it. So I think if the existing mascots were given more character or a story, with a clear role or message, it would be much more effective than just sending people to keep repeating "recycle, reuse, reduce." The way it's done now feels too much like a classroom lecture. People hear it, but it doesn't sink in. ● It's very important to teach children to think before buying anything ● Should not be too difficult if the message is tailored to the target audience.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		● Consider how to encourage people, especially children, to truly put these practices into action in their daily lives
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 11 participants expressed this is high importance - 1 participants expressed this is medium importance - 1 participants expressed this is low importance - 6 participants didn't answer ● Reduce and reuse should be integrated into school life.

Strategy 3.5 Increase access to reuse, refill, and repair 策略 3.5 增加重用、補充及維修嘅可及性 Action ID060: Explore the feasibility of a small business grant program to support the transition to reuse, refill, and waste reduction. 行動 ID060：研究設立小型企業資助計劃嘅可行性，協助轉型至重用、補充及減廢模式。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 個困難嘅地方就係，點樣去檢查佢哋係咪真係有持續嘅影響？係咪要定期提交報告去顯示佢哋嘅成效呢？(translation: The challenge is how to check whether they're actually creating ongoing impact. Should there be regular reporting to show their results?) • If resources are being put into a grant and resources are put into enforcement, is this a good direction?	• 其實坊間已經有好多 reuse、refill 同 waste reduction 嘅 program 喺度做緊，但我覺得反而要睇監管方面。因為假設有啲小型機構或者企業攞到基金去做呢啲項目，再用嗰啲資金去擴大規模，咁到最後佢哋係咪真係有成效？係咪真係做到實際嘅改變？定係淨係攞咗啲資金就算？呢個位其實要監察得清楚啲 (translation: There are already many reuse, refill, and waste reduction programs happening in the community, but what we really need to look at is regulation and accountability. For example, if small organizations or businesses receive funding to run these programs and then expand them, are they actually achieving real results in the end? Are they truly creating impact, or just taking the funding without meaningful outcomes? This part needs clearer oversight.) • 其實每一次有呢啲 grant 嘅時候，都應該要有監管作用。但如果要將資源擺喺呢啲 program 上面，係咪真係值得呢？第一，你要撥錢出去畀人攞 grant；第二，你又要再花成本去 review、監察中間啲人做嘅嘢係咪啱。咁樣其實都係一個雙重資源嘅開支。咁呢個方向係咪真係好？我自己都有啲懷疑 (translation: every time there's a grant like this, there should be some form of oversight. But it raises the question, is it really worthwhile to allocate resources this

		way? First, you're spending money to issue the grant; then you also have to spend more resources reviewing and monitoring whether people are doing things properly. That becomes a double cost of resources. So is this really the best approach? I'm a bit skeptical.) ● ● The grant is targeted at small businesses, so it's difficult for consumers to participate. ●
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	● Is relying on economic incentives a truly sustainable way to encourage reuse in the long term?	● It would help if the grant process were simple and accessible, with multilingual support and practical examples showing how other small businesses have successfully reduced waste
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 0 participants expressed this is high importance - 2 participants expressed this is medium importance - 9 participants expressed this is low importance - 8 participants didn't answer ● Rather than offering grants upfront, it may be more effective to provide incentives or rewards ("carrots") to businesses that have demonstrably increased reuse, refill, or waste reduction ● 關於設立呢個小型企業資助計劃，我自己覺得首先要睇清楚政府想針對邊一類廢物。要先有明確方向，然之後再根據嗰類廢物去設計相應嘅資助方案。例如而家溫哥華都有唔少餐具 reuse 嘅計劃，目的係減少即棄餐具。如果有清晰嘅目標，同時設立一個明確嘅 roadmap 去睇下點樣推到大規模實行，咁其實呢類計劃係好有意義嘅。但如果淨係「呢樣資助少少、嗰樣又資助少少」，冇一個整體目標去針對邊類廢物、邊個解決方案，就好容易出現頭先講嘅問題——例如監管困難、成效唔明顯、成本效益難以估計。

		所以我覺得最重要係，喺決定撥款之前，要衡量清楚呢筆錢係咪真係值得投資落去 (translation: regarding the establishment of this small business funding program, I think the first step is to clearly define which type of waste the government aims to target. There needs to be a clear direction first, and then funding programs should be designed around that specific waste stream.For example, Vancouver already has several reuse initiatives focused on reducing single-use tableware. If there are clear goals and a roadmap outlining how to scale these initiatives, such programs can be very meaningful. But if funding is just scattered here and there without a unified objective without specifying which waste stream or solution it addresses, it easily leads to problems like weak oversight, unclear impact, and poor cost-effectiveness. So I think before allocating funds, it's crucial to carefully assess whether this investment is truly worthwhile.)

THIS MARKS THE END OF THE DISCUSSION

However, participants have added comments to these strategies below that we didn't get a chance to discuss.
Please see the notes below.

Strategy 3.5 Increase access to reuse, refill, and repair
策略 3.5 增加重用、補充及維修嘅可及性

Action ID061: Foster the development of a network that connects independently operated, non profit and community based reuse and repair initiatives.
行動 ID061：推動建立一個網絡，連結獨立營運、非牟利及社區為本嘅重用及維修計劃。

Section	Feedback heard
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Easy, coz the NGO may share the same culture, ppl willing to use/ join • 容易, 集中同一個網站, 令市民知道有咩地方可以回收 (translation: easy, centralize everything on one website so people can quickly see where to recycle) • Making more promotion online on FB/ IG/ TikTok…etc • Social media promotion is important to increase visibility and let more people see recycling information in one place. It helps centralize information whether it's about personal practices or about where recycling locations are. information can be more accessible to everyone
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Make sure the information is up to date.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	Three people came back to the document to mark this as high priority.

Strategy 3.5 Increase access to reuse, refill, and repair 策略 3.5 增加重用、補充及維修嘅可及性 Action ID086: Work with multi-family buildings to increase donation collection options for reusable streams such as clothing and books. 行動 ID086：與多戶住宅合作，增加衣物、書籍等可重用物品嘅捐贈收集選項。	
Section	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Need to limit the scope to something washable and not too personal • Should be OK if suitable items are clearly defined • 容易, 方便去放置 (translation: it needs to be easy and convenient to drop things off) • Lack of space, how can we store the things? Is it clean? • Ensure sufficient collection points at convenient locations • 多戶住宅定期有動可以放置重用物品嘅捐贈, 需要既人可以直接拿走, 餘下的物品就直接送到二手店 (translation: in multi-unit buildings, there could be regular donation days where people can leave reusable items for others to take, and whatever remains can then be sent to thrift stores)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• The main difficulty would be storage space and cleanliness. In multi-family buildings, there's often no extra room for donation bins, and residents may worry about hygiene or pests. A clear schedule for pickup and regular cleaning would help.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？	Two people came back to the document to mark this as medium priority. One person came back to the document to mark this as low priority. • People are already dropping off donations at the various thrift stores, maybe there should be leaflets or other form of information to tell people where the nearest thrift stores are. • Metro Vancouver should work with certified donation partners to ensure bins are safe, clean,

Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	and regularly maintained. It's also important to design secure containers that prevent theft or people from climbing inside—since there have been past safety incidents with donation boxes in some cities. Clear labeling and education on acceptable donation items would also help.

Strategy 3.5 Increase access to reuse, refill, and repair
策略 3.5 增加重用、補充及維修嘅可及性

Action ID166: Support increasing the size, number and frequency of repair and reuse events around the region.
行動 ID166：支援擴大區內維修及重用活動嘅規模、數量及頻率。

Section	Feedback heard
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• I really like the idea of community repair workshops. Many people here enjoy DIY, and repair services are expensive. So if local libraries or community centres could host repair cafés, it would encourage reuse and community connection. • Should be OK if locations are convenient • Easy, many cities already have repair cafes that rotate around different neighbourhoods. There should be more of these cafes and the items that can be repaired should be expanded. • More time slots allocated for "popular" repair categories
What should Metro Vancouver consider to support your participation with this action?	• Expand repair cafes, provide opportunities for people to observe and learn, encourage people to volunteer to repair items and pass their knowledge in their own communities.

大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	Six people came back to the document to mark this as high priority.

Strategy 3.7. Encourage and celebrate residents and businesses that prioritize reuse and refill practices 策略 3.7 鼓勵及嘉許重視重用及補充做法嘅居民和商戶 Action ID076: Provide education for residents on affordable actions they can take to prevent waste through everyday activities. 行動 ID076：為居民提供教育，推廣日常生活中可負擔嘅減廢方法。	
Section	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？	• Probably easy for me to participate, because I think there are actually a lot of people who are interested in preventing waste, they just don't know how to do it • Easy if message is clear and tailored for target audience • relatively easy, as the focus is on sharing practical, low-cost strategies that residents can implement in their daily lives • Deliver these materials through accessible channels • visible motivation, reminders, or reinforcement can help change habits

If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• providing short, visually engaging materials, tips tailored to different household types, and examples of real-life applications. • providing ongoing reinforcement through newsletters or community events to keep waste prevention top of mind.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	Two people came back to the document to mark this as high priority. Two people came back to the document to mark this as medium priority.

Strategy 3.7. Encourage and celebrate residents and businesses that prioritize reuse and refill practices
策略 3.7 鼓勵及嘉許重視重用及補充做法嘅居民和商戶

Action ID077: Promote bring your own cups and bags and other reusable items, including fun new elements and co-developed messaging that resonates with residents with a diversity of cultures and values.

行動 ID077：推廣自備杯、袋等可重用物品，並加入有趣新元素，與多元文化及價值觀嘅居民共同設計訊息。	
Section	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• I would like to remind Vancouver City had a bring your own cup movement, but it didn't work well • Difficult for shops with high foot traffic. Imagine if the bubble tea shops or coffee shops are already busy enough/ overcapacity, it wouldn't be a practical solution because BYOC would further slow down their operations • Difficult to define "fun new elements" because these could be very subjective. co-developed messaging might not resonate with diverse communities • Easy for those who already have the habit to bring their own cups • 自備杯/餐具可以有折扣, 吸引市民自備重用物品 (translation: offer discounts for bringing your own cup or utensils to encourage people to use reusable items)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Besides repair workshops, I think creative upcycling workshops could be great too — for example, inviting local artists or designers to teach people how to turn old materials into something useful or beautiful. It's educational, fun, and promotes sustainability. • Provide more incentives for businesses to promote bringing their own cups/containers/utensils.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	Three people came back to the document to mark this as high priority. One person came back to the document to mark this as medium priority. • There is so much waste in food courts and restaurant take out orders when the containers and utensils are all single use items. There needs to be promotions and incentives for people to bring their containers/utensils.

Strategy 3.7. Encourage and celebrate residents and businesses that prioritize reuse and refill practices 策略 3.7 鼓勵及嘉許重視重用及補充做法嘅居民和商戶 Action ID078: Develop waste prevention and reuse programs and education targeting specific sectors that may be unfamiliar with regional waste reduction practices such as newcomers and tourists. 行動 ID078：針對新移民及遊客等對地區減廢做法未必熟悉嘅群體，制定減廢及重用計劃同教育	
Section	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Easy to participate if the programs are accessible, culturally sensitive, and tailored to the knowledge level of newcomers. • Difficult for tourists due to different cultures/ practices. They might not pay attention to these programs or protocols when they are on holiday mood • 製造不同語言的回收單張, 在入境時派發, 在新移民必去的地方派發, 例如:Service Canada Office (translation: create recycling pamphlets in different languages and distribute them at entry points or places where newcomers often go, such as Service Canada offices) • delivered through channels that newcomers and tourists regularly access. From discussion: 針對遊客或者旅客呢個喺後面嘅 ID78 問題，其實佢哋好難知道應該點樣分類或者掠垃圾，我哋自己都未必清楚，因為各個城市嘅分類標準都唔一樣。如果冇一個統一嘅系統，旅客根本唔知道應該點樣處理 (translation: regarding the ID78/ question later on about tourists or travellers, it's difficult for them to know how to sort or dispose of waste. Even we ourselves aren't always sure, since each city has different recycling standards. Without a unified system, visitors have no idea how to handle it)
What should Metro Vancouver consider to support your participation with this action?	•

大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	Three people came back to the document to mark this as high priority. • 本人剛到溫哥華都不知道原來買飲品時所扣的按金是可以從Return-it對換回來, 也是後來從朋友口中得知才知道 (translation: when I first arrived in Vancouver, I didn't know that the deposit charged on drink containers could be refunded at Return-It, I only found out later through a friend) • More signage at the source of potential wastes, e.g. signage at grocery check outs that plastic bags used in packaging can be recycled.

Strategy 3.7. Encourage and celebrate residents and businesses that prioritize reuse and refill practices 策略 3.7 鼓勵及嘉許重視重用及補充做法嘅居民和商戶 Action ID089: Develop and implement an annual recognition program to celebrate businesses in the region for reuse, refill, and repair programs and initiatives. 行動 ID089：制定並推行年度嘉許計劃，表揚區內推行重用、補充及維修計劃嘅商戶。	
Section	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得	• 有點困難, 要有咩嘉許才能吸引商戶去參與推行? (translation: It's a bit difficult, what kind of recognition or incentive would encourage businesses to take part?) • Should not be too difficult if targeted probably • Recognition programs can motivate businesses to adopt or expand reuse, refill, and repair practices by providing public acknowledgment, enhancing their reputation, and showcasing their sustainability leadership.

自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	● If the program requires an application/ admin/ selection process, it shouldn't be time-consuming, unclear, or requires extensive documentation, as this may disincentivize businesses from participating ● Develop a simple matrix for recognition so it's easy to understand. The criteria should also be widely communicated.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	● celebrate winners through multiple channels, including social media, local news, and at industry events, to maximize visibility and encourage broader adoption of waste reduction practices. ● promoting the program widely through local business associations, chambers of commerce, and media
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	One person came back to the document to mark this as medium priority. Two people came back to the document to mark this as low priority. ● Don't think this is needed. It may be more effective to provide incentives for businesses to have these initiatives.

Notes

廢物事大: 社區組織／義工專場

Waste Talk: Community + Organizers Session

Strategies: Rethink, Reduce, Reuse, Recycle

策略：重新思考、減少、重用、回收

Strategy 1.2. Support the transition to a more circular regional economy through waste prevention 策略 1.2 透過減廢支援地區經濟向循環經濟轉型 Action ID041: Identify and work with industry event organizers to include circular built environment success stories, communication, and learning sessions that promote waste prevention in their industry communications and learning sessions. 行動 ID041：識別並與行業活動主辦方合作，將循環建築環境成功案例、交流及學習環節納入活動行業交流同學習環節內容中，以及推動減廢嘅資訊同討論。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it?	• 我自己睇呢個方案，係咪好似比較適合大型企業去做？如果我哋係代表一啲	• It's difficult to recycle, reduce, or reuse when it isn't easily accessible. • There also doesn't seem to be a strong initiative encouraging people to go out, listen, or learn about these topics.

如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	活動主辦方，淨係搞啲細型、簡單嘅活動，其實喺環保方面嘅影響力唔算大。要我哋為咗啲物資特登行去搞回收，其實都幾困難 (translation: from what I can see, does this seems more suitable for larger companies? For smaller event organizers like us who just run simple activities, our environmental impact isn't that significant. It's difficult to justify going out of our way just to recycle a small amount of materials)	• Some organizers of large-scale events outsource to waste management companies, so hosting sharing sessions within the waste management industry could be helpful • It might also be difficult if event organizers or companies don't share or prioritize environmental protection values • 我自己如果as一個活動主辦人嘅身份去睇，其實我唔係成日搞活動，所以唔會有好大嘅動力或者 initiative 特登去聽啲做開環保嘅人分享佢哋嘅故事。如果想吸引我呢類人參與，可能可以喺地面或者網上分享佢哋嘅故事或者資源，好似政府講嗰啲例子——例如香港環保署專門推動減廢，或者可以製作宣傳短片，教企業或者活動主辦單位點樣減廢，咁樣會容易啲吸引人參與。但如果要我特登搞個 session，又要參加一個四、七十人嘅活動去聽講座，老實講，個 motivation 真係好低 (translation: from the perspective of an organizer who don't host events very often, I don't have much motivation or initiative to attend sessions where environmental groups share their stories. To engage people like me, maybe those stories or resources could be shared publicly or online, for example, similar to how Hong Kong's Environmental Protection Department promotes waste reduction, or through short videos that teach companies and event organizers practical ways to reduce waste. That kind of approach would be easier to take in and more engaging. But if I have to set aside time to join a separate session or attend a large 40–70 person event just to listen to a talk, honestly, my motivation would be quite low.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• Waste collection currently adds costs for event organizers • Providing case studies, real-life examples, or practical scenarios would help organizers better understand how to take effective actions for waste prevention
How much of a priority is it to you to		In terms of priority:

include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		- 1 participants expressed this is high importance - 7 participants expressed this is medium importance - 1 participants expressed this is low importance - 0 participants didn't answer • 我主要 concern 嘅係嗰個 deposit site 嘅地點同埋處理流程。即係話，嗰啲地點係咪方便？會唔會有啲車可以定時定點嚟收？因為對於主辦單位嚟講，如果要自己處理，其實仲要自己出錢去處理垃圾，咁樣好難做到有效分類。好多時啲機構都冇資金、唔知應該點樣處理，或者根本冇車。好多活動都係平等、簡單為主，但如果仲要開架車去處理垃圾，其實就唔係幾 make sense。 (translation: my concern is mainly about the location of the deposit sites and how the process works. Are these sites convenient? Will there be vehicles doing scheduled pick-ups? For event organizers, it's difficult because they still need to pay to dispose of waste properly. That makes it hard to sort things effectively, especially since many organizations don't have funding, don't know how to handle it, or simply don't have a vehicle. Most events aim to be simple and accessible, but if organizers have to drive somewhere just to manage waste, it doesn't really make sense.)

Strategy 2.2 Support residents adopting waste prevention habits
策略 2.2 支援居民養成減廢習慣

Action ID079: Improve circular economy education in schools through field trips, hands-on learning, and other innovative school education programs.
行動 ID079：透過實地考察、動手學習及其他創新教育計劃，加強學校對循環經濟嘅教育。

Section	Questions asked by Participants	Feedback heard
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	•	• 我覺得教育係一個好好嘅推動方法。之前我搞過啲小組，以環保義工嘅身份參與，教啲小朋友了解香港嘅環保回收系統係點樣運作。喺香港嗰陣，我試過特登帶小朋友去唯一嘅造紙回收廠，睇佢哋點樣處理同運作。嗰次我哋就學到，原來啲膠紙要撕開、要分開先可以真係回收到。 我而家喺呢度做回收嘅時候，其實都會好好奇究竟呢度嘅系統係點樣嘅，因為我唔清楚啲交出去嘅回收物最後會點處理。同埋我唔太明白點解要分開「硬膠」同「軟膠」，唔同地方又有唔同嘅分類方法，令我有少少confused。如果我清楚知道呢度嘅回收流程同分類方法，我會更加有動力去做。教育唔一定要靠大人，可以透過教小朋友或者下一代，咁樣推廣會更容易。 • (translation: I think education is a very effective way to promote change. In the past, I organized small groups and, as an environmental volunteer, taught children how Hong Kong's recycling system works. Back then, I even took them to visit Hong Kong's only paper recycling factory to see how it operates. We learned that you have to peel off and separate tape before paper can actually be recycled. But now when I recycle here, I often wonder how the system works because I don't know what happens to the materials after collection. I also don't fully understand why we have to separate "hard plastic" and "soft plastic," or why sorting rules differ across locations, it's a bit confusing.If I understood the recycling process and sorting system better, I'd feel more motivated to do it. Education doesn't have to rely only on adults, teaching children and the next generation can make it easier to spread awareness and build habits.) • 教育係一個好好嘅推動方向，可以畀小朋友參與，同時介紹環保回收系統

		(translation: education is a great way to promote environmental action, involve children and introduce how the recycling system works.) ● 其實就算係大人，都好想知道呢度嘅系統係點樣運作。如果將推廣教育放喺下一代身上，會更加容易傳開去 (translation: even adults are curious about how it operates here, but promoting education through the next generation would be more effective in raising awareness.) ● Relatively easy because field trips, hands-on activities, and interactive modules make learning tangible and engaging for students, which can increase understanding and retention of circular economy principles. ● Providing materials that align with existing curricula and age-appropriate content will help teachers incorporate activities smoothly.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		● 我覺得參觀可以令佢哋親眼睇到嗰樣嘢，會比較實在，亦都可以畀人learning by doing，效果會好啲。(translation: I think site visits let people see things firsthand, it feels more tangible, and learning by doing is a much more effective approach.) ● Collaboration or partnership referral with local recycling facilities, innovation hubs, or environmental organizations would support participation
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 6 participants expressed this is high importance - 2 participants expressed this is medium importance - 1 participants expressed this is low importance - 0 participants didn't answer ●

Strategy 2.3 Prioritize food waste reduction initiatives 策略 2.3 優先推動減少食物浪費嘅措施 Action ID072: Work with business, industry associations, and non-profits to reduce food waste by improving food purchasing, storage, and preparation methods. 行動 ID072：與企業、行業協會及非牟利組織合作，透過改善食物採購、儲存及準備方式，減少食物浪費。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	•	• Have a more centralized platform that shares where food scraps or nearly expired food can be collected from. This would be especially helpful for event organizers or community groups to gather food for community use or redistribution. • How do we deal with sorting? • 我喺啲 soup kitchen 做義工，有時都會去啲 food bank 拎食物。不過我發覺有少少混亂，食物種類唔一定齊全，每次都有嘅都唔同，分類亦都未必做得好完善。 如果 food bank 成日都有咁多剩餘食物，係咪可以好似香港咁，有啲食堂或者社區廚房用嗰啲剩餘食材再煮？如果唔咁樣處理，啲剩餘食物又可能會變成另一種浪費。唔知喺呢度可唔可以做到類似 food coupon 嗰種形式，等有需要嘅人可以用嚟換取食物？ (translation: I volunteer at soup kitchens and sometimes go to food banks to pick up food. But I've found it a bit disorganized, the types of food aren't always consistent or available every time, and sorting isn't always done properly. If food banks often have a lot of surplus food, maybe there could be community kitchens, like in Hong Kong, that use those leftovers to prepare meals. Otherwise, all

		that extra food could just end up being another form of waste. I also wonder if something like a food coupon system could work here, so people in need could use them to get food.) ● 其實而家都有好多非牟利組織去做呢啲食物回收，然後用比較低嘅價錢畀有需要嘅人去買，好似我而家volunteer緊嘅 Quest都係其中一個例子。但係最麻煩嘅地方就係，冇一個統一嘅機構去整理同統合呢啲資料。如果有需要嘅人想搵呢啲地方，其實佢哋根本唔知道要去邊度睇。就算係有需要嘅人，有時冇車access唔到，如果有幾個固定嘅地點，好似喺溫哥華唔同區都有分店咁樣，咁就會方便access好多。而家就係太分散、冇人統籌，全部靠自己去搵，好混亂又唔集中，令好多人都唔知道應該點樣搵 (translation: There are already many non-profit organizations doing food recovery work, selling surplus food at lower prices to people in need, for example, the NGO “Quest,” where I volunteer, is one of them. But the main problem is that there isn’t a centralized organization to organize and consolidate this information. When people in need want to find these places, they often don’t know where to look. Many don’t have cars, so if there were several fixed locations, like a few sites across different areas, it would make things much more accessible. Right now, everything is too scattered and uncoordinated. People have to search on their own, and it’s very confusing and fragmented, leaving many unsure where to start.) ● 我都同意，因為我發覺喺唔同地區申請服務嘅時候情況都唔一樣。有啲 client 會卡喺中間，基本上申請唔到佢哋需要嘅服務。每個區嘅申請文件都唔同，又要提供唔同嘅證件或者卡，有時啲要求又唔清楚，成個流程都唔太 user-friendly，令到啲人覺得好尷尬，最後就放棄申請。但另一方面，我都有聽過有啲地方只係排隊就可以攞到服務。所

		以要理解到，其實呢啲申請過程入面存在好多barriers，要聽多啲 client 自己嘅經歷先可以知道問題喺邊度。 (translation: I agree with this, because I've noticed that applying for services varies across different regions. Some clients get stuck in the process and basically can't access the services they need. Each area has different application forms and requires different IDs or documents, and sometimes the requirements aren't clear. The whole process isn't very user-friendly, which makes people feel awkward and even give up on applying. On the other hand, I've also heard feedback that in some places, people can just line up to get services. So it's important to recognize that there are many difficulties and barriers in these processes, and to listen to clients' real experiences to understand where the problems are.) ● 我自己本身都喺餐廳工作，喺行業層面其實真係好缺乏相關途徑。因為有時會有啲剩餘食物，但我哋又冇辦法好好善用，最後唯有throw away咗。其實嗰啲食物仲可以食，只係可能放多一兩日就唔得。但如果可以捐畀有需要嘅人會好好多，不過而家我哋根本冇呢個途徑，或者唔知道點樣去做。再加上，如果對餐廳嚟講流程太麻煩，大家都會傾向直接掉咗，冇受到鼓勵去做食物捐贈呢件事 (translation: I work in a restaurant, and at the industry level, there's really a lack of channels for handling surplus food. Sometimes we have leftovers that are still perfectly edible, maybe they just can't be kept for another day or two — but we have no way to make good use of them, so we just throw them away. It would be much better if there were a way to donate them to people in need, but we don't have that kind of channel, nor do we know how to do it. Also, if the process is too complicated for restaurants, most will just choose to throw the food out. There's really no system or incentive that encourages food donation right now.)

What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• More standardization is needed, different organizations or regions have different rules about what items are accepted, shared, or given, which makes participation confusing. • 我識有人喺餐廳做嘢，幾乎每日都聽到佢哋話倒咗好多食物，食唔曬、會到，我聽到都覺得好upset。但係又要理解點解佢哋會倒，因為佢哋真係有個好大嘅顧慮——就係驚啲食物如果送畀人之後，萬一對方食咗有事，好似食物中毒或者有過敏反應，餐廳就要負責。所以如果真係要推行食物回收或者再分配嘅計劃，政府要考慮埋呢啲問題。例如要同餐廳講清楚，食物入面有冇 gluten、有冇致敏成分、點樣標示、點樣分類；同時要有明確指引講明萬一有人食咗出事，邊個要負責。呢個責任問題其實係餐廳最擔心嘅地方，呢啲細節要處理好，先至會有人肯參與 (translation: I know people who work in restaurants, and I hear them say almost every day that they have to throw away a lot of food because it can't all be eaten or kept. It's really upsetting to hear. But I also understand why they have major concerns. If they donate leftover food and someone gets sick or has an allergic reaction, the restaurant could be held responsible. So if a food redistribution program is to be implemented, the government needs to address this issue. There should be clear guidance for restaurants, for example, labelling allergens like gluten, explaining what's in the food, and setting out how to handle and store it safely. There also needs to be clear rules on liability: who's responsible if someone gets sick after eating it? This liability concern is probably what restaurants worry about most, and it needs to be resolved before they'll feel comfortable participating.)
How much of a priority is it to you to include this action in the draft solid		In terms of priority: - 9 participants expressed this is high importance

waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		- 0 participants expressed this is medium importance - 0 participants expressed this is low importance - 0 participants didn't answer

Strategy 3.4 Work with event organizers, business, and institutions to increase reuse 策略 3.4 與活動主辦方、企業及機構合作，加強重用 Action ID050: Work with event organizers, event venues, schools, and universities to implement reusable food service ware, bags reuse programs, and food recovery. 行動 ID050：與活動主辦方、活動場地、學校及大學合作，推行可重用餐具、購物袋重用計劃及食物回收。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier?	•	• It could be difficult due to logistical challenges, such as sourcing reusable items, managing washing and storage, and ensuring food safety during recovery efforts. • 我覺得市面上其實已經有好多重用餐具或者購物袋嘅計劃，例如大統華都有自己嘅購物袋。不過我覺得呢啲計劃未必咁有用，因為而家好多人用嗰啲不織布袋（所謂環保袋）已經氾濫到一個地步，基本上當普通膠袋咁用，用完就掉。其實用不織布袋用嘅膠仲可能多過普通膠袋。如果要推動減廢，應該係唔好再派，鼓勵大家自己帶。我見到而家大部分人其實都會自己帶，所以情況比香港冇咁緊張

如果覺得困難，有乜嘢可以令你參與得更加容易？		(translation: I think there are already many reusable container or shopping bag programs on the market, for example, T&T Supermarket has its own reusable bags. But I don't think these programs are that effective anymore, because the use of non-woven "eco bags" has become so widespread that people treat them like regular plastic bags, using them once and throwing them away. In fact, producing non-woven bags might even use more plastic than regular ones.) ● 另外，我都想講講我喺餐廳工作嘅經驗。有時客人買外賣，餐廳見佢冇袋，通常都會諗：「唔如我直頭畀個膠袋佢啦，包得穩陣啲，方便啲。」但係呢個又變成另一個問題，令膠袋使用變得氾濫。(translation: Also, from my experience working in restaurants, when customers order takeout, if they don't bring a bag, restaurants often think, "It's easier if I just give them a plastic bag so I can pack it properly." But that convenience adds to the same problem: the overuse of plastic bags.) ● It's difficult for restaurants to use customer-supplied bags for takeout because of hygiene concerns. ● A "bag reuse program" could help, allowing people to borrow a bag if they forget theirs, instead of buying another reusable one. ● Post-pandemic hygiene is still a major concern, and it's not easy for restaurants to reuse or accept customer-brought food ware safely. ● 如果啲客人自己拎袋或者 container 嚟裝食物，我哋都會擔心，萬一我哋將食物擺咗入去之後出咗事，究竟關唔關我哋事呢？再加上，有啲客人自己帶嘅 container 本身可能已經唔乾淨，咁樣就會有衞生同責任上嘅問題。所以好多餐廳都未必咁 prefer 接受客人自備容器，始終要考慮到安全同埋責任問題。(translation: If customers bring their own bags or containers, we're not sure whether we'd be held responsible if something went wrong after we put the food in. Some of their containers might not even be clean to begin with, so there are hygiene and liability concerns.

		Because of that, many restaurants may not prefer or feel comfortable accepting customer-supplied containers, it's mainly about safety and responsibility.)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	會唔會係餐廳都會擔心啲客人打爛、整壞或者弄損 or take away 啲可重用嘅餐具呢？ (translation: maybe restaurants are also worried that customers might break, damage, or even take away the reusable tableware?)	● Metro Vancouver could support the creation of organizations or programs that let event organizers and restaurants borrow reusable food ware, with simple collection and cleaning services. ● It's hard for organizers to prepare large amounts of reusable ware on their own, and renting them adds extra costs, this is why many end up using single-use or recyclable options. ● 我以前喺大陸食嘢嘅時候，見到有啲公司為咗方便唔想自己洗碗，就會有租借公司提供一 set set 嘅餐具，擺喺你面前用，食完之後佢哋會嚟收返。咁樣真係好方便又容易做到重用。唔知道呢個模式喺呢度可唔可以行得通。 (When I used to dine out in China, some restaurants didn't want to wash dishes themselves, so there were rental companies that provided full sets of tableware, they'd place them in front of you and collect them after you finished eating. It was really convenient and made reuse easy. I wonder if that kind of model could work here.) ● Having a centralized program or organization that provides reusable ware and manages logistics would help. Food courts could be a good starting point for such a program. ● Provide clear operational guidelines, build partnerships with reusable ware suppliers, and improve access to food recovery networks.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？		In terms of priority: - 3 participants expressed this is high importance - 5 participants expressed this is medium importance - 0 participants expressed this is low importance - 0 participants didn't answer

Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		

Strategy 3.4 Work with event organizers, business, and institutions to increase reuse 策略 3.4 與活動主辦方、企業及機構合作，加強重用 Action ID053: Co-develop measures to improve the reuse experience for consumers with national plastics waste reduction organizations and retailers. 行動 ID053：與全國性塑膠減廢組織及零售商共同制定措施，改善消費者重用體驗。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 呢度係咪指搵零售商去幫客人減少廢物? (translation: do you mean getting retailers involved to help customers reduce waste?)	• It's good if it's actually getting retailers to talk with waste reduction organizers to create solutions • It depends, experience is largely correlated with the "cost" and accessibility to consumers. • 我哋頭先講 food court 嗰部分其實都好適用喺呢度。如果環保或者減廢組織可以同啲零售商、food court 合作，去傾下點樣減少即棄餐具，其實係一個好好嘅方向。而家好多時候都係好被動，我哋只係揀到乜就用乜。如果有啲主動嘅措施，例如你自備飯盒可以慳返一蚊，咁就會有誘因，啲人就真係會諗唔好用即棄餐具，自己帶。所以我覺得呢個位可以由啲減廢組織去同零售商傾，去搵合作空間。 (translation: What we discussed earlier about food courts also applies here. If environmental or waste reduction

		organizations could collaborate with retailers and food courts to discuss ways to reduce single-use tableware, that would be a great direction.Right now, people are quite reactive, they just use whatever is available. But if there were proactive measures, like offering a small discount (say $1) for bringing your own container, it would really encourage people to stop using disposable ware and bring their own instead.So I think this is an area where waste reduction groups could engage with retailers to explore collaboration and make progress together.) ● Policies and measures need to be genuinely effective, otherwise, they may lead to unintended side effects, like what happened with reusable bags. It's important to evaluate whether these actions truly reduce waste or simply shift the problem elsewhere. ● Could be difficult if the retailers are not grounded in shared goals or if if stakeholders have differing priorities ● Provinces have different limitations, constraints, or cultural practices so developing measures in national level might not be practical ● Start with regional or provincial pilot programs before scaling up to the national level, especially when there are still many uncertainties. This allows for testing, learning, and adjusting policies to ensure effectiveness before wider implementation.
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		● 其實我都諗緊，如果好似我咁，啱啱過嚟、手頭唔太寬裕、又冇車、屬於比較對價格敏感（cost-conscious）嘅消費者，咁成個體驗好大程度上都會受到價錢同埋便利程度影響。例如回收點多唔多、交通方便唔方便、或者係咪要額外畀錢去做環保——呢啲都會影響我哋嘅選擇。有時環保反而變得貴咗，例如要畀幾蚊買個不織布袋，咁呢啲成本對某啲人嚟講都係負擔，會令佢哋卻步。 (translation: I've been thinking that for people like me: newcomers with limited income, no car, and who are

		more cost-conscious, the experience really depends on both price and accessibility. Things like how many recycling points there are, how convenient they are to reach, and whether there are extra costs associated with being environmentally friendly all matter. Sometimes sustainability ends up being more expensive, for example, having to pay a few dollars for a non-woven reusable bag. For people watching their budgets, those small costs can add up and discourage participation.) ● 政府都係一樣嘅，例如喺溫哥華，如果要攞一個袋，政府有立例規定一定要向客人收費。如果唔收錢就係犯法。佢哋仲會規定個袋要可以重用到一百次嗰啲先合格，呢啲袋通常要收一蚊。但問題係，就算你收咗個袋費，之後嗰啲袋去咗邊、點處理，其實都唔清楚；而如果唔收錢，又會犯法。咁變相好似唔係真係支持環保，而係變成一個規條。而且呢啲袋本身都唔平，成件事反而令消費者覺得環保變咗一種額外開支。對餐廳嚟講，要用「環保」物料或者工具都好難避開加價呢個問題。我諗有冇可能好似香港咁，例如香港大家樂會收一兩蚊畀客人買一套餐具，客人可以拎走再重用？呢個做法會唔會喺呢度都行得通？)(translation: The government is the same, for example, in Vancouver, there's a bylaw requiring businesses to charge customers for bags. If they don't, it's actually illegal. The rule even specifies that the bags must be durable enough for around 100 reuses, and those usually cost about a dollar. But even when you charge for the bag, it's not clear what happens afterward, where those bags go or how they're used. On the other hand, if you don't charge, the business is breaking the law. So it feels less like a genuine environmental effort and more like a regulation to follow. These bags aren't cheap either, so for consumers, it ends up making "being eco-friendly" feel like an extra cost. For restaurants, it's also hard to avoid raising prices when switching to "eco" materials or

		utensils.Maybe there's another approach,like in Hong Kong, where some restaurants such as Café de Coral charge one or two dollars for a reusable cutlery set that customers can take away and use again. Could something like that work here?) ● It's important to engage corporations and retailers to integrate these initiatives, making them readily and commercially available for consumers to participate in. ● Establish clear communication channels, pilot programs, and shared success metrics among partners to ensure the solutions are practical and meet real community needs.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 2 participants expressed this is high importance - 5 participants expressed this is medium importance - 0 participants expressed this is low importance - 2 participants didn't answer ● 又有個香港嘅例子，就係喺香港有啲地方係可以免費斟水嘅。我諗，如果呢度都可以同一啲企業或者零售地點合作，喺啲地方擺水機，等人經過嘅時候可以斟水——例如去買運動用品嗰啲位，都可以順便 refill 水樽——其實咁樣都係一種推廣環保同埋改善場地體驗嘅方法。 (translation: there's another example from Hong Kong where in some places, people can refill their water bottles for free. I think if we could partner with certain companies or retail locations here to set up water refill stations, people could easily refill when they pass by, for example, at sports stores. It's not just about promoting sustainability, but also about improving the overall customer experience in those spaces.)

Strategy 3.4 Work with event organizers, business, and institutions to increase reuse 策略 3.4 與活動主辦方、企業及機構合作，加強重用 Action ID054: Evaluate the feasibility of a 'reuse mall' model. 行動 ID054：評估「重用商場」模式嘅可行性。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 可唔可以講下乜嘢係重用商場? (translation: Can you explain what a "reuse mall" is?) • 同value-village 有冇分別？ • Is it like a buy-nothing?	• If it's at the initial evaluation stage, participation would be easy since it mainly involves consultations and analysis. However, moving from concept to implementation would be much more difficult due to real-world challenges, such as finding suitable locations with steady foot traffic and coordinating among diverse tenants with different business models and priorities • A recycling depot open day could follow a similar concept, combining repair services with education on recycling and sorting. However, it might be missing the "buy" or exchange component that encourages reuse and circular participation. • 維修家電方面比較重要囉，喺溫哥華比較少見到。 (translation: repairing household appliances is more important, it's something we don't see very often in Vancouver) • 我好同意呢個可以交換 skill set 嘅想法，但唔知道點樣可以 connect 到呢啲人。 (translation: I really agree with this idea of exchanging skill sets, but I'm not sure how people can actually connect with each other.) • Don't know how to connect these people in the community? • Provide solutions for transportation, storage, and other logistical challenges related to item movement • Start with a small-scale pilot or pop-up version to test community interest and operational logistics before

		committing to a long-term reuse mall or permanent facility
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• Offer incentives for the public to buy second-hand products in the “reuse mall” — ensuring prices remain reasonable and not overpriced. • It’s also important to evaluate public perception of the idea, since long-term success depends on strong community interest and ongoing participation. • 其實都有啲朋友佢哋可能係好緊急咁樣去搵傢俬呀，搵一啲真係二手嘅嘢。我覺得係有呢個市場同需要嘅，但係而家啲二手市場都唔係好理想。Facebook Marketplace 唔係好如意，Little Star 都唔平，Fellow 都好貴。最麻煩係運送問題，好擔心我要賣張梳化，仲要搵人幫我搬出去，好貴。啲櫃都係一樣，要點樣搬、點樣搵人？所以要搞呢啲 reuse 嘅話，storage 同 logistics 都係要諗清楚。(translation: some of my friends often need to find furniture urgently, like second-hand pieces, so I think there’s definitely a market and a need for it. But the current second-hand market isn’t ideal,Facebook Marketplace doesn’t always work well, Little Star isn’t cheap, and even Fellow is expensive. The biggest problem is transportation. If I want to sell a sofa, I still need to find someone to help move it out, which costs a lot. Same with cabinets, how do you move them, how do you find people to help? So if we really want to promote reuse, we need to think carefully about storage and logistics.)
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you’d like to		In terms of priority: - 0 participants expressed this is high importance - 3 participants expressed this is medium importance - 4 participants expressed this is low importance - 2 participants didn’t answer • There is a market for this, but even value village/ thrift

add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		needs to overprice things to be operationally sustainable. • 可以講一個小小嘅 idea——香港以前喺灣仔嗰度有一個「時分券」嘅計劃。即係除咗畀舊物回收之外，仲係畀人嘅 talent 去互相 support。譬如話我啲衣車壞咗我唔識整，但可能有個人識整；而我識通渠，佢又唔識。咁我幫佢通渠，佢幫我整衣車。呢啲計劃就係透過大家交換自己叻嘅地方去互相幫助，令到整個系統更加 sustainable。我覺得呢個 idea 係非常之好，不知呢度會唔會都可以有類似嘅計劃。 I have a small idea: in the past, there was a "time voucher" program in Wan Chai, Hong Kong. Besides recycling old items, it also encouraged people to support each other through their talents. For example, if my sewing machine breaks and I don't know how to fix it, maybe someone else does. And if I know how to unclog drains, I can help them in return. These kinds of programs let people exchange their skills and help each other, making the system more sustainable. I think it's a really good idea, maybe something like this could be done here too.

Strategy 3.4 Work with event organizers, business, and institutions to increase reuse 策略 3.4 與活動主辦方、企業及機構合作，加強重用 Action ID055: Evaluate the feasibility of a regional-scale reusable food service ware system. 行動 ID055：評估地區層面可重用餐具系統嘅可行性。		
Section	**Questions asked by Participants**	**Feedback heard**

If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 唔係好明呢個係乜system (translation: I'm not really sure what kind of system this is) • Isn't this hard for national food chains to adopt? • This is a bit confusing, isn't there a lot of different rules for each municipality?	• If you talk about the initial evaluation stage, it would be easy because it's mainly consultations and analysis. However, coordination among municipalities, vendors, and washing facilities may be complex. It will also be difficult if data on current waste streams, usage patterns, and logistics are limited. • It's hard to see this being feasible, is it meant to be a service, a system that organizations must follow, or just a set of guidelines? If it's only guidelines, it will be very difficult to implement effectively. • 真係好難，商戶嗰邊會比較難。佢哋要點樣統合曬呢件事，我真係想像唔到。 (translation: It's really difficult, it would be especially hard for businesses. I can't imagine how they could coordinate and manage all of this.) • 如果真係一個活動係一次性嘅，所有可重用餐具都畀曬參加者用，之後再全部攞返嚟洗嘅話，呢個 system 可能會可行囉。 (translation: If it's a one-time event where all the reusable food is given to participants to use and then collected afterward for washing, this kind of system might actually be feasible.)
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• Engage subject matter experts and key stakeholders including local governments, food vendors, and businesses managing washing and storage to co-design practical models and share data. • Conduct case studies from other cities or countries that have implemented similar systems to guide design and build confidence in long-term sustainability
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？		In terms of priority: - 0 participants expressed this is high importance - 3 participants expressed this is medium importance - 4 participants expressed this is low importance - 2 participants didn't answer

Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		• Reallocate resources to evaluate the feasibility of other actions

Strategy 3.4 Work with event organizers, business, and institutions to increase reuse 策略 3.4 與活動主辦方、企業及機構合作，加強重用 Action ID056: Continue to scale up reuse drop-off at Metro Vancouver recycling and waste centres across the region. 行動 ID056：繼續擴展大溫回收及廢物設施內嘅重用物品收集點。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• 而家天車站有冇回收設施？如果可以喺 SkyTrain 站內設回收點，其實會好方便。 (translation: are there any recycling facilities at SkyTrain stations right now? It would actually be great if recycling points could be set up inside the stations.) • 我想問點解唔可以好似香港嗰啲「綠在區區」咁樣	• Easy to participate, scaling up and expanding reuse drop-off locations builds on existing infrastructure and habits around visiting recycling and waste centres. • 我覺得而家啲回收站真係好遠、好難去，要有車先至去到。如果普通人冇車，其實好難參與。可以諗下點樣擴充，例如同啲超市合作，喺啲大型連鎖店（好似 Walmart、Superstore）設置收集點，會方便好多。(translation: I think the current recycling stations are too far away and hard to access, you basically need a car to get there. For regular people without cars, it's very difficult. Metro Vancouver could expand access by partnering with supermarkets or big retail stores like Walmart or Superstore to add collection points, that would make it much easier.) • Locations needs to be more convenient/ higher traffic area

	，市民拎嘢去回收可以儲分，之後換禮品？呢個 model 都幾好，可以考慮參考下，點解我哋冇呢啲咁樣嘅制度？ (translation: I'm wondering why we don't have something like Hong Kong's "Green Community" system, where people can take items to recycle, earn points, and redeem rewards. That model seems very effective,why don't we have something like that here?)	•
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• Make depots more accessible and standardized. Partner with supermarkets/ mall/ high traffic areas like transit • Provide support for non-profit recycling organisations to secure accessible locations at affordable cost • 我覺得呢度啲回收站環境真係幾差，好臭。好多人都冇清洗乾淨啲回收物，所以成日有異味。咁樣真係冇乜人有動力去。而且唔係每個回收站都收曬所有嘢，有啲只收膠樽，有啲又要去第二度先收電子產品，真係超唔方便、超唔 user-friendly。咁樣啲人自然就唔想再做落去囉。 (translation: I think the recycling depots here are in pretty poor condition — they often smell bad because many people don't rinse their recyclables properly. The odour makes it unpleasant and discourages people from going. On top of that, not every depot accepts all types of materials. Some only take bottles, while others require you to go elsewhere for electronics. It's extremely

		inconvenient and not user-friendly, so many people just give up on recycling altogether.)
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？	• 點解喺交通工具、天車站、或者公交站都冇呢啲回收措施呢？ (translation: why aren't there any recycling measures at transportation hubs, like SkyTrain stations or bus stops?)	In terms of priority: - 5 participants expressed this is high importance - 1 participants expressed this is medium importance - 0 participants expressed this is low importance - 3 participants didn't answer •

Strategy 4.1. Promote design for recyclability and the use of recycled content in products and packaging 策略 4.1 推廣產品及包裝設計可回收化，以及使用再造物料 Action ID112: Enhance partnerships with the provincial government, industry, academia, and community groups to research and develop solutions to overcome barriers to reuse and recycling and opportunities to incorporate recycled content into new products. 行動 ID112：加強與省政府、行業、學術界及社區團體嘅合作，研究並制定方案，以克服重用及回收嘅障礙，並探索將再造物料納入新產品嘅機會。		
Section	**Questions asked by Participants**	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate	• 佢哋係咪想搵啲 partner 出去，去了解或者揭示下啲 field service 要面對嘅	• 好多時候投放咗好多錢同人力去做 research，但最後點樣將啲 research 應用喺實際政策上，或者真係落地去執行，

in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	挑戰，或者啲 fair、event organization 會遇到嘅問題？係咪真係咁樣嘅意思？ (translation: are they trying to find partners to help uncover or understand the challenges faced by field services, fairs, or event organizers? Is that what this is actually about?) ● 佢係咪講緊一啲回收之後升級再造成嘅產品呀？呢個係乜嘢嚟㗎？係咪真係會變成波鞋或者其他產品嗰啲咁樣嘅嘢？ (translation: Is it talking about products that are made from recycled and upcycled materials? What exactly does that mean does it actually turn into things like sneakers or other kinds of products?)	其實大家都唔係好清楚。老實講，我都唔太知道佢哋做緊乜嘢研究。反而我覺得，如果佢哋花咁多時間去做研究，不如將啲資源擺去推廣同宣傳，因為問題唔一定係大家唔知，而係做唔到、未做到、或者唔知道去邊度搵資料、唔方便去做 (translation: a lot of money and resources are spent on research, but it's unclear how those findings are actually applied to policy or put into action. Honestly, I don't even really know what kind of research they're doing. I think instead of spending so much time on studies, more effort should go into public promotion and outreach. The problem isn't always that people don't know, sometimes it's that they can't do it, haven't done it yet, or simply don't know where to find the information or how to access it easily.) ● 我覺得呢條問題有啲太過 general，因為佢又冇講清楚係想處理啲乜嘢障礙。所以大家面對呢條題目嘅時候都唔太知道可以講乜。最大嘅問題就係個問題本身太過概括，冇講明究竟係邊一類障礙。 (translation: think this question is too general because it doesn't clearly specify what kinds of barriers it's referring to. So when people were responding, they didn't really know what to talk about. The main issue is that the question itself is too broad and doesn't define what kind of barriers it means.) ● This action is too general because it's just researching the barriers, but not actually solving the barriers? ● Easy to participate if there is an established network. Collaboration with the provincial government, industry, academia, and community groups can pool expertise, funding, and networks, making research and solution development more efficient and impactful. ● Ensure the priorities among stakeholders are aligned and bureaucratic processes do not slow decision-making

What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？		• establishing formal partnership agreements, defined project scopes, and regular coordination meetings. • Creating working groups focused on specific barriers so different discussions/ R&D can happen simultaneously • Crowdsourcing ideas from schools and communities via
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處理計劃》有幾重要？ Is there anything else you'd like to add to the conversation on this ACTION? 你仲有冇其他關於呢項行動嘅意見想補充？		In terms of priority: - 4 participants expressed this is high importance - 2 participants expressed this is medium importance - 3 participants expressed this is low importance - 0 participants didn't answer • 我想講，其實都要考慮一樣幾重要嘅嘢，就係所有回收或者可重用物料都會涉及成本。好多時候零售商用呢啲物料嘅成本可能會高咗好多，如果真係高得太多，其實會令佢哋冇乜動力去做。所以要搵返個平衡點囉。 (translation: I think it's important to consider the cost factor, using recycled or reusable materials often increases expenses. If retailers end up bearing much higher costs, it can really discourage them from participating. So there needs to be a balance.) • 我唔明點解啲嘢可以差咁遠，譬如每個城市用唔用可堆肥膠袋都唔一樣，真係好混亂。 (translation: I don't understand why things are so different everywhere. For example, even something as simple as whether compostable bags are accepted varies between cities, and it's really confusing.)

THIS MARKS THE END OF THE DISCUSSION

However, participants have added comments to this last question that we didn't get a chance to discuss.

Please see the notes below.

Strategy 3.4 Work with event organizers, business, and institutions to increase reuse 策略 3.4 與活動主辦方、企業及機構合作，加強重用 Action ID165: Develop a regional approach to events prioritizing surplus food redistribution, reusable food service ware, and litter reduction. 行動 ID165：制定地區性活動方案，優先考慮剩餘食物再分配、可重用餐具及減少垃圾。	
Section	**Feedback heard**
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? 如果大溫地區喺更新嘅《固體廢物處理計劃》入面加入呢項行動，你覺得自己參與起嚟會容易定困難？ If difficult, what would make your participation easier? 如果覺得困難，有乜嘢可以令你參與得更加容易？	• Difficult. Each event is different, so it's hard to develop a one-size-fits-all approach. Costs, storage, and staff training could also pose barriers. Focusing on educating organizers to assess and prepare the right amount of food to reduce food waste is more important than finding solutions to resolve and redistribute food surplus. • provide toolkits, templates, and contact lists for food recovery organizations, reusable ware vendors, and waste management support. • Training sessions or workshops for event staff could also improve compliance
What should Metro Vancouver consider to support your participation with this action? 大溫地區應該考慮啲乜嘢去支援你參與呢項行動？	• Subsidized program or funding support to offset the increased costs of waste prevention.
How much of a priority is it to you to include this action in the draft solid waste management plan? 你覺得將呢項行動納入《固體廢物處	Workshop ended so folks weren't able to comment on this question

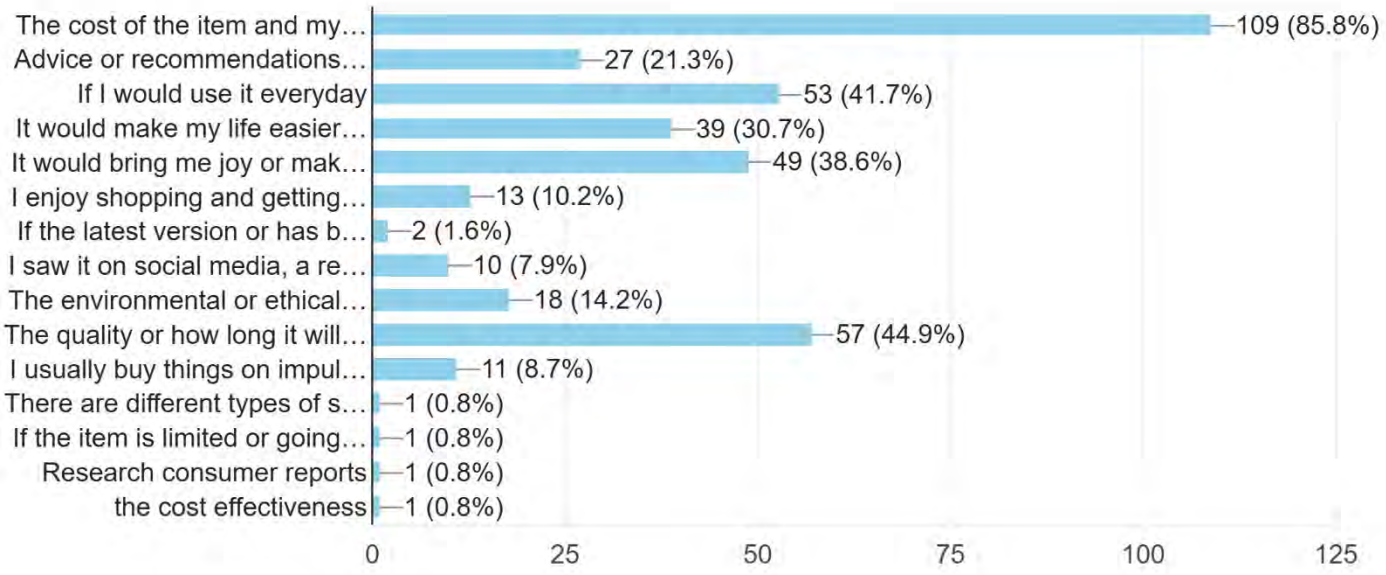
Metro Vancouver Solid Waste Update – Langley Environmental Partners Society
Questionnaire Results

Question 1. How do you decide what you really need before buying something? [Please select your top three considerations]

127 responses



Question 2.
Is there anything else that is not listed above that's important to you when deciding if you need something? [open answer]

57 responses

no

No

not particularly

the social impact

if it wouldn't be useful long term

how often I would use it

Weight and storage for the item

the brand it is reliable

if I've waiting it for awhile

I'll buy things as gifts or mementos to feel closer to people. I'll buy things to make other things. I'll buy old/vintage things because they're cool and I want to save them

Weighing of want vs need depending on the otem

I need to be able to use it because I personally need it, not just because some else told me to

Less or no plastic and forever chemicals

If you need it (don't buy if you don't need it)

I prefer to buy used items on marketplace or thrift stores

The environmental and ethical impact of the item, if it would make my life easier/convenient, and if it would bring me joy or make me feel good

If it is something I need for a certain thing

If I am out of the object and need more

I just buy stuff when I need it and it will be useful

If it is food whether it's healthy or not

If I buy one, I have to give away one which I already had. I rethink about the worth of a new item. Is it worth to replace mine?

I ask myself..... do I really need it.

N/a

If I already have something or not

Giving it to someone knowing they will enjoy it.

Whether I have something already that does the same purpose.

How I will dispose of it when it expires or is used up.

Whether it meets my unique personal needs that are not covered by the above facts

depend if it's a big purchase or not

If it is urgent and I need it spontaneously

Is it worth my money? Do I really want it or do I just want to purchase an item

n/a

Maybe I really like it

none

If I am giving it to people/friends - I would be more willing to spend money on my friends that myself

how much money I have that I'm willing to spend. And if I really want it or if I just saw it.

If it is replacing something that is worn out or has failed.

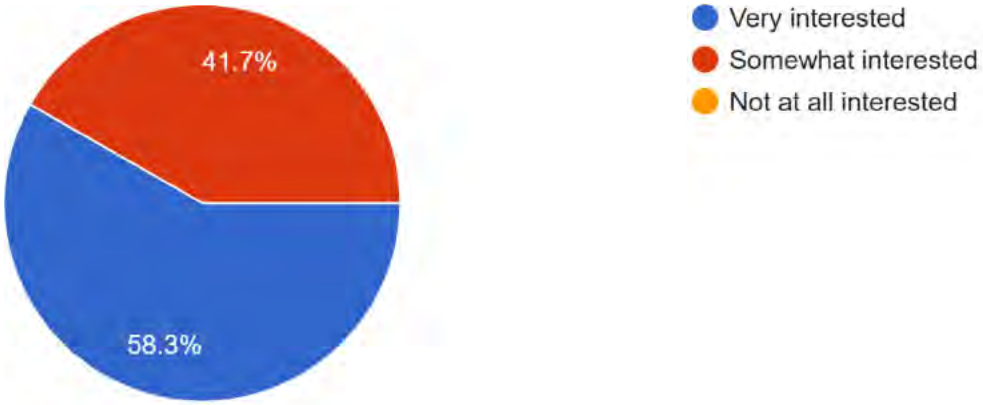
Design

How much I would use it.

Is it a need or a want / will I be happy with the purchase

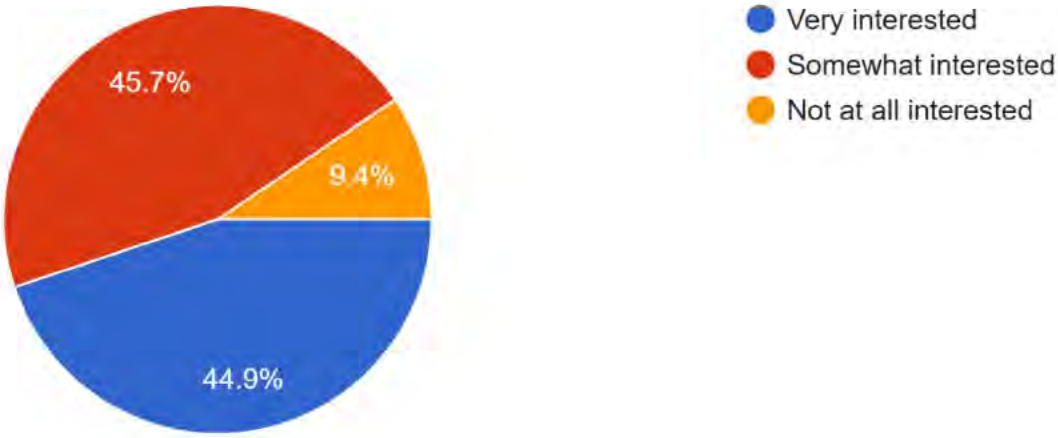
Question 3. How interested are you in learning about the following? (Very interested, Somewhat interested, Not at all interested) Choosing better quality items that last longer

127 responses



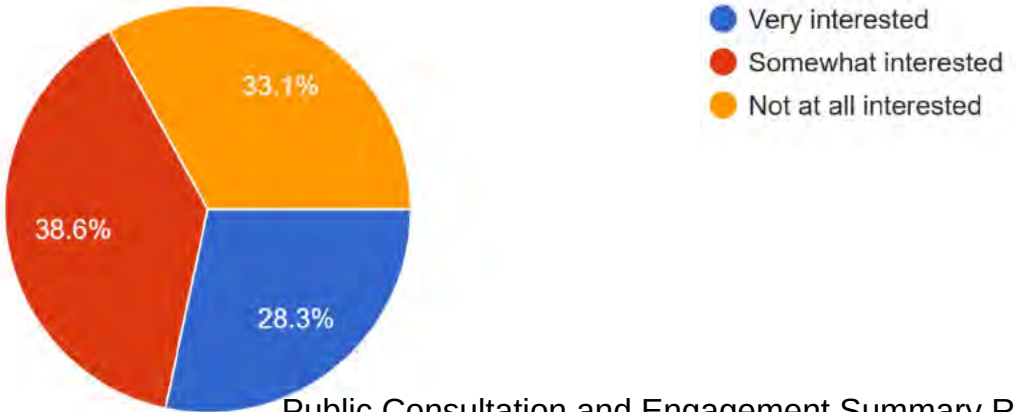
Using reusable items (bags, bottles, cups, containers, cutlery, etc.)

127 responses



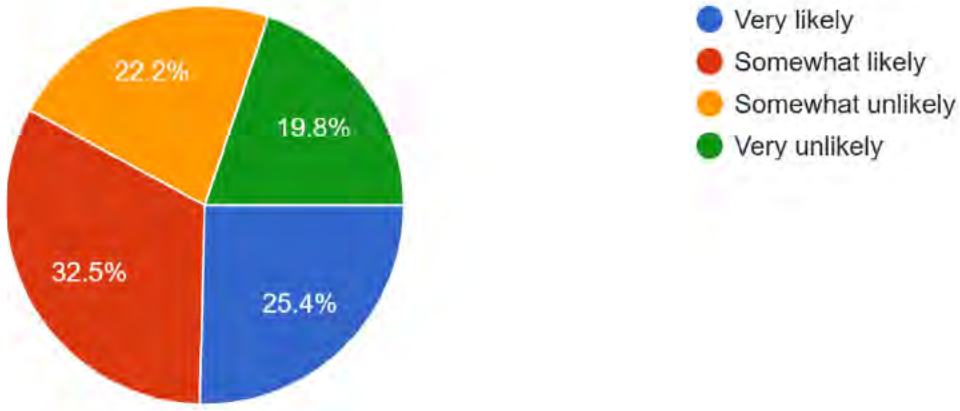
Going to repair events to fix broken items

127 responses



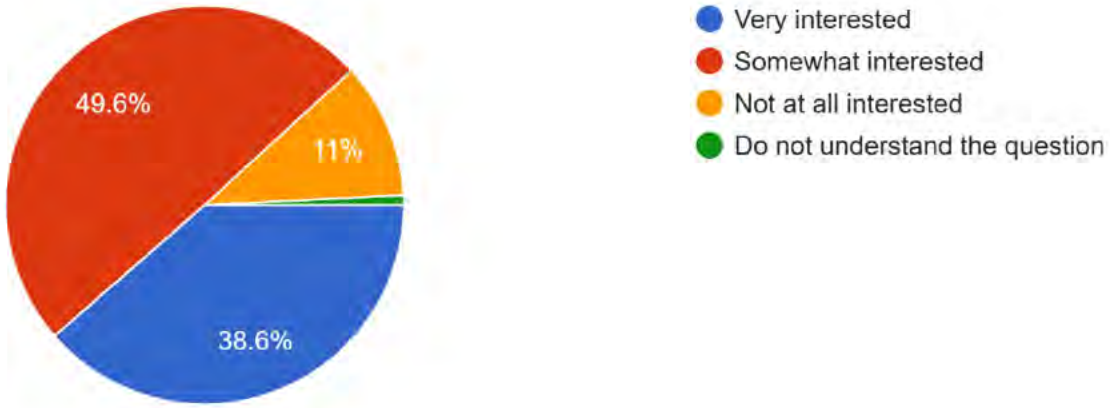
Taking worn clothing for repair or learning to repair them myself

126 responses



Gifting experiences instead of items

127 responses

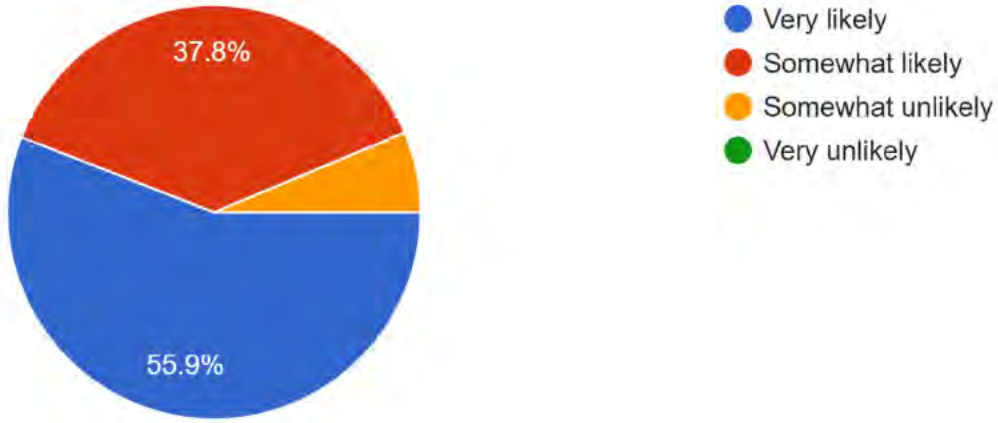


Question 4. How likely are you to try the following in the next year? (Very likely, Somewhat likely, Somewhat unlikely, Very unlikely) Buying fewer things or mindful buying

127 responses

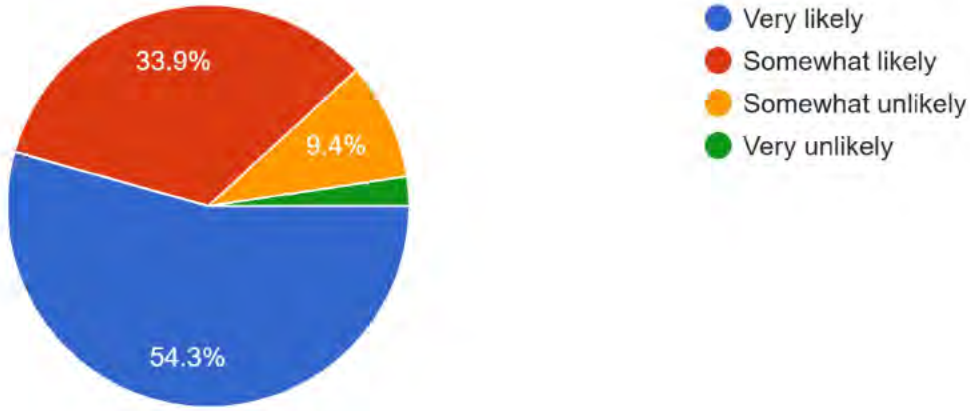
Choosing better quality items that last longer

127 responses



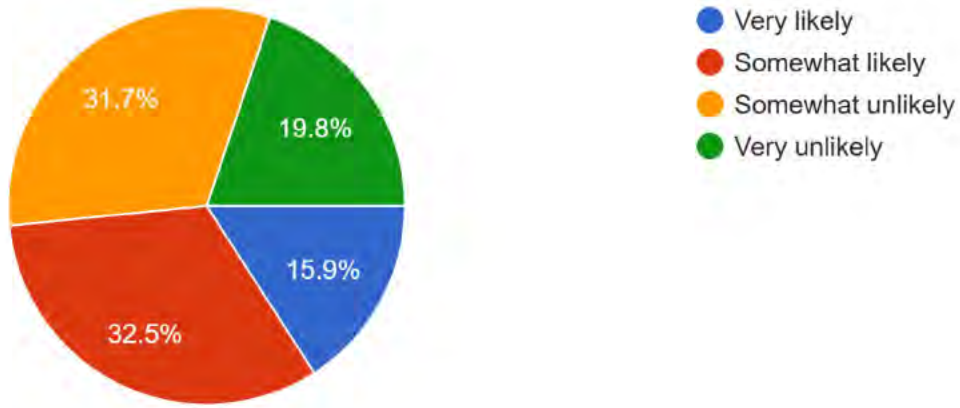
Using reusable items (bags, bottles, cups, containers, cutlery, etc.)

127 responses



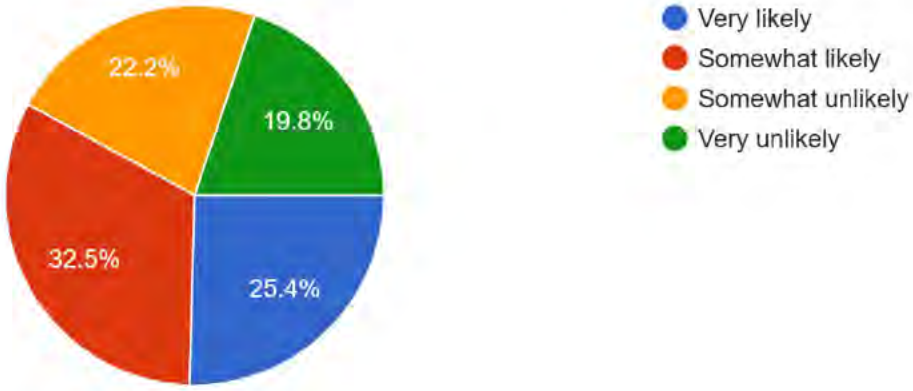
Going to repair events to fix broken items

126 responses



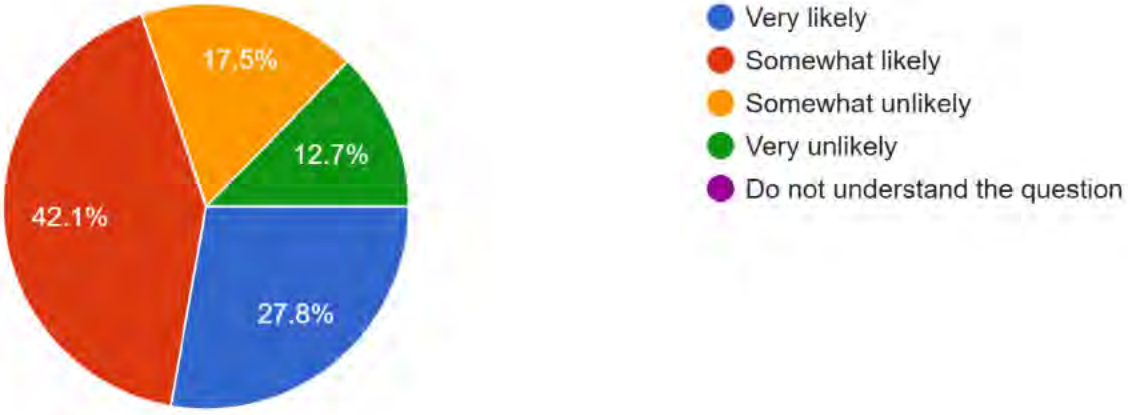
Taking worn clothing for repair or learning to repair them myself

126 responses



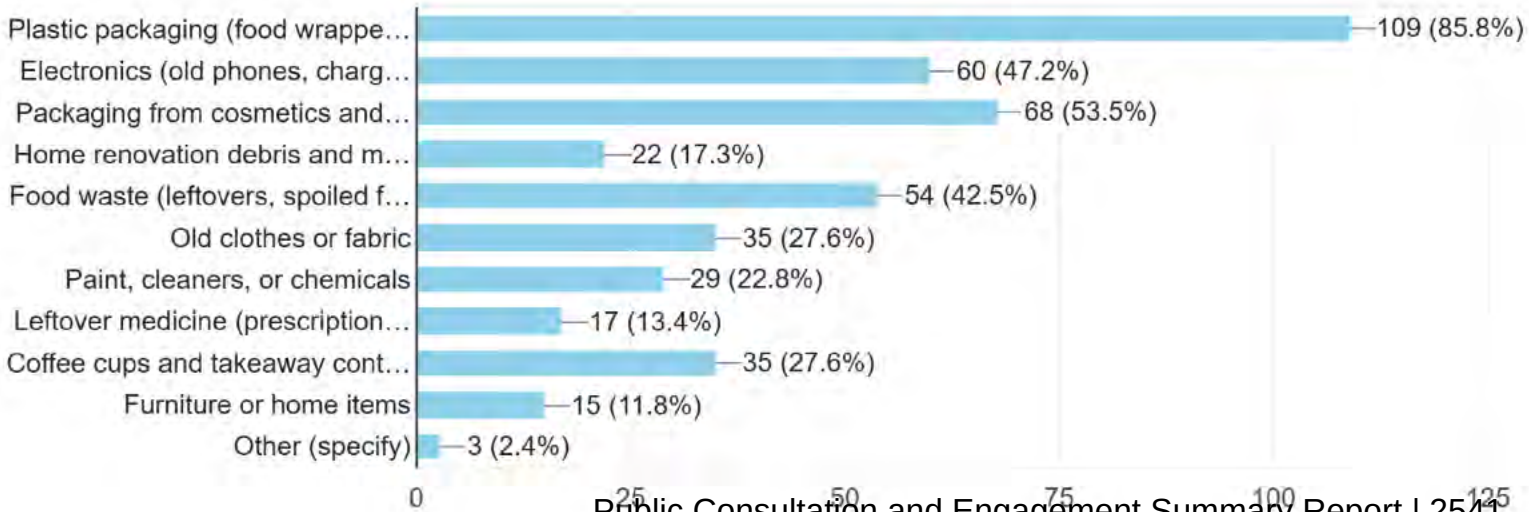
Gifting experiences instead of items

126 responses



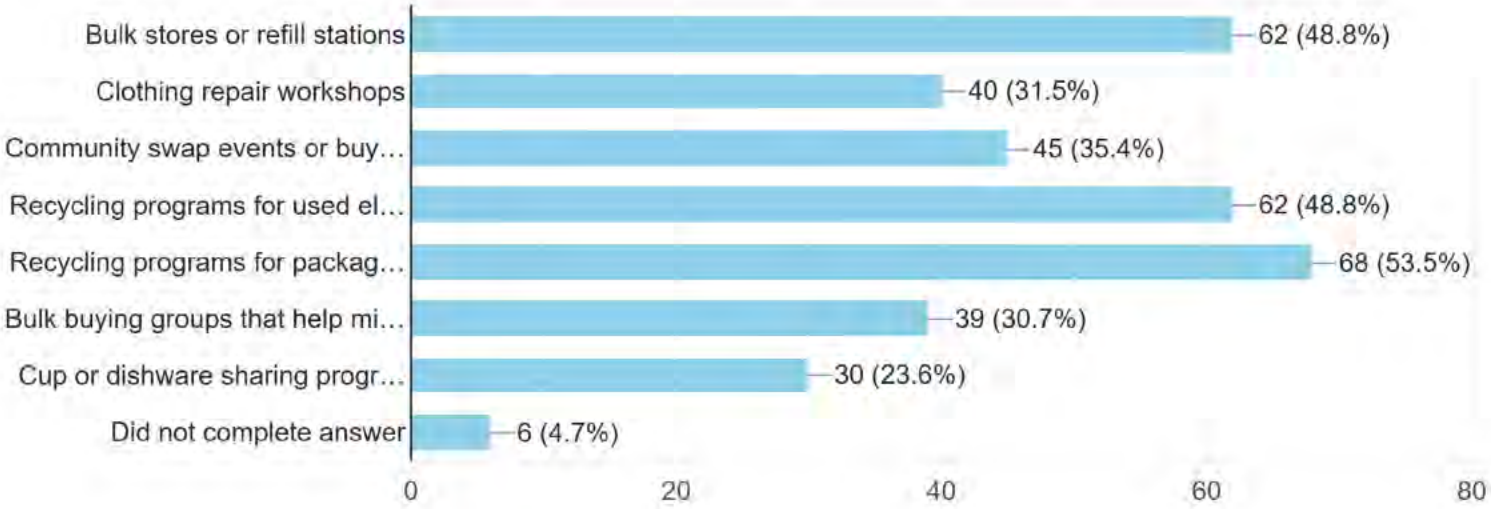
Reduce Reduce means creating less waste in the first place. Question 5. What types of waste do you find challenging to avoid? (select all that apply)

127 responses



Question 6. What types of waste reduction programs would you be most interested in? (select as many as apply)

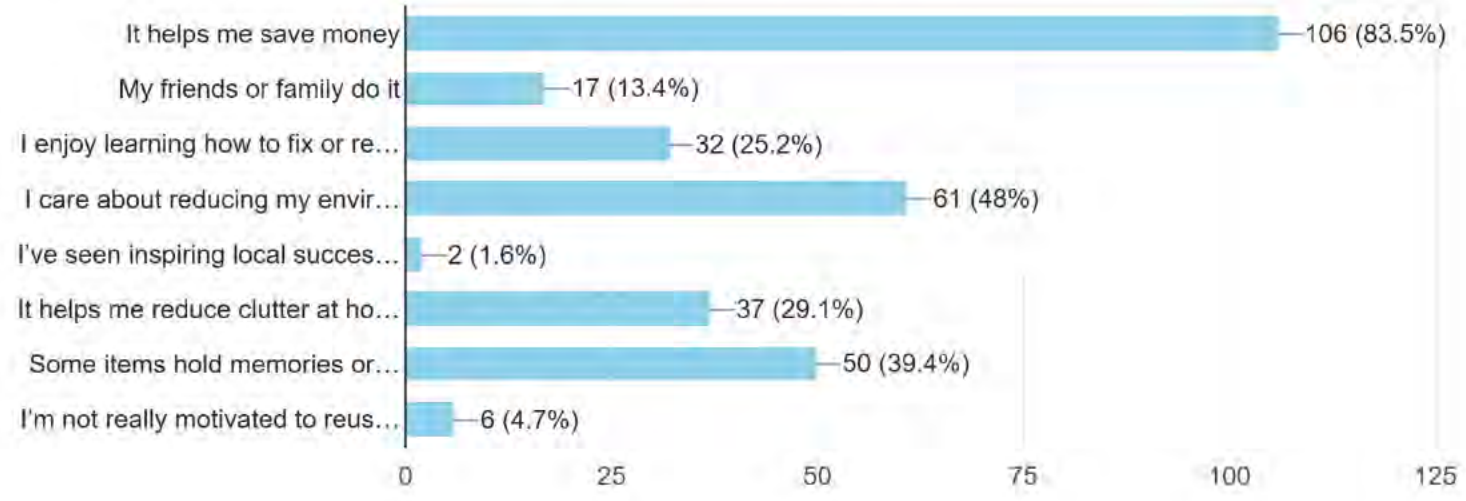
127 responses



Question 7.

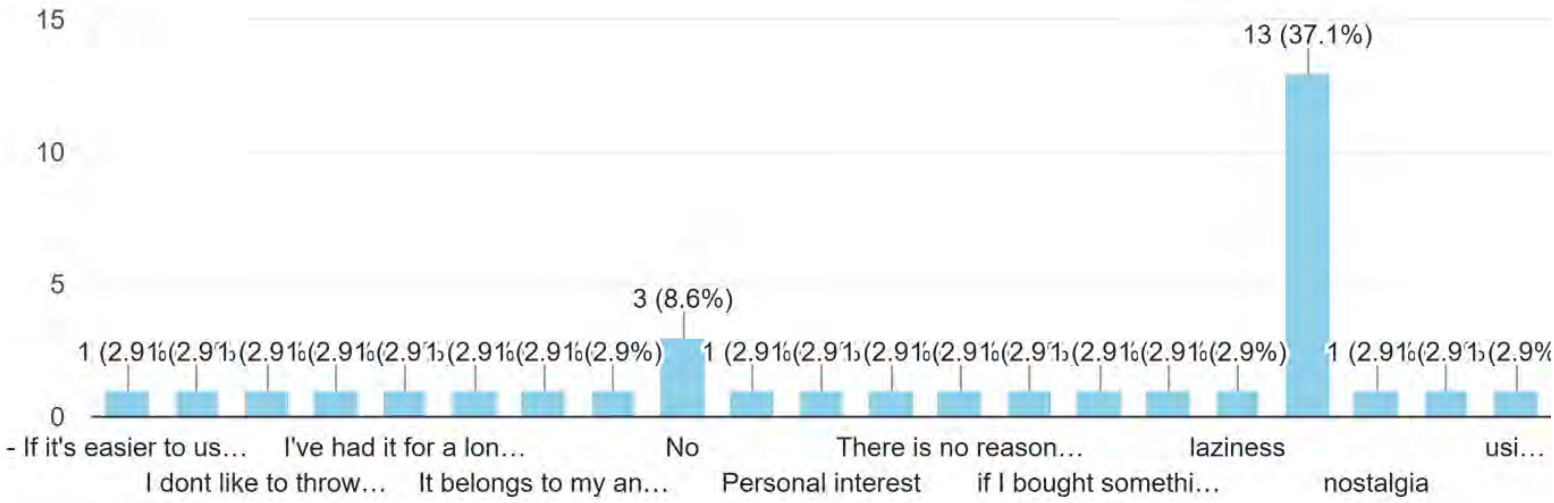
Reuse and Repair Reuse means giving items a second life — by repairing, repurposing, or sharing them — instead of sending them to disposal. Quest...motivates you most to reuse items? (Select top 2)

127 responses



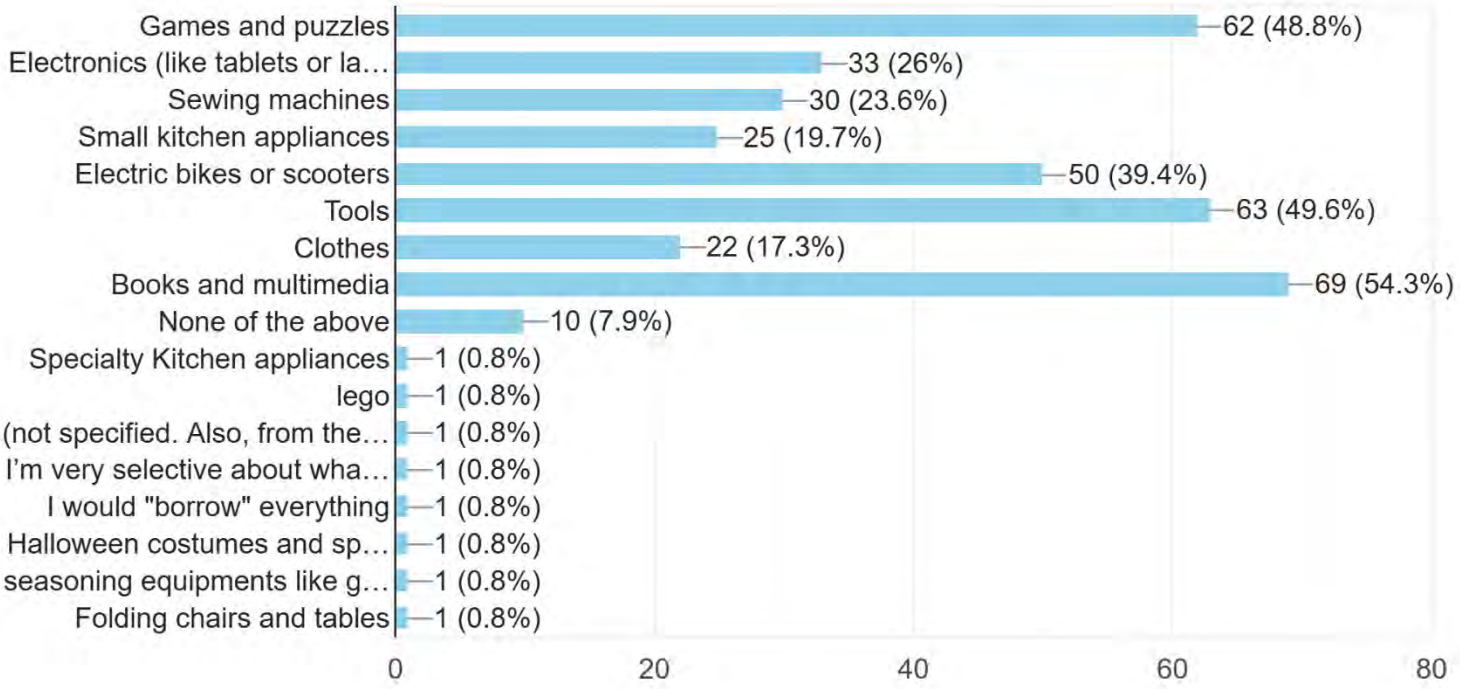
Question 8. Is there anything else that's not listed above that motivates you to reuse an item? [open answer]

35 responses



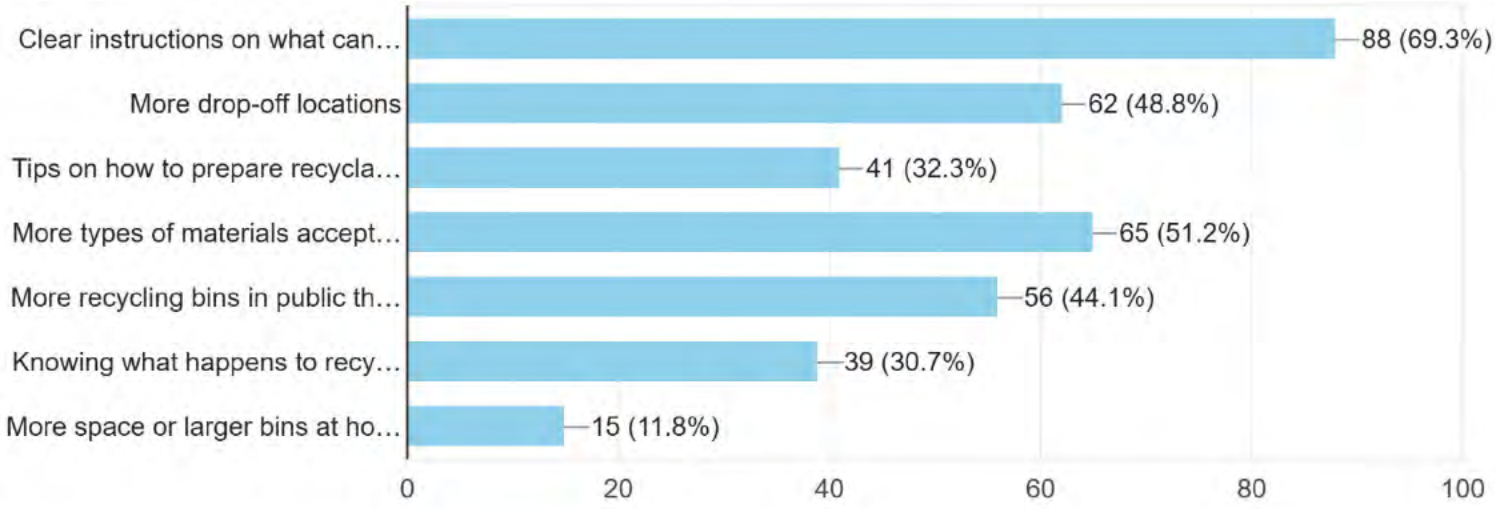
Question 9. Some communities have "sharing libraries" where people borrow various items instead of buying them. If there was a "sharing library" in ...hood, what would you borrow? (Select all that apply)

127 responses



Recycle Recycle means keeping materials in use by giving them a second life — turning waste into new products. Question 10. What would make it easier for you to recycle more? (select your top three)

127 responses



Question 11.

Is there anything else not listed above that would make it easier for you to recycle more materials? [Open answer]

36 responses

no

No

the material actually being recycled and not thrown in some landfill in Indonesia

larger bins at home to collect recyclables

A help page where I put in what I am doing like painting an apartment or house to list items I am likely to use and where to take the waste or what can be re used or not afterwards

Making it so labels weren't so hard to get off

A reduced variety of consumer packaging to simplify recycling. Make the manufacturers more responsible for waste.

Accessibility of recycling locations is a major barrier

Just make it mandatory

Knowing that all materials collected are recycled and not just collected. Knowing that there is a government program from collecting to deliver to appropriate manifactures for recycle, at the opposite to putting them in the hands of privates that deliver for recycle only if convenient for them, if they have a profit, other way they dump the collected materials in landfills, or worst in the environment in third world countries (we pollute land and water there). That companies doing that and polluting other countries be persecuted for pollution here in canada. To be sure that what is produced and sold here is destined to be recycled (do no put not recyclable items on the market), it is really recycled and doesn't go to pollute other countries. To produce less items, as now the over-aboundance is due to the wish of making profit of industries (private greadiness), not to a real need of the population (we have about everything). To educate people to use less and buy less. To introduce regulations that limit the over-abbondance of items on the market (the consumerism in the west world is awful). Also: to introduce regulations and implement them, that stores selling recyclable containers and materials have the responsability to collect them back from the consumers, and have the responsibility to put them on the correct path to recycling. That contaiers and materials collected from those stores are effectively recycled (government involved, not greedy private that dump them whenever). That canada funds recycle plants for plastic, paper, styrofoam, etc., and recycle/reporpose/repair plants for electronics discarded here in canada. No pollution exported to other countries.

different recycling pick ups

I hope each item has recyclable symbol, there are but not every. For example, I'd like to recycle as many as but I don't know if a paper sticker is recyclable, how about stickers on fruits? There is a website about recycling items but it's very complicated. It is categorized, I click battery, I have to choose and click again, again. I had to be knowledgable to recycle.

More items accepted for home collection, like electronics, lights, soft plastics pick up scheduled once every 3 months and an app to notify

Where to take items not picked up by regular recycling collection.

More readily available information

Maybe not

Bulk items 'pick up day' once or twice a year; charities offering to pick up bulk items (like furniture) for free.

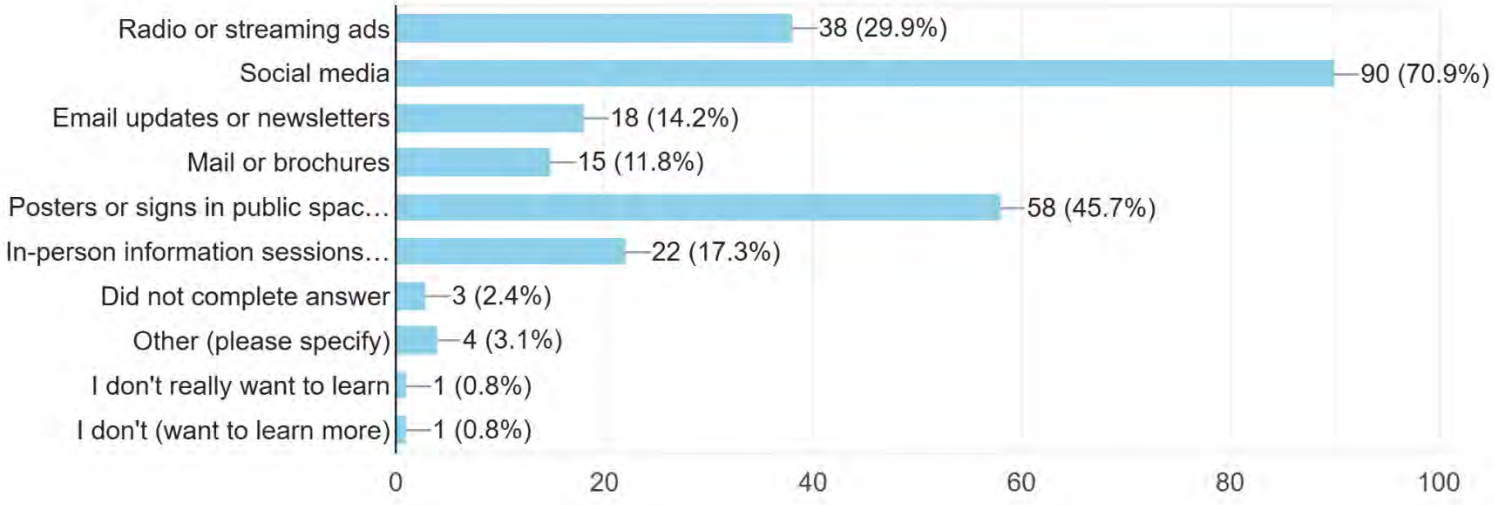
Get money

more easy access recycling facilities

Some materials aren't longer accepted at our local recycling centre and where we have to take them is quite far away and I would need a car to get it there.

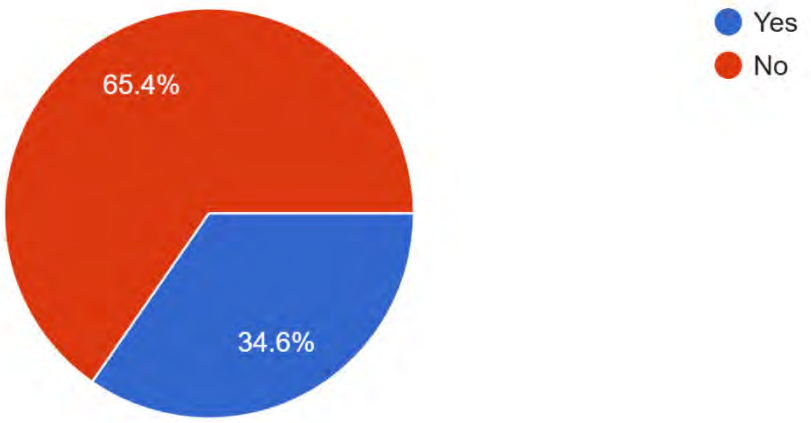
Education and Resources Question 12. How would you like to learn more about recycling, reuse, and repair programs? (Select all that apply)

127 responses



Multi-Family Homes Question 13. Do you live in an apartment, condo, or townhouse? (yes/no)

127 responses



Question 14.

(If yes to question 13) What would make it easier to recycle food waste in your building? [Open answer]

31 responses

Use different colour bag to differentiate that kind of food waste

easier instructions

put a bigger recyclingbins in a fixed position

more bins

Not an issue currently

more proper place to keep bins (townhomes) not just garages

The food waste collection is awful in my complex and in many others. There is a collection bin and that is ok, but people are not educated to select food scraps, and about what can go in the food collection. There is a lot of plastic, food is been dumped in plastic bags, plastic containers, take out not biodegradable containers. I also see lots of people dumping food scrapes and everything in the garbage. There is no education from the city of Surrey, nor from MetroVan about what to put/not to put in food collection, and in the recycle collection. There is a small poster down the stairs about recycling and that's it. For what I know

putting in the recycle and in the food scrap bin has become mandatory, but no one cares about educating residents. We have many newcomers (no ones educate them), but also many peope who have been here for years and many are canadian citizens don't recycle. No education provided, no implementation, no accountability. I'm very upset because I collect all recyclables, including plastc wraps (very invasive in our lives now - even food that could be sold without has plastic wrapping), glass and the little styrofoam I get, which I deliver to the depot.
Glass should be collected in a bin with residential collection too. It's not collected in Surrey and it has to be brought to the depot. Many put it in the recycle.
In every building we need capillar education, mandatory for every unit. Attached to it we need a container to collect food scraps in every apartment.
Selling styrofoam should be prohibited. Everything that is not recyclable or is not efectively recycled should be prohibited in stores and in packaging.
Fake compostables (from "compostable" plastic bags to compostable food containers containing plastic) should be prohibited, they contain plastic and you transfer plastic to the environment and to food if you compost them. Also the composition of coffee cups is unclear. Everything containing plastic mixed with paper and additives should go to the landfill, and should be clearly written on the items. Substitute them with reusable items.
Only biodegradable items are compostable. Plastic is not biodegradable and when fragments in composters it goes to add to the microplastic in the environment. Plastic "compostable" bags in stores should not be labelled as compostable, we need some regulation and to apply such a regulation. They fragment and produce microplastic. Those companies have been allowed to trick and misinform consumers.
Building owners and managers should be educated and should be held responsible for recycling. Big companies owning buildings should be taken accountable and should be pushed to recycle and to inform residents.
Who is responsible for the education of renters and owners in buildings or townhouses? Is it the municipality, is it MetroVancouver, is it the building owner? That should be clear and should do it work. Who is accountable for the missing education? I'm really curious and I can be contacted with answers by Mero Vancouver at my email.

more places to dispose stuff

clear guidelines on how to recycle

I don't know

A compost bin

N/A

Having the garbage truck come more often for food waste

Nothing

More frequent waste ... (illegible: taken?)

Organics program - no green waste disposal at Murrayville House

put them in special trash can

Appropriate food

If they make an easier pathway to get rid of waste

I dont know to be honest

Small recycling station

A tube? Collect together

not sure

required compost routes everywhere

We are already good with food waste

A big trash can

know what can I make with it

nothing

More often trash pick up

a turtle

Compost (Usually never waste food)

(If yes to question 13) Would you be interested in a short learning series about recycling and waste if it was offered in your building or online?

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary

Activity:	
Activity Date	October 29th
Organization/group name	Mind Your Plastic
Time/Duration	One hour
Location	Virtual
Format	*One-on-one virtual interview*
# of Participants	1
Strategies and Actions Discussed	Selected Strategies for Discussion by Mind Your Plastic in One-on-One Interviews: Strategy 2.1. Collaborate with businesses and institutions to reduce waste at the source Action ID100: Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations Strategy 3.3 Foster the broad adoption of reuse, refill, and repair Action ID047: Advocate that the federal and provincial government develop funding programs to support the expansion and development of reuse and repair infrastructure such as “thing rentals” at public libraries, refill at retail, packaging reuse systems, furniture reuse, and a community reuse options database.

Appendix

Please Include the following in the appendix:

- ✔ **Raw data/notes from engagement activities** (i.e. survey data, focus group and interview detailed notes)
- ✔ **Digital files and photos from the engagement activities** (Please include any digital files and/or photos of focus group products, such as visual brainstorming activity boards)
- ✔ **Engagement survey data**, preferably in editable form (i.e. word document or spreadsheet)
- ✔ **Participants demographic information** (optional)
- ✔ **Participant evaluation forms**

Detailed Interview Notes for Interview #1 attached.

Selected Strategies for Discussion by Mind Your Plastic:

Strategy 2.1. Collaborate with businesses and institutions to reduce waste at the source

- Action ID100: Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations

Strategy 3.3 Foster the broad adoption of reuse, refill, and repair

- Action ID047: Advocate that the federal and provincial government develop funding programs to support the expansion and development of reuse and repair infrastructure such as “thing rentals” at public libraries, refill at retail, packaging reuse systems, furniture reuse, and a community reuse options database.

Other actions discussed:

Strategy 1.2. Support the transition to a more circular regional economy through waste prevention

- Action ID041: Identify and work with industry event organizers to include circular built environment success stories, communication, and learning sessions that
- Action ID079: Improve circular economy education in schools through field trips, hands-on learning, and other innovative school education programs.

Strategy 3.4 Work with event organizers, business, and institutions to increase reuse

- Action ID050: Work with event organizers, event venues, schools, and universities to implement reusable food service ware, bags reuse programs, and food recovery.

Strategy 3.5 Increase access to reuse, refill, and repair

- Action ID058: Facilitate more community-based solutions like buy-nothing groups and shared fridges.
- Action ID059: Support community-based waste reduction and reuse programs for schools, non-profit organizations, and community groups.

Notes #1

Format : Virtual
Session Date: October 29th, 2025
# of Interviewees: 1 (One-on-one)

Section	Questions Asked by Participant	Feedback Heard
Strategy/Action #1		
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair • **Action ID100** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	-Where would these actions be hosted?	-If actions were hosted at participant's community library, it would be very easy to participate (e.g. in repair and borrowing initiatives) -It is difficult to find the personal time in participant's schedule to accommodate things like these actions unless there is something specific that the participant needs to borrow
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair • **Action ID100** What should Metro Vancouver consider to support your participation with this action?	-What kind of reuse and borrowing items would be made available?	-If these stations were accessible in the participant's community (Cloverdale) without needing a car -Participant suggested that initiatives such as buy-nothing groups or shared fridges may be abused or underused in this community -Participant would feel supported if the rules and regulations were clearly stated so that the participant knows how long they can borrow a specific item -If there were multiple sessions available for repair or swapping so that the participant could attend (in the case that the participant couldn't accommodate one specific date in their schedule) -Participant noted that they would be most interested in borrowing and reusing items such as lawn care, tools,

		cleaning equipment that they would only realistically need once a year and would not want to buy -Repair meet ups with an expert would also be valuable, especially for small electronics like lamps or alarm clocks, etc. -Participant has participated before in sewing workshops, which has helped them save a few clothing items -Participant mentioned that greater reuse/refill system support at events, schools, and bigger social gatherings would be valuable as the effort to clean and return items would be easier -Having more events and opportunities in general and doing things to market reuse/refill/repair to their local community -Having flyers at recreational centres or local libraries could help spread the word as well as posting on social media
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		-Low as solid waste management is not something that the participant thinks about that much, but participant thinks it would be valuable to consider more if opportunities arise
Is there anything else you'd like to add to the conversation on this ACTION?		-N/A
Strategy/Action #2		
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source	-What businesses would be taking on these actions? Businesses that I already frequent?	-It would be fairly easy for the participant to participate if the initiatives are visible, well-defined, and well-integrated into everyday transactions at the businesses and institutions they frequent

• **Action ID047** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		-Participant gave example of discounts for initial participation, staff that can explain how the process works if the participant has questions -Training or workplace resources could help employees understand how to manage waste correctly and communicate to customers, as participant has had experiences where staff do not understand the process or motivation behind special programs -If the business clearly explains how their waste reduction program works and it is convenient for the participant to take part, then they do not see why they would not participate -Consistency across businesses would also help right now, as every store seems to have a slightly different system or strategy to reduce waste (e.g. different waste sorting, different labels, different reuse options), which can get confusing -Education for businesses and consumers, sharing what has worked, and clear guidance could make participation easier -If there was a model business/consumer to help participant learn the correct behaviours it could also help make them more popular and promote consistent waste-reduction messaging/efforts across Metro Van
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source • **Action ID047** What should Metro Vancouver consider to support your participation with this action?		-Participant suggested that Metro Vancouver could create a directory or recognition program highlighting local businesses leading in waste reduction that would allow them to access vetted businesses more easily -Publicly celebrating business' efforts would help customers identify and support sustainable options. -Providing consistent signs in-store and ads online or on social media could also help businesses standardize the messaging on waste reduction to all Metro Van customers
Strategy Number: 2.1.		-Medium: participant thinks this action

Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		has potential to reduce waste into the future given that they see a lot of waste produced by businesses, -Participant mentioned that while it's not something they interact with daily, giving businesses to tools to lead by example may allow the participant the opportunity to participate in more waste reduction initiatives at the places they already shop
Is there anything else you'd like to add to the conversation on this ACTION?		-N/A
Other Strategies/Actions engaged on?		● Action ID058: Facilitate more community-based solutions like buy-nothing groups and shared fridges. ● Strategy 3.4 Work with event organizers, business, and institutions to increase reuse

Notes #1

Strategy/Action #1		
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	-Where would these actions be hosted?	-If actions were hosted at participant's community library, it would be very easy to participate (e.g. in repair and borrowing initiatives) -It is difficult to find the personal time in participant's schedule to accommodate things like these actions unless there is something specific that the participant needs to borrow
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** What should Metro Vancouver consider to support your participation with this action?	-What kind of reuse and borrowing items would be made available?	-If these stations were accessible in the participant's community (Cloverdale) without needing a car -Participant suggested that initiatives such as buy-nothing groups or shared fridges may be abused or underused in this community -Participant would feel supported if the rules and regulations were clearly stated so that the participant knows how long they can borrow a specific item -If there were multiple sessions available for repair or swapping so that the participant could attend (in the case that the participant couldn't accommodate one specific date in their schedule) -Participant noted that they would be most interested in borrowing and reusing items such as lawn care, tools,

		cleaning equipment that they would only realistically need once a year and would not want to buy -Repair meet ups with an expert would also be valuable, especially for small electronics like lamps or alarm clocks, etc. -Participant has participated before in sewing workshops, which has helped them save a few clothing items -Participant mentioned that greater reuse/refill system support at events, schools, and bigger social gatherings would be valuable as the effort to clean and return items would be easier -Having more events and opportunities in general and doing things to market reuse/refill/repair to their local community -Having flyers at recreational centres or local libraries could help spread the word as well as posting on social media
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		-Low as solid waste management is not something that the participant thinks about that much, but participant thinks it would be valuable to consider more if opportunities arise
Is there anything else you'd like to add to the conversation on this ACTION?		-N/A
Strategy/Action #2		
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source	-What businesses would be taking on these actions? Businesses that I already frequent?	-It would be fairly easy for the participant to participate if the initiatives are visible, well-defined, and well-integrated into everyday transactions at the businesses and institutions they frequent

• **Action ID047** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		-Participant gave example of discounts for initial participation, staff that can explain how the process works if the participant has questions -Training or workplace resources could help employees understand how to manage waste correctly and communicate to customers, as participant has had experiences where staff do not understand the process or motivation behind special programs -If the business clearly explains how their waste reduction program works and it is convenient for the participant to take part, then they do not see why they would not participate -Consistency across businesses would also help right now, as every store seems to have a slightly different system or strategy to reduce waste (e.g. different waste sorting, different labels, different reuse options), which can get confusing -Education for businesses and consumers, sharing what has worked, and clear guidance could make participation easier -If there was a model business/consumer to help participant learn the correct behaviours it could also help make them more popular and promote consistent waste-reduction messaging/efforts across Metro Van
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source • **Action ID047** What should Metro Vancouver consider to support your participation with this action?		-Participant suggested that Metro Vancouver could create a directory or recognition program highlighting local businesses leading in waste reduction that would allow them to access vetted businesses more easily -Publicly celebrating business' efforts would help customers identify and support sustainable options. -Providing consistent signs in-store and ads online or on social media could also help businesses standardize the messaging on waste reduction to all Metro Van customers
Strategy Number: 2.1.		-Medium: participant thinks this action

Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		has potential to reduce waste into the future given that they see a lot of waste produced by businesses, -Participant mentioned that while it's not something they interact with daily, giving businesses to tools to lead by example may allow the participant the opportunity to participate in more waste reduction initiatives at the places they already shop
Is there anything else you'd like to add to the conversation on this ACTION?		-N/A
Other Strategies/Actions engaged on?		● Action ID058: Facilitate more community-based solutions like buy-nothing groups and shared fridges. ● Strategy 3.4 Work with event organizers, business, and institutions to increase reuse

Notes #2

Format : Virtual
Session Date: October 29th, 2025
# of Interviewees: 1 (One-on-one)

Section	Questions Asked by Participant	Feedback Heard
Strategy/Action #1		
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	-How far away from my neighbourhood would the initiatives take place?	-The ease of a reuse, refill, repair initiative would depend on the distance of the initiative -As an example, if a furniture reuse location was far away from the participant's home, they would be less likely to participate -Participant's reluctance to participate in these initiatives may also be based on perceived cleanliness of the reusable items -In the case of furniture reuse, the participant would be worried about concerns such as bed bugs -Close proximity or organizing the initiative in a way where it is brought to the participant's home would make it easier to participate -It would also be valuable to know how such items were accepted and maintained to address cleanliness concerns -Participant would be particularly interested in rentals of items and community reuse options -Participant mentioned that they had previously seen an initiative where the library was offering fishing poles for rent, however, the information provided by the library about how to participate was confusing to navigate -Buy nothing groups may also be a great option that isn't limited by the location of the participant's home
Strategy Number: 3.3 Foster the broad adoption	-What kind of information could	-Consider making information as accessible as possible

of reuse, refill, and repair ● **Action ID100** What should Metro Vancouver consider to support your participation with this action?	Metro Van provide to ease participation?	-Participants should not have to investigate or depend on outside sources for information about how something works, the logic and purpose behind it, its usefulness and impact, etc. -Smaller communities and neighbourhoods have been trying to introduce these initiatives for a while and there are apps that will categorize you based on location for participation -Metro Vancouver can help by amplifying these resources or creating their own resources where people can access this information and opportunity based on location
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		-Medium -Participant suggested there are initiatives out there that currently exist and potentially an alignment for Metro Van to assist with these initiatives instead of arranging a brand new action
Is there anything else you'd like to add to the conversation on this ACTION?		-N/A
Strategy/Action #2		
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will	-What actions are businesses currently taking that Metro Van can uplift?	-It would be easy -Participant is a small business owner and would be ecstatic to have such information available to them -Difficulty often comes from access -Access to what measures are included in the education tools and whether the resources have accessible language options are also important factors -People pay attention to business practices and if businesses are transparent about their sustainability practices, participant thinks that it would

it be for you to participate in it? If difficult, what is it that makes your participation easier?		give consumer more motivation to purchase -By transparency, participants clarified that they mean having a page on the business' website or highlight on their social media page that is dedicated to their sustainable practices -Businesses appreciate the direction because it is easy to not have sustainability practices at the forefront of their mind -Participant said that they think sustainability practices are often the sacrifice when it comes to running a business, so having an educational tool available is important -Bringing the awareness sooner rather than later helps to build practices early and makes a huge difference in maintaining sustainability over time -Participant is inspired when other small business owners share their sustainability practices, as it makes them think about what they should be implementing and what they should have available to their customers -As a consumer, the participant tries to be conscious of who they are purchasing from, but sometimes convenience may take priority -This is not always the case, and mostly the participant wants to ensure that they are purchasing from businesses with these tools available to them and who show they care about the environment
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** What should Metro Vancouver consider to support your participation with this action?		-Metro Van should consider giving a platform to those who are actively pursuing the increase in sustainability practices and are increasing consumer awareness of what other options are available -That way, these businesses are more apparent to consumers, and can offer a model for other business owners

Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		-High -Participant believes there is not enough support for the efforts that are already established -Giving these opportunities more of a platform to reach people who are not actively thinking about sustainable practices is important
Is there anything else you'd like to add to the conversation on this ACTION?		-Participant uses the VarageSale app to help with waste reduction -App gives people the option to sell or giveaway their items to other people in their communities -There is a vetting process prior to ensure you are a part of that community -This helps with access because those who are looking to participate in waste reduction are nearby so transit efforts are not wasted -Consider involving more small business owners in the Solid Waste Management Plan update -Small business owners are passionate and often the participant finds are more mindful of contributing to sustainability practices
Other Strategies/Actions engaged on?		● Action ID058: Facilitate more community-based solutions like buy-nothing groups and shared fridges. ● Strategy 3.4 Work with event organizers, business, and institutions to increase reuse

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary

Activity Date	October 30th
Organization/group name	Mind Your Plastic
Time/Duration	One hour
Location	Virtual
Format	*One-on-one virtual interview*
# of Participants	1
Strategies and Actions Discussed	Selected Strategies for Discussion by Mind Your Plastic in One-on-One Interviews: Strategy 2.1. Collaborate with businesses and institutions to reduce waste at the source Action ID100: Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations Strategy 3.3 Foster the broad adoption of reuse, refill, and repair Action ID047: Advocate that the federal and provincial government develop funding programs to support the expansion and development of reuse and repair infrastructure such as “thing rentals” at public libraries, refill at retail, packaging reuse systems, furniture reuse, and a community reuse options database.

Appendix

Please Include the following in the appendix:

Collaborative Engagement Toolkit Templates | **0**

- ✔ **Raw data/notes from engagement activities** (i.e. survey data, focus group and interview detailed notes)
- ✔ **Digital files and photos from the engagement activities** (Please include any digital files and/or photos of focus group products, such as visual brainstorming activity boards)
- ✔ **Engagement survey data**, preferably in editable form (i.e. word document or spreadsheet) ✔ **Participants demographic information** (optional)
- ✔ **Participant evaluation forms**

Detailed Interview Notes for Interview #2 attached.

Selected Strategies for Discussion by Mind Your Plastic:

Strategy 2.1. Collaborate with businesses and institutions to reduce waste at the source

- Action ID100: Develop education tools for businesses to help them reduce waste, motivate customers to participate, and comply with evolving waste reduction regulations

Strategy 3.3 Foster the broad adoption of reuse, refill, and repair

- Action ID047: Advocate that the federal and provincial government develop funding programs to support the expansion and development of reuse and repair infrastructure such as “thing rentals” at public libraries, refill at retail, packaging reuse systems, furniture reuse, and a community reuse options database.

Other actions discussed:

Strategy 1.2. Support the transition to a more circular regional economy through waste prevention

- Action ID041: Identify and work with industry event organizers to include circular built environment success stories, communication, and learning sessions that
- Action ID079: Improve circular economy education in schools through field trips, hands-on learning, and other innovative school education programs.

Strategy 3.4 Work with event organizers, business, and institutions to increase reuse

- Action ID050: Work with event organizers, event venues, schools, and universities to implement reusable food service ware, bags reuse programs, and food recovery.

Strategy 3.5 Increase access to reuse, refill, and repair

- Action ID058: Facilitate more community-based solutions like buy-nothing groups and shared fridges.
- Action ID059: Support community-based waste reduction and reuse programs for schools, non-profit organizations, and community groups.

Notes #3

Format : Virtual
Session Date: November 3rd, 2025
# of Interviewees: 1 (One-on-one)

Section	Questions Asked by Participant	Feedback Heard
Strategy/Action #1		
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	-Who would be participating?	-Participant would find it easy to participate in such initiatives if there are clear, realistic steps and easily accessible areas to implement -Spreading the news about the initiatives and adding some rules to get apartments and public areas to be involved -These steps are more likely to motivate people to partake -Participant suggested they would need to see others participate to feel like they are not making the effort on their own -Including the general public as mentioned using free or affordable workshops to teach people, even influencing figures like educators so school and youth are active members in this work -Having volunteers trained to spread awareness and model these actions would be a good step as well -Teaching people the benefits and how they're involved in this would make it more relatable to attract people into action -Participant would be interested in participating in libraries, refill at retail, and furniture reuse -Making these initiatives eco-friendly and more affordable than expensive brand -Working on an individual and local level is necessary but not sufficient for a significant change, so there is an importance in spreading messages across youth, families, neighbourhoods,

		and communities -Important for initiatives to be straightforward and practical
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** What should Metro Vancouver consider to support your participation with this action?		-More awareness activities/ads and inclusions in various areas (residential, educational, and occupational)
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		-Medium -Solid waste management downstream is still a part of the solution
Is there anything else you'd like to add to the conversation on this ACTION?		-N/A
Strategy/Action #2		
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** If Metro Vancouver includes this action in the updated solid waste management	-What types of businesses would be taking part?	-It would depend on the means of advertisement and the sectors in which these initiatives are presented and taught -Modeling practices and engaging in education about them would be beneficial to motivate people to care -If businesses preach about an initiative they don't practice, people are quite unlikely to listen to them, especially with corporations and their current reputation on pollution, consumerism

plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		reinforcement, and neglect/minimization of global warming -Education tools would be important but reinforcement of the initiatives throughout the community it also important to make sure that it isn't a short-lived trend -When policies can involve fines, businesses may also take it more seriously
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** What should Metro Vancouver consider to support your participation with this action?		-Participant suggested that accessibility, affordability, practicality, and education are essential to supporting their participation
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		-Medium -Consistency is key to sustainability initiative and seeing others like businesses actively contribute would encourage the participant to do the same while inviting others to join them
Is there anything else you'd like to add to the conversation on this ACTION?		-N/A
Other Strategies/Actions engaged on?		● Action ID058: Facilitate more community-based solutions like

		buy-nothing groups and shared fridges. ● Strategy 3.4 Work with event organizers, business, and institutions to increase reuse

Detailed Interview Notes for Interview #4 attached.

Notes #4

Format : Virtual
Session Date: November 5th, 2025
# of Interviewees: 1 (One-on-one)

Section	Questions Asked by Participant	Feedback Heard
Strategy/Action #1		
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	-What information is going to be provided to participants about the handling and cleaning procedures for reusable items?	-Relatively easy, as the participant doesn't mind the extra effort -Concerns would be hygiene with reuse, so participant would be selective in what products to reuse or refill -It would be easiest to participate if opportunities were more convenient across locations and availability -Process to participate should be simple and easy to understand -There should be an easy way to clearly view stock and what's available in terms of reuse/refill/repair -It would be easier to participate if there were cleaning process assurances that were clearly communicated to the public and increased transparency about how items are handled -Participant has tried rentals and furniture reuse systems before and found them to be a great opportunity, but still had concerns about the cleanliness and quality of the products
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** What should Metro Vancouver consider to support your participation with this action?		- Participant was unsure about what Metro Van could do to support their participation in this action -Participant suggested that they thought it would be beneficial to expand offerings and support to reuse/refill systems such as foodware, shopping bag sharing at events, schools and elsewhere -Participant would utilize community-based solutions such as buy nothing groups, but would likely not utilize shared fridges if they were available in

		the participant's neighbourhood
Strategy Number: 3.3 Foster the broad adoption of reuse, refill, and repair ● **Action ID100** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		-Medium -Participant suggested that it is important, but likely not the top priority when it comes to waste management
Is there anything else you'd like to add to the conversation on this ACTION?		-Community curbside pick up systems could also be a great opportunity to explore
Strategy/Action #2		
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		-It would be very easy to participate -To have businesses take care of waste reduction at the source makes the process more convenient for the consumer -Easier access to businesses taking on these actions would be great, so that the participant knows exactly what steps the business has taken -Clear instructions on how the participant can engage and reduce waste through the business or its programs -As long as there are guidelines on what needs to be carried out, participation should be possible -Education tools would be key to help businesses do this and to help consumers understand the business' actions -If participant had learned more about waste reduction or circular economy through school programs, they might be better equipped to identify where businesses are already making changes, so educational programming in schools could be helpful

Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** What should Metro Vancouver consider to support your participation with this action?		-Participant was not sure how Metro Van could best support their participation in this action -Participant mentioned that helping businesses develop and communicate their success stories in waste reduction would not necessarily be helpful, as they would not be sure where or how to access those stories in a timely way while ensuring there is no greenwashing
Strategy Number: 2.1. Collaborate with businesses and institutions to reduce waste at the source ● **Action ID047** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?		-Medium -Participant found it difficult to answer how this action would impact them as a consumer -Participant was not able to identify the business practices they would like to see from businesses to reduce waste or what would engage them the most as a consumer -Participant mentioned that they did not know of any businesses offering special waste reduction initiatives and engaging customers in that process, so it was difficult to say how important this action would be without a reference point to understand how effective it could be -Participant suggested ad campaigns about these actions could help as well as a timeline for consumers on what to expect and when in order to ease the transition
Is there anything else you'd like to add to the conversation on this ACTION?		-N/A
Other Strategies/Actions engaged on?		● Action ID058: Facilitate more community-based solutions like buy-nothing groups and shared fridges. ● Strategy 3.4 Work with event organizers, business, and institutions to increase reuse

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary

Activity Date	October 1st-November 4th, 2025
Organization/group name	Mind Your Plastic
Time/Duration	Throughout the month of October/first week of November
Location	Virtual
Format	*Online surveys*
# of Participants	83
Strategies and Actions Discussed	An online survey was conducted throughout October to gather community feedback for Metro Vancouver's Solid Waste Plan Update. A multi-channel outreach strategy was used to maximize participation, including targeted Meta (Facebook and Instagram) ads, recruitment through community social media groups, and collaborations with local small businesses to promote the survey. Staff were also engaged as ambassadors, encouraging participation across university campuses and within their personal and professional networks. These coordinated efforts ensured broad regional reach and diverse input, helping to inform the updated Solid Waste Management Plan with meaningful community perspectives. There were some challenges in recruiting the 200+ goal stated in our engagement proposal, as this was our first attempt at a Metro Van Solid Waste Management Plan Update engagement that was entirely virtual. In the last week, we were able to almost double our response rate with more follow ups to potential survey-takers. Ultimately, we ended with 83 total participants.

Appendix

Please Include the following in the appendix:

Collaborative Engagement Toolkit Templates | 0

- ✔ **Raw data/notes from engagement activities** (i.e. survey data, focus group and interview detailed notes)
- ✔ **Digital files and photos from the engagement activities** (Please include any digital files and/or photos of focus group products, such as visual brainstorming activity boards)
- ✔ **Engagement survey data**, preferably in editable form (i.e. word document or spreadsheet)
- ✔ **Participants demographic information** (optional)
- ✔ **Participant evaluation forms**

Raw survey data attached.

Post-engagement Activity Summaries

Activity: Park clean-up	
Activity date	Oct 19, 2025
Organization name	NatureKids BC
Time/duration	1 pm to 3:30 pm (2.5 hours)
Location	Renfrew Ravine Park
Format	Focus group
# of participants	14
Strategies and Actions Discussed	Strategy 3.5: Increase access to reuse, refill, and repair Action ID 058 and ID 059 discussed

Activity: Member survey	
Activity date	Oct 9, 2025
Organization name	NatureKids BC
Time/duration	Oct 9, 2025 to Oct 24, 2025 (16 days)
Location	Virtual
Format	Questionaire
# of participants	24
Strategies and Actions Discussed	N/A

Appendix

Note: We modified the action IDs from Strategy 3.5 to incorporate several examples of what community-based solutions could look like to inspire generative conversation with our audience. Here are the 2 restructured action IDs for your reference:

Action ID 058: Facilitate more community-based solutions like buy-nothing groups, shared fridges, refill at retail, and packaging reuse systems.

1. **Buy-nothing groups**: hyper-local online communities where members can borrow, receive, give away, or exchange services for free. (ex. Buy Nothing Burnaby South East group on Facebook)

2. **Shared fridges**: a fridge with donated food that's for public use, or fridges in shared housing like dorms or apartments (ex. Collingwood Neighborhood house outdoor fridge)

3. **Refill at retail**: Customers bring in their own packaging such as bottles, glass jars, and containers to fill up and reuse (ex. The Soap Dispensary and Kitchen Staples, who refill bulk hygiene products)

4. **Packaging reuse systems:** Durable containers or packaging that is returned to a business or collection point and are repurposed instead of discarded after single use. (ex. Avalon Dairy, where customers return empty glass bottles, receive a cash deposit, and then the containers are cleaned and refilled with milk)

Action ID 059: Support community-based waste reduction and reuse programs for schools, non-profit organizations, and community groups

1. **Repair cafes**: Free periodic events where you can bring items like small kitchen appliances, clothing, or electronic devices to be fixed by volunteers (ex. Kitsilano Community Centre, Oct 11, 2025)

2. **Free swap events:** Events where people donate portable items that are in working condition and can browse the tables for an item of their choice. (ex. Halloween free swap event, Oct 25 at Renfrew Community Centre)

3. **Reuse centres**: Vancouver tool library, a library that loans various tools for home repair, gardening, and bike maintenance, along with offering affordable workshops that teach you repair skills

4. **Community gardens**: shared space for people to cultivate fruits and vegetables, which is a good opportunity to support food security, learn about composting practices, decrease food waste as what's grown is being locally consumed, and transform vacant land into productive green spaces (Ex. David Thompson Secondary School greenhouse)

Feedback from focus group

Format: In-person

Session date: Oct 19, 2025

# of participants registered: 6 families

# of actual participants: 4 families (14 participants)

# of event promotions: 2

Note: We had difficulties in gathering detailed feedback for Action ID 058 and 059 as participants were confused by the original solid waste strategy packet questions. Our modified wording and local examples provided context. However, it still took active rephrasing for families to understand each question. Some struggled because English was a second language, and others struggled because the language was too formal.

Despite these issues, the videography team was able to capture unique and valuable information in interviews with 5-7 year old child participants, who shared their views on the importance of sustainable initiatives as emerging nature stewards.

Section	Questions asked by participants	Feedback heard
Strategy Number: 3.5 **Action ID: 058** ***Facilitate more community-based solutions like buy-nothing groups, shared***	• "What is a buy nothing group?" A concise description of a buy nothing group was offered, but further	• The government should promote buy-nothing groups • More advertising and communication of

fridges, refill at retail, and packaging reuse systems. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	clarification was needed for one family who had not heard of this before	when and where sustainability events are happening would be helpful
Strategy Number: 3.5 **Action ID: 058** What should Metro Vancouver consider to support your participation with this action?		• Location of events or programs must be central to transit and also have parking • Support increased sustainability events through commitments like funding and providing the space
Strategy Number: 3.5 **Action ID: 058** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		• Low to medium priority

Section	Questions asked by participants	Feedback heard
Strategy Number: 3.5 **Action ID: 059** ***Support community-based waste reduction and reuse programs for schools, non-profit organizations, and community groups*** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	• "What is a repair cafe?" A few Asian participants stated that this was new for them. One family has held on to their fan for 2 years even though it does not work as they don't know what is wrong with it – the fan is in good condition and they can not find affordable, if any, repair businesses that will help fix it	• The government should create better advertisements for repair cafes to make participation easier

Strategy Number: 3.5
 	
Action ID: 059
 	
What should Metro Vancouver consider to support your participation with this action?
		• Community centres can be far away from home, so it would be convenient if more repair cafes or recycling centres are part of local stores as well
		
		  • Preference for accessible information on where and how to repair and recycle items like electronic devices or cooking pans
		
		  • A hybrid sign-up and drop-in system for electronic repair cafes would be beneficial, so that the people running the event would be able to get a sense of the questions and problems ahead of time

Strategy Number: 3.5 **Action ID: 059** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		• Low to medium priority • More government support for community centres and other social hubs was preferred regarding facilitation of regular repair cafe events

Metro Vancouver Solid Waste Management Plan
Options Analysis

Collaborative Engagement
Final Report to Metro Vancouver

Introduction

The Recycling Council of British Columbia (RCBC) has partnered with Metro Vancouver in their collaborative engagement process to increase the reach of consultations taking place to inform the Options Analysis phase of the Solid Waste Management Plan update process. In order to do so, RCBC has sought to consult with RCBC Members in the non-profit and business/industry sectors that interact with and are impacted by solid waste management in the Metro Vancouver region, as well as residents who interact with RCBC Information Services (such as the BC Recycling Hotline). This consultation has taken the form of a targeted survey, constructed to enable these stakeholders to provide feedback that is specific to their sectors and areas of work, and a general public survey for interested residents.

Survey Design

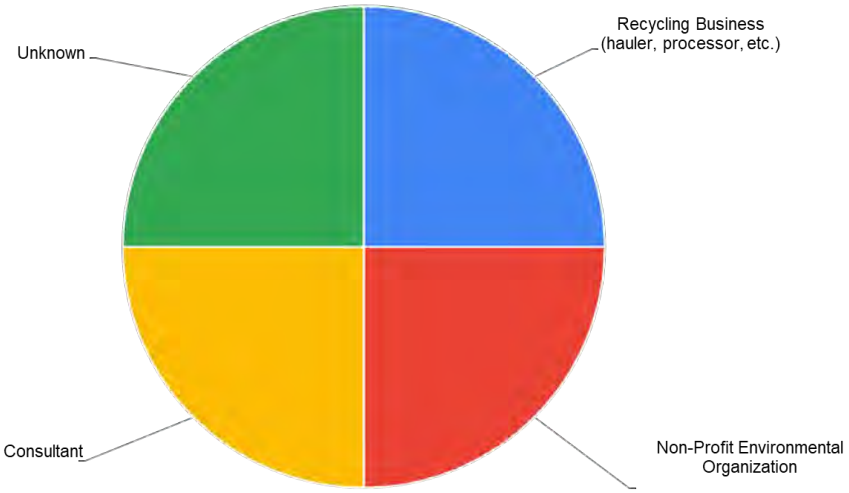
The surveys were developed based on the public survey materials provided by Metro Vancouver. For the RCBC Member survey, some questions were omitted or altered in order to ensure that they were relevant to the target member audience. The public survey was created as a duplicate of Metro Vancouver's public survey.

On September 23, 2025 the tailored survey was distributed to RCBC Member contacts in the Industry and Non-Profit sectors operating in the Metro Vancouver region, totaling 118 recipients. The survey closed on October 22, 2025, and reminders were sent two days prior to the close of the survey, as well as in RCBC's Member Newsletter, ReCap, which was distributed October 15, 2025. Simultaneously, a public survey was conducted through RCBC's Information Services channels to reach members of the public who engage with RCBC programs and services. The link to the public survey was provided in RCBC's public newsletter, The Circular, which was distributed October 3, 2025 to 1,366 subscribers, in 6 total social media posts across Facebook, Instagram, and X, and was also included in email responses to residents in the region at the discretion of RCBC Environmental Advisors.

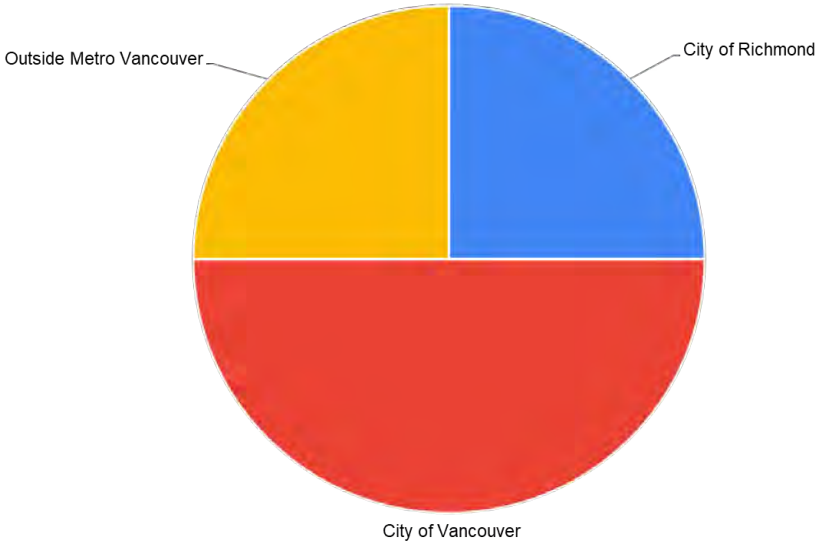
The Member Survey received four responses and the public survey received three responses.

Member Survey Results

Member Survey respondents represented a range of organization types. One identified themself as a Consultant, one as a Recycling Business like a hauler, and one as a Non-Profit Environmental Organization. A final respondent did not specify the nature of their organization.



The largest share of respondents (50%) were based in the City of Vancouver. One respondent was located in Richmond, and another outside of Metro Vancouver. Of these respondents, three of four indicated that they do not operate outside of the Metro Vancouver Region.



Rethink

How do you decide what you really need before buying something? [Please select your top three considerations]

How do you decide what you really need before buying something?	Number of responses
The cost of the item and my budget	4
Advice or recommendations from friends or family	1
If I would use it everyday	1
The environmental or ethical impact of the item	3
The quality or how long it will last	3
It would bring me joy or make me feel good	1

A number of potential areas of interest were presented, and ranked from “very interested” to “not at all interested”, the results follow:

How interested are you in learning about the following?	Very interested	Somewhat interested	Not at all interested
Buying fewer things or mindful buying	2		2
Choosing better quality items that last longer	2		2
Using reusable items (bags, cups, containers, cutlery, etc.)	2		2
Going to repair events to fix broken items	3		1
Taking worn clothing for repair or learning to repair them myself	3		1
Gifting experiences instead of items	1	1	2

A number of potential actions to be taken in the next year were presented, and ranked from “very likely” to “very unlikely”, the results follow:

How likely are you to try the following in the next year?	Very likely	Somewhat likely	Somewhat unlikely	Very unlikely
Buying fewer things or mindful buying	4			
Choosing better quality items that last longer	4			
Using reusable items (bags, cups, containers, cutlery, etc.)	4			
Going to repair events to fix broken items	3	1		
Taking worn clothing for repair or learning to repair them myself	3	1		
Gifting experiences instead of items	4			

Reduce

Respondents were asked to indicate which types of waste they find challenging to avoid, the results follow:

What types of waste do you find challenging to avoid?	Number of responses
Plastic packaging (food wrappers, plastic wrap)	4
Paint, cleaners, or chemicals	2
Furniture or home items	2
Electronics (old phones, chargers, batteries)	3
Packaging from cosmetics and toiletries (shampoo bottles, makeup containers)	2
Home renovation debris and materials (drywall, tiles, wood scraps)	2
Old clothes or fabric	1
Coffee cups and takeaway containers	2

In response to the question, “What types of waste reduction programs would you be most interested in?” the following responses were received:

What types of waste reduction programs would you be most interested in?	Number of responses
Bulk stores or refill stations	3
Clothing repair workshops	2
Community swap events or buy-nothing groups	3
Recycling programs for used electronics	2
Recycling programs for packaging	1
Bulk buying groups that help minimize shipping materials and waste	2
Cup or dishware sharing program that allows you to “borrow” dishware for takeaway instead of using single-use items	2
Recycling programs for packaging	1

Reuse and Repair

Participants were asked, “What motivates you most to reuse items?” and asked to select their top 2 options.

What motivates you most to reuse items?	Number of responses
It helps me save money	3
I enjoy learning how to fix or repurpose things	1
I care about reducing my environmental impact	3

In response to, “Is there anything else that’s not listed above that motivates you to reuse an item?” the following response was submitted:

- *“Being a conscious consumer”*

Respondents were asked, “Some communities have “sharing libraries” where people borrow various items instead of buying them. If there was a “sharing library” in your neighbourhood, what would you borrow?”

Some communities have “sharing libraries” where people borrow various items instead of buying them. If there was a “sharing library” in your neighbourhood, what would you borrow?	Number of responses
Sewing machines	4
Games and puzzles	2
Small kitchen appliances	2
Electric bikes or scooters	2
Tools	3
Electronics (like tablets or laptops)	1
Clothes	1

Recycle

Respondents were asked to indicate “What would make it easier for you to recycle more?”

What would make it easier for you to recycle more?	Number of responses
Clear instructions on what can be recycled and how	3
More drop-off locations	3
Tips on how to prepare recyclables (e.g., do I remove the labels from cans? Do containers need to be clean?)	3
Knowing what happens to recycled items	3
More types of materials accepted in residential recycling pick-up	2
More recycling bins in public that accept more materials	1
More space or larger bins at home to collect recyclables	1

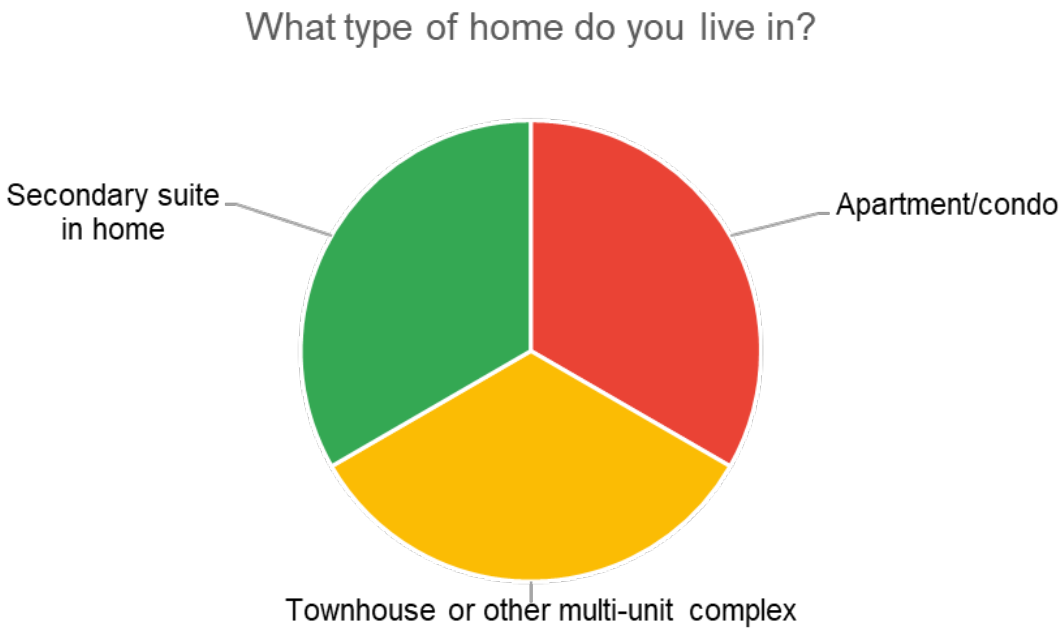
Respondents were asked, “How would you like to learn more about recycling, reuse, and repair programs?”

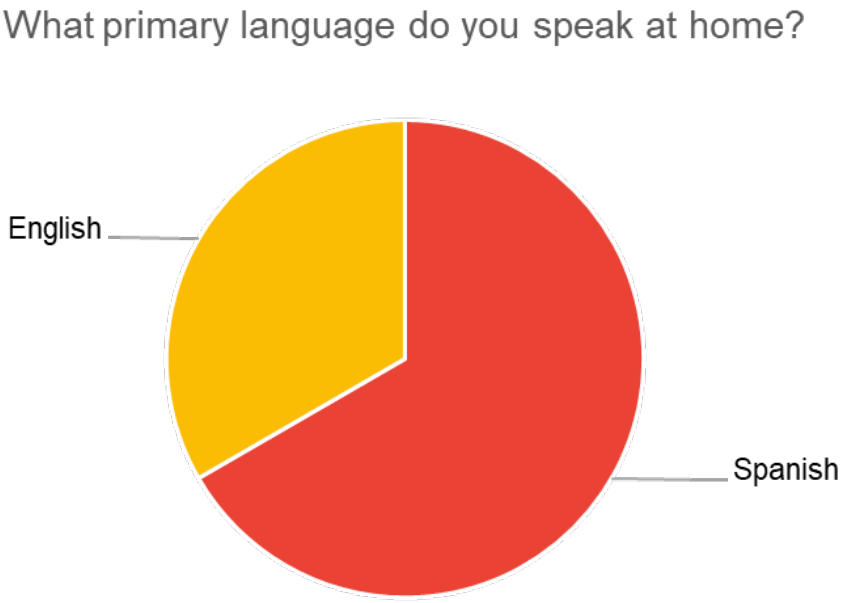
How would you like to learn more about recycling, reuse, and repair programs?	Number of responses
Social media	1
Radio or streaming ads	1
Short online learning sessions or videos	3
Social media, Mail or brochures	1
Email updates or newsletters	2
Mail or brochures	1
Posters or signs in public spaces and buildings	2

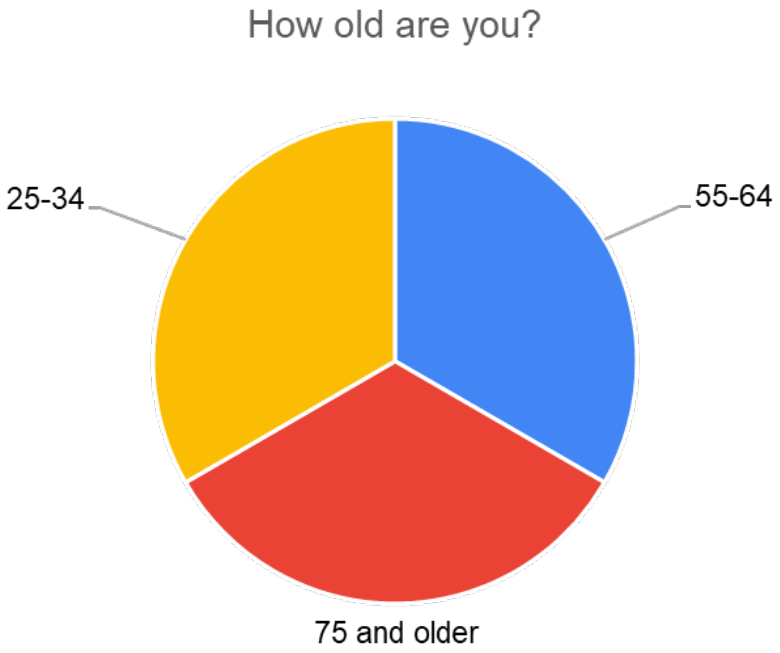
No additional comments were received.

Public Survey Results

The public-facing survey received three total responses. Of the respondents, 100% indicated that they live in the City of Vancouver. The breakdown of dwelling type, primary language spoken at home, and age groups of respondents are displayed below:







Rethink

How do you decide what you really need before buying something? [Please select your top three considerations]

How do you decide what you really need before buying something?	Number of responses
The cost of the item and my budget	3
Advice or recommendations from friends or family	1

Reduce

Respondents were asked to indicate which types of waste they find challenging to avoid, the results follow:

What types of waste do you find challenging to avoid?	Number of responses
Plastic packaging (food wrappers, plastic wrap)	3
Old clothes or fabric	3
Paint, cleaners, or chemicals	2
empty propane tanks for barbeques	1
Electronics (old phones, chargers, batteries)	2
Home renovation debris and materials (drywall, tiles, wood scraps)	2
Furniture or home items	1
Packaging from cosmetics and toiletries (shampoo bottles, makeup containers)	1

In response to the question, “What types of waste reduction programs would you be most interested in?” the following responses were received:

What types of waste reduction programs would you be most interested in?	Number of responses
Community swap events or buy-nothing groups	3
Bulk stores or refill stations	2
Recycling programs for packaging	2
Recycling programs for used electronics	2
Bulk buying groups that help minimize shipping materials and waste	1
Clothing repair workshops	1
Cup or dishware sharing program that allows you to “borrow” dishware for takeaway instead of using single-use items	1

Reuse and Repair

Participants were asked, “What motivates you most to reuse items?” and asked to select their top 2 options. Several respondents chose to select more than 2 options.

What motivates you most to reuse items?	Number of responses
It helps me save money	3
I enjoy learning how to fix or repurpose things	3
I care about reducing my environmental impact	3
It helps me reduce clutter at home	2
Some items hold memories or sentimental value	2
I’ve seen inspiring local success stories	1

Respondents were asked, “Some communities have “sharing libraries” where people borrow various items instead of buying them. If there was a “sharing library” in your neighbourhood, what would you borrow?”

Some communities have “sharing libraries” where people borrow various items instead of buying them. If there was a “sharing library” in your neighbourhood, what would you borrow?	Number of responses
Electronics (like tablets or laptops)	1
Books and multimedia	2
Small kitchen appliances	1
Tools	1

Recycle

Respondents were asked to indicate “What would make it easier for you to recycle more?”

What would make it easier for you to recycle more?	Number of responses
More recycling bins in public that accept more materials	1
Clear instructions on what can be recycled and how	2
More drop-off locations	1
More types of materials accepted in residential recycling pick-up	2
Tips on how to prepare recyclables (e.g., do I remove the labels from cans? Do containers need to be clean?)	1

Social media	3
Radio or streaming ads	1
Email updates or newsletters	2
Posters or signs in public spaces and buildings	3
Short online learning sessions or videos	1
In-person information sessions in my neighbourhood	1

No additional comments were received.

Observations & Recommendations:

Engagement in this process was lower compared to the 2024 survey on Idea Generation. As a result, respondents represented a narrower range of age groups, municipalities, and organization types in the case of the RCBC Member survey. Last year, it was noted that in the public survey 100% of respondents selected English as the primary language spoken at home. This is contrasted by this survey which saw ⅔ of respondents indicate Spanish as their primary language. This suggests that this public survey may have reached a different audience than has been engaged in previous surveys.

Conclusions:

This survey aimed to solicit feedback both from RCBC Members in the Business/Industry and Non-Profit sectors and from members of the public who interact with RCBC Information Services. Overall, there is a high degree of interest in actions like participating in repair cafes and learning to repair, and a high likelihood of trying activities like mindful consumption and choosing reusable options. The two audiences expressed differing preferences in terms of how they would like to receive information about recycling, reuse, and repair programs. RCBC Members showed a preference for short online learning sessions or videos, while the public survey respondents preferred social media and Posters or signs in public spaces and buildings.

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary

- **Spreadsheet**: 2025 MVSWMP Engagement Survey Responses from Master Recycler Vancouver (82 responses)
- **Spreadsheet**: 2025 Focus Group Feedback Form Responses from Master Recycler Vancouver (5 responses out of 15 participants across 2 focus groups)

Metro Vancouver Solid Waste Management Plan (SWMP) Collaborative Engagement Activities Fall 2025
Options Analysis Focus Group Notes from Master Recycler Vancouver / SPEC

FOCUS GROUP 1

Format: Virtual
Session Date: Oct 8 , 2025
# of Participants Registered: 11
# of Actual Participants: 8
# of event promotions: 6

Session	Questions asked by Participants	Facilitator Notes/Observations
Opening Notes	**Questions asked:** • How did SPEC get the opportunity to participate in this Collaborative Engagement? I was delighted when I saw this. **Comments:** • Thank you for sending out the survey simultaneously with the invitation tonight; it was helpful to prime me for things that I want to say in the group, feedback I want to give, and to feel prepared for the event. **What roles did this group introduce themselves with?** • Retired but active coordinating recycling. Build Local Communities organization, to give Vancouver residents. Has four pop-up recycling spots. Works with City of Vancouver to support the program. It's easy, he wants to make certain they can get more people to volunteer to do this, it keeps a lot of stuff out of landfill. • I engage because I really worry about the future, and want to do what I can.	**The participants are heavily engaged in reuse, recycling, repair behaviours and volunteer in their communities or workplaces to advocate for and promote these behaviours.**

Session	Questions asked by Participants	Facilitator Notes/Observations
	• Works in Riley Park Community Garden. Master Gardener, Master Composter from the UK, and Master Recycler Vancouver 2023. Gives talks on composting. Did a long involved session today on worm composting. A colleague brought her microscope along and they were able to see all the microorganisms in the liquid. This was a special session for Master Gardeners in training. They all took baby worms with them. • Part of a sustainability class and club at her university. The professor told her about the workshop. Interested in learning more about local recycling. • Not actively volunteering in anything right now, but all things sustainable, for the longest time. What she tries to do is a lot of influencing in her circle; her family, her friends. She's typically the person to ask "does this go into the compost? The recycling? How do I deal with this? And she tries to do little education pieces about things like Amazon Prime days - try to convince people to buy nothing, or buy local. ○ I live in Coquitlam - my neighbours include bears. I am hyper aware of how to manage my compost and recycling and garbage. When we interact, it can be a disaster for the bears. • Retired from the printing industry; they created so much waste, he got concerned about how much they waste. **What are people's favourite items to reuse?** • Jokes! • Stand up pouches with the zipper. It seems I cannot avoid buying foods that I need and want, ALL in bulk, and I predominantly buy in these stand up zipper pouches. I wash and reuse them. I haven't bought a ziplock bag in about 20 years. I reuse them several times before they go into my flexible plastic recycling. • Plastic bags, because inevitably you end up with them. Ziploc bags as well, we reuse over and over. at least they're not one use. • Tote bags, especially when grocery shopping or going somewhere.	

Session	Questions asked by Participants	Facilitator Notes/Observations
	• One, plastic bags. I haven't acquired a new plastic bag in years. I reuse the ones I have. ○ Two, clothes. I use them, reuse them, mend them, repurpose them, do new things with them. • Plastic bags; both the disposable kind and the supposed ones you use for years. I've got a whole bunch of them stuffed under the car seat, and in my bike panier. Everywhere I go I have my own bag.	

Strategy Number: 3.3
 	
Action ID: 164
 	
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it?
 	
If difficult, what is it that makes your participation easier?
	Comments
	
	• They should define what the low hanging fruit are. We assume they've been communicated and dealt with - as you say, we have a really high recycling rate. But, they should pick one thing - say, for the next couple of years - one thing that they think would make the biggest impact on reducing or reusing. They should communicate that.
	  ○ I see things from RecycleBC in my Instagram feed, and elsewhere. I see various things from the City, but not very much from Metro.
	
	Additional prompt question for participants; how familiar are you already / how much are you using reuse, refill and repair services?
	
	• The Refillery closed in my neighbourhood, and I have not been refilling anymore.
	• I would refill everything honestly, and I used to, but I'm in the same boat as (the previous speaker). NADA closed down, another one that had a refill station closed, the one in Port Moody ended their refill program a week ago. It used to be more accessible, now it's really difficult to find where to refill things. **For me, I would do it (refill) if more places were available. I would use it, I really miss it.**
	  ○ **In terms of repair, the accessibility is where, and how often do they do the Repair Cafes, and how well they advertise to the public?**
		It's noted that Metro Vancouver's marketing on waste / recycling don't have the same reach that the City of Vancouver or RecycleBC have. Where is Metro already sharing resources, via social media?
		
		COVID health concerns changed the refill landscape. Could Metro collaborate on publicizing the Health advisories that reassure businesses that refill can still be safe and sanitary?
		
		It's reiterated a few times that businesses need to be reassured that they can refill and reuse, from restaurants to pharmacies.
		
		Small businesses offering refill struggle to stay open. Many have closed in recent years.

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ A quick thing - typically refill places are your local small business; what I hear from my friends is they mostly go to Costco, especially ones with big families. So they have said - **if Costco had that (refill) option, I would use it.** So if I have to go to Costco AND the refill place, I don't have the time, it's very inconvenient. So if we could take supermarkets, Costco, big places to set up a station, that would maybe entice people who are already going there. • One thing with my Build local Community is I send out a newsletter twice a month with fun things, good news in Vancouver. The most recent one I sent out was the next 3 Repair Cafes. ○ **I think we should be doing Repair Cafes a LOT more frequently. It's only once a year in most of the community places.** ○ **One of the things I found with pop-up recycling is I do it the same time EVERY week. If you try to do it once a month, people always miss it. So, we've got to be much more accessible that way.** ○ The other thing is, the refill part, people have to really change to want to be able to do that. If we could recycle the containers more effectively, that would be great. Like single use coffee cups, **why doesn't the city have the municipal (recycling) bins for containers on Commercial Dr. where we have all these coffee shops?** They're on the West side, but not where we really need it. ○ I know many of the stores I have gone to used to have refillery, and they don't know. Safeway used to have bulk foods, and now they package everything in hard plastic. ■ **Refilling is a great idea but doesn't work that well in practice *(due to the health & safety issues)*.** • Some kind of incentive from the municipality to open businesses like that (refill) is necessary. They create foot traffic and are great for the economics of a neighbourhood; when you refill you're walking by other stores. It makes good sense for the other businesses and services.	**This makes the behaviour less accessible, even for people who strongly identify with and advocate for refilling.** **Boutique refill / small business refill offerings don't make a dent in the purchasing at bigger box stores, e.g. families who shop at Costco need refill options at Costco.** **More frequent and more publicity for Repair Cafes. Do one every week, at the same time.** **Can libraries participate in hosting refill / reuse programs?**

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ To go back to repair and reuse; I've heard some libraries don't get used much anymore. There may be space there. **Could some of our underused libraries accommodate reuse and tool sharing, and hosting of the repair programs?** Maybe not large things, but the small things. ■ *Facilitator note - in Europe, quite a few of the book libraries also have tool libraries.* • Most people look for convenience and unfortunately, refilling takes an extra effort that not everybody is willing to do ○ before Covid, refill was getting some momentum but people and businesses got scared and there were also regulations to prevent containers from being reused • It bothers me that every time I finish a pill bottle, nothing is happening with these perfectly reusable pill bottles. Surely they could be sanitized and reused without being melted down, rebuilt, everyday. ○ *Facilitator note - Recycling in health is much more complicated.* • Before COVID, my pharmacy would actually take my empty container and refill the pills for me. After COVID they said they can't even touch those.	
Strategy Number: 3.3 **Action ID:** 164 What should Metro Vancouver consider to support your participation with this action?	• What is MOST important is to communicate what's available. It's really difficult to get that out. But if Metro Vancouver can get this on a webpage, ad directory, all the places you can repair and refill. And everyone else can point to that. • I say this every time we have this discussion - why are there not more recycling facilities at public meeting places, like the Plaza at Riley Park? Which has a farmer's market every year. NO recycling facilities - so what do they do? They put it in my compost bin. ○ *We need to talk to the Parks Board rather than Metro.* • Consistency - Metro improving consistency - in public areas, the inconsistency between what's available for recycling at, say, the Sheraton Wall Convention Centre - no organics - whereas at the Canada Place Convention Center there's organics recovery.	**There are public meeting places with no recycling bins. How can the region or municipalities work with venues to implement better recycling accessibility? This is named as absolutely necessary in the streetscape.** **Consistency is touted as an important strategy; e.g.**

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ It's just the availability, and always - having a consistent message out there. ○ Also, coffee shops. It's very upsetting that coffee shops with ceramic mugs give their drink-in customers disposable cups still. ○ You can be sitting inside a coffee shop and more than half the people have the disposable cups in hand instead of the ceramic ones available. • Advertise Repair Cafes on social media. • **Ceramic mugs should be the default at cafes** • Bylaws mandating coffee shops to use ceramic / reusable as opposed to single use, as default, and things like that. Things with a little more teeth, a bit more action in them. • The recruitment of one of the local coffee chains, not thinking corporate e.g. Starbucks is international - JJ Bean is still very local, for example. It would be great to see the person taking the order bring out a ceramic mug first, so the customer can say oh no, I want a disposable. But if the ceramic is offered first, they'll (the customer) probably take it if they're staying in. • It's really important to get the City to accept the single-use containers. They do have the blue (Streetscape) bins. They should have them at every block on Commercial Drive. ○ At Continental Coffee at 2nd and Commercial, they had a big garbage bin, and people were just throwing their stuff in there. ○ I talked to them and said, if I have a blue bin here and collect these things, would that be okay with you? ○ I've been doing that for months now, and I get hundreds of these things. And that's just me doing it because I can't emotionally see all that stuff going into the landfill. ○ The City, gosh darnit, should have single use container bins in all of these places. I tried to do it myself, personally, to set up the bins, and JJ Bean, really thought it was a great idea. But the city said no, there's tripping hazards, what do we do about keeping	**organics recycling both at businesses and home.** **More advertisement of Repair Cafes is mentioned, in particular on social media.** **Ceramic coffee mugs should be the default at cafes. Can this be regulated? Can Metro evaluate what makes it difficult for cafes to implement ceramic mugs as the default, and share best practices for how to do it?** **One participant has a pop-up recycling initiative they've been doing on Commercial Drive to divert coffee cups, and they've collected thousands of cups with fairly nominal but consistent effort. How can Metro Vancouver recognize, incentivize and promote this kind of volunteerism?**

Session	Questions asked by Participants	Facilitator Notes/Observations
	things clean. They're more interested in not having to worry about it than doing the right thing. ○ I'm telling you, it's the waste management that is not yet doing the right stuff. I'm really trying to get the City of Vancouver to work on this, because people love what I've been doing on Commercial Drive.	
Strategy Number: 3.3 **Action ID:** 164 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	 • Does this mean marketing the best practices? ○ I am in support of it if they're marketing them. • The action should be more specific - what does sharing look like, how will it be tangible? • It's so difficult to identify the priority on it, there's 200 strategies, and we're only looking at 2 of them ○ I can't say the priority, I can't answer this poll. **Comments on votes**	**There's strong encouragement for this action, although participants ask for more information on what it is being prioritized against.** **Participants want more specificity in the action; where will they be shared? How will reach be measured, how will success be measured?** **There can never be too much publicity about reuse, refill and repair. Engage with community centres, neighbourhood houses, libraries, businesses to reshare and promote the best practices.** **Try to have consistent messages shared everywhere from sports clubs to churches, etc.**

Session	Questions asked by Participants	Facilitator Notes/Observations

	• It's important to get the information out to the widest range possible. The more people who knew about it, the better. There can never be too much publicity about reuse, refill and repair.
	  ○ How to go about that, I don't quite know.
	• The sharing has to go hand in hand with not thwarting anyone's efforts either. If you learned it, want to do it, but can't figure out how or where. It's frustrating and you won't try again.
	  ○ It's expensive - the advertisements on the sides of buses.
	
	Add-on question: How could this (content Metro would share) reach you better? Where does the messaging matter most? Any other considerations to add?
	
	• I don't know about me, but I do wonder about the children.
	  ○ This is a long-term project, we should think of those who are living with the mess
	  ○ Generally curriculum is not directed municipally, it's a provincial thing, but if Metro Vancouver can introduce and reiterate the importance
	  ■ No non-reusables in schools.
	• I think this should be a high priority because these programs are essential if we want to reduce waste long-term. Especially younger generations who are not aware. Many youth are opening up small businesses like coffee shops or matcha shops, and are only using single-use plastic not offering re-usable cups.
	• I don't think enough people know about reuse, repair, and refill. But, if we can convince the community centers and the neighbourhood houses to advertise repair, and the reuse events that are going on.
	  ○ If we had a schedule at each community center, so people would know what's going on, that could help.
	  ○ I want to add in, we should do the pop-up recycling so when people are bringing in recycling things we can say, AND, do you see the schedule of repair and reuse that's going on	

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ Get them started with the easy stuff - bringing in your plastic bags or batteries, and we naturally educate them on the next level they could go to. • Further to (the other person)'s point; anywhere people gather - Churches, sport clubs, the education is consistent, and ever-present.	
Strategy Number: 4.7 **Action ID: 159** If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	**How easy or difficult would it be to engage in this? What makes participation easier?** • I get a lot of experience with the pop up recycling, people say "I'm told this all goes to Asia or is put in the landfill anyway" ○ I find that the plastic is turned into pellets they can use for 3D printing. The styrofoam is processed for construction material. ○ The batteries, 95% of the elements can be reused, and the batteries are much more valuable than the ore where the original elements come from. ○ If we had a list of all these things, how they were used, and what happens, that would help. ○ People are frequently willing to LISTEN to what I say, but whether they really believe it? If we were privy to that, and it was very available, "this is what we're doing currently" - and the wonderful thing is technology is improving all the time, so we can do more with these materials ○ People are getting more optimistic. I'm really extroverted and am trying to get people into it, but people are feeling the excitement that things are getting better. You can't just listen to the news that says here are all the bad things that are happening. • Metro Vancouver, carry on with the practice of making people aware of the composition of the materials - of solid goods that Metro Van purchases. ○ Here's an example - I really like it when I see labels say "this garment is made out of 30% recycled materials". Metro	**Transparency in the destination of recycled products is critical for consumer confidence. It will also help advocates and volunteers who are attempting to shift culture and encourage recycling behaviour.** **<u>There's no point recycling if there's no demand for recycled materials.</u>** **Extend transparency to the use of recycled content too - e.g. share statistics about the use of recycled materials in the region. E.g. if Metro Vancouver has a procurement policy for buying X% recycled, share that, share templates for that kind of procurement policy.** **Consumers want to know how their recycled items are actually used, and that it's**

Session	Questions asked by Participants	Facilitator Notes/Observations
	Vancouver is a purchaser of a LOT of things, at least if Metro Vancouver makes a point of displaying or stating on any large object that it purchases, how much of it is made of recycled material; people will get the message that recycling is worthwhile. ○ What if any new home has a new recycling tote, and the recycling tote itself says "this is made out of recycled materials" "your recyclables became this tote"	**actually being put to beneficial use.** **Demonstrate the use of recycled content in purchasing.**
Strategy Number: 4.7 **Action ID: 159** What should Metro Vancouver consider to support your participation with this action?	(Question clarification) How would you like Metro to show this? ● I thought, and I do see a lot from Recycle BC about what they collect, and they do tell you that a lot of it stays within British Columbia and gets recycled here, so I'm not sure what Metro Vancouver should perhaps be concentrating on the compostables that they collect, and how that gets processed. ● There's very, very few people who read RecycleBC newsletters, or Metro Vancouver newsletters. The messaging has to be more broadly shared. ● I do see RecycleBC all the time in my Instagram feed. Lately they've been talking more about where the things they collect go to. I'm assuming that all the stuff in the blue box, the yellow bag, and the grey box, and they've started collecting soft plastics in certain municipalities and putting them in a pink box. ○ *(Facilitator) It seems to be going in all around Metro now.* ○ So when you go into London Drugs and take your soft plastics; theoretically this is going to be turned into something useful next time I go to London Drugs, it will be in the chain to become something useful. ○ So, Recycle BC is telling me about that. So, where is Metro? They're involved beyond that, with what goes in the green bin, and where your paper goes. ■ It's just the green bin and garbage Metro uses.	**Metro Vancouver should evaluate and communicate success of the compostable organics that are collected; there's no or little information on that.** **It's noted folks have the perspective that the messaging is not accessible to the vast majority of people. What influential media businesses or individuals can Metro partner with to get the word out?** **Suggestion to share on the sides of waste pickup trucks what the destination of the waste / recycling is. They're "rolling billboards".** **Similarly, can businesses be encouraged to include messaging on e.g. the side of**

Session	Questions asked by Participants	Facilitator Notes/Observations

	• Could they put more specific information on the side of the trucks? The garbage trucks, recycling trucks, green bin trucks. Huge area, we see them every week, they could put a lot of information there. It's in a form that could be easily replaced, like stick-on posters.
	  ○ Give us up to date information on where it's going. What you've just put in their truck, where it's going.
	• When I think of downtown Vancouver, you see so many of those trucks. They're rolling billboards.
	• The new immigrant guides, having personally been on a bus and explained to new immigrants that we don't throw wrappers out. I can do this, because I'm Asian. I can go to Asian people and say "we actually keep our wrappers, and we wait until we get off the bus and go to the garbage can"
	  ○ It's so handy being a person of colour that way, because I've also approached people who aren't yellow like me, I've gone to brown people, white people who don't seem to speak english. I seem to have that kind of license.
	• Maybe Metro Vancouver can hire people to do these kinds of jobs as well.
	• This might be off topic, but can Metro mandate, say, Vancouver did put a 25 cent deposit on non-reusable coffee cups and cold beverage. If Metro did this - can Metro mandate, in addition to your logo, Starbucks or JJ Bean, can you put in 25 words in large type saying "this container can be recycled in British Columbia, just put it in your blue box"
	  ○ Going to what the other was saying - people don't believe that recycling actually happens - perhaps you put some link or a QR code to a website that tells you what the recycling process is, for different materials.
	  ○ It could save your municipality money and your taxes will go down,
	• Make the people who are using it, contribute somehow to the whole system, beyond making the money on it.
		branded coffee cups, that this material is recycled in BC?
		
		Can Metro Vancouver consider hiring people to be community educators, especially for immigrant communities?
		
		Metro Vancouver should be promoting how exceptional its recycling system is.

Session	Questions asked by Participants	Facilitator Notes/Observations

	• I missed telling you about REUSE stories. I'm going to do it quickly. I went to my cobbler and asked if I can fix my shoes to give them to charity; the cobbler said no, I think they're on their last legs.
	• I'm sorry, I am jokeless. But I'd really like to see Metro Vancouver point out our exceptionalism. Because, we are doing well compared to others, and it would be a way of refuting what is often seen by people in the media, that's actually national or international news, or even just not Metro Vancouver, about how badly things are done. Or how deceptive recycling is.
	  ○ Metro Vancouver is really trying hard, and we're not using deception when we share. We're not shipping to Asia our raw collected plastic water bottles. We're doing good.
	  ○ So why can't we brag about that? And refute what's not true?
	• Celebrate our wins.
	• Even CBC knows, bad news is selling news. Good news is not always selling great. All the TV stations and papers are looking to show how things are actually not good, and not going according to what they're supposed to.	

Session	Questions asked by Participants	Facilitator Notes/Observations

Strategy Number: 4.7
 	
Action ID: 159
 	
How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high?
 	
Is there anything else you'd like to add to the conversation on this ACTION?
		• I CAN respond to this one. The other one was not - this seems to be a much EASIER way to get the message out. It's a GOOD NEWS and educational component. I really want to see this.
	• It's easier to grasp. It's easier to hold. Of course we want to show you where your waste goes, and how it's processed.
	  ○ The first action is more general, more nebulous.
	• I think we have to take time to talk about volunteer, pop-up recycling. This is something we can really do effectively. I've got years of experience doing it. I even have a sticker station that I use to entice people to use coloured stickers to vote on different things. Things work out really well, we should be able, as volunteers, to do this. Because it's really simple to do. Especially if we can do it at a location like a community center, or neighbourhood houses.
	  ○ I don't know if we could do it at schools, but schools would be great as well.
		Greater transparency on the supply chain for recycling - where it goes, how it's processed, where it gets reused, and the use of recycled content - is seen as an important win, and a more tangible benefit than just sharing best practices (the prior action discussed).
		
		The participant with the pop-up recycling initiative is retired and interested in collaborating to propagate his model for collecting recyclables in community.

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ I'd love to communicate with Master Recycler and get this sorted out. I am retired and have lots of time to work on this.	
In closing, please say a few words not about the two actions only, but how important is the whole engagement? Is it valuable, is it something hopefully can promote a better solid waste management plan and so on?	• This is a much more effective event than I thought it was going to be. Thank you very much for doing this. • Ditto - I got a few things off my chest, and I had nowhere to put them before, so this was a really great opportunity. Thank you so much. ○ I'm also very curious what Metro Vancouver is going to conclude about the pilot program for the pink boxes. I understand in West Vancouver there's a curbside flexible plastic collection going on right now. Personally, I hope it works really well for them so that it becomes widespread. I run out of kitchen counter space for cleaning plastic bags. ○ *Facilitator - understand downtown and Kitsilano will get the pink box by March. And Recycling Alternative will be collecting it.* • I'm glad Metro Van is doing something. That's encouraging. I'm also waiting for what they're going to propose. ○ *Next Thursday, we're going to do the same session, you're welcome to register.* Question • Does the solid waste management plan relate back to climate action? ○ *Facilitators confirm, yes.*	**Folks are excited about the pink box for collecting soft plastics at the curbside. Everyone wants it in their neighbourhood.** **Folks are very glad for this opportunity for the focus group. They're encouraged that Metro Vancouver is engaging with community and getting input.**
Other Strategies/Actions engaged on?	n/a	
Next Steps	• I want to let you know I finished the survey as we were talking here, it's really quick and easy. It's not completely up to date - repair cafe count is listed as 2023.	

Session	Questions asked by Participants	Facilitator Notes/Observations
	• I am feeling really hopeful. I LOVE that Metro Vancouver is trying to do this, and engage with the community. A lot of these topics have been in my mind, and I didn't really know if anybody was doing about these things. This community outreach is great, you letting us know this is something that's a priority for Metro Vancouver, and that our voices are being heard, that's absolutely fantastic. • This session was helpful and I gained a lot of insight and I will spread the survey to my fellow peers as well!	

Metro Vancouver Solid Waste Management Plan (SWMP) Collaborative Engagement Activities Fall 2025
Options Analysis Focus Group Notes from Master Recycler Vancouver / SPEC

FOCUS GROUP 2

Format: Virtual
Session Date: Oct 16, 2025, 6:30 - 8:00pm
# of Participants Registered: 7
# of Actual Participants: 7
# of event promotions: 8

Session	Questions asked by Participants	Facilitator Notes/Observations

Opening Slides	• Very affirmative attitude about the addition of 'Rethink' to the waste prevention hierarchy.
	
	Questions
	
	• The 65% recycling rate from the opening slides - how much of that is actually still being shipped away? How much of that is still incinerated?
	• I don't understand how they got the 65% recycling rate; that sounds very good
	  ○ When we talk about the recycling that happens on a home by home basis, it seems pretty good, where plastic and paper goes. But I work at the port, and we go into a food court - they have these different containers.
	  ○ To me it's a hodgepodge, no one knows which goes where. I am curious about that percent.
		An uncaptured opening discussion affirmed that 'Rethink' is a welcome addition to the waste management hierarchy.
		
		Folks want to know how the 65% recycling claim from Metro Vancouver's slides and survey is calculated.

Introductions	**Comments about their interest in the topic:** • Participants from the Master Recycler course over various years • Microplastics research at the aquarium	**Participants are advocates and deeply interested in recycling, reuse and repair behaviours.**

Session	Questions asked by Participants	Facilitator Notes/Observations
	• Have always been interested in reducing, reusing; a value growing up in a rural area, needing to innovate. • Did the Master Composter program, and Master Recycler in Edmonton; would like to know more about how to recycle in Metro Vancouver • Retired pharmacist, had an interest in multi-family recycling though now living in single-family **Favourite things to reuse:** • Plastic bags (two people) • Tinfoil • Whatever she can see; anything - toys, plastic bag, she thinks about recycling and composting, whatever goes back to the earth • Everything and anything!	**The focus group session is seen as a way to get more information about recycling in Metro Vancouver for one participant.**

Strategy Number: 3.3
 	
Action ID: 164
 	
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it?
 	
If difficult, what is it that makes your participation easier?
	• What is Metro's communication strategy around this?
	  ○ Sometimes we get some little flyers 'this is how you recycle', and I find some greenwashing information on it
	  ○ What will the information look like- something we can actually use? E.g. use the reusable mugs, because even if you think you can recycle the cups, they have a plastic liner
	  ○ Refill - my focus on corporate plastic waste reduction - after years of researching refill options in offices, I've been hitting a wall. I can't find suppliers, hence why I'm going to try to start a company on my own with that issue.
	  ○ If you've noticed, a lot of the refill shops have been closing after COVID, or during COVID, so I find it harder to refill for our whole household unless I really take the time to go to places further away.
	  ○ How will they communicate that? Will there be actual actionable items - like MORE information on where can you refill, actually?
		COVID-related closure of refill shops is seen as a major hindrance to refill behaviour.
		
		More input could be provided if Metro Vancouver outlined what the communication strategy specifically is, and asked for feedback on the approach.
		
		Participant notes that the 'how to recycle' flyers seem to contain misinformation/greenwashing - how can the flyers correspond with 'deeper dive' information online to clarify messaging?

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ Are there QR codes that will immediately give you a map of refill shops in the Vancouver area? ○ Something EASY - people don't like to do hard things ○ When I speak to people in my office on recycling, everyone feels great that they're doing recycling and putting items in the blue bin ○ What we also know through the recycling program, comes with a bit of greenwashing. A certain portion of it doesn't get recycled, or is shipped overseas or burned. ○ So, refusing and reusing more efforts, rather than just making people feel okay about recycling. • I'd like to see the principle of the 15 minute city brought in. I'd like, within a 15 minute walk or transit of my home or workplace, to have these amenities available - for reuse, repair, refill. ○ I'd also like to see TEAMS that are SPONSORED by Metro Vancouver. ○ Part of the engagement process is looking for volunteers to organize an event. That's the hard bit. But if we had the package so Metro Vancouver sponsored a team of enthusiastic "Zero Waste Technologists" to zoom into your workplace, school, church, community center, and what the volunteers at the center do is just the venue and some kind of lure, like a free donut if you bring your own reusable mug - something like that could work for engagement. ○ There's a lot of negativity out in the world, and if these events could be associated with something fun and festive; people show up and feel good after they leave, I think that's a big help. ○ What the other said, it's REALLY hard to refill right now, and reuse and repair - even in North Van, I have to drive about 20 minutes to get to my Zero Waste center. ○ Make it easier for people; a 15 minute city - Metro is already embracing that	**Transparency in the effectiveness and destiny of recycling was mentioned as a requirement for effective communication to encourage recycling.** **People present ideas for businesses that could promote or enable refill behaviour; can Metro Vancouver provide case studies, example business models, or showcase successes as a part of its communication strategy to promote these behaviours?** **The link between individual desire and the easy "one-stop" access for refilling and/or reusing in the city is made again; sharing best practices for the consumer isn't enough if there isn't relatively easy access to businesses who can meet their needs.** **Marketing suggestion to target youth, and youth influencers - making it cool to reuse at school. Does Metro's existing superhero campaign reach younger audiences?** **An immigrant to the region who's lived in Metro Vancouver, who is**

Session	Questions asked by Participants	Facilitator Notes/Observations

	• Just HAVE containers that, like in a food court, have containers that are clearly marked where you can put items.
	  ○ As far as getting the message out; the message would be defined by how well the practice is.
	• When people were talking about refilling - back in the day, it meant your milkman came and refilled your milk, and your cheese. Maybe, the possibility - people have gotten used to their groceries delivered, and their takeout food, and those prepackaged meals like Chef's Plate - it might be cool if the city or region started cultivating the practice of getting things refilled through door service.
	  ○ A lot of things people have embraced that were old school ideas that were back in our daily practices
	  ○ Also - thinking about youth, who have embraced and 'verbed' it, calling reuse 'thrifting' - a lot of people in the under 30 age group are really fired up about reusing clothing, thrifting.
	  ■ So, leveraging the thrifting movement to create an opportunity to have the youth not drinking coffee beverages in disposable cups. Everyday, I see a parade at 3:30/4 o clock of iced coffee. Just to make that correlation that reuse is across the board - why not have your coffee in a cup.
	  ○ I'd pick something specific, drilling in on the youth generation possibility here.
	  ○ I would say no, the demographic would be more inclined to learn things at school, make it cool, be part of the crowd that is not using a plastic cup to have your coffee. Understand it's not really recyclable when you drink coffee from a plastic-lined cup.
	  ○ They're really about the influencing culture, and the younger generation would influence the older generation who is actually used to drinking out of reusable / china cups.
	• Get statistics about how much you are saving by refilling or reusing
	• Living 10 years in Vancouver I didn't even know that
		interested in recycling and an advocate in her community, pointed out a lack of access to Farsi-based materials. We directed her to the multi-lingual resources on the Metro Vancouver website - and, her points made an impression, with questions about what Metro can do with local BIA's or community groups to get multi-cultural information out.

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ As an energy mentor with a company in the past; I communicate with many organizations like BC Hydro, Fortis BC, CleanBC, even educating someone about recycling, saving energy, saving money ○ I find it really, some point that we can work on the immigrants, because they don't have so much knowledge on exactly how they can compost, recycle or the other initiatives ○ I would be happy if I can share my experience, and if there's any opportunity to share and bring lots of my experience and ideas for Metro Vancouver. ○ There are MANY Persians or other immigrant groups who don't know any concept about recycling and reusing ○ That would definitely be her interest, if she had any chance to give her any connection, the best person for assistance. • The majority of my fellow citizens throw things in black containers that go into landfills; even conscious and wonderful friends. So, how to reverse that is the most challenging - we're obviously failing to a large extent. ○ I actually think we've got the best system, with all its flaws, aren't we further ahead than anywhere else in Canada? And is there any jurisdiction that's more ahead in recycling than BC? ○ The Reuse Revolution is the next goal, the next step in everything that Vancouver's already doing in the Reuse, Sharewares - people reusing containers from small companies. This is them going out ahead, and Metro is obviously trying to do their part, so advertising in ANY way, in ANY mode is going to show people that there's something BEYOND recycling. ○ A lot of people are not happy, they think recycling is a waste of time, so advertising REUSE and getting that message across is a good idea.	

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ How can they get the message across? The Return It cartoons that I thought were highly effective, where Metro has hired ad companies who are experts at targeting different groups, whether they're immigrants or old fogies with white hair, or they're young people who only go on Instagram. I think it's up to them to decide which are the groups that are most important to focus on, and an Ad agency would then be able to most effectively target which combinations of media would be the most effective.	
Strategy Number: 3.3 **Action ID:** 164 What should Metro Vancouver consider to support your participation with this action?	• I'm all into participating in reuse, I do as much as I can. I'm having a bit of trouble dissecting this question. ○ Seeing more readily available opportunities in everyday living; so, more restaurants and grocery stores ADVOCATING or having SYSTEMS IN PLACE that allow for reuse. ○ Like bringing my own containers to take food away from a grocery store, or a restaurant. ○ For me, I do it anyway, so I don't think Metro Vancouver sharing best practices will help me - but certainly for the larger population, I think tHEY'RE the ones that need to know. ○ For example, if I bring my own containers to a restaurant or bakery to go - the staff and employers thank me for doing that, but it's them wanting to take the initiative to do that, and then on the other side, the customer base needs to know that there's a space for them to have those options. ○ You see signs like "Safe place fo rLGBT community" - it's okay to be , something similar like "It's okay to bring your own container, at the deli, the restaurant, etc" ■ They value this, they're supporting me doing this ■ If I do it, someone next in line sees me doing it and it catches on like that ■ But it's about KNOWING that it's even an opportunity	**People struggled to understand the question; wondered whether the question was if Metro expects citizens to participate in sharing resources, or participate in the targeted behaviour (reuse).** **Having visibly obvious reuse/refill/repair systems in everyday life is the best communication.** **Provide best practices / advice for customers to bring their own containers, and guidance for businesses on how to handle customers bringing their own containers.** **In particular, restaurants have to be better informed about the**

Session	Questions asked by Participants	Facilitator Notes/Observations
	■ As an easy first step, so long as businesses are in support of it and are set up to wash tongs that touch containers, etc. • Number one, it's not clear to retail shops, butchers, and bakers that it's OK to refill people's personal containers. It's been inconsistent reception where I've been, until people recognize me because I'm a frequent visitor. ○ Also, the other speaker reminded me why I joined SPEC, which was about being a multi - family dweller. Here's something I'd wished for and now I think may be possible - the City of Vancouver has told developers that there is a regulation that there has to be a certain number of bicycle spots. ○ Now, why can't Metro Vancouver specify to developers that there needs to be a dedicated - not a GARBAGE room - call it something else? Maybe a "resource recycling and sharing room" = bit a specific building amenity with standards, maybe invite the interior design group of BC to say something, or the architectural institute to say something ○ Our kitchens have to have counters at a certain height, why can't the recycling room have a countertop at a certain height, with a wash basin, so you can wash your hands after? ○ An inviting room which maybe becomes recognized in some buildings as a gathering space ○ I know some buildings where there's a lot of single people, people love to go out and do their laundry because they meet other people in the building ○ Why can't we elevate the whole experience of separating our recyclables into something like that • One idea - I frequently hear from staff at food service places that "Oh, they can't accept a reusable container because of the HEALTH requirements"	**health guidance that says they can provide refill and reuse.** **Recommendation that multi-family building codes improve further around the requirements for common space to facilitate management of recycling destined for depots. Depot recyclables like soft plastics, etc, will be easier for the average person to participate in if there's a central collection in their building. The City of Vancouver's Zero Waste Ambassador program is cited as an example of a resource bank for activating and supporting volunteers in multi-family buildings, but it's irrelevant if the building doesn't have room for handling more streams. *Can recycling be made a social event?***

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ I often then say, well, what health requirement are you talking about? And they don't really know but they just are under the impression. Maybe it's a leftover from COVID. ○ My suggestion here, for Metro Vancouver to make a FORMAL request to the Vancouver Coastal Health, to rewrite the entire health requirements not from a point of view of let's - it seems its entirely written from a point of view of saving human lives - which obviously is admirable, but the fallout, and unintended consequences of that, is that our environment that supports the air and water and the things we need to live, are being seriously damaged because of the health department. ○ So, I would request of them that we need them to rewrite the health requirements so that the environment flourishes, and the humans flourish. This will be very difficult for them to think. They have to do some research. • Adding to the prior point - Prov BC does have protocols in place for resto's to accept reusable containers....it does exist...but to Brian's point, restaurant's don't A. follow it, B. know about it C. don't set themselves up to be successful at it. • Share best practices not just for residents and communities, but for businesses. The businesses will make it a norm through their own systems display.	

Session	Questions asked by Participants	Facilitator Notes/Observations
Strategy Number: 3.3 **Action ID:** 164 How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	 • It's quite vague, what they're proposing, so I have no idea if sharing best practices is going to BE effective or mean anything.	**Folks reiterated points made about needing more clarity on what kinds of best practices are shared, before they can** **Folks also comment that prioritizing is difficult when we're not covering all the other actions this is being compared against.** **Despite these caveats, all participants considered this a high priority.**

Strategy Number: 3.3
 	
Action ID: 164
 	
Anything to add?
	• Can I ask maybe - how can I find out about how much every business gets charged for the waste they produce?
	  ○ I'm asking because one of my pitches for selling up the refill station for offices would be to make a point that right now, business XYZ has to pay X amount of money to have those plastic bottles taken away every month.
	  ○ So yes, case studies about the savings cost.
	  ○ Also - stickers everywhere if reuse is welcome. But also, can coffee shops put stickers on their doors saying 'bring your
		There's interest in financial case studies that make the case for offices and businesses to initiate reuse - can Metro demonstrate the savings that are possible by wasting less?
		
		Consider what lessons have been learned from the reusable bag

Session	Questions asked by Participants	Facilitator Notes/Observations
	own cup' or 'we appreciate you bringing your own cup!' if you see that sticker in your face every time you open the door! It seems like such a simple little fix. ○ They pay for that disposal to take away anyway! ○ I want to start a sticker business now, for shops to put up these signs. • I want to think about examples that are working now... and there are many other municipalities in Metro Van, thinking about the reusable bag initiative, the scenario where we've started switching to reusable bags - there are a LOT of people who've been affected by that, especially in Vancouver,because we had a bylaw first,t and eventually the province ○ Is there a way for MEtro to leverage that experience that we collectively went through as the reusable bag being the example - it's a reusable item, it was uncomfortable at first, but when we changed our habits, now most of us are getting used to it, we don't complain that there's no plastic bags for garbage ○ What are the positive outcomes of that? Has there been less pollution found? Is it cleaning up the landfill a little bit? Is there less pollution in the water? ○ When we THINK about reuse - you guys have already DONE it with the reusable bag, already gotten on board, willingly or begrudgingly, but it seems to be working pretty well. So that shift in mentality; • We have tons of visitors/tourists all the time ○ Can we share something of our mindset, our intentionality around how we use things and reduce waste, with visitors?	**regulations and success, and translate those to other target reuse item replacements.** **Can Metro report any metrics on the impacts of the reusable bag strategies?** **Consider how to reach visitors to the region, both with success metrics and with mindset-shifts. What does Metro Vancouver say about itself as a region, how clear are these statements, and where are they stated?**
Strategy Number: 4.7 **Action ID: 159**	• I guess it would be easy for the transparency. I'm struggling a little bit with the question, too, because, not that anyone cares - a lot of people don't realize that a lot of the plastic gets shipped, who knows	**Participants struggled understanding the question; are they being asked to participate in communicating transparency**

Session	Questions asked by Participants	Facilitator Notes/Observations
If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	where, so if they find out that the plastic gets shipped elsewhere, like the USA, and goes who knows where, they may not recycle as much. ○ It would be better if we fixed the system! ○ My first thought was, it's easy to share and be transparent- but if people find out it's not magically going off somewhere and becoming something lovely, that might be a disincentive. ○ People will throw their hands up if they don't trust. ○ I bought plums in a paper container, which was great. But i bought gatorade in a plastic bottle that was packaged in paper. • Maybe there will be a big kerfluffle and a change, if people disagree with recycled items going abroad. • To be honest, I don't consider myself stupid but I struggle with the questions, too. And I usually get things. So I find the questions difficult, the way they're worded. ○ I relate to the previous answer - if there's more transparency on where things go, they might not feel good about it, because it would show the percentage of what gets incinerated, what gets shipped away, what ends up in god knows where. ○ The truth would come out. ○ This would be most useful only if it also emphasized the REUSE and REDUCe as solutions to the problems, not just finding more local recycling markets. • For me I think it's easier if we're talking about recycling as in composting. I'd love to see an event at the peak of growing season in Metro Vancouver, July-August, a week dedicated to some kind of visible sign that says "local compost used here" ○ This is of course assuming that the organic composting is successful enough to be resold or redistributed as a fertilizer. ○ Let's say to my gardeners - your leftovers are growing my containers ○ To communicate that some good things are happening	**around the recycling supply chain, or being asked whether this transparency would make their recycling behaviours easier or more difficult?** **It's remarked there's a tradeoff with transparency, where communicating that recycling gets shipped overseas with uncertain outcomes for the material being repurposed, this can discourage / disincentivize recycling behaviour.** **Think about transparency and celebrating organics recycling in this action, not just plastics/glass/metal.** **Metro is encouraged to promote where local recycling is happening. Merlin Plastics is mentioned, but especially thinking about compost. A campaign for example for signs that say 'local compost used here' for land projects, or for residents using locally produced compost products.** **<u>Having greater transparency readily available from Metro Vancouver / other reliable sources will make it easier for community</u>**

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ As someone who volunteers for public outreach, I have found it really challenging to defend recycling sometimes, because I don't have the whole story. ○ For example, the only company that I know of locally that reprocesses is Merlin, and even so, I don't know exactly where they are, I've never been there, I haven't attended any workshops that explain what happens to Merlins' processed products, so it is a barrier for me. • Referencing the other speaker - I find what they were saying, dead on - people just put it in a black container ○ The other issue is; how ARE things being reprocessed? How many things ARE redone and recycled properly? ○ It's an informational gap that is HUGE, I think. ○ When you recycle plastic - DOES It get recycled, does it really become something else, another plastic? ○ All that information, I'd love to see. • Sharing information has pros and cons; it's best if things are being done right, more locally, and really turning into something new. • Definitely I agree; transparency is the best way forward for honesty of the customer and who produces waste ○ Honestly, as you mention it; the best way is transparency with REAL data and the exact, real information that you share - at least, on the website or on social media or whatever ○ So, when you make people educated with REAL data, it definitely affects their minds, and they change their thoughts. This is real, this is the concern, this is the wildfire every year - so something exactly; this is the reason behind that. ○ If we show them the real results of recycling, based on real exact data - definitely it can work for them. • I would recommend knowing information. The bottle depots added a few years ago - where each of these materials are getting recycled, and how.	**advocates to explain and defend the benefits of recycling.** **Can a tour of local recyclers be arranged, perhaps a video tour? People find it difficult that Merlin Plastics resists tours and publicity.** **Metro has cause to CELEBRATE the degree of local and in-BC processing. If we are really a world leader in this regard, we should be very clear, transparent and promote that. This will also contribute to an atmosphere of continuous improvement; being transparent means being more trackable.**

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ I don't know how many people read them, but for me it does make a difference. ○ I would highlight Merlin. I think Merlin is a huge, global success story, and to highlight that in BC, most people think that ○ I've been to Merlin. I think they're a very secretive company, because they're afraid that I'm working for one of their competitors who wants to steal their system, so they've been very strangely unwilling to talk to me. But, I think the facts have come out after; it took them years to finally announce what they were up to ■ So, to advertise - everyone thinks only 7% of plastics are recycled, because that's some north american average ■ And the fact RecycleBC is up to 56% and I think the recycling regulation wants them to up that to 75%; isn't that the system. ○ To CELEBRATE that WE'RE leading the WORLD in localizing, and plastics are getting recycled here. • There's a need to know, if you're being transparent, that what we're doing is actually good, and to celebrate where we are succeeding and doing a good job.	
Strategy Number: 4.7 **Action ID: 159** What should Metro Vancouver consider to support your participation with this action?	• I don't feel like it's going to help me because I do it anyway, but I think for the masses, transparency is going to help ○ I think RecyclEBC is one of the best ERPS out there ■ I find their website pretty good in terms of telling stories of where things go, telling the REAL story ■ I'd love to see that amount of information on the other EPR programs. I don't know if they do as good a job as RecycleBC on where their end markets go. ■ That would be a minimum requirement from all EPRS, including the stuff that's collected - RecycleBc is	**Explain not just where the end markets are, but how this relates to behaviour change - how the individual's choices impact the destination and quality of recycling efforts.**

Session	Questions asked by Participants	Facilitator Notes/Observations

	collected at home, but also the stuff you take at the depots, like electronics, styrofoam. Where are the end markets for ALL of the streams that we engage with, not just at home, but also at depots?
	• The other thing - I don't know if - if I know where all the end markets are going and how things are recycled- I don't know if that's compelling enough for some people to participate
	  ○ I think it has to be linked to behaviour change. How does it affect THEIR communities, how does it link to their local community? Is it worse off for the community, is money going outside of the community
	  ○ Is it providing more jobs or not?
	  ○ How is the way we engage with waste and its end destination, related to our personal lives, how is it relating to us locally that would compel us to want to shift our behaviour, knowing the impacts of the data, the implications .
	  ○ Not just how it's getting recycled, but why does it matter?	

Session	Questions asked by Participants	Facilitator Notes/Observations
Strategy Number: 4.7 **Action ID: 159:** How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?	 • do you know if there's any indication of how much budget Metro Van is willing, capable and able to put at actually delivering this? There's a lot of IDEA generation, but the more money they have, the more money they're committed to this, the more actions they'll be able to take on? • Or is it more like, they'll take all the ideas and afford what they can • Or is it like, it's not an essential enough service that we can't afford it this far.	**Folks are interested in understanding how Metro will allocate budget towards all the actions; this would help them better provide input on prioritization.** **They want to see a side-by-side comparison of actions that are being considered, e.g. if this action is chosen, what is the tradeoff, what other action might be compromised?**
Other Strategies/Actions engaged on?	Recycling in general was discussed.	

Session	Questions asked by Participants	Facilitator Notes/Observations

Final Concluding Thoughts	• My contribution would be - I wonder, in my world, I feel that we're all like as scouts that go into the future and solve the problems that are coming at us, so when they are presented to the mainstream, we've worked out what does and doesn't work, so the mainstream can adopt them
	  ○ Partly this whole process is that way of trying this out, trying that out, and finding the way that people WILL accept, versus rolling it out in a way that they won't accept
	  ○ But to me, my zero waste world revolves around having a zero waste KIT WITH ME at ALL TIMES when I'm out in public
	  ○ And, to me, the idea of going out in the urban wilderness is the same as going camping.
	  ○ E.g. I'm living on the sunshine coast with grandchildren, and every time we go on the ferry, there's all those recycling bins, and the ferry people tell me they're so contaminated, they have to landfill everything
	  ○ I don't trust any business, any municipality to take care of recycling, so I think it's my responsibility to take it home, always.
	  ○ So if I have a backpack with me, then I've got my zero waste kit and I'm reusing it constantly, and finding out who will take items or reuse them, and if they don't, I just take it home and compost or recycle it at home - so, bingo, actual zero waste.
	  ○ The idea that Metro Vancouver could actually SAVE Money and not put things into recycling containers that are so contaminated
	  ■ Is it 80% are doing a good job, 20% contaminating, and it ends up =in the landfill?
	• Thank you for putting this on, it's been nice to see you gain after a few years!
	• If Metro is able to communicate that idea of Rethinking - what came to me, it would be called - "how to buy the clean future"
		Popularize having a zero waste kit. Explain how to go about reducing waste out in the 'urban wild'. (with regards to sharing best practices)
		
		Metro is encouraged to be creative around marketing the new RETHINK value.

Session	Questions asked by Participants	Facilitator Notes/Observations
	○ It would have a logo that was a four leaf clover, and the four leaf clover would have four actions - so, every time you approach a cash terminal, number one - stop - ■ Number 1 RETHINK! Don't approach the cash terminal. ■ Number 2 - REDUCE - don't buy it. ■ Number 3 - REthink it - is this clean and healthy, what I'm about to buy? Just reflect. ■ Number 4 (petal of the clover) - buy the clean future ○ This will just evolve one step at a time, forever, one purchase at a time. You'll find out - oh, this thing broke, maybe I heard there was something not clean about this. Maybe I don't know if it's clean. So maybe I can, can AI, right there in the store, tell us what's not clean, if you ask it?	
Next Steps	Survey reshared and participants encouraged to please share far and wide!	

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary

Activity:	
Activity Date	September 6 – October 20, 2025, with an in-person event on September 19th.
Organization/group name	Surrey & White Rock Board of Trade
Time/Duration	September 6 – October 20, 2025
Location	Online and in-person at the Civic Hotel, Surrey
Format	Online survey and in-person event: Environment and Business Awards/Environmental Innovation Forum
# of Participants	38 responses
Strategies and Actions Discussed	Survey questions modelled after the toolkit suggestions – responses noted in document.

Appendix

Please Include the following in the appendix:

- ✓ **Raw data/notes from engagement activities** (i.e. survey data, focus group and interview detailed notes)
- ✓ **Digital files and photos from the engagement activities** (Please include any digital files and/or photos of focus group products, such as visual brainstorming activity boards)
- ✓ **Engagement survey data**, preferably in editable form (i.e. word document or spreadsheet)
- ✓ **Participants demographic information** (optional)
- ✓ **Participant evaluation forms**

Format	*Button upcycling workshop + feedback session*
# of Participants	13
Strategies and Actions Discussed	ID166: Support increasing the size, number and frequency of repair and reuse events around the region. ID148: Expand appeal of recycling messaging by working with artists and community influencers to develop messaging to inspire and motivate people to recycle.

Appendix

Please Include the following in the appendix:

- ✓ **Raw data/notes from engagement activities** (i.e. survey data, focus group and interview detailed notes)
- ✓ **Digital files and photos from the engagement activities** (Please include any digital files and/or photos of focus group products, such as visual brainstorming activity boards)
- ✓ **Engagement survey data**, preferably in editable form (i.e. word document or spreadsheet)
- ✓ **Participants demographic information** (optional)
- ✓ **Participant evaluation forms**

• Take notes as close to the exact contributions as possible. Do not paraphrase without seeking permission. For example, it is better to say: “I have noted that you shared about the need for recycling programs and services to be accessible by providing information in multiple languages. Did I miss anything?”

After the session:

• Review your notes right away and clean them up to ensure accuracy and clarity.

• If you have a colleague who was also in the focus group, ask them to review them for accuracy.

Collaborative Engagement Toolkit Templates | 23 • Once finalized, please provide all session notes and feedback received to Metro Vancouver no later than October 31, 2025 at zerowaste@metrovancouver.org .

Notes Format : Virtual
Session Date: October 8
# of Participants Registered: ?
# of Actual Participants: 3
# of event promotions: 2

Section	Questions asked by Participants	Feedback heard
Strategy Number: Action ID: 25 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		• Only great if you shop very local from brands that are available here. • Very easy to get a garment, but not so easy to send back to brands. • The sheer volume of clothes is such a large issue, feasibility might be an issue. Bringing it back to people who know what they’re doing (ex. sustainable organizations) would be a good idea.
Strategy Number:		• Metro Van can have more used

Action ID: What should Metro Vancouver consider to support your participation with this action?		clothing bins, which can be given to organizations that can reuse it. ● Putting the onus on the consumer, would encourage extending the lifecycle of clothing from the brand point.
Strategy Number: Action ID: How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		● Would be a medium priority.
Strategy Number: Action ID: 47 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		● Would totally support, very high level of importance. ● Having it more centralized through libraries that would force you to think before buying something. ● Had to spend so much in furniture when moving, FB marketplace is iffy and not always reliable, if the city could have "thing borrowing" it would be good, but most right now are inaccessible. ● Vancouver doesn't have the flea market that other big cities have, if the city could provide something like this it would be great. ● This could reduce the mindset of one time use, would be a great implementation and is of high priority.

Strategy Number: Action ID: What should Metro Vancouver consider to support your participation with this action?		• Policies that make the use of single use packaging expensive, then it can incentivize the business to not purchase these, and instead encourage borrowing.
Strategy Number: Action ID: How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		• High priority; Builds the circular economy, not just for fashion, extends to other household items. • Root cause is policy.

Post-Engagement Activity Summary Template

Please use the following template to report on the engagement activities your organization has led on the solid waste management plan update this fall. Please send this summary along with your detailed notes and data from your engagement activities to zerowaste@metrovancouver.org by **October 31, 2025.**

Engagement Activity Summary

Activity:	
Activity Date	October 8th 2025
Organization/group name	Threading Change
Time/Duration	60 minutes
Location	Online zoom
Format	*Focus group*
# of Participants	6 - 3 organizers and 3 participants
Strategies and Actions Discussed	**3.3. Foster the broad adoption of reuse, refill, and repair** **ID025 Encourage brands to take back garments from consumers for reuse and repair.** **ID047 Advocate that the federal and provincial government develop funding programs to support the expansion and development of reuse and repair infrastructure such as "thing borrowing" at public libraries, refill at retail, packaging reuse systems, furniture reuse, and a community reuse options database.**

Appendix

Please Include the following in the appendix:

- ✓ **Raw data/notes from engagement activities** (i.e. survey data, focus group and interview detailed notes)
- ✓ **Digital files and photos from the engagement activities** (Please include any digital files and/or photos of focus group products, such as visual brainstorming activity boards)
- ✓ **Engagement survey data**, preferably in editable form (i.e. word document or spreadsheet)
- ✓ **Participants demographic information** (optional)

• Take notes as close to the exact contributions as possible. Do not paraphrase without seeking permission. For example, it is better to say: “I have noted that you shared about the need for recycling programs and services to be accessible by providing information in multiple languages. Did I miss anything?”

After the session:

• Review your notes right away and clean them up to ensure accuracy and clarity.

• If you have a colleague who was also in the focus group, ask them to review them for accuracy.

Collaborative Engagement Toolkit Templates | 23 • Once finalized, please provide all session notes and feedback received to Metro Vancouver no later than October 31, 2025 at zerowaste@metrovancouver.org .

Section	Questions asked by Participants	Feedback heard
Strategy Number: Action ID: 166 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	Is there a budget in place?	- Barrier to participation as a student not that much, but social barriers. Having it at places where people go often, (cafes, libraries, local thriftstore,), monthly, frequent, - Subscribe for a ticket - essentially like a classroom so you see the same people again and again. - Hard to find advertising. Need to promote more. We never know. - Promote on social media and posters on bills. - Posters at the library, thrift stores, - Ads on city website - Open to families (have child care included, or make it such that children can also participate.

Strategy Number: Action ID: What should Metro Vancouver consider to support your participation with this action?		
Strategy Number: Action ID: How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		High 12 Medium 1 Swaps are easier and need to be prioritised. Not everyone needs to upcycle.
Strategy Number: Action ID: 148 If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?		- Would be cool to partner with makers and upcycle artists. Way to highlight the local businesses. - Partner with fashion schools - There will need to be a range. Not really influencers, but some community artists, that way it can be accessible to community. - Create the infrastructure first, then do the influencing. - The city has good options for thrifting, consignment stores, - Suggest partnering with neighbourhood communities and centres. - People are more motivated to - If it's posted as a solution, if artists that can create public activation events to get the community involved?

Strategy Number: Action ID: What should Metro Vancouver consider to support your participation with this action?		
Strategy Number: Action ID: How much of a priority is it to you to include this action in the draft solid waste management plan? Low, medium, high? Is there anything else you'd like to add to the conversation on this ACTION?		- Medium (only if they are upcycle artists and can do public events. We want to be offline)

Section	Questions asked by Participants	Feedback heard
Strategy Number: Action ID: 0047 Advocate that the federal and provincial government develop funding programs to support the expansion and development of reuse and repair infrastructure such as "thing rentals" at public libraries, refill at retail, packaging reuse systems, furniture reuse, and a community reuse options database. If Metro Vancouver includes this action in the updated solid waste management plan, how easy or difficult will it be for you to participate in it? If difficult, what is it that makes your participation easier?	This is unclear to me: what does this mean? Sara: (facilitator) Should our local government proactively ask for these programs from the federal and provincial govs, such as rental libraries?	1 participant: "I think just at the beginning, it might be a little bit difficult to sort of build up like, all of these things that we would be renting from. So, you know, you could have people come and donate, but sort of to, like, create a collection of things where people can rent from, might be a little bit difficult, so to have some sort of government, government help with that, in terms of, like, monetary help or, like, actual in-kind donations, would probably be useful, at least at the beginning, to sort of get it running and off the ground." 1 participant: "I agree. I think for me, this is a medium one, because I think it's really important that we should be able to have access to things like libraries, like thing libraries. But what I find especially tends to happen where I live is, or, like, in Vancouver, it kind of depends on the neighborhood as well. Like, a lot of neighborhoods will have things like small book libraries, and they get really populated. Like, they tend to be really concentrated. So maybe just kind of introduce the ideas of what lending libraries are, and then once they're kind of understood everywhere, and they're not so, like, popular in one area, that they're more common everywhere, then start to advocate for it more. So it's like a medium one."

		1 participant (From out of town) “Oh, a tool library! Oh, I love that! You have a whole tool library! I don't know if Vancouver has tool libraries. Regarding participation: 1 participant: “To have some sort of government help with that, in terms of, like, monetary help or, like, actual in-kind donations, would probably be useful, at least at the beginning, to sort of get it running and off the ground.” Is this a priority? 1 participant: low priority 1 participant: medium 1 participant:

Engagement Activity Summary

Activity:	
Activity Date	1 – 26 October 2025 (time survey was open)
Organization/group name	Vancouver Food Runners Society
Time/Duration	Online survey
Location	Online
Format	**Online Food Donor Survey:** At Vancouver Food Runners, we took the Metro Vancouver survey that covered "rethink", "reduce", "reuse and repair", "upcycle and recover", "education & support" and "demographics" and adapted it for food businesses. Twenty-two food business partners completed the survey between 1 and 26 October 2025. In the folder, I have included: 1. The survey we developed 2. The raw data (which contains demographics) 3. The summary data (compiled by Google Forms)
# of Participants	22 food donors completed the survey

Strategies and Actions Discussed	N/A

Help Shape Solid Waste Policy in Metro Vancouver

You are receiving this message as you have subscribed to receive notifications about Metro Vancouver projects, services, and initiatives.

*To continue receiving updates, please click here to sign up or adjust your topics of interest to include "Solid Waste Management Plan Update". **Note that unless you are signed up to receive updates on this specific topic, you will not receive regular updates on this project.***

Metro Vancouver is responsible for waste reduction, recycling planning, and the operation of a series of solid waste facilities in the region. Metro Vancouver's solid waste

management plan is due for an update. This long-range plan guides the management of solid waste and recyclable materials in the region including key goals, targets and strategies.

Your voice matters

Help shape the public engagement process. Let us know how and how often you'd like to hear from us, and what information you would need from us to provide feedback on solid waste management topics and issues.

To learn more or provide feedback:

- Visit our engagement web page to learn more about this project and complete our 3-minute pre-engagement questionnaire. The questionnaire closes **May 28, 2021**.
- Email zerowaste@metrovancouver.org to set up an online meeting with our staff project team or consultant.
- Sign up for a timeslot on **May 17, 2021** to speak directly with members of the Consultation and Engagement Panel, by emailing zerowaste@metrovancouver.org. This is an independent panel of engagement experts established to advise and guide Metro Vancouver as we develop and implement an engagement program. Panel members are listed on our web page.
- Sign up here to receive future updates and invitations to engagement events and activities. Be sure to click "Solid Waste Management Plan update" as a topic of interest.

Chat with the Chair

Watch Jack Froese, Chair of Metro Vancouver's Zero Waste Committee and host Jaeny Baik, a former CBC broadcaster, as they discuss how 'zero waste' can be achieved by working towards a circular economy.

Mayor [redacted] and Council
[redacted]
VIA EMAIL: [redacted]

Dear Mayor [redacted] and Council:

Metro Vancouver's Solid Waste Management Plan Update

Metro Vancouver is updating its solid waste management plan, and would like to learn how [redacted] would like to be engaged in the development of the new plan over the next two to three years.

The *Integrated Solid Waste and Resource Management Plan* was approved by the Provincial Government in 2011 and requires an update. By applying a framework of resilience, equity and prosperity, the updated plan will build on the current plan's strengths and identify opportunities for accelerated waste reduction and diversion, while reducing greenhouse gases and promoting a circular economy.

A comprehensive engagement program involving a broad range of stakeholders and perspectives will be critical in the development of an updated solid waste management plan. Metro Vancouver's engagement on this project is guided by an Independent Consultation and Engagement Panel, a group of engagement experts established to advise and guide Metro Vancouver staff and Board.

Seeking Your Feedback

Metro Vancouver would like to learn how [redacted] would like to be notified of engagement opportunities and provide input at various stages in the plan development process (e.g. preferred channels of communication, level and frequency of updates). The information we receive will help shape an engagement program that describes engagement phases, methods and audiences, and strives to align with the priorities and preferences of a broad range of audiences. This pre-engagement phase will close on **May 28, 2021**.

44113443

Metro Vancouver will work closely with municipal staff through the REAC-Solid Waste Sub-Committee to understand and identify opportunities to advance waste reduction and recycling in key priority areas, such as single-use items, illegal dumping, and construction and demolition waste. Although the development of a new solid waste management plan is anticipated to be a two- to three-year process, Metro Vancouver and municipal staff will continue to work together in the interim to advance efforts in these key areas.

An engagement web page has been developed and is available here or at metrovancouver.org by searching 'solid waste management plan engagement'. The web page describes the project, outlines the phases of engagement, and links to a 3-minute questionnaire.

If you have any questions or comments about the review and update of Metro Vancouver's solid waste management plan, require additional information, or wish to schedule an online meeting or presentation with Metro Vancouver, a third party consultant that will summarize feedback, or the Consultation and Engagement Panel, please contact Sarah Evanetz, Division Manager, Strategy and Stakeholder Relations, by email at Sarah.Evanetz@metrovancouver.org or by phone at 778-995-3476.

Thank you in advance for your consideration.

Your sincerely,

Sav Dhaliwal

An engagement web page has been developed and is available here or at metrovancouver.org by searching 'solid waste management plan engagement'. The web page describes the project, outlines the phases of engagement, and links to a 3-minute questionnaire.

In addition to the questionnaire, below are several other opportunities to provide feedback on the engagement process for the development of a new solid waste management plan:

- Presentation to the Fraser Valley Regional District Board
- Meeting with Metro Vancouver
- Meeting with a third party consultant that will summarize feedback
- Meeting with Metro Vancouver's Independent Consultation and Engagement Panel

If you have any questions or comments about the review and update of Metro Vancouver's solid waste management plan or would like to schedule one of the above opportunities, please contact Sarah Evanetz, Division Manager, Strategy and Stakeholder Relations, by email at Sarah.Evanetz@metrovancouver.org or by phone at 778-995-3476.

Thank you in advance for your consideration.

Your sincerely,

Sav Dhaliwal

Subject: Let's work together to rethink waste – Metro Vancouver wants to hear from you!

metrovancouver | SOLID WASTE

Help shape the future of how we purchase, use, reuse, recycle, and throw things away in Metro Vancouver.

Metro Vancouver is updating its solid waste management plan and has launched a public engagement process to listen and learn more about community values and interests. If you have an interest in helping us move towards reducing waste, lowering greenhouse gas emissions, and achieving a circular economy, we highly encourage you to participate.

By November 5, we want to hear your ideas about what is most important when considering the vision and guiding principles for the long-term management of solid waste in Metro Vancouver. Here's how you can participate in this public engagement process:

1. Attend an in-person workshop in Burnaby on October 24, 2023.
2. Visit us in Surrey on November 5 at Diwali Festival.
3. Register to speak directly with the Consultation and Engagement Panel in-person or virtually.
4. Share your feedback online by completing a 5-minute questionnaire.
5. Are you part of a not-for-profit organization? We have an opportunity to work collaboratively on engaging your audiences to ensure their input is heard. Funding is available. Please email zerowaste@metrovancouver.org if you are interested in learning more.

To participate in any of the above activities and to sign up to receive updates on the project, please visit the project web page.

You can also reach out to the project team at zerowaste@metrovancouver.org

CONTACT US:

Phone: 604-432-6200
Email: zerowaste@metrovancouver.org

Metro Vancouver is a federation of 21 municipalities, one electoral area, and one treaty First Nation that collaboratively plans for and delivers regional-scale services. It delivers regional scale water, wastewater, and solid waste utility services. Metro Vancouver also regulates air quality, plans for urban growth, manages a regional parks system, provides affordable housing, and serves as a regional federation. The regional district is governed by a Board of Directors of elected officials from each member jurisdiction.

Mayor [redacted] and Council
[redacted]
VIA EMAIL: [redacted]

Dear Mayor [redacted] and Council:

Vision and Guiding Principles Engagement:
Metro Vancouver's Solid Waste Management Plan Update

Metro Vancouver is updating its solid waste management plan, a long-term strategic plan that guides our region's policies and collective actions over the next decade and beyond. At this time, Metro Vancouver is launching engagement on the development of the vision and guiding principles for the updated plan. As a Metro Vancouver member jurisdiction, [redacted] is invited to provide input during all phases of the plan's development.

Solid Waste Management Plan Update
Regional districts are required by the Province to develop, and submit for approval, plans for the management of municipal solid waste and recyclable materials. Building on the strengths of the current *Integrated Solid Waste and Resource Management Plan* that was approved by the Province in 2011, Metro Vancouver will be updating its solid waste management plan and identifying opportunities to accelerate waste reduction and diversion. In doing so, significant consideration will be given to reducing greenhouse gases and promoting a circular economy. In the meantime, work to advance waste reduction and recycling in the region will continue to progress during the solid waste management plan update process.

Metro Vancouver conducted pre-engagement work in 2021 and continues to actively engage with governments – including First Nations and member jurisdictions – government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan over the next 2-3 years. An Engagement Panel supports the development and implementation of the public engagement program. The two Advisory Committees, Solid Waste Management Plan Public/Technical Advisory Committee and Solid Waste and Recycling Industry Advisory Committee, provide ongoing advice and support.

The engagement webpage contains information on previous and current phases of engagement (visit metrovancouver.org and search 'solid waste management plan engagement').

Seeking Your Feedback – Vision and Guiding Principles
The vision and guiding principles will set the plan's foundation as well as the direction, and reflect fundamental values that guide the plan's development and implementation. Inputs and inspiration will include existing vision statements and guiding principles from Metro Vancouver, the Province, and leading jurisdictions worldwide, complemented by engagement feedback.

Metro Vancouver has scheduled two upcoming engagement opportunities involving member jurisdiction representatives:

- March 30, 2023 – Member Staff Advisory Committee Workshop.
- April 13, 2023 – The Zero Waste Committee meeting will include a session on solid waste management plan vision and guiding principles. Climate Action Committee members have been invited to join this discussion.

In addition to receiving feedback through these scheduled channels, Metro Vancouver will engage with [redacted] at its preference.

If you have questions or comments about the review and update of Metro Vancouver's solid waste management plan, require additional information, or wish to schedule a meeting or presentation, please contact Paul Henderson, General Manager, Solid Waste Services, by email at Paul.Henderson@metrovancouver.org

Thank you in advance for your consideration.

Dear Chair Lum and Board of Directors:

Vision and Guiding Principles Engagement:
Metro Vancouver's Solid Waste Management Plan Update

Metro Vancouver is updating its solid waste management plan, a long-term strategic plan that guides our region's policies and collective actions over the next decade and beyond. At this time, Metro Vancouver is launching engagement on the development of the vision and guiding principles for the updated plan, and would like to invite Fraser Valley Regional District to provide feedback at this phase of the plan's development.

Solid Waste Management Plan Update
Regional districts are required by the Province to develop, and submit for approval, plans for the management of municipal solid waste and recyclable materials. Building on the strengths of the current *Integrated Solid Waste and Resource Management Plan* that was approved by the Province in 2011, Metro Vancouver will be updating its solid waste management plan and identifying opportunities to accelerate waste reduction and diversion. In doing so, significant consideration will be given to reducing greenhouse gases and promoting a circular economy. In the meantime, work to advance waste reduction and recycling in the region will continue to progress during the solid waste management plan update process.

Metro Vancouver conducted pre-engagement work in 2021 and continues to actively engage with governments – including First Nations and member jurisdictions – government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan over the next 2-3 years. An Engagement Panel supports the development and implementation of the public engagement program. The two Advisory Committees, Solid Waste Management Plan Public/Technical Advisory Committee and Solid Waste and Recycling Industry Advisory Committee, provide ongoing advice and support.

The engagement webpage contains information on previous and current phases of engagement (visit metrovancouver.org, and search 'solid waste management plan engagement').

Seeking Your Feedback - Vision and Guiding Principles

Metro Vancouver is engaging on the vision and guiding principles for the updated solid waste management plan. The vision and guiding principles will set the plan's foundation as well as direction, and reflect fundamental values that guide the plan's development and implementation. Inputs and inspiration will include existing vision statements and guiding principles from Metro Vancouver, the Province, and leading jurisdictions worldwide, complemented by engagement feedback.

Below are several opportunities available to provide feedback on the development of a vision and guiding principles for the updated solid waste management plan:

- Presentation to the Fraser Valley Regional District Board.
- Meeting with Metro Vancouver.
- Meeting with Metro Vancouver's Independent Consultation and Engagement Panel.

In addition to the above options listed, Metro Vancouver will engage with Fraser Valley Regional District at its preference.

If you have questions or comments about the review and update of Metro Vancouver's solid waste management plan, require additional information, or wish to schedule a meeting or presentation with Metro Vancouver or the Engagement Panel, please contact Paul Henderson, General Manager, Solid Waste Services, by email at Paul.Henderson@metrovancouver.org.

Thank you in advance for your consideration.

metrovancouver | SOLID WASTE

Help Shape the Future.
Share Your Ideas on How to Further Reduce Waste in Our Region.

Metro Vancouver is updating its solid waste management plan and has launched a public engagement process to hear your ideas about the future of solid waste management in our region. This is a multi-phase engagement process, and we are currently in the idea generation phase. There will be opportunities to participate in future phases of engagement.

Help us move towards reducing waste, increasing recycling, reducing greenhouse gas emissions, and achieving a circular economy.

Share your ideas and feedback by **November 8, 2024** by:

- Completing a five to ten minute questionnaire
- Saying hello at one of these community events:
    - Saturday, September 21, 2024 — Shipyards Festival, North Vancouver
    - Saturday, September 28 2024 — RiverFest, New Westminster
    - Monday, September 30, 2024 — Tsawwassen Mills Shopping Centre (visit our booth at the parking lot by the main entrance)
    - Sunday, October 20, 2024 — Diwali Downtown, Surrey
- Presenting to the Zero Waste Committee and Public/Technical Advisory Committee about your ideas for the future of waste management in the region. Register here.
- Presenting to the Consultation and Engagement Panel about your experience with the engagement process. Date to be confirmed. Complete this form to indicate your interest.
- Giving feedback on the phone. Are you a local champion working to reduce waste in your community? We would love to chat! Email us to schedule a call.

To participate in any of the above activities and sign up to receive updates, visit the project web page.

Questions? Reach out to the project team at zerowaste@metrovancouver.org.

Mayor [redacted] and Council
[redacted]
VIA EMAIL: [redacted]

Dear Mayor [redacted] and Council:

Idea Generation Engagement:
Metro Vancouver's Solid Waste Management Plan Update

Metro Vancouver is updating its solid waste management plan, a long-term strategic plan that guides our region's policies and collective actions over the next decade and beyond. At this time, Metro Vancouver is launching engagement on idea generation – developing a set of potential actions and strategies for inclusion in an updated plan. As a Metro Vancouver member jurisdiction, [redacted] is invited to provide input during all phases of the plan's development.

Metro Vancouver is a North American leader in waste reduction and recycling, with a 65% recycling rate that is approximately double the Canadian average. However, much work remains to be done. The potential actions and strategies discussed at this phase of developing an updated plan will foster innovative and collaborative solutions and combine the strengths and resources of multiple parties across the region. These ideas will be fundamental to developing a plan that enables our region to advance its zero waste and climate goals.

Background and Timeline
Regional districts are required by the Province to develop, and submit for approval, plans for the management of municipal solid waste and recyclable materials. Building on the strengths of the current *Integrated Solid Waste and Resource Management Plan,* Metro Vancouver will develop an updated plan that identifies opportunities to accelerate waste reduction and recycling, reduce greenhouse gas emissions, and promote a circular economy.

68080994

A vision statement and guiding principles for the plan update (Attachment 1) were developed as a result of engagement in 2023, and will serve as a foundation for work in upcoming phases, including informing criteria that will be used to assess potential strategies and actions.

While the plan is being updated, work to advance waste reduction and recycling in the region will continue to progress.

Metro Vancouver is committed to actively engaging with governments – including First Nations and member jurisdictions – government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan over the next 2-3 years. An Independent Consultation and Engagement Panel supports the development and implementation of the engagement program. Two key advisory committees, the Solid Waste Management Plan Public/Technical Advisory Committee and the Solid Waste and Recycling Industry Advisory Committee, provide ongoing advice and support.

The engagement webpage contains information on previous and current phases of engagement (visit metrovancouver.org and search 'swmp').

Seeking Your Feedback – Idea Generation
The objective of the idea generation phase is to develop a set of potential actions and strategies and to identify priority goals for the updated solid waste management plan. These ideas will be analyzed in the next phase of engagement: options analysis. Metro Vancouver has developed a set of discussion questions to serve as a framework for gathering and analyzing feedback collected during this phase (Attachment 2).

Metro Vancouver will be creating opportunities to engage with member jurisdiction representatives on idea generation in the fall of 2024. In addition to receiving feedback through these organized channels, Metro Vancouver is happy to engage with [redacted] at its preference. Please submit any feedback on the idea generation phase by **December 13, 2024**.

If you have questions or comments about the review and update of Metro Vancouver's solid waste management plan, require additional information, or wish to schedule a meeting or presentation, please contact Paul Henderson, General Manager, Solid Waste Services, by phone at 604-432-6400 or by email at paul.henderson@metrovancouver.org.

Thank you in advance for your consideration.

68080994

Solid Waste Management Plan
Vision and Guiding Principles

Vision:

A thriving region where nothing is wasted and resources are valued.

Guiding Principles:

1. Accountability from residents, businesses, and governments to prevent waste.
2. A solid waste and recycling system that is affordable, convenient, and consistent across the region.
3. A solid waste system that is resilient to climate change and future challenges.
4. Environmental stewardship and climate action.
5. Inclusive solid waste services and programs.
6. Innovation and collaboration to support a vibrant regional economy that keeps products and materials in circulation.
7. Transparency about what happens to garbage and recycling.

Solid Waste Management Plan
Idea Generation: Issue/Opportunity Discussion Questions

Since the Integrated Solid Waste and Resource Management Plan was approved in 2011, Metro Vancouver's waste generation rate has decreased 11%, while our recycling rate has increased from 57 to 65% – nearly twice the Canadian average recycling rate. As we update the plan, **what actions can build on our success to**:

1. Build confidence in recycling systems?
2. Develop more inclusive programs and services?
3. Enhance accountability for eliminating waste?
4. Improve infrastructure and systems for waste management across the region?
5. Increase participation and reduce contamination in organics and recycling programs?
6. Leverage knowledge and expertise through collaboration?
7. Rethink and prevent waste in the first place?

The objective of the idea generation phase is to develop a set of potential actions and strategies and to identify priority goals for the updated solid waste management plan. These ideas will be analyzed in the next phase of engagement: options analysis. Metro Vancouver has developed a set of discussion questions to serve as a framework for gathering and analyzing feedback collected during this phase (Attachment 2).

Below are several opportunities available to provide feedback on the development of potential strategies and actions for an updated solid waste management plan:

- Presentation to the Sunshine Coast Regional District Board
- Meeting with Metro Vancouver
- Meeting with Metro Vancouver's Independent Consultation and Engagement Panel

In addition to the above listed options, Metro Vancouver is happy to engage with Sunshine Coast Regional District at its preference. Please submit any feedback on the idea generation phase by **December 13, 2024**.

If you have questions or comments about the review and update of Metro Vancouver's solid waste management plan, require additional information, or wish to schedule a meeting or presentation with Metro Vancouver or the Engagement Panel, please contact Paul Henderson, General Manager, Solid Waste Services by email at paul.henderson@metrovancouver.org.

Thank you in advance for your consideration.

Yours sincerely,

Mike Hurley
Chair, Metro Vancouver Board

Sincerely,

Sarah Kirby-Yung
Chair, Zero Waste Committee
Metro Vancouver

Solid Waste Management Plan
Vision and Guiding Principles

Vision:

A thriving region where nothing is wasted and resources are valued.

Guiding Principles:

1. Accountability from residents, businesses, and governments to prevent waste.
2. A solid waste and recycling system that is affordable, convenient, and consistent across the region.
3. A solid waste system that is resilient to climate change and future challenges.
4. Environmental stewardship and climate action.
5. Inclusive solid waste services and programs.
6. Innovation and collaboration to support a vibrant regional economy that keeps products and materials in circulation.
7. Transparency about what happens to garbage and recycling.

Solid Waste Management Plan
Idea Generation: Issue/Opportunity Discussion Questions

Since the Integrated Solid Waste and Resource Management Plan was approved in 2011, Metro Vancouver's waste generation rate has decreased 11%, while our recycling rate has increased from 57 to 65% – nearly twice the Canadian average recycling rate. As we update the plan, **what actions can build on our success to**:

1. Build confidence in recycling systems?
2. Develop more inclusive programs and services?
3. Enhance accountability for eliminating waste?
4. Improve infrastructure and systems for waste management across the region?
5. Increase participation and reduce contamination in organics and recycling programs?
6. Leverage knowledge and expertise through collaboration?
7. Rethink and prevent waste in the first place?

VIA EMAIL: jford@slrd.bc.ca; Info@slrd.bc.ca

Dear Chair Jen Ford and Board of Directors:

Idea Generation Engagement:
Metro Vancouver's Solid Waste Management Plan Update

Metro Vancouver is updating its solid waste management plan, a long-term strategic plan that guides our region's policies and collective actions over the next decade and beyond. At this time, Metro Vancouver is launching engagement on idea generation – developing a set of potential actions and strategies for inclusion in an updated plan. We would like to invite Squamish-Lillooet Regional District to provide feedback during all phases of the plan's development.

Metro Vancouver is a North American leader in waste reduction and recycling, with a 65% recycling rate that is approximately double the Canadian average. However, much work remains to be done. Potential actions and strategies discussed at this phase, including collaborative solutions involving multiple parties both within and outside of the region, will be key to developing a plan that enables Metro Vancouver to meet its zero waste and climate goals.

Background and Timeline
Regional districts are required by the Province to develop, and submit for approval, plans for the management of municipal solid waste and recyclable materials. Building on the strengths of the current *Integrated Solid Waste and Resource Management Plan,* approved by the Province in 2011, Metro Vancouver will develop an updated plan that identifies opportunities to accelerate waste reduction and recycling, reduce greenhouse gas emissions, and promote a circular economy.

69048530

A vision statement and guiding principles for the plan update (Attachment 1) were developed as a result of engagement in 2023, and will serve as a foundation for work in upcoming phases, including informing criteria that will be used to assess potential strategies and actions.

Work to advance waste reduction and recycling in the region continues to progress, while the solid waste management plan update process proceeds.

Metro Vancouver is committed to actively engaging with governments – including First Nations and member jurisdictions – government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan over the next 2-3 years. An Independent Consultation and Engagement Panel supports the development and implementation of the engagement program, and two advisory committees provide ongoing advice and support.

The engagement webpage contains information on previous and current phases of engagement (visit metrovancouver.org, and search 'swmp').

Seeking Your Feedback – Idea Generation

The objective of the idea generation phase is to develop a set of potential actions and strategies and to identify priority goals for the updated solid waste management plan. These ideas will be analyzed in the next phase of engagement: options analysis. Metro Vancouver has developed a set of discussion questions to serve as a framework for gathering and analyzing feedback collected during this phase (Attachment 2).

Subject: Let's work together to rethink waste — Metro Vancouver wants to hear from you!

Help shape the future. We want to hear your feedback on strategies and actions to include in our region's solid waste management plan.

Metro Vancouver is updating its solid waste management plan and wants to hear from you! We are looking ahead to the next decade and beyond to see how our region can manage solid waste. Together, we can continue to move towards reducing waste, increasing recycling, reducing greenhouse gas emissions, and achieving a circular economy.

In earlier engagement phases, you shared your values, challenges, and ideas — helping shape the options we are considering for inclusion in the draft plan. Now, we welcome your feedback on potential actions and strategies — the final step before the new plan is drafted.

Share your feedback before **October 31, 2025** by:

- Completing a quick 5 – 10-minute questionnaire to share your thoughts
- Saying hello at one of these community events:
    - Saturday, September 6, 2025 — Car Free Day, Port Coquitlam
    - Sunday, September 14, 2025 — Main Street Car Free Day, Vancouver
    - Saturday, September 27, 2025 — RiverFest, New Westminster
    - Sunday, October 5, 2025 — Diwali Downtown, Surrey
- Do you have more to say about the strategies and options being considered to reduce waste in your community? Email us to schedule a call — we would love to hear from you!

Interested in sharing feedback on the engagement process? Sign up to be notified when a date is set and present to the Consultation and Engagement Panel by completing this form.

To participate in any of the above activities and sign up to receive updates on additional opportunities as they become available, visit the project web page.

Questions? Reach out to the project team at zerowaste@metrovancouver.org.

Mayor [redacted] and Council
[redacted]
VIA EMAIL: [redacted]

Dear Mayor [redacted] and Council:

Options Analysis Engagement: Metro Vancouver's Solid Waste Management Plan Update

Metro Vancouver is updating its solid waste management plan, a long-term strategic plan that guides our region's policies, priorities, targets, and collective actions over the next decade and beyond. Metro Vancouver is launching engagement on the options analysis phase — gathering feedback and creating opportunities for dialogue around draft strategies and actions to include in the updated solid waste management plan. As a Metro Vancouver member jurisdiction, [redacted] is invited to provide input during all phases of the plan's development.

Metro Vancouver is a North American leader in waste reduction and recycling, achieving a 65% recycling rate — twice the Canadian average. However, while progress has been made, there is still considerable work to be done. Evaluating potential strategies and actions during this phase will be fundamental in developing the draft components of a plan that can enable our region to advance its zero waste and climate goals.

Background and Timeline
Regional districts are required by the Province to develop, and submit for approval, plans for the management of municipal solid waste and recyclable materials. Building on the strengths of the current *Integrated Solid Waste and Resource Management Plan*, approved by the Province in 2011, Metro Vancouver is developing an updated plan that identifies opportunities to accelerate waste reduction and recycling, reduce greenhouse gas emissions, and promote a circular economy.

While the plan is being updated, work to advance waste reduction and recycling in the region continues to progress.

77812297

Work to update the solid waste management plan began in 2021 and is nearing completion, with a draft plan expected in 2026. A vision statement, guiding principles, goals, and a waste hierarchy were developed following research and engagement (Attachment 1). Idea generation research and engagement in 2024 resulted in the development of potential strategies and actions for an updated plan. During the upcoming options analysis phase, these potential strategies and actions will be considered using a set of evaluation criteria informed by feedback to date, the vision and guiding principles, and the Metro Vancouver Board Strategic Plan. Engagement will contribute to further refinement of the draft strategies and actions. Below is a timeline graphic of the solid waste management plan update.

Metro Vancouver is committed to actively engaging with governments — including First Nations and member jurisdictions — the waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan. An Independent Consultation and Engagement Panel supports the development and implementation of the engagement program, and two advisory committees provide ongoing advice and input.

The engagement webpage contains information on previous and current phases of engagement (visit metrovancouver.org and search 'swmp').

Seeking Your Feedback – Options Analysis
The objective of this phase of engagement is to evaluate ideas from the previous phase by applying decision-making criteria and gathering feedback to decide which strategies and actions will be included in the draft plan. This phase of engagement marks the final step before the new plan is drafted.

In spring 2025, Metro Vancouver staff held preliminary discussions with member jurisdiction staff at advisory committee meetings to explore potential member priority actions for inclusion in the updated plan. Metro Vancouver will continue to work with member jurisdiction staff to refine the member priority actions. In addition, a full list of potential strategies and actions will be made publicly available on the project webpage. A workshop on options analysis for member jurisdiction staff has tentatively been scheduled for early October, and Metro Vancouver will continue to bring relevant updates to the regularly scheduled member staff advisory committees. In addition to receiving feedback through these channels, Metro Vancouver is pleased to engage with [redacted] at its preference. Please submit any feedback on the options analysis phase by **October 31, 2025.**

If you have any questions or comments about the review and update of Metro Vancouver's solid waste management plan, require additional information, or wish to schedule a meeting or presentation, please contact Paul Henderson, General Manager, Solid Waste Services, by email at paul.henderson@metrovancouver.org.

Yours sincerely,

metrovancouver | SOLID WASTE

Metro Vancouver Solid Waste Management Plan Update

Options Analysis

About Metro Vancouver

Metro Vancouver is a diverse organization that plans for and delivers regional utility services, including water, sewers and wastewater treatment, and solid waste management. It also regulates air quality, plans for urban growth, manages a regional parks system, provides affordable housing, and serves as a regional federation. The organization is a federation of 21 municipalities, one electoral area, and one treaty First Nation located in the region of the same name. The organization is governed by a Board of Directors of elected officials from each member jurisdiction.

What is Solid Waste Management

Solid waste management is the term used to describe how packaging, construction and demolition materials, food scraps, yard and garden trimmings, and other materials from residential, commercial, and institutional sources are managed when they are no longer needed. It includes the decisions we make when reducing and preventing garbage, using recycling and green bins, and the services provided by companies, governments, and non-profits to collect, transport, and process these materials.

Metro Vancouver's Role in Solid Waste Management

Metro Vancouver is responsible for planning for waste reduction, reuse, and recycling, and managing and disposing of the remaining waste in an environmentally responsible manner. This work is guided by our commitment to environmental stewardship, and affordable and accessible waste management services. It would not be possible without the continued efforts of committed residents and innovative businesses across the region.

Metro Vancouver operates several recycling and waste centres in the region where residents and businesses can drop off recycling and garbage. Metro Vancouver also runs educational campaigns and initiatives to encourage waste reduction, reuse and repair, and recycling.

Updating the Solid Waste Management Plan

This important plan will guide solid waste management strategies, actions, targets, and priorities in the decade ahead. The updated plan will identify how our region can continue to reduce waste, increase reuse and recycling, reduce greenhouse gas emissions, and work towards a circular economy. Together as a region, we need to think about how we purchase, use, reuse, recycle, and throw things away in Metro Vancouver to better manage our solid waste.

Previous Work

Metro Vancouver has established a vision statement and guiding principles, as well as goals and a waste hierarchy, for the solid waste management plan update. These will guide plan development and implementation, and were created with direct input from First Nations, member jurisdictions, adjacent regional districts, advisory committees, interested parties, and the public.

Vision and Guiding Principles

Vision

A thriving region where nothing is wasted and resources are valued.

Guiding Principles

1. A solid waste and recycling system that is affordable, convenient, and consistent across the region.
2. A solid waste system that is resilient to climate change and future challenges.
3. Accountability from residents, businesses, and governments to prevent waste.
4. Environmental stewardship and climate action.
5. Inclusive solid waste services and programs.
6. Innovation and collaboration to support a vibrant regional economy that keeps products and materials in circulation.
7. Transparency about what happens to garbage and recycling.

Hierarchy and Goals

Goals	Components
1. Enable circular systems that preserve resources	• Design waste-free systems • Transition to a circular economy
2. Minimize waste generation	• Prevent • Use less
3. Keep materials in use as long as possible	• Share/Donate • Repair/Refurbish • Repurpose
4. Make it easier to recycle effectively	• Recycle into new products • Compost and anaerobic digestion
5. Recover resources from non-recyclable materials	• Recover materials from the waste stream • Create alternatives to fossil fuels
6. Dispose only as a last resort	• Landfill and mass burn waste-to-energy

Project Timeline

The solid waste management plan update process is being supported by robust First Nations and public engagement. Work began in 2021 and is nearing completion with a draft plan expected in 2026.

Options Analysis

The objective of the current phase – options analysis – is to evaluate ideas that were generated in the previous phase by applying decision-making criteria that are grounded in the vision and guiding principles for the updated plan. The feedback we receive in this phase will help to decide what actions and strategies are included in the draft plan. This is the final step before the new plan is drafted.

How to Get Involved

Provide your feedback on the potential strategies and actions to include in the updated solid waste management plan by October 31, 2025.

Metro Vancouver Solid Waste Management Plan Update

Options Analysis

About Metro Vancouver

Metro Vancouver is a diverse organization that plans for and delivers regional utility services, including water, sewers and wastewater treatment, and solid waste management. It also regulates air quality, plans for urban growth, manages a regional parks system, provides affordable housing, and serves as a regional federation. The organization is a federation of 21 municipalities, one electoral area, and one treaty First Nation located in the region of the same name. The organization is governed by a Board of Directors of elected officials from each member jurisdiction.

What is Solid Waste Management

Solid waste management is the term used to describe how packaging, construction and demolition materials, food scraps, yard and garden trimmings, and other materials from residential, commercial, and institutional sources are managed when they are no longer needed. It includes the decisions we make when reducing and preventing garbage, using recycling and green bins, and the services provided by companies, governments, and non-profits to collect, transport, and process these materials.

Metro Vancouver's Role in Solid Waste Management

Metro Vancouver is responsible for planning for waste reduction, reuse, and recycling, and managing and disposing of the remaining waste in an environmentally responsible manner. This work is guided by our commitment to environmental stewardship, and affordable and accessible waste management services. It would not be possible without the continued efforts of committed residents and innovative businesses across the region.

Metro Vancouver operates several recycling and waste centres in the region where residents and businesses can drop off recycling and garbage. Metro Vancouver also runs educational campaigns and initiatives to encourage waste reduction, reuse and repair, and recycling.

Updating the Solid Waste Management Plan

This important plan will guide solid waste management strategies, actions, targets, and priorities in the decade ahead. The updated plan will identify how our region can continue to reduce waste, increase reuse and recycling, reduce greenhouse gas emissions, and work towards a circular economy. Together as a region, we need to think about how we purchase, use, reuse, recycle, and throw things away in Metro Vancouver to better manage our solid waste.

Previous Work

Metro Vancouver has established a vision statement and guiding principles, as well as goals and a waste hierarchy, for the solid waste management plan update. These will guide plan development and implementation, and were created with direct input from First Nations, member jurisdictions, adjacent regional districts, advisory committees, interested parties, and the public.

Vision and Guiding Principles

Vision

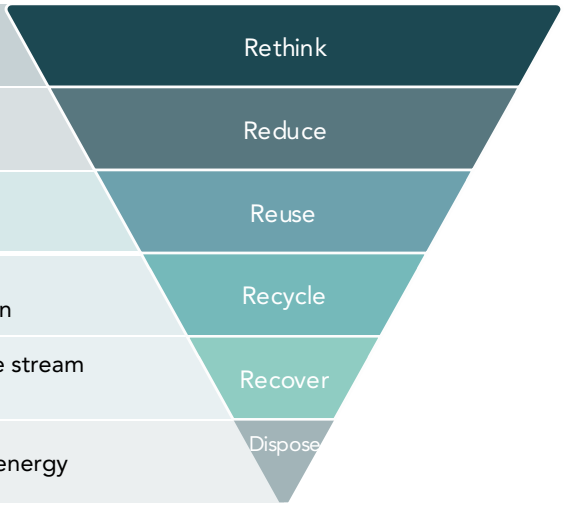
A thriving region where nothing is wasted and resources are valued.

Guiding Principles

1. A solid waste and recycling system that is affordable, convenient, and consistent across the region.
2. A solid waste system that is resilient to climate change and future challenges.
3. Accountability from residents, businesses, and governments to prevent waste.
4. Environmental stewardship and climate action.
5. Inclusive solid waste services and programs.
6. Innovation and collaboration to support a vibrant regional economy that keeps products and materials in circulation.
7. Transparency about what happens to garbage and recycling.

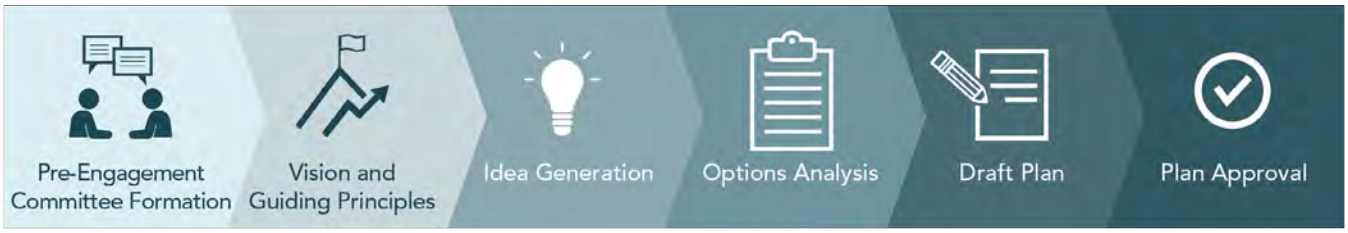
Hierarchy and Goals

Goals	Components
1. Enable circular systems that preserve resources	• Design waste-free systems • Transition to a circular economy
2. Minimize waste generation	• Prevent • Use less
3. Keep materials in use as long as possible	• Share/Donate • Repair/Refurbish • Repurpose
4. Make it easier to recycle effectively	• Recycle into new products • Compost and anaerobic digestion
5. Recover resources from non-recyclable materials	• Recover materials from the waste stream • Create alternatives to fossil fuels
6. Dispose only as a last resort	• Landfill and mass burn waste-to-energy



Project Timeline

The solid waste management plan update process is being supported by robust First Nations and public engagement. Work began in 2021 and is nearing completion with a draft plan expected in 2026.



Options Analysis

The objective of the current phase – options analysis – is to evaluate ideas that were generated in the previous phase by applying decision-making criteria that are grounded in the vision and guiding principles for the updated plan. The feedback we receive in this phase will help to decide what actions and strategies are included in the draft plan. This is the final step before the new plan is drafted.

How to Get Involved

Provide your feedback on the potential strategies and actions to include in the updated solid waste management plan by October 31, 2025.

metrovancouver | SOLID WASTE

Feedback Opportunity — Initial Draft of Metro Vancouver's Solid Waste Management Plan

You are receiving this message as you have signed up for updates on Metro Vancouver's process to update its regional solid waste management plan.

Thank you to everyone who shared input during the Options Analysis phase of the solid waste management plan update in fall 2025. Metro Vancouver will share the engagement summary report soon.

Feedback from engagement and supporting studies has helped shape the Initial Draft Solid Waste Management Plan.

Share your feedback by February 20, 2026

- Submit comments to zerowaste@metrovancouver.org
- Participate in an online discussion board
    - A login using an email address is required. Note that submitted comments are reviewed prior to posting
- Request a phone call or meeting with Metro Vancouver staff by emailing zerowaste@metrovancouver.org

To support transparency of the engagement process, feedback provided may be published on the Metro Vancouver website, in reports, and in submissions to the Ministry of Environment and Parks.

More info

A revised draft will be provided to the Zero Waste Committee and Board, followed by an additional public comment period prior to submitting the final draft to the Minister of Environment and Parks for approval.

Thank you for your continued interest in the solid waste management plan and helping our region further reduce waste, increase recycling, and advance a circular economy.

Do you have feedback on the solid waste management plan engagement process?

We want to hear from you. Sign up to present and share your thoughts with the Consultation and Engagement Panel on February 11, 2026.

Find out more on the project web page.

metrovancouver | SOLID WASTE

Draft Solid Waste Management Plan and Process for Additional Comments

Thank you to everyone who has contributed input to the region's draft Solid Waste Management Plan, the long term plan that will guide how our region reduces waste, increases recycling, and moves toward a more circular economy.

Review the draft Solid Waste Management Plan

Any additional feedback received by August 1 will be included with the draft Solid Waste Management Plan when it is submitted to the Minister of Environment and Parks for review.

Share your feedback by August 1, 2026

- Complete the feedback form
- Send written comments to zerowaste@metrovancouver.org
- Call the Metro Vancouver information line at 604-432-6200 to set up a phone conversation with staff

What's in the draft plan?

The draft Solid Waste Management Plan outlines:

- A vision and goals to guide the transition to a thriving region where resources are valued and nothing is wasted
- Strategies to reduce greenhouse gas emissions from solid waste
- Actions to support reuse, recycling, and waste prevention
- Management of residual garbage left over after all waste reduction and recycling actions

The draft plan builds on Metro Vancouver's current solid waste plan and reflects multiple years of research, engagement, and collaboration.

Mayor [redacted] and Council

VIA EMAIL: [redacted]

Dear Mayor [redacted] and Council:

Re: Metro Vancouver's Draft Solid Waste Management Plan

Metro Vancouver is updating its 2011 *Integrated Solid Waste and Resource Management Plan*, a long-term strategic plan that guides our region's policies, priorities, targets, and collective actions over the next decade and beyond. Metro Vancouver intends to submit the current draft of the updated solid waste management plan for approval to the Ministry of Environment and Parks. In advance of this submission, Metro Vancouver is inviting feedback on the current draft of the plan, which is available on the Metro Vancouver website. Please share your feedback by **August 1, 2026**. Metro Vancouver staff would welcome the opportunity to meet with you to discuss the draft plan further.

Background and Timeline
Regional districts are required by the province to develop, and submit for approval, plans for the management of municipal solid waste and recyclable materials. Building on the strengths of the current *Integrated Solid Waste and Resource Management Plan*, approved by the province in 2011, Metro Vancouver has developed a draft updated solid waste management plan that identifies opportunities to accelerate waste reduction and recycling, reduce greenhouse gas emissions, and promote a circular economy.

84549280

Work to update the solid waste management plan initiated in 2021 and has culminated in the current draft plan that Metro Vancouver intends to submit for approval to the Ministry of Environment and Parks. The current draft plan includes a vision statement, guiding principles, goals, waste hierarchy, and a series of strategies and actions. In addition, strategic approaches for residual waste, regulatory options, and recycling and waste centres outline criteria for future decision making in those areas.

Metro Vancouver is committed to actively engaging with governments — including First Nations and member jurisdictions — the waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan. An Independent Consultation and Engagement Panel supports the development and implementation of the engagement program, and two advisory committees have provided ongoing advice and input across all project phases.

Member Jurisdiction Feedback
On April 24, 2026, the GVS&DD Board approved the following recommendation:

> *THAT the GVS&DD Board:*
> *a) direct staff to invite feedback on the draft updated solid waste management plan (the "Solid Waste Management Plan") from First Nations, interested parties, and the public;*
> *b) request that the Board Chair and the Zero Waste Committee Chair invite feedback on the Solid Waste Management Plan from member jurisdictions and adjacent regional districts; and*
> c) *authorize the Board Chair and the Zero Waste Committee Chair to submit to the Ministry of Environment and Parks for approval the Solid Waste Management Plan materially in the form attached in Attachment 1 to the report dated March 31, 2026 titled "Draft Solid Waste Management Plan", along with feedback received by August 1, 2026.*

As a Metro Vancouver member jurisdiction, [redacted] has been invited to provide input during all phases of the plan's development**.** At this time, we invite member jurisdictions to inform Metro Vancouver of any feedback on the draft of the solid waste management plan that Metro Vancouver intends to submit for approval to the Ministry of Environment and Parks. Note that feedback will be provided to the Ministry of Environment and Parks concurrently with the plan, and may also be published on the Metro Vancouver website and in reports.

The draft plan is available on the Metro Vancouver website (visit metrovancouver.org and search swmp).

Please share any feedback by **August 1, 2026.**

Suggested opportunities available to provide comments include:

- Submitting written feedback to zerowaste@metrovancouver.org
- Presentation to council
- Meeting with Metro Vancouver staff
- Meeting with the Solid Waste Management Plan Independent Consultation and Engagement Panel

If you have any questions about Metro Vancouver's draft solid waste management plan, require additional information, or wish to schedule a meeting or presentation, please contact Paul Henderson, General Manager, Solid Waste Services, by email at paul.henderson@metrovancouver.org.

Yours sincerely,

Mike Hurley

THIS DAY IN HISTORY: 2000

Teen Sedin twins played it cool after sizzling Canucks debut

PATRICK JOHNSTON

No matter whether you say the Sedin era began the day they were drafted or the day they first put on a Vancouver Canucks uniform, one thing is true: the first time they did suit up, they started with a bang.

Sept. 14, 2000 was the first time the Sedins played any kind of game for the Canucks, a pre-season tilt in Stockholm against Modo, the team from northern Sweden that produced the Sedins (and Markus Naslund, among many others).

That night at Globen Arena, the twins, still just 19, put on a show.

Sure it was pre-season, but the way the twins played against their old team was a taste of what was truly to come: dominating puck possession leading to dazzling goals.

They set up the game's first two goals, then Daniel scored the Canucks' third, all in the first period. The Canucks would go on to win 5-2.

Trent Klatt, who would become the Sedins' first regular linemate, scored the game's first goal, set up by a deft pass from Daniel from behind the net.

"I found out pretty quickly how talented these guys are," Klatt told reporters post-game. "I'll be laying in front on the ice and if they want to hit one in off my leg, that will be just fine."

That principle would serve Klatt well as he would score 37 goals over the next three seasons, often playing as the "triplet" on the Sedins' right wing.

The Vancouver Sun's Iain MacIntyre wrote that the Sedins' strong performance was essential to quiet the noise that had swirled around them, practically from the day they were drafted in June 1999.

"And best of all, their game of strength and finesse around the net should be even better suited to the more physical, compact North American game than it is amid the ponderous space of the Euro rink," MacIntyre wrote.

Henrik Sedin, left, and twin brother Daniel answer questions after a news conference at GM Place in July 1999. The Sedins were just 19 when they first played a pre-season game for the Canucks. *WARD PERRIN/FILES*

"The Sedins' lack of an NHL-calibre top gear became a national issue this week in Sweden — or rather, criticism of their skating reported in Vancouver became a national issue here. But it's obvious after Wednesday that their effectiveness is not contingent on their open-ice speed."

The Sedins' teammates agreed there was obvious room for improvement, but they were starting from solid footing.

"The way they play, they're going to adjust quite well. They're going to need some time because they're only 20-year-old guys coming into the league. The way they played today was really fun to watch. Everyone can see they have talent that not many guys on this hockey team have," defenceman Mattias Ohlund, another Swede, said after the game.

The Sedins called playing for an NHL team, even in pre-season, against their old squad a dream come true.

On the ice they dazzled. But off the ice, they played it cool. And given how we've come to know them, this is no surprise. They remain as humble today as they were in their teens, always ready to put the credit elsewhere.

The wage they were set to make in one day, even as rookies, would far eclipse what their brother Stefan would make in a month as a civil servant, the elder Sedin noted to The Province's Tony Gallagher.

Maybe that's too much, young Henrik said.

"This is Henrik Sedin in a nutshell. Unassuming to a bizarre degree, the new centre is expected one day to make as big a splash as possible in pro hockey, but heaven forbid if someone were to recognize him trying to get into a bar and move him to the head of the line," Gallagher commented.

Thomas Gradin, the Swedish former Canucks player turned scout, explained this was Henrik following a foundational Swedish value, known as "odjmjukhet."

"It means he doesn't think of himself as any better than anyone, but 'humble' doesn't quite mean the same. He's a very respectful person. He knows what he wants to do and thinks a lot all the time. He always thinks before he speaks," Gradin told Gallagher.

And from this sizzling start, the Sedins just got on with it.

Got on with it ... and ended up in the Hockey Hall of Fame.

pjohnston@postmedia.com

Sun, Province reporters finalists for Jack Webster Awards

CHERYL CHAN

Postmedia reporters, from left, Lori Culbert, Gordon Hoekstra and Glenda Luymes are up for awards recognizing excellence in B.C. journalism.

Three Vancouver Sun and The Province journalists are finalists for the Jack Webster Awards this year.

Gordon Hoekstra is nominated for best print/digital news reporting for his story on the B.C. trucking industry and why there have been several strikes on overpasses and bridges since 2021.

Lori Culbert earned a nomination for best investigative and enterprise journalism for her stories on the overdose death of University of Victoria student Sidney McIntyre-Starko in a dorm.

Glenda Luymes is nominated in the legal journalism category for her work tracing how a B.C. man racked up 21 impaired driving convictions — believed to be a Canadian record.

The awards are named in honour of late radio and television reporter Jack Webster and recognize excellence in B.C. journalism.

The winners will be announced at the 38th annual Jack Webster Awards on Oct. 28 in Vancouver.

CONVERSATIONS THAT MATTER

STUART McNISH

Energy is the backbone of every economy. With it, economies grow; without it, they are stagnant.

Africa is energy impoverished. According to the International Energy Agency, "African economies that were already hard hit by the COVID-19 pandemic are further challenged when you factor in Russia's invasion of Ukraine, which sent food, energy and other commodity prices soaring."

According to NJ Ayuk of the African Energy Chamber, "these crises are also compromising many parts of Africa's energy systems. ... They are deepening the financial difficulties of utilities, increasing risks of blackouts and rationing and they're contributing to a sharp increase in extreme poverty. It doesn't need to be this way."

NJ Ayuk

Africa has plenty of what it takes to produce electricity, Ayuk says.

"The continent has abundant reserves of hydrocarbons — at least 125.3 billion barrels of crude oil, 509 trillion cubic feet of natural gas," he says. "More than enough resources to support renewables, enough sunlight to support 1,000 gigawatts of solar generation, enough running water to support 350 GW of hydropower generation, enough wind to support turbines that can generate 110 GW of power, and enough geothermal energy to support 15 GW of capacity."

Ayuk joined Conversations That Matter to talk about how to utilize those resources to ignite economies throughout Africa.

metrovancouver | SOLID WASTE

We need your input on how to reduce and manage solid waste in Metro Vancouver.

Metro Vancouver is updating the regional solid waste management plan

We want to hear your ideas on potential actions and strategies to reduce garbage and increase recycling in the region while reducing greenhouse gases, and promoting a circular economy.

Public engagement will run from September 16 to November 8, 2024. There are a variety of ways to connect and participate. You can visit us at a community event, complete an online questionnaire, or email us at **zerowaste@metrovancouver.org**.

To learn about more about how you can participate, visit **metrovancouver.org** and search 'swmp', or scan the QR code.

B.C. added jobs last month, but not enough to offset a tough summer of losses

NATHAN GRIFFITHS

B.C.'s economy added 7,800 jobs last month, with gains coming mostly in the hospitality, education, and arts and culture sectors, according to Statistics Canada.

It was the largest increase since May but not nearly enough to offset the previous two months of job losses. The province shed 32,000 jobs in July and August.

"B.C. leads Canada in private-sector job growth and is holding steady working to build an economy that can stand on its own two feet," said Ravi Kahlon, the province's minister of jobs and economic growth.

"Year over year, B.C. has seen an increase of 48,600 jobs."

Gavin Dew, the Conservative critic for small business and innovation, countered by saying: "This government keeps trying to claim B.C.'s economy is strong. But the numbers tell a very different story, and it's even worse when you actually talk to small-business people."

The hospitality industry added 12,000 jobs in September, the most of any sector. After that was education, with nearly 11,000 new jobs.

Unsurprisingly, given U.S. tariffs, the wholesale and retail trade lost nearly 17,000 jobs, far and away the most jobs lost in any sector.

"B.C. and Canada are facing serious challenges in the face of U.S. President Donald Trump's attacks on our economy and sovereignty. Tariffs and economic uncertainty are large challenges for certain sectors and regions throughout the province," Kahlon said.

Despite the modest increase in jobs, the unemployment rate ticked back up to 6.4 per cent, the same rate as in May. September and May's rates were tied as the highest rate of unemployment since January 2022.

The unemployment rate in the province has grown fairly steadily since its recent low of 4.2 per cent in December 2022.

Kahlon, however, said the unemployment rate remains below the national average of 7.1 per cent, adding, "B.C. continues to lead the country with an average hourly wage of $37.94, the second highest among provinces."

B.C.'s unemployment rate was lower than the rate in Alberta and Ontario but higher than Quebec's. Newfoundland and Labrador leads the country in unemployment, with a rate of 10.6 per cent.

The B.C. hospitality industry added 12,000 jobs in September, the most of any sector, said Statistics Canada. ISTOCKPHOTO/GETTY IMAGES

There are significant differences in unemployment among different age groups.

Nearly six per cent of core-age workers, defined as being between 25 and 54, were unemployed in September, nearly two percentage points higher than in January 2022.

And youth unemployment remains stubbornly high. Among British Columbians aged 15-24, 13.7 per cent were unemployed — the second highest level since January 2022.

Youth unemployment has grown steadily since January of 2024.

"What continues to worry me is the lack of opportunities for young people," Dew said.

Public Consultation and Engagement Summary Report | 2767

Five people a day died from drug use in B.C. over summer

J.J. ADAMS

The unrelenting flood of drug deaths in B.C. continued this summer.

The B.C. Coroners Service has released a report listing 153 drug deaths in July and 149 in August 2025 in the province. That's down from the same months last year, when it was 195 in July and 211 in August.

Those numbers are up slightly from the previous months — the service reported 145 people died in May and 147 in June.

According to preliminary data gathered by the service, 69 per cent of the deaths were among people aged 30-59, and 78 per cent male. In July there were 4.9 deaths a day on average; in August there were 4.8 deaths a day.

In 2024, there were 2,312 total deaths. In 2025, there were 1,218 by the end of August.

The most common substances detected in expedited toxicological testing were fentanyl and its analogs.

Solid Waste Management Plan Update

Draft Solid Waste Management Plan

Thank you to everyone who has contributed input to the region's draft Solid Waste Management Plan. The GVS&DD Board endorsed the draft plan (available below).

View the final draft plan

Any additional comments received before August 1 will be provided to the Minister of Environment and Parks when the plan is submitted for approval.

Share your comments before August 1, 2026

- Complete the public feedback form

Project overview

Metro Vancouver is responsible for waste reduction and recycling planning, and operating a series of solid waste facilities in the region.

Metro Vancouver's current Solid Waste Management Plan was approved by the BC Minister of Environment and Climate Change Strategy in 2011. The plan established goals, strategies, and actions for the management of garbage and recyclable materials for Metro Vancouver and its member jurisdictions.

Timeline

- **Pre-engagement**
  April 27 - May 28, 2021
- **Vision and guiding principles engagement**
  September 18 – November 10, 2023
- **Idea generation engagement**
  September 16 – November 8, 2024
- **Options analysis engagement**
  September 4 to October 31, 2025

Provincial guidelines recommend initiating a plan review on or before the 10-year anniversary of the current plan's approval.

Progress

The GVS&DD Board has endorsed the draft Solid Waste Management Plan. Any additional comments received before August 1 will be provided to the Ministry of Environment and Parks when the draft plan is submitted for approval.

Read the draft Solid Waste Management Plan

The draft plan builds on Metro Vancouver's current solid waste plan and reflects multiple years of research, engagement, and collaboration. The draft plan outlines:

- A vision and goals to guide the transition to a thriving region where resources are valued and nothing is wasted
- Strategies and actions that support reuse, recycling, and waste prevention, and reduce greenhouse gas emissions from solid waste
- Management of residual garbage as a last resort

Engagement

Metro Vancouver is committed to engaging audiences who may be impacted by or have an interest in the review and update of the solid waste management plan.

> Pre-Engagement (April 27 to May 28, 2021)

> Vision and guiding principles engagement (September 18 to November 10, 2023)

> Idea generation engagement (September to November, 2024)

> Options analysis (September to October 31, 2025)

> Draft plan (January 22 to February 20, 2026)

Groups included in engagement

- Government and regulatory agencies: including First Nations in BC*, provincial and federal governments, member jurisdictions, adjacent regional districts, crown corporations, airport and port authorities, and health authorities
- Waste and recycling industry: including haulers, processors, extended producer responsibility programs, disposal facilities, waste/recycling industry associations, binner community, and reuse/repair organizations
- Waste producers: including various sectors such as food service, grocery, construction, tourism, office and property management, real estate, retail, residents, and educational institutions
- Industry and business associations: professional associations
- Community, environmental and non-profit groups: non-governmental organizations (NGOs), youth and students, and Indigenous Peoples
- Metro Vancouver residents: community members from all 23 member jurisdictions

*Indigenous People are invited to participate in all public engagement activities. A separate First Nations engagement strategy focuses on government-to-government engagement with First Nations.

Collaborative Engagement Program

The Collaborative Engagement Program was a part of engagement on the draft plan and supported diversity, equity and inclusion in the public engagement process by collaborating with and hearing from people who otherwise may not be aware of or have access to opportunities to help inform the plan update.

Through this program, Metro Vancouver provided funding and support for not-for-profit organizations to engage with their networks to provide ideas and feedback. Organizations that support underrepresented or equity-denied communities, youth, seniors, Indigenous people, and environmental groups were integral to this work. Find out more about the Collaborative Engagement Program.

Solid Waste Management Plan Update Backgrounder

March 2023

Prepared By:
Solid Waste Services

Orbit # 56896403

Purpose

The purpose of this backgrounder is provide readers with an understanding of Metro Vancouver's role in managing garbage and recycling in the region, including work underway to advance zero waste, to allow meaningful participation in engagement on the solid waste management plan update.

The current *Integrated Solid Waste and Resource Management Plan* was approved by the Province in 2011, and focuses on reducing waste, improving reuse and recycling, recovering resources from garbage and disposing of remaining garbage in an environmentally sustainable manner. Provincial guidelines recommend initiating a plan review on or before the 10-year anniversary of the current plan's approval. An updated solid waste management plan will build on the strengths of the current plan, and identify opportunities for accelerated waste reduction and recycling while reducing greenhouse gases and promoting a circular economy.

Metro Vancouver is engaging with governments – including First Nations – government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan.

What is Solid Waste Management?

Solid waste management is the term used to describe how products, packaging, construction materials, food scraps, yard and garden trimmings, and other materials are managed when they're no longer needed. It includes the decisions we make when using garbage, recycling and green bins, and the services provided by companies, governments and non-profits to collect, transport and process these materials. It also includes actions we take to prevent or reduce the amount of solid waste we produce, at home, work, school and in our community, such as buying less, sharing, repairing, reusing and repurposing.

Metro Vancouver is recognized across North America as a leader in recycling, composting and reducing garbage. An impressive 65% of waste in Metro Vancouver is recycled and diverted because of its committed residents, innovative businesses, and regional and local authorities, recognizing that responsible management of waste is essential for a sustainable, healthy, and equitable region. Despite these successes, every year, close to 1.25 million tonnes of products, packaging and other materials are disposed of from Metro Vancouver residents and businesses. Metro Vancouver recognizes that the responsible management and disposal of waste is essential for a sustainable, healthy, and equitable region.

Solid waste management plans are policy documents which set out a vision, guiding principles and actions for the responsible management of materials that become solid waste. Metro Vancouver is in the process of updating its solid waste management plan.

Why Update the Solid Waste Management Plan?

The region is guided by its commitment to environmental stewardship and cost-effective and accessible waste management services, including the goals within the *Integrated Solid Waste and Resource Management Plan*, approved by the BC Minister of Environment and Climate Change Strategy in 2011. Metro Vancouver is updating this plan and is now seeking feedback to help shape how our region manages waste for the next decade.

Metro Vancouver's current solid waste management plan establishes goals and targets for waste reduction and the recovery of materials and energy from waste, and supporting strategies and actions for Metro Vancouver and its member jurisdictions.

Important themes for an updated plan will include reducing greenhouse gases and promoting a circular economy, which considers environmental, social, and economic factors.

The plan update process is expected to take two to three years and will be supported by robust Indigenous and public engagement. Metro Vancouver will engage audiences and gather feedback to support the plan update:

About Metro Vancouver

Metro Vancouver is a federation of 21 municipalities, one Electoral Area and one Treaty First Nation that collaboratively plans for and delivers regional-scale services in the greater Vancouver region of British Columbia. Core Metro Vancouver services include the provision of drinking water, wastewater treatment and solid waste management. Metro Vancouver also provides affordable housing, regulates air quality, plans for urban growth and manages a regional parks system.

Metro Vancouver services

Vision

Metro Vancouver embraces collaboration and innovation in providing sustainable regional services that contribute to a livable and resilient region and a healthy natural environment for current and future generations.

Mission

1. Serve as a Regional Federation
   Serve as the main political forum for discussion of significant community issues at the regional level and facilitate the collaboration of members in delivering the services best provided at the regional level.
2. Deliver Core Services
   Provide regional utility services related to drinking water, liquid waste and solid waste. Metro Vancouver also provides other core regional services including parks and affordable housing, and acts as the local government for Electoral Area A.
3. Plan for the Region
   Carry out planning and regulatory responsibilities related to the three utility services as well as air quality and climate change, regional planning, regional parks, affordable housing, labour relations, regional economic prosperity, and regional emergency management.

About Solid Waste Services

Metro Vancouver is responsible for planning for less waste, improving reuse and recycling systems as well as managing and disposing of the remaining waste generated by residents and businesses in the region. This reflects the public's expectations of high environmental stewardship, as well as the desire to keep waste management affordable.

The Vancouver Transfer Station and the Vancouver Landfill are owned and operated by the City of Vancouver and function as part of the overall regional solid waste system.

Solid Waste Management

The existing solid waste management plan, approved by the Province in 2011, focuses on reducing waste, improving reuse and recycling, recovering resources from garbage and disposing of remaining garbage in an environmentally sustainable manner. Metro Vancouver continually collects and reviews data on municipal solid waste – waste generated by residents, commercial/institutional sources, and construction and demolition activity – to track progress towards waste reduction and recycling goals. Metro Vancouver is updating its current solid waste management plan, building on the strengths of the current plan and identifying opportunities to accelerate waste reduction and diversion while reducing greenhouse gases and promoting a circular economy. We are actively engaging with governments – including First Nations – government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan.

Regional Solid Waste Facilities

Metro Vancouver operates six recycling and waste centres where residents and businesses drop off recyclable materials, yard trimmings and food waste, and garbage. After recycling, the remaining waste is disposed at the Metro Vancouver Waste-to-Energy Facility and the Vancouver Landfill, and any excess is disposed of at remote landfills.

Education and Outreach

Some of the waste that has to be managed can be prevented in the first place. Wise purchasing, repair and reuse of goods, and better access to recycling could lead to less waste going to disposal. Metro Vancouver works with local governments to develop educational materials and behavior change campaigns that encourage a change in our approach to generating waste.

Waste Reduction – Local and National

Our existing solid waste management plan includes a target of reducing the waste created per person by 10% compared to 2010. The 10% reduction in waste generation target has been achieved, but further reducing the amount of waste generated continues to be an important goal for the region. This means advocating for better product and packaging design as well as more selective purchasing by consumers and businesses. To bring about those changes we're engaging partners from across Canada through the National Zero Waste Council.

An Integrated Waste Management System

The solid waste management system in Metro Vancouver depends on the interconnected operations of many different organizations, including governments, the private sector, non-profit organizations and the public.

How do I fit in?

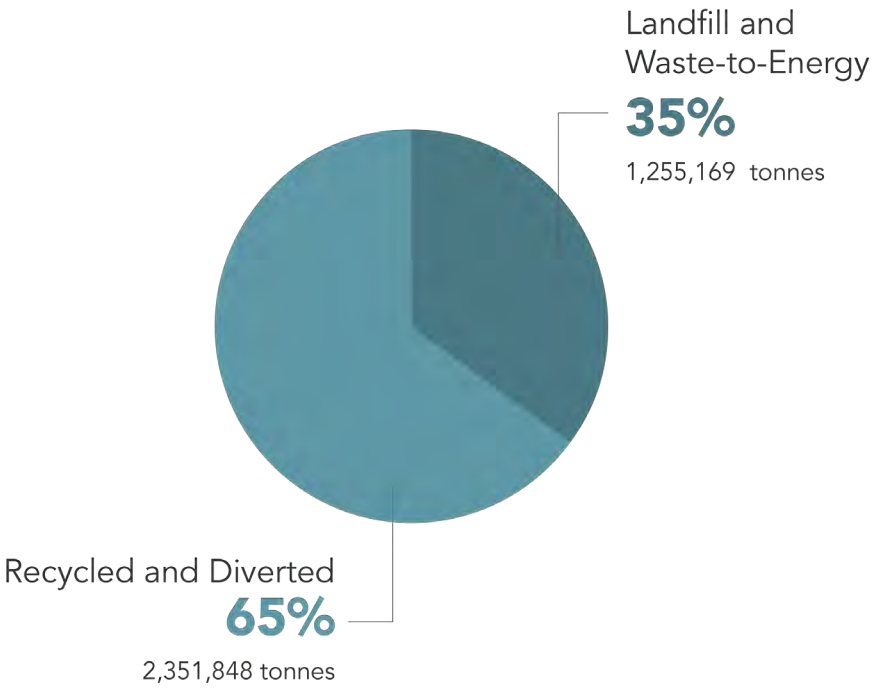
As individuals we can have a huge impact on how much waste is generated in the region. Our habits, such as shopping second hand, repairing and reusing, and putting our food scraps in the green bin have helped Metro Vancouver become a North American leader in waste reduction and recycling. At home, at work, and everywhere we go in between, the choices we make have a big impact on recycling and waste disposal in the region. We can use our voices to advocate for less wasteful practices and increased access to recycling services. Thanks to dedicated Metro Vancouver residents, grassroots movements such as saying no to single-use items have led to policy changes and less waste. Keep up the great work!

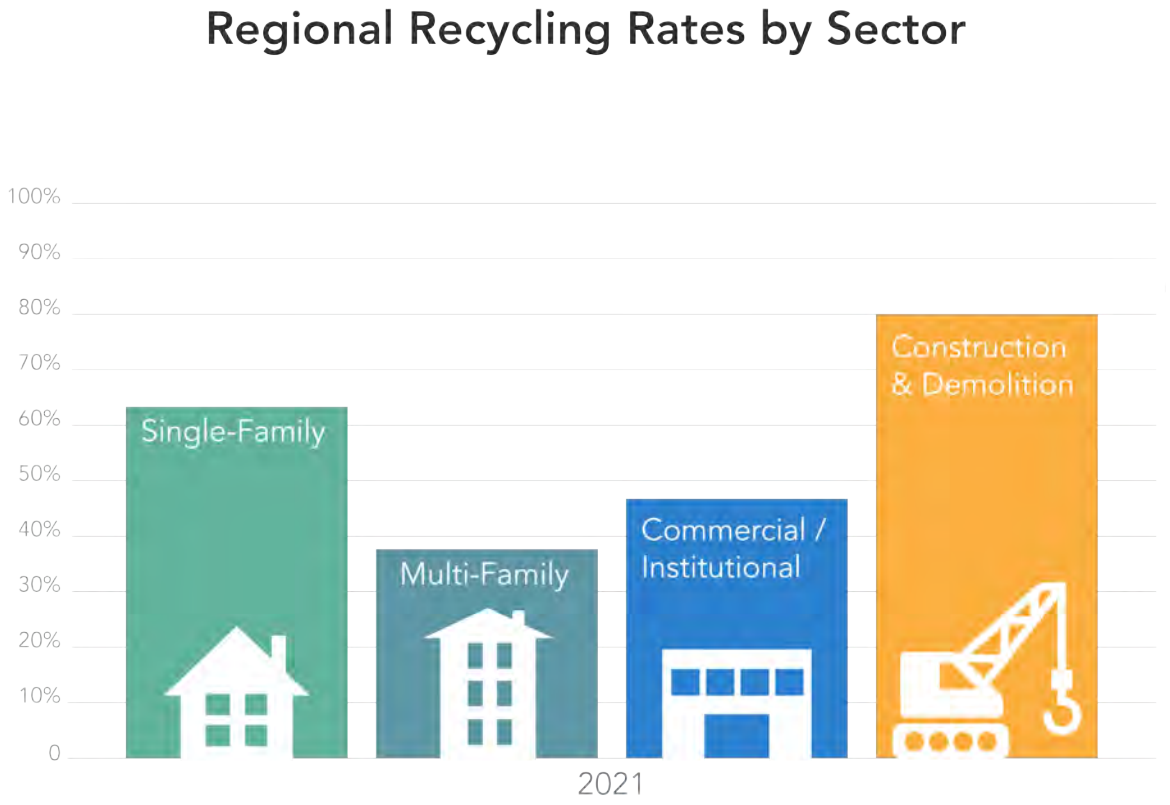
How We Are Doing Today

Recycling Rates

Metro Vancouver is a North American leader in waste reduction and recycling because of the committed local residents and businesses who work hard to recycle, policies supporting waste diversion, and a network of publicly and privately operated facilities to maximize recycling opportunities.

Based on 2021 data, 65% of the waste generated in the Metro Vancouver region is recycled (compared to a Canadian average of 26.5%) and the amount of waste generated has decreased by 11% per person since 2010. Even so, Metro Vancouver residents and businesses dispose of close to 1.25 million tonnes of garbage every year, an indication there is much work to be done. Metro Vancouver's annual solid waste and recycling report provides baseline information and data about how garbage and recycling is managed in Metro Vancouver. View the 2021 report here.





What We've Accomplished Together

A lot has changed over a decade. Together in Metro Vancouver, we've made great strides toward zero waste and are recognized as North American leaders in waste reduction and recycling. Here are some examples of accomplishments in the past decade, thanks to our dedicated residents, businesses, actions by non-profits and governments, progressive waste management policies, programs and regulatory framework:

The National Zero Waste Council, an initiative of Metro Vancouver formed in 2013, is leading Canada's transition to a circular economy by bringing together governments, businesses and NGOs to advance a waste prevention agenda that maximizes economic opportunities for the benefit of all Canadians. The Council acts collaboratively with business, government, and the community, at the national and international level, as an agent of change for waste prevention and reduction in the design, production and use of goods. The council's many initiatives and collaborations have been instrumental in opening a national dialogue on waste reduction, which has impacted not only our region, but the entire nation.

In 2014, Multi-Material BC (now Recycle BC) took over the management of residential packaging and printed paper in the province, which represents the bulk of material that residents recycle. As a result, a consistent province-wide recycling system for these materials is now in place, making it easier to collect, process, and make new products from these materials.

In 2015, food scraps were added to Metro Vancouver's already extensive list of items banned from disposal. This policy supported the organics processing industry in the region to transform food scraps and yard trimmings into compost or energy. This helped pave the way for municipalities to collect food scraps at the curb, and to switch to garbage collection every two weeks, thus effectively reducing the amount of garbage from single-family homes.

Metro Vancouver's many behavior change campaigns have helped educate residents on many zero waste initiatives, including tips for using the green bin ("Food Scraps Aren't Garbage" campaign), how simple habits can help reduce single-use items ("What's Your Superhabit" campaign), ways to make clothing last longer to reduce textile waste ("Think Thrice About Your Clothes" campaign), how to have a less wasteful holiday season ("Create Memories, Not Garbage" campaign) and many more.

Recycling services continued to expand at Metro Vancouver solid waste facilities, and the new United Boulevard and Central Surrey recycling and waste centres feature extended and convenient recycling opportunities for residents and businesses.

Where We Are Headed

Building off the progress of initiatives such as the organics disposal ban, Metro Vancouver strives to continually increase recycling and re-use opportunities in the region. Recent progress on waste reduction, re-use and repair initiatives, as well as investigation into renewable energy opportunities, indicate Metro Vancouver's response to industry trends and efforts to reduce greenhouse gas emissions through effective waste management.

- Waste Prevention Collaborations:
    - FoodMesh: Metro Vancouver contracted FoodMesh to develop a regional food recovery network to help rescue and redistribute surplus food, moving food up the waste hierarchy to feed animals and people.
    - Urban Repurpose: Metro Vancouver implemented 'ReUse Days' at recycling and waste centres working with Urban Repurpose, collecting items from customers that can be reused instead of recycled or disposed.
    - Ocean Ambassadors: Metro Vancouver is working with Ocean Ambassadors to expand their successful reusable container program on the North Shore, with the intention to encourage similar programs throughout the region.
- Renewable Energy:
    - Metro Vancouver is developing a district energy system to provide energy for heat and hot water to developments in Vancouver, Burnaby and potentially New Westminster. The project will provide heat and hot water for up to 30,000 homes and reduce greenhouse gas emissions by up to 45,000 tonnes per year.
    - Small load waste, consisting of materials brought to Metro Vancouver facilities by residents and contractors in hand-unloaded vehicles, has been identified as another target for future renewable energy initiatives, with the potential to reduce disposal by up to 120,000 tonnes per year through the recovery of recyclables and alternative fuel.
- Greenhouse Gas Reduction:
    - Metro Vancouver is exploring carbon capture and utilization opportunities to reduce emissions from regional solid waste facilities. Metro Vancouver will revisit opportunities to incorporate new technologies to minimize our carbon footprint

Your Opinion Counts

Metro Vancouver is committed to engaging audiences and governments who may be impacted by or have an interest in the review and update of the solid waste management plan, with additional emphasis on engaging underrepresented and equity-denied communities by reducing barriers to participation.

Pre-engagement was initiated in 2021 to find out how audiences wanted to be engaged in the process to update the regional solid waste management plan. Metro Vancouver established an Independent Consultation and Engagement Panel, consisting of third party engagement experts to guide the development and implementation of a robust and inclusive engagement process.

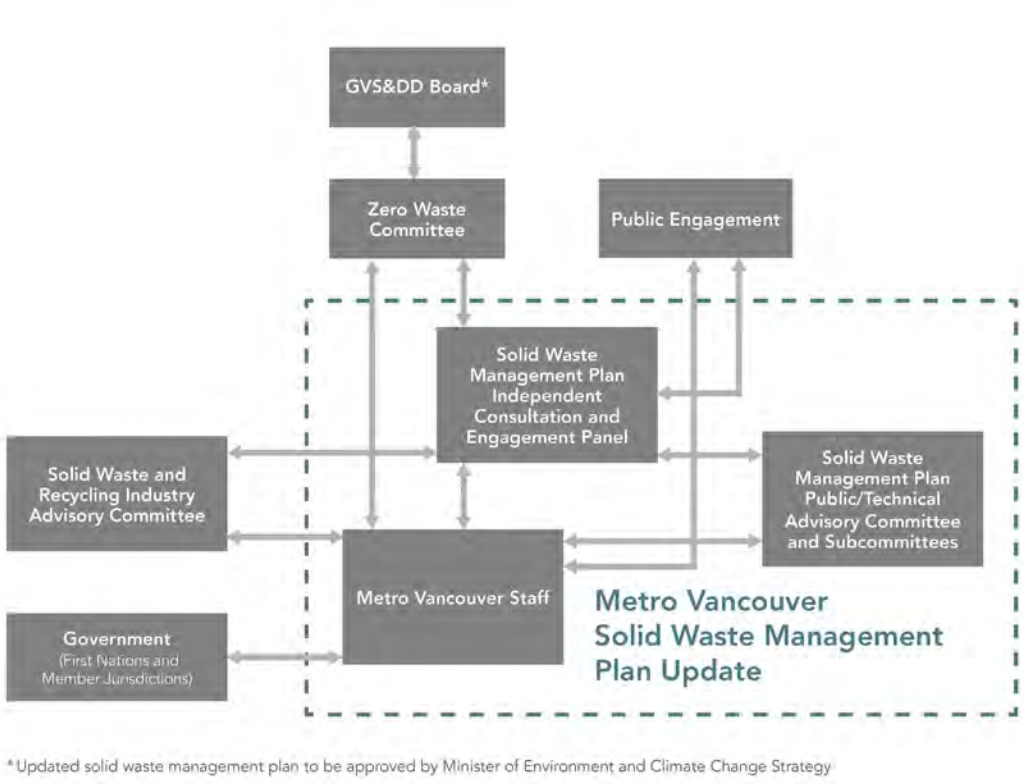
Audiences will be asked to provide feedback during all phases of engagement. Key examples include:

- **Government and regulatory agencies, including Indigenous Peoples**, provincial and federal governments, member jurisdictions, adjacent regional districts, crown corporations, airport and port authorities, and health authorities
- **Waste and recycling industry**, including haulers, processors, producer responsibility organizations, disposal facilities, waste/recycling industry associations, binner community, and reuse/repair organizations
- **Waste producers**, including various sectors such as food service, grocery, construction, tourism, office and property management, real estate, retail, residents, and educational institutions
- **Industry and business associations**, professional associations and academic institutions
- **Community, environmental and non-profit groups**, NGOs, youth and students, and urban Indigenous Peoples
- **Metro Vancouver residents**

In 2022, Metro Vancouver convened two advisory committees that will be heavily involved in providing feedback on the plan update throughout the phases of engagement:

- Public/Technical Advisory Committee – members represent a diversity of sectors and interests, who bring various personal qualities, perspectives and experiences to solid waste and recycling issues. Learn more.
- Solid Waste and Recycling Industry Advisory Committee – members represent private waste and recycling collection and processing companies, and their industry associations. Learn more.

Feedback from these two advisory committees along with input from member staff advisory committees, public engagement efforts, and the Indigenous engagement process, will help shape the updated solid waste management plan over the next 2-3 years.



Technical Studies and Planning

Metro Vancouver is also undertaking technical studies that will support engagement on the solid waste management plan update. The studies inspire idea generation and guide the analysis of options to accelerate waste reduction and diversion while reducing greenhouse gases and promoting a circular economy.

The studies will provide information on:

- how various future scenarios could affect the Metro Vancouver solid waste system
- current challenges and opportunities
- global best practices, and new research and technologies
- financial, social and environmental impacts of various future options/scenarios, and
- performance metrics.

Information from the technical studies will be shared as background information during engagement to help participants discuss ideas, compare options and support actions that could be included in the updated plan.

Circular Economy and 3Rs Study

This study introduces the circular economy and highlights opportunities for our region through local and global examples with the potential to reduce waste and address climate change, equity, community cohesion, regional prosperity, ecological health, and air quality.

Solid Waste System Assessment Study

The study assesses the current regional solid waste system by profiling existing programs and facilities, highlighting best practices, and modeling different facility scenarios to forecast future demands and improvements.

Residual Disposal Management Options Review

This study will review options to manage garbage and investigate innovative approaches to managing residual materials.

Solid Waste Management Plan Literature Review

This study will review solid waste management plans from other leading jurisdictions globally and summarize leading initiatives and best management practices.

Solid waste management plan update – planning inputs

Next Steps

Metro Vancouver looks forward to collaborating with you in the coming years to develop and implement a solid waste management plan that reflects your values, priorities and interests. This can be achieved through rigorous technical research and a robust engagement process involving governments – including First Nations – government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents.

At each phase of engagement on the solid waste management plan, an accompanying Discussion Guide will present themes and issues for consideration, and provide prompting questions for discussion, reflection and feedback. Information and resources related to the current phase of engagement can be found on the Metro Vancouver website (visit metrovancouver.org and search 'solid waste management plan engagement').

We hope that through this process we can accelerate waste reduction and diversion, reduce greenhouse gases, promote a circular economy, and build new goals to advance towards. **Together we make our region strong.**

Metro Vancouver Solid Waste Management Plan Update

Vision and Guiding Principles

DISCUSSION GUIDE
March 2023

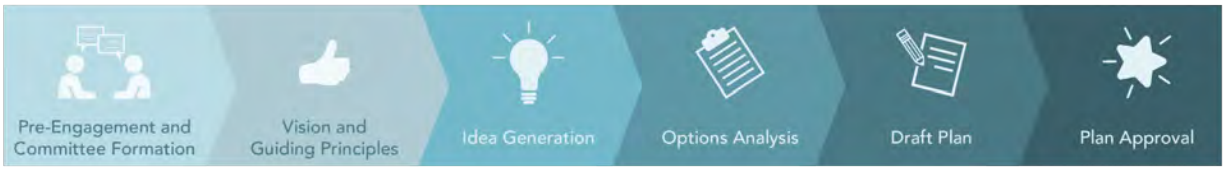
Prepared By:
Solid Waste Services

1.0 INTRODUCTION

Metro Vancouver is updating its solid waste management plan, building on the strengths of the current plan, and identifying opportunities for accelerated waste reduction and diversion, while reducing greenhouse gases and promoting a circular economy, where products are kept at their highest value. The plan update process will be supported by robust Indigenous and public engagement.

In 2021, Metro Vancouver conducted pre-engagement to learn how audiences would like to engage with Metro Vancouver on the solid waste management plan update. An Engagement Plan was developed, incorporating feedback received from 350 individuals through a questionnaire, written responses, meetings, and presentations, and considering input from a panel of engagement experts. In 2022, Metro Vancouver convened two key advisory committees – the Solid Waste Industry Advisory Committee and the Solid Waste Management Plan Public/Technical Advisory Committee – to provide ongoing advice and support.

This discussion guide focuses on the **vision and guiding principles** for the updated solid waste management plan, which will set the overall plan direction before the next phase, Idea Generation.



This document describes what a vision statement and guiding principles could entail, draws inspiration from existing vision statements and guiding principles from Metro Vancouver, the provincial government, and leading jurisdictions around the world, and seeks feedback through discussion questions.

Vision

A succinct narrative that describes the desired future

"Where are we headed?"

"What do we want the future to look like?"

Guiding Principles

A list of values that guides decision-making and determine how the work is approached

"What do we need to consider as we develop the plan?"

"What should all strategies and actions take into account?"

2.0 ENGAGEMENT ON VISION AND GUIDING PRINCIPLES

The vision and guiding principles will set the plan foundation and direction, and reflect fundamental values that guide plan development and implementation.

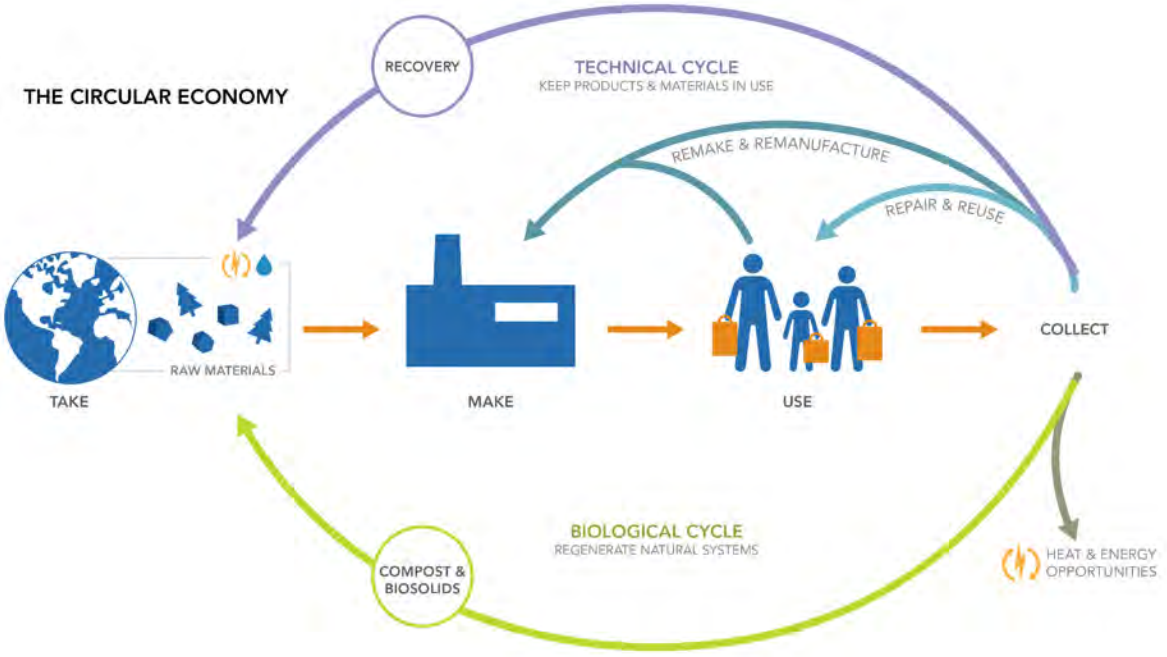
Metro Vancouver is actively engaging with governments – including First Nations and member jurisdictions – government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan. Engagement feedback will be used to help develop the vision and guiding principles for the updated plan, setting the direction and building the foundation as we enter into the next phase of engagement: Idea Generation.

3.0 SOLID WASTE MANAGEMENT IN METRO VANCOUVER

Metro Vancouver is a North American leader in waste reduction and recycling. Metro Vancouver's solid waste facilities, programs, and policies are known throughout the industry and our 65% recycling rate is among the highest in North America. So where do we go next?

Metro Vancouver's vision and guiding principles for managing solid waste should take into account the vision and principles of the region as a whole, as well as those of the province and of leading jurisdictions around the world. The BC Ministry of Environment and Climate Change Strategy's *A Guide to Solid Waste Management Planning* provides eight provincial principles for solid waste management. Additional guiding principles for the Metro Vancouver solid waste management plan will be developed through this phase of the plan update process.

In addition to waste reduction and diversion, important themes for the updated plan will include reducing greenhouse gases and promoting a circular economy, which considers environmental, social, and economic factors. A circular economy framework is critical to reducing waste and greenhouse gas emissions. A circular economy framework also aligns with the provincial waste management 5Rs hierarchy. In a circular economy the value of products is retained after their initial use through rethink, reduce, reuse, repair, and remanufacture. Keeping products functioning at their highest potential reduces embodied emissions and reduces emissions associated with waste management. Transitioning to a circular economy will gradually decouple economic activity from the consumption of finite resources by designing waste out of the system and helping to regenerate natural systems.



4.0 WHAT IS A VISION STATEMENT?

A vision statement answers the questions "Where are we headed?" and "What do we want the future to look like?" It is a short statement that describes the desired future in relation to the scope of the plan, or a shared understanding of the desired future state or success.

A vision looks to the future and must consider the future context, including but not limited to solid waste management. Themes might include regional growth, affordability, climate change, reconciliation, equity, stewardship, innovation, and resilience, and account for changes that should be expected in the coming years.

5.0 WHAT ARE GUIDING PRINCIPLES?

Guiding Principles outline the values that guide decision making and determine how the work is approached. Guiding principles describe the fundamental values that guide plan development and implementation and can be used to help evaluate goals, strategies, and/or actions.

The Metro Vancouver Board's cross-cutting themes include principles of regional growth, regulation and legislation, affordability, reconciliation and equity, climate action/resilience, and system stewardship. Guiding principles can also be adapted into short phrases rather than individual words, such as "Provide for ongoing prosperity" (Integrated Solid Waste and Resource Management Plan) or "Promote zero waste approaches and support a circular economy" (BC Ministry of Environment and Climate Change Strategy).

6.0 EXISTING SOLID WASTE MANAGEMENT PLAN

The Integrated Solid Waste and Resource Management Plan, approved by the Province in 2011, sets out Metro Vancouver's existing waste management and recycling goals and targets. An updated plan will build upon the successes of the current plan, adapting it for the challenges we face today and utilizing the most up-to-date solutions.

6.1. Vision statement: current solid waste management plan

The following is an excerpt from the 2011 approved *Integrated Solid Waste and Resource Management Plan*'s Vision Statement, which adopted the regional vision at the time:

"Metro Vancouver has a vision to achieve what humanity aspires to on a global basis – the highest quality of life embracing cultural vitality, economic prosperity, social justice and compassion, all nurtured by a beautiful and healthy natural environment"

"Building a sustainable, livable region is the overarching regional vision."

6.2. Guiding principles: current solid waste management plan

The *Integrated Solid Waste and Resource Management Plan* follows the sustainability principles set out in Metro Vancouver's Sustainability Framework, the principles of Integrated Resource Recovery and the 5R hierarchy of resource management (reduce, reuse, recycle, recover energy or materials, and dispose of residuals).

- Sustainability
    - Having regard for both local and global consequences, and long-term impacts
    - Recognizing and reflecting the interconnectedness and interdependence of systems
    - Being collaborative
    - Protecting and enhancing the natural environment
    - Providing for ongoing prosperity
    - Building community capacity and social cohesion
- Integrated Resource Recovery
    - Enabling the 'wastes' from one system to become 'resources' for another
- Resource Management Principles: The 5Rs
    - Reducing waste at source
    - Reusing where possible
    - Recycling products at the end of their useful life
    - Recovering energy or materials from the waste stream
    - Managing Residuals in an environmentally sound manner

- Public Health Principles
    - Investing in upstream preventative solutions as opposed to downstream problem management
    - Fairness and equity
    - Transparency
- Process and Consultation
    - Consulting and cooperating with municipalities, senior government, First Nations, health authorities, the business community, and the public
- Aligning with Provincial Initiatives
    - Ensuring environmental and fiscal objectives are mutually supportive and successful
- Aligning with Federal Initiatives
    - Supporting principles of and including actions to accelerate Extended Producer Responsibility (EPR), aligning with the Canadian Council of Ministers of the Environment (CCME) waste management approach

7.0 OTHER METRO VANCOUVER MANAGEMENT PLANS AND OTHER LEADING JURISDICTIONS

Below are examples of vision statements and guiding principles found in other Metro Vancouver plans.

Plan	Vision Statement	Guiding Principles
Integrated Liquid Waste and Resource Management Plan (update ongoing)	*Healthy Waters: For All. Forever.*	1. Innovate, strive for value and cost effectiveness, be resilient and adaptive to climate change 2. Collaborate closely with a range of organizations to achieve outcomes that are beneficial for all, share data on how we are doing openly and transparently, and align with other initiatives taking place in the region 3. Integrate equity throughout, including fairness and justice, to address any barriers that may keep people from accessing wastewater services 4. Minimize greenhouse gas emissions and contributions of pollutants to the environment, including the ocean and our local rivers and streams

Clean Air Plan	*Metro Vancouver is a carbon neutral region where residents experience healthy, clean and clear air.*	1. Ambitious 2. Evidence-based 3. Equitable 4. Inclusive & Collaborative 5. Preventative 6. Continuous Improvement 7. Prioritize Co-benefits (improve air quality and educe greenhouse gas emissions) 8. Dynamic 9. Transparent 10. Comprehensive & Integrated
Metro Vancouver Board Strategic Plan*	*Metro Vancouver embraces collaboration and innovation in providing sustainable regional services that contribute to a livable and resilient region and a healthy natural environment for current and future generations.*	Metro Vancouver Board Strategic Plan Cross-Cutting Themes: 1. Regional Growth 2. Regulation & Legislation 3. Affordability 4. Reconciliation & Equity 5. Climate Action/Resilience *6.* System Stewardship

**To be updated in 2023*

A literature review of vision statements and guiding principles in solid waste management plans from other leading jurisdictions revealed several common themes:

- Social, environmental and economic sustainability
- Waste reduction
- Waste management hierarchy
- Recovery and reuse
- Collaboration at all levels
- Social justice, equity and accessibility

8.0 PROVINCIAL GUIDING PRINCIPLES

Under the *BC Environmental Management Act*, regional districts are required to develop a solid waste management plan for approval by the Minister of Environment and Climate Change Strategy. The BC Ministry of Environment and Climate Change Strategy's *A Guide to Solid Waste Management Planning* provides eight provincial principles for solid waste management. Engagement will help to inform additional guiding principles, with a focus on areas that are specific to our local region.

The provincial guiding principles are as follows:

1. Promote zero waste approaches and support a circular economy
2. Promote the first 3Rs (Reduce, Reuse and Recycle)
3. Maximize beneficial use of waste materials and manage residuals appropriately
4. Support polluter and user-pay approaches and manage incentives to maximize behaviour outcomes
5. Prevent organics and recyclables from going into the garbage wherever practical
6. Collaborate with other regional districts wherever practical
7. Develop collaborative partnerships with interested parties to achieve regional targets set in plans
8. Level the playing field within regions for private and public solid waste management facilities

9.0 DISCUSSION QUESTIONS

Metro Vancouver is engaging audiences on the creation of **vision and guiding principles** for the updated solid waste management plan, which will set the overall plan direction. A vision describes what we want the future to look like, while guiding principles describe the fundamental values behind the updated plan. To help develop a vision and guiding principles that are reflective of the goals and values of Metro Vancouver residents, the questions below prompt discussion to help us understand what matters to you, and what your hopes are for the future.

Q1 What waste reduction, recycling and garbage disposal topics are most important to you, now and into the future?

Q2 List words or phrases that describe what matters to you, when you decide what to do with products, packaging and materials you no longer need.

Q3 The updated solid waste management plan is intended to reflect the values of everyone in the region. What values, interests, and priorities can be considered?

Q4 Thinking of how we purchase, use, reuse, repurpose, recycle and throw things away in the Metro Vancouver region, what could be better in the future than it is today?

Vision and Guiding Principles Workshop

October 24, 2023

Solid Waste Management Plan Update

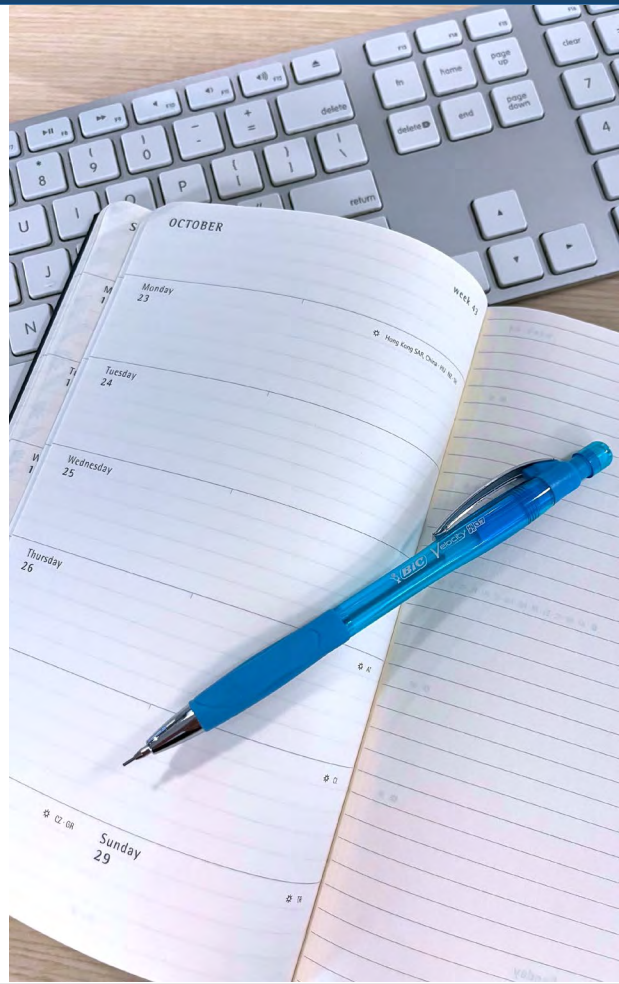
Opening Remarks

COMMUNITY WORKSHOP GUIDELINES

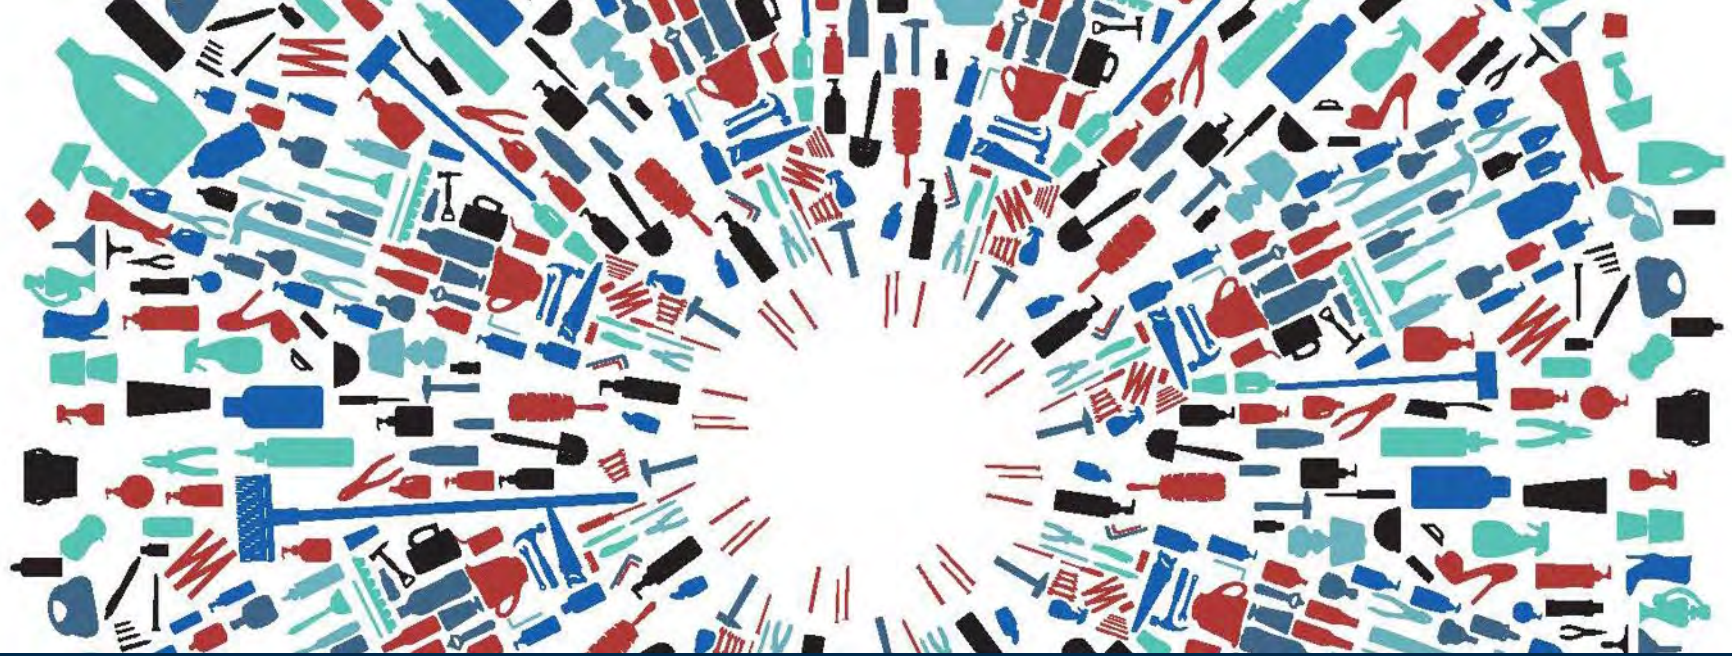
- ✓ All perspectives are welcome.
- ✓ There are no right or wrong ideas or insights.
- ✓ We will balance airtime ensuring we hear from everyone.
- ✓ Please engage as you'd like and feel free to pass and we will come back to you
- ✓ We don't need to agree… in fact we welcome different perspectives.
- ✓ *Anything else that is important to you for our time together?*

COMMUNITY WORKSHOP AGENDA

1. Introductions
2. Vision and guiding principles project overview
3. Group discussion and feedback
4. Next steps and closing remarks



Introductions



Circular economy

Solid Waste Management Plan Update

Metro Vancouver Solid Waste Services Overview

OVERVIEW

Paul Henderson, P.Eng

General Manager, Solid Waste Services

Community Workshop, October 24, 2023

metrovancouver

Public Consultation and Engagement Summary Report | 2816

TOGETHER
WE MAKE OUR REGION
STRONG

metrovancouver

23 Member Jurisdictions

2.8 Million Residents

53% of BC population

METRO VANCOUVER SERVICES

Metro Vancouver plans for and delivers regional public and utility services.
It is a regional federation of 21 municipalities, Tsawwassen First Nation, and Electoral Area A.

MANAGEMENT PLANS

GUIDING POLICY & TARGETS

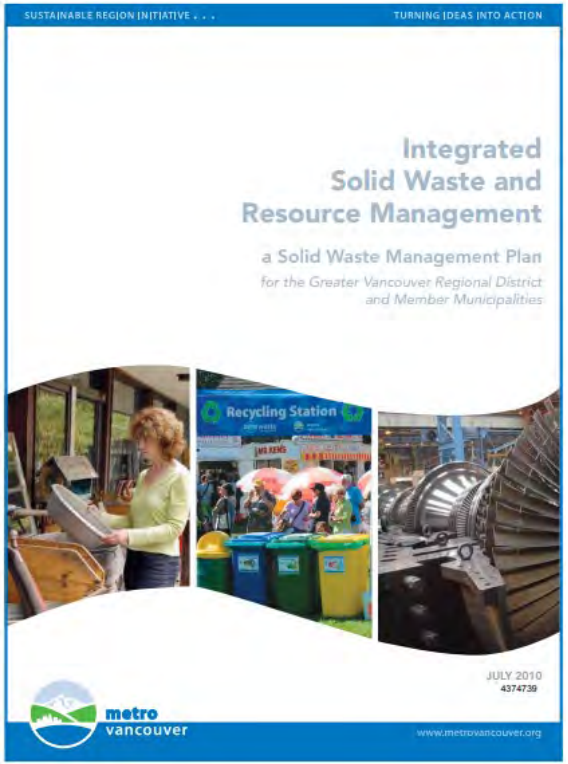
2011 Solid Waste Management Plan

Goal: 10% Reduction Waste Generation (Achieved 11%)

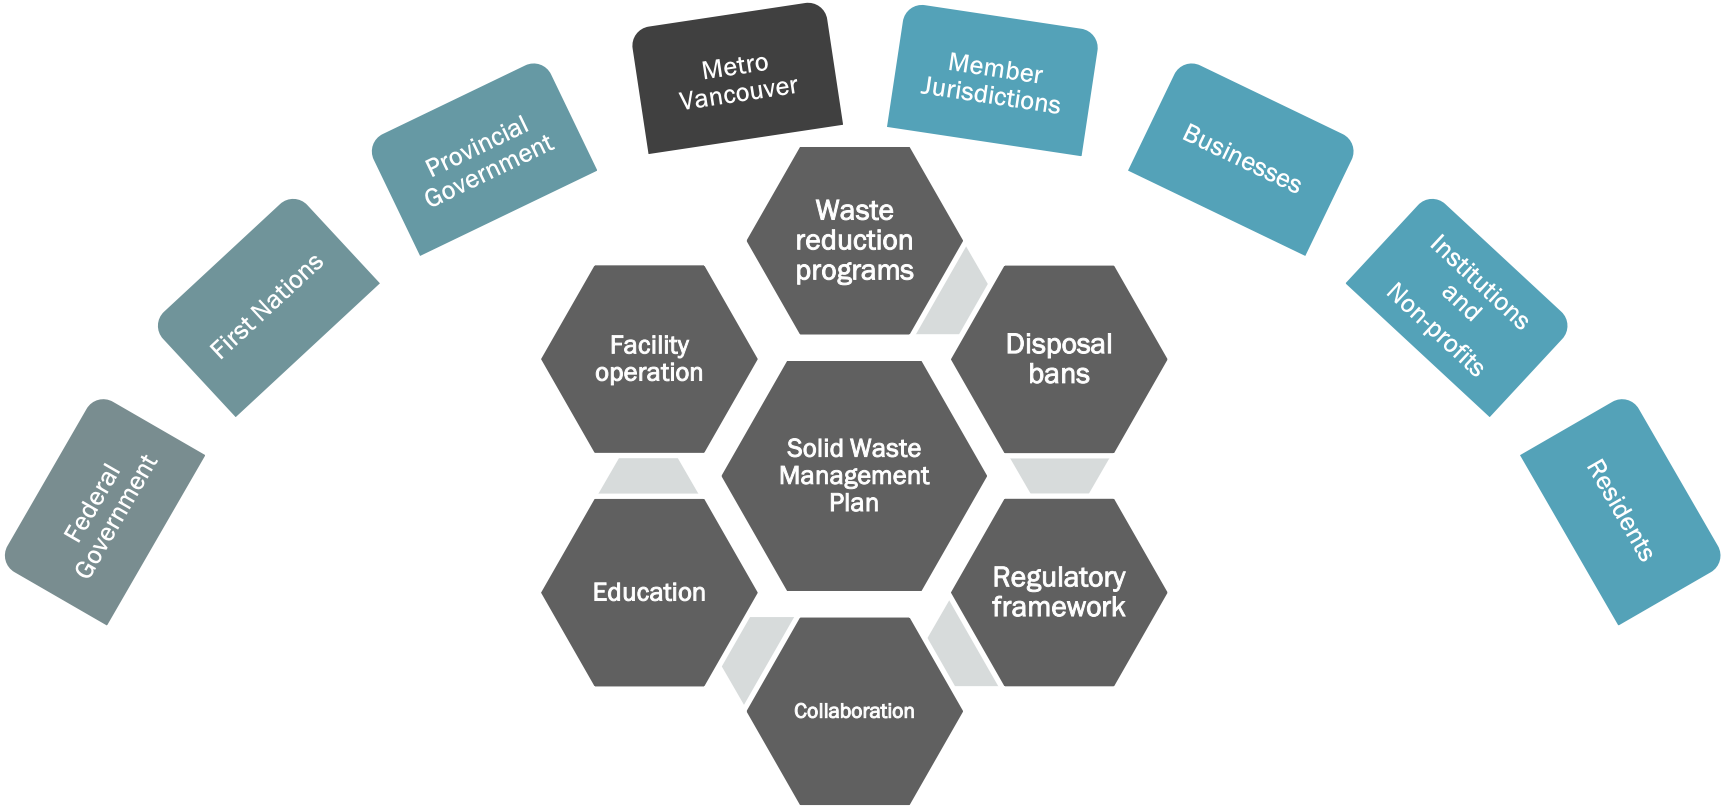
Generation = Recycled + Disposed

Goal: 80% Recycling Rate (Achieved 65%)

Recycling Rate = Recycled / Generated



INTEGRATED SOLID WASTE SYSTEM



PROJECT OVERVIEW:

ABOUT THE SOLID WASTE MANAGEMENT PLAN

The solid waste management plan will guide the solid waste strategies and actions, targets and priorities for the future.

The new plan will identify how our region can continue to:

- ✓ Reduce waste
- ✓ Increase reuse and recycling
- ✓ Reduce greenhouse gas emissions
- ✓ Support a circular economy

PROJECT OVERVIEW:
WHY THE SOLID WASTE MANAGEMENT PLAN MATTERS

Metro Vancouver is a North American leader in waste reduction / recycling:

- 65% recycling rate – twice the Canadian average
- Striving for zero waste, greenhouse gas emission reduction, and a circular economy

The updated plan will direct key future actions and initiatives.

METRO VANCOUVER BOARD STRATEGIC PLAN

Strategic priorities and principles that guide our work

ENGAGEMENT FEEDBACK

First Nations | **Member Jurisdictions** | **Waste/Recycling Industry** | **Businesses** | **Institutions** | **Non-Profits** | **Residents**

Engagement will help guide updates to the solid waste management plan

COLLABORATIVE ENGAGEMENT

- Offering funding for organizations to engage on Metro Vancouver's behalf
- Not-for-profit organizations with interest in solid waste management
- Providing up to $5,000 to cover the cost of community outreach and engagement activities
- Email zerowaste@metrovancouver.org if interested

WHERE ARE WE AT NOW?

Seeking feedback on the fundamental values, vision and guiding principles that will guide the plan development and implementation.

EMERGING THEMES FROM EARLY ENGAGEMENT

- Accountability and transparency for producers and consumers to reduce waste
- Affordability and accessibility of recycling and waste disposal options
- Circular economy – reuse, repair, and refurbish
- Convenience and consistency for waste and recycling services
- Environmental stewardship – protection of natural spaces
- Climate resilience – investing in systems with low climate impact
- Equity and societal improvements – all groups have access to information, education and services
- Education and behaviour change
- Incentives for recycling and waste reduction – for businesses and individuals
- Product design and innovation – designing products to be more circular and regenerative

WHAT'S MISSING, WHAT ELSE?

Help fill in the gaps by completing the following:

When you think well into the future, what guiding principles are being prioritized for Metro Vancouver to continue to be a leader in solid waste management?

INDIVIDUAL CLOSING STATEMENT

When thinking about a vision and guiding principles for solid waste management in Metro Vancouver, the overall most important thing for me is…

NEXT STEPS

Vision and guiding principles engagement

- Questionnaire is open until November 10, 2023
- Community events across Metro Vancouver (September/October 2023)
- Speak with the Independent Consultation and Engagement Panel (December 1)
- Collaborative engagement opportunity for not-for-profit organizations

Use QR code to take the questionnaire and sign up for project updates

FEEDBACK

- ❑ We are committed to continuously improving how we engage.
- ❑ We would appreciate you taking a short 3-minute survey to provide feedback on the workshop.
- ❑ Paper copies are available.
- ❑ Please email additional feedback to zerowaste@metrovancouver.org

Thank you for your participation and engagement!

metrovancouver

What actions can build on our success to rethink and prevent waste in the first place?

How can waste reduction fight climate change? Everyday items like coffee cups require energy, water, and materials to make. By switching to reusable items and repairing instead of replacing, we can lower our carbon footprint and reduce waste. Win-win!

Waste Prevention and Reduction

How are we doing?

Our region has reduced the amount of waste generated by 11% since 2011	Approximately 78,500 tonnes of material were reused in Metro Vancouver in 2022	Per person waste disposal has decreased by 23% since 2011	Metro Vancouver helped fund 19 repair café events in 2023

Promotion and Education

Waste reduction campaigns:

- "**Create Memories Not Garbage**" for holiday waste
- "**Think Thrice**" for textiles
- "**What's your Superhabit?**" for single-use items

Construction and Demolition Reduction and Recycling Toolkit

- Includes opportunities to prevent waste from construction and demolition sites

Reuse education for businesses

- In partnership with **Ocean Ambassadors Canada**

Metro Vancouver Recycles database

- Includes reuse locations

Advocacy

National Zero Waste Council

- Takes action to prevent waste Canada-wide

Canada Plastics Pact

- Explores plastic waste reduction

Canadian Circular Textiles Consortium

- Works to keep textiles out of the garbage

Provincial and Federal Single-Use Item Regulations

- Informed by conversations with Metro Vancouver and member jurisdictions

Programs and Pilots

Regional Food Recovery Network

- Rescues food before it goes to waste

Temporary storage of homes at a former Metro Vancouver landfill

- Allows homes to be moved rather than demolished

Repair café funding

- Helps residents to repair broken items.

Reuse days

- Stops reusable items from being disposed

What actions can build on our success to enhance accountability for eliminating waste?

Enhancing Accountability

How are we doing?

18 stewardship agencies reported recycling a total of 237,731 tonnes in 2022 across our region.

Recycle BC assumed responsibility for packaging and paper products recycling from single and multifamily homes in 2014, a huge step forward for producer accountability!

17 of Metro Vancouver's 22 member jurisdictions collect garbage every other week, providing incentive for residents to throw less away.

The list of items that producers are responsible for continues to grow, with single-use items and party supplies recently added.

Individual Accountability

Free or low cost recycling drop off

- Helps provide a cost incentive to recycle

Smaller bin sizes

- Are offered by many municipalities for a lower fee than larger options

Education and awareness campaigns

- Help highlight the benefits of waste reduction and recycling and provide examples to residents of actions they can take

Producer Accountability

Extended Producer Responsibility in BC

- Many producers are responsible for recycling their products and packaging. For example:
  - **Beverage containers**
  - **Electronics**
  - **Batteries**
  - **Packaging**
  - **Paper Products**
  - **Paint**
  - **Pharmaceuticals**
  - **Tires**
  - **Used oil and antifreeze**
  - Appliances (**small** and **large**)

Research and Advocacy

Metro Vancouver researches and provides input on new regulations, including:

- **Expanding the types of materials that are the responsibility of producers**
- **Expanding accountability beyond just residential products and packaging**
- **Shifting accountability from municipalities to producers for recycling collection in public spaces**
- **Reducing additives that make materials challenging to recycle**

What actions can build on our success to leverage knowledge and expertise through collaboration?

Collaboration and Innovation

How are we doing?

National Partners

National Zero Waste Council
- Takes action to prevent waste Canada-wide

Love Food Hate Waste Canada
- Focuses on reducing wasted food

Canada Plastics Pact
- Works to eliminate problematic plastics

Canadian Circular Textiles Consortium
- Calls for action to reduce the impact of the apparel industry

Circular Economy Leadership Coalition
- Fosters collaboration on circular economy issues

Circular Innovation Council
- Puts circular economy concepts into action

Local Partnerships

Reuse Days
- Opportunities to drop off reusable items in partnership with at regional solid waste facilities

FoodMesh Regional Food Recovery Network
- Rescues surplus food before it goes to waste

City Farmer Regional Compost Hotline
- Provides information on composting for residents

Metro Vancouver Recycles
- Powered by the Recycling Council of British Columbia

Ocean Ambassadors Canada
- Provides education resources to businesses to increase reuse

Solid Waste and Recycling Industry Advisory Committee
- Supports Metro Vancouver in management planning, operations and policy

Solid Waste Management Plan Public and Technical Advisory Committee
- Represents multiple interests and provides input on the solid waste management plan update

Innovation

Waste-to-Energy District Energy Project
- Will provide heat and hot water for up to 50,000 homes

Interactive Wayfinding
- Helps residents navigate new recycling and waste centres

Artificial Intelligence Research Project:
- Examines the practicality of artificial intelligence sensors in waste bins

State-of-the-art Recycling and Waste Centres
- Making it easier than ever for residents to drop off reusables and recyclables

Construction Waste Pilot
- Explored the possibility of making new products from discarded wood

UBC Sustainability Scholars Program
- Facilitates waste reduction and recycling research

There are many contributors to the solid waste system in our region:

What actions can build on our success to increase participation and reduce contamination in organics and recycling programs?

Composting food scraps is an easy way to have a big impact in our region.
By using their green bins, Metro Vancouverites have:

- Saved 400,000 tonnes of food scraps from the garbage in 2021.
- Prevented 160,000 tonnes of greenhouse gases in 2021 – comparable to taking 50,000 cars off the road.

Recycling and Composting

How are we doing?

Garbage Composition (2022)

- **27%** construction and demolition waste
- **25%** compostable organics
- **19%** recyclables
- **5%** textiles
- **3%** single use items
- **20%** materials with limited recycling options

Recycling Rate (2022)

- Multi-family: **36%**
- Single-family: **64%**
- Commercial/ Institutional: **48%**
- Construction & Demolition: **80%**

Progress

- Compostable organics disposed with garbage have decreased from **35%** in 2011 to **23%** in 2023.
- Recycling rate has increased from **57%** in 2011 to **65%** in 2023

Organics

Organics Disposal Ban

- Encourages food scraps and yard trimmings to be composted

Every-other-week Garbage Collection

- Provides an incentive for residents to use their green bin

City Farmer

- Provides resources and subsidized backyard composters for all residents

Municipal and Private Organics Management Facilities

- Process our organic material into usable end products

Recyclables

RecycleBC

- Has helped create a consistent province wide system for residential recycling of packaging and printed paper

What can be recycled

- Continues to grow with the help of organizations such as RecycleBC

Recycling and Waste Centres

- Continue to offer opportunities to drop off more types of items, with recycling depots planned in North Surrey and Langley

Reducing Contamination

What goes where?

- Municipalities have programs in place to educate residents about what belongs in their green bins and recycling containers
  - The Recycling Council of BC allows residents to **call to ask questions** about where to recycle specific items

Pastics labelled compostable

- Are considered garbage in most municipalities

"Food Scraps Aren't Garbage" Campaign

- provides residents with tips on proper green bin usage

What actions can build on our success to promote confidence in recycling systems?

Promoting Confidence in Recycling Systems

How are we doing?

Metro Vancouver tracks recycling tonnage for 15 commodities	Detailed solid waste statistics are available in annual reports on Metro Vancouver's webpage. Additional years back to 2010 available upon request.	In a recycling rate review, only 2 out of 11 jurisdictions reviewed measure and report on as many material types as Metro Vancouver	Detailed methodology for how Metro Vancouver calculates the regional recycling rate is provided in each year's annual solid waste and recycling report.

Measurement

Metro Vancouver measures:

- Tonnes recyclable and reusable material collected by material type and by facility
- Tonnes of recyclable material remaining in the garbage through waste composition studies

Metro Vancouver collects data from others on:

- Overall tonnes managed by private facilities, by commodity type
- Tonnes managed by extended producer responsibility organizations, by material type
- Recycling rates for construction and demolition facilities

Reporting

Annual reports
Includes: Total tonnage by material type, overall and sector specific recycling rates, calculation methodology

Biennial reports
Includes: Summary of waste strategies, performance measures, and progress toward goals

Metro Vancouver Solid Waste System Factsheets
Includes: Detailed information by for each Metro Vancouver solid waste facility

Waste Composition Studies
Includes: Tonnage of materials remaining in the garbage

Performance Monitoring Dashboard
Includes: Overview of recycling rate and tonnes disposed

Education

- Product stewards provide resources on their webpage showing **what happens to recycling**
- Recycling Council of BC operates a **hotline** where residents can ask where to recycle items
- Residents can call **City Farmer** to ask questions about managing organic materials
- Questions can be directed to **Metro Vancouver's infocentre**
- Metro Vancouver publishes a **map of solid waste facilities** around the region

What actions can build on our success to help us expand inclusive programs and services?

Inclusive Programs and Services

How are we doing?

Accessibility

- Information on Metro Vancouver's website is available in over 130 languages
- A 2022 system review concluded that 98% of the regional population has maximum 30 minute drive times to access regional recycling and waste centres
- 12 municipalities provide bulky item collection

Engagement

- Metro Vancouver Initiated a successful collaborative engagement process to work with non-profit organizations and connect with underrepresented and equity-denied groups who otherwise may not be aware of or have access to opportunities to provide input to Metro Vancouver

Resources and Infrastructure

Providing information

- Online search tools provided by the Recycling Council of BC help provide recycling information
- **Metrovancouver.org** can be translated into over 130 languages

Improving access to recycling services

- Since 2011, the region's **solid waste system** has expanded to include many new regional and municipal facilities
- Free recycling drop-off service at Metro Vancouver recycling and waste centres

Programs and Campaigns

"Food Scraps Aren't Garbage" Campaign

- Addresses specific barriers for multi-family residents.

Binners' Project Coffee Cup Revolution

- Highlights the importance of the binners community in the solid waste system

Solid waste management plan update collaborative engagement initiative

- Provides funding for not-for-profit organizations, including those representing underrepresented or equity-denied communities

Strategic Plans

Metro Vancouver's accessibility plan

- Intends to break down barriers and become a more accessible and inclusive region

Metro 2050 Regional Growth Strategy

- Intends to support the creation of complete, connected, and resilient communities

What actions can build on our success to plan for future infrastructure and systems for waste management across the region?

Infrastructure and Systems

How are we doing?

Regional Solid Waste Facilities

- Recycling and waste centres
- Waste-to-energy facility
- Landfill
- Municipal recycling depots funded in part by Metro Vancouver

Private Facilities

- Recycling brokers
- Organics management facilities
- Construction & demolition facilities
- Private landfill

Resources and Infrastructure

Recycling and Waste Centres

- A series of recycling and waste centres where residents and businesses drop off garbage, yard trimmings and other recyclables, and materials for reuse

Member Jurisdiction Facilities

- **The Vancouver Landfill and Vancouver South Transfer Station/ Zero Waste Centre** also offer recycling and waste disposal services
- Five municipalities operate their own recycling depots funded in part by Metro Vancouver

Private Facilities

- Metro Vancouver licenses private facilities which manage various materials
- Other private businesses that manage materials such as concrete textiles, and scrap metal
- Non-profit organizations and industry organizations manage reuse networks and facilities.

Disposal

- Garbage is disposed at the Vancouver Landfill, the Waste-to-Energy facility, or private landfills for excess garbage

Programs and Campaigns

Reuse

- Household items for reuse are generally managed by non-profits, thrift stores and donation bins for textiles and books

Collection

- Single-family homes: Municipalities provide curbside collection of garbage, recycling, and organics
- Apartments and Businesses: Provided by the private sector or municipality

Recycling

- Private or non-profit organizations sort and process materials for reuse, recycling, composting and energy recovery

Construction and Demolition Material

- Construction and demolition materials are managed at **licensed private facilities**

Strategic Plans

Improving the system

- Over time, system upgrades are required to increase waste reduction and recycling and ensure system adaptability and resiliency to changing population and distribution over time

Generator Levy

- Every person who generates municipal solid waste helps fund the regional solid waste system.

Waste-to-Energy Facility District Energy System

- Will provide heat and hot water for up to 50,000 homes, reduce greenhouse gas emissions by up to 70,000 tonnes per year, and triple the energy efficiency of the Waste-to-Energy Facility

ABOUT THE SOLID WASTE MANAGEMENT PLAN

The solid waste management plan will guide the solid waste strategies and actions, targets, and priorities for the future.

The new plan will identify how the region can continue to:

- Reduce waste
- Increase reuse and recycling
- Reduce greenhouse gas emissions
- Work towards a circular economy

PLAN TIMELINE

SOLID WASTE MANAGEMENT PLAN VISION

Vision

"A thriving region where nothing is wasted and resources are valued."

GUIDING PRINCIPLES

- Accountability from residents, businesses, and governments to prevent waste.
- A solid waste system that is resilient to climate change and future challenges.
- A solid waste and recycling system that is affordable, convenient, and consistent across the region.
- Environmental stewardship and climate action.
- Inclusive solid waste services and programs.
- Innovation and collaboration to support a vibrant regional economy that keeps products and materials in circulation.
- Transparency about what happens to waste and recycling.

IDEA GENERATION

- Develop a set of potential actions and strategies to include in an updated plan
- Updated goals
- Next phase: options analysis

FROM IDEAS TO PLAN

Idea Generation

- Focus areas created based on feedback from vision and guiding principles phase
- Will result in a collection of actions

Options Analysis (Subsequent Phase)

- Evaluation criteria will be developed and used to determine actions to include in the updated plan

Focus Area for Discussion

National Zero Waste Conference

Today's Topic

As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**:

Rethink and prevent waste in the first place

Today's Topic

As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**:

Enhance accountability for eliminating waste

Today's Topic

As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**:

Leverage knowledge and expertise through collaboration

Today's Topic

As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**:

Increase participation and reduce contamination in green bin and recycling programs

Today's Topic

As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**:

Promote confidence in recycling systems

Today's Topic

As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**:

Expand inclusive programs and services

Today's Topic

As Metro Vancouver updates the plan, **what ideas and actions can build on our success to**:

Plan for future infrastructure and systems for waste management across the region

ISSUES/OPPORTUNITIES DISCUSSION QUESTIONS

Since the Integrated Solid Waste and Resource Management Plan was approved in 2011, Metro Vancouver's waste generation rate has decreased 11%, while our recycling rate has increased from 57 to 65% – nearly twice the Canadian average recycling rate. **What actions can build on our success to:**

- Rethink and prevent waste in the first place?
- Enhance accountability for eliminating waste?
- Leverage knowledge and expertise through collaboration?
- Increase participation and reduce contamination in organics and recycling programs?
- Promote confidence in recycling systems?
- Expand inclusive programs and services?
- Plan for future infrastructure and systems for waste management across the region?

Identifying Barriers and Key Challenges

- ✓ What do you see as the primary challenges or barriers we face in addressing [insert key area]?
- ✓ What could Metro Vancouver do to address these challenges?

Collaboration Opportunities

- ✓ What roles do businesses, the waste management industry, not-for-profits, community organizations, and others play?
- ✓ In what ways could Metro Vancouver collaborate with others more effectively to advance [insert key area]?

Wins

- ✓ Let's flip the script: Thinking of the current system, what is working well and should not be changed when thinking of [insert key area]?
- ✓ What is going well and could be expanded on?

Knowledge Gaps and Communications

- ✓ What types of information would be most helpful for you in furthering your understanding of [insert key area]? Meaning – do you have any questions about this topic that Metro Vancouver may be able to answer for you?

Knowledge Gaps and Communications

- ✓ What are some ways to engage with Metro Vancouver residents on [insert key area]?
- ✓ How would you or your community like to receive communications about solid waste?
  - ✓ Emails
  - ✓ Social media
  - ✓ Bus ads
  - ✓ Website
  - ✓ In-person
  - ✓ Other

Closing Discussion

- ✓ Is there anything else you'd like to add to the conversation on this topic?

View of Metro Vancouver

AGENDA

1. Agenda – October 7, 2025
2. Brief overview by Metro Vancouver
3. Small Groups
4. Plenary Discussion
5. Takeaways
6. Next steps and Additional Opportunities for Input

Solid Waste Management Plan Update

OPTIONS ANALYSIS

Terry Fulton
Senior Project Engineer

Stephanie Liu
Program Manager, Solid Waste Community Engagement

Member Jurisdiction Staff Workshop, October 6, 2025

metrovancouver

PLAN TIMELINE

MEMBER ENGAGEMENT AND REPORTING MILESTONES

2025 Options Analysis Phase

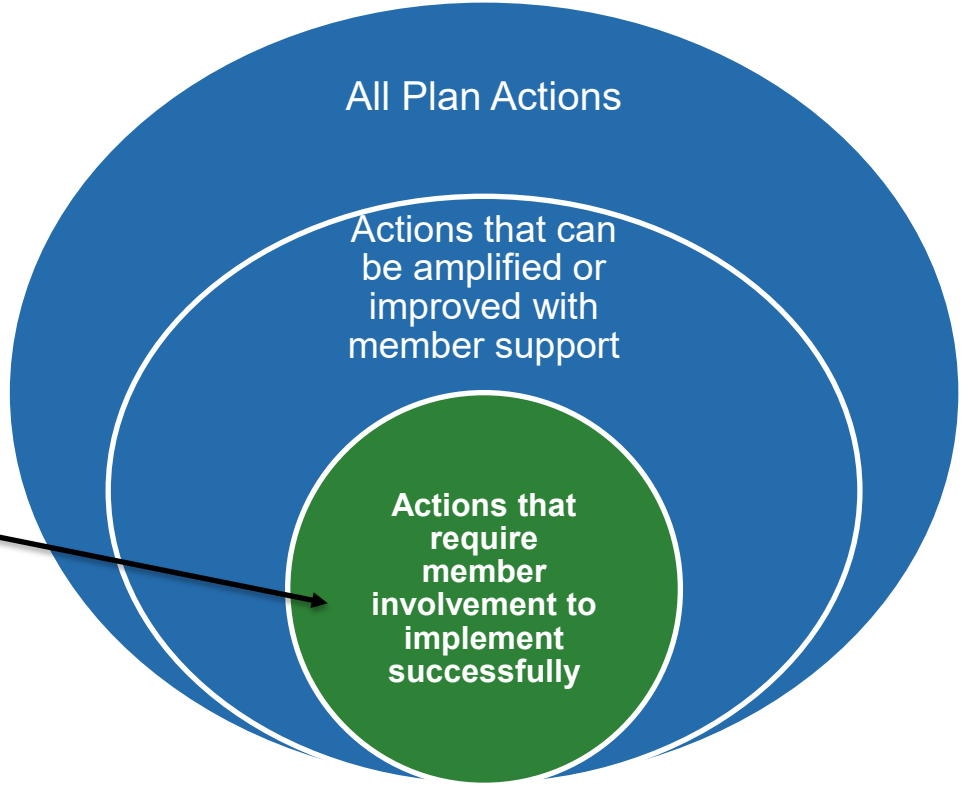
Date	Engagement / Report
Ongoing	• Regular updates to REAC-Solid Waste and Regional Waste Reduction Coordinators Committee at standing meetings
June 2025	• MV Conference Day – Session on Member Actions (June 20) • REAC Solid Waste Sub-Committee Workshop on Member Actions (June 26)
July 2025	• Report to GVS&DD Board summarizing idea generation engagement and seeking approval of hierarchy and goals • Also sent to Air Quality and Climate Committee on September 12 as an info item
September 2025	• Letters to member jurisdictions (mayor/council) inviting feedback on the Options Analysis phase
Sept/Oct 2025 Committees	• Regional Communications Advisory Group update (Sept 3) • Agricultural Advisory Committee update (Sept 18) • REAC and RAAC verbal updates (Sept 12 and Oct 2) • **Workshop with member staff advisory committees (Oct 6)** • Indigenous Relations Committee update (Oct 16) • Invest Vancouver Advisory Committee update (Oct 22)
2026	• Reporting on options analysis • Draft solid waste management plan – for review/engagement

OPTIONS ANALYSIS

- Determine which strategies and actions to include in the draft plan
- Engaging with First Nations, public, advisory committees, neighbouring regional districts, member jurisdictions, business and industry associations and groups, and non-profits
- Last step before a new plan is drafted in 2026

SOLID WASTE MANAGEMENT PLAN ACTIONS

Member Priority Actions



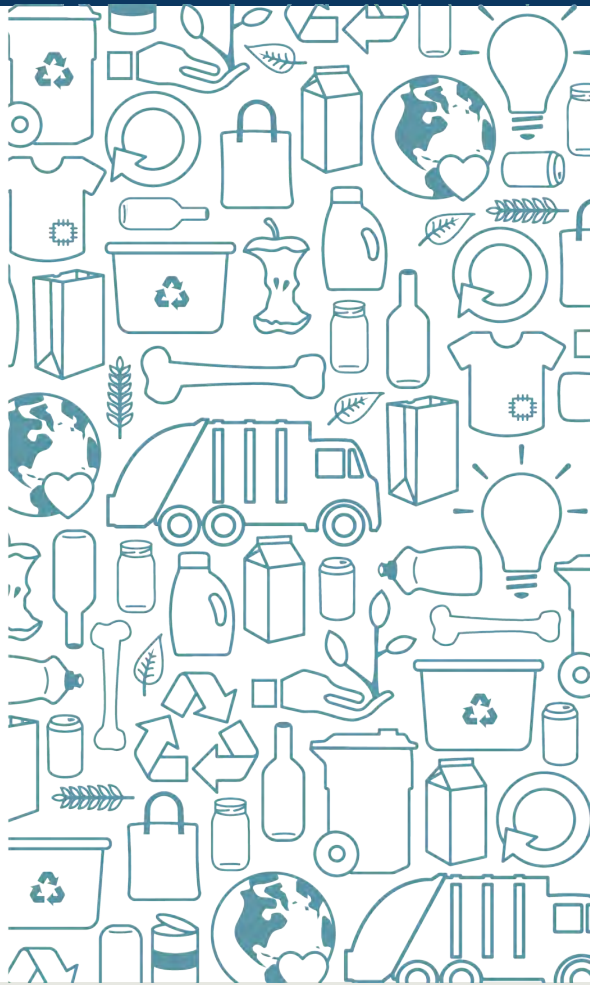
MEMBER PRIORITY ACTIONS

Previous Feedback from Member Jurisdiction Staff

- Should be phrased as an option for members rather than a requirement
- Approach where Metro Vancouver develops guidance and municipalities incorporate where feasible/practical is preferred
- Zoning, use of public spaces, and business licensing requirements are challenging

POTENTIAL STRATEGIES AND ACTIONS FOR AN UPDATED PLAN

- Provided on September 18
- Available publicly on Metro Vancouver website (public version does not include member actions)
- Approximately 200 potential actions organized into 23 strategies



TODAY'S SESSION

Objectives:

- Small group discussion on strategies and actions within the first 4 R's, with the goal of identifying which actions are most important to include
- Plenary discussion on actions under Recover and ideas considered unadvisable by staff

Outcome of the options analysis phase: Help determine what strategies and actions to include in the solid waste management plan

ADDITIONAL OPPORTUNITIES FOR FEEDBACK

- Full list of potential strategies and actions are published on the website
- Feedback form available for providing comments on any of the potential actions

metrovancouver

Small group exercise

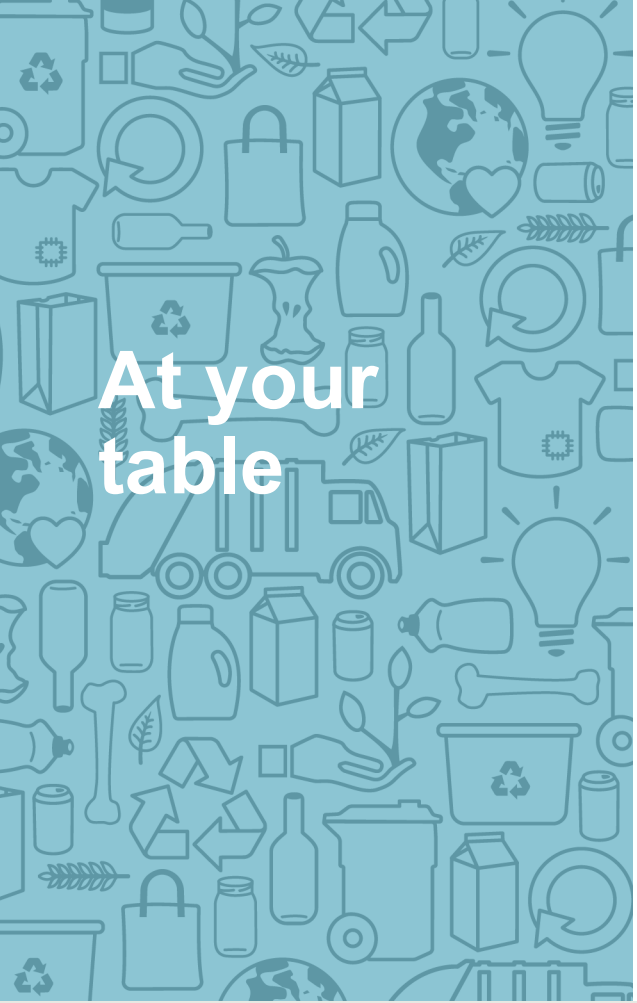
Public/Technical Advisory Committee

Choose your table for Round 1

(aiming for 2-3 rounds)

Tables:

- ***Rethink***
- ***Reduce***
- ***Reuse*** *(Reuse, Refill, Repair)*
- ***Reuse*** *(Food and Built Environment)*
- ***Recycle*** *(Infrastructure and Programs)*
- ***Recycle*** *(Education)*



At your table

As a group, choose one strategy to discuss

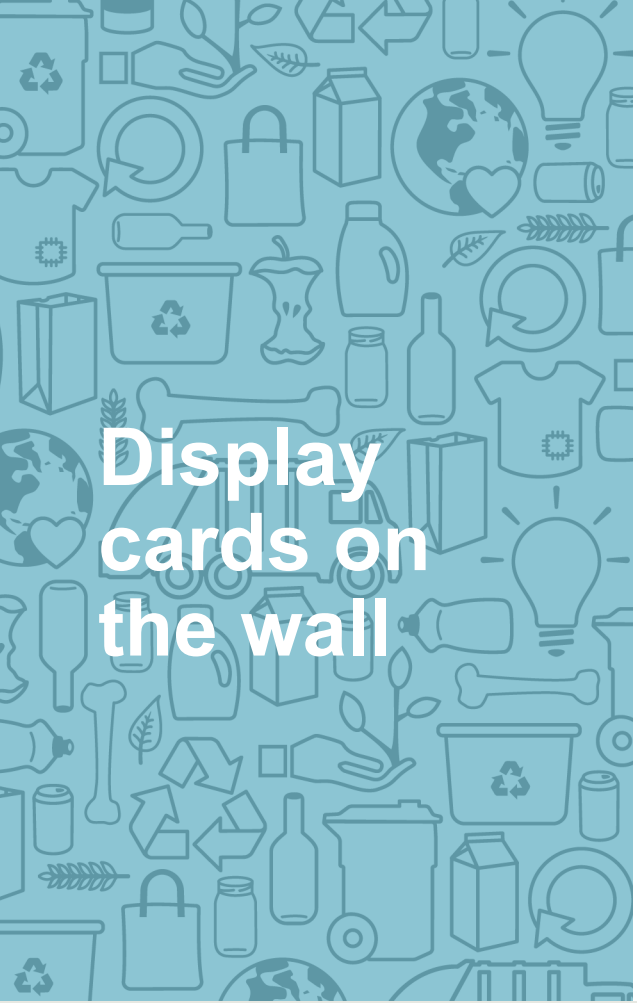
Facilitator will show and read out each action

Use your hand to note the level of priority for including each action in the plan:

How important is it that this action is included in the plan?

5 – extremely important *0 – least important*

Facilitator writes total number for each action on a sticky note on the card



Display cards on the wall

Arrange cards on the wall in order from highest to lowest number

To add a new action, use the large sticky notes on your table

DISCUSSION

Designate a note taker and use the markers / flip charts to take notes

- How will these actions impact your municipality? Residents?
- How easy or difficult would it be for you or others to participate in these actions? *If difficult, what makes participation difficult?*
- What should Metro Vancouver consider to support implementation of these actions or increase participation/involvement?

DISCUSSION

For the **2 actions** with the lowest number, discuss:

- Why were these actions ranked as lower priority for inclusion in the updated plan?

DISCUSSION

Member actions

For any member jurisdiction actions, discuss:

- Do you support the inclusion of this member action?
- Are there any changes required before you can support this action?

Round 2

Switch tables and repeat the exercise

Round 3

Switch tables and repeat the exercise

metrovancouver

Plenary discussion

Public/Technical Advisory Committee

DISCUSSION – PLENARY

Do you have any comments about these?

- Strategies and actions under ‘Recover’
- Draft summary of ideas staff consider unadvisable
- Member jurisdiction actions

5.0 RECOVER

5.1 Recover materials and energy from non-recyclable materials

- ID169 Collect dimensional lumber not suitable for reuse or recycling to process into fuel to replace fossil fuels in applications such as district energy and other decentralized heating and agricultural/industrial systems.
- ID172 Advocate for and explore the potential for piloting technologies that can convert construction and demolition wood waste into energy and fuel such as: electricity, aviation fuel or hydrogen, biomass/biocoal
- ID168 Share information with respect to construction and demolition waste characteristics and quantities to support investigations into the potential to recover materials from non-recyclable construction and demolition waste

5.0 RECOVER

5.1 Recover materials and energy from non-recyclable materials

- ID171 Continue to pursue processing of small load waste to recover non-recyclable wood and other materials.
- ID170 Encourage diversion of non-recyclable construction and demolition waste to recover recyclables and alternative fuels in facilities with advanced environmental protection systems such as cement plants
- ID179 Continue to pursue the beneficial use of bottom ash from the Waste-to-Energy Facility in cement plants

DRAFT SUMMARY OF IDEAS STAFF CONSIDER UNADVISABLE

- Stop using landfills
- Close the Waste-to-Energy Facility
- Increase Waste-to-Energy Capacity
- Privatize regional solid waste system
- Replace source separation programs with single stream recycling collection and mixed-waste sorting programs
- Don’t send materials to cement kilns and other industries for recovery

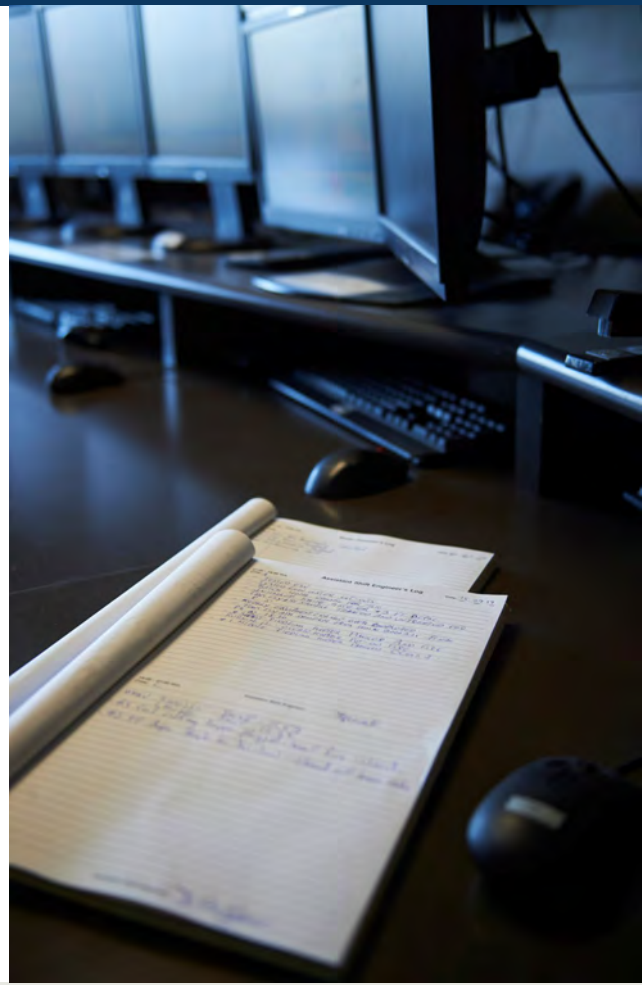
metrovancouver

Takeaways (plenary)

Public/Technical Advisory Committee

NEXT STEPS

- Engagement open to October 31
- Potential strategies and actions published on the Metro Vancouver website
    - Feedback form available
- Continued engagement with First Nations and the public
- Draft plan – 2026



Metro Vancouver Skyline

Vision and Guiding Principles
Idea Generation
Options Analysis

Solid Waste Management Plan Update Vision and Guiding Principles – Questionnaire Findings Summary

November 16, 2023

Methodology

An online questionnaire was conducted from September 18 – November 10, 2023, with 484 residents of the Metro Vancouver area.

Values and Priorities

Ten themes had been identified as potentially informing the vision and guiding principles for the updated solid waste management plan. Respondents were asked to think about how they purchase, use, reuse, recycle and throw things away, and to rate each of the themes on a scale from very important to not important.

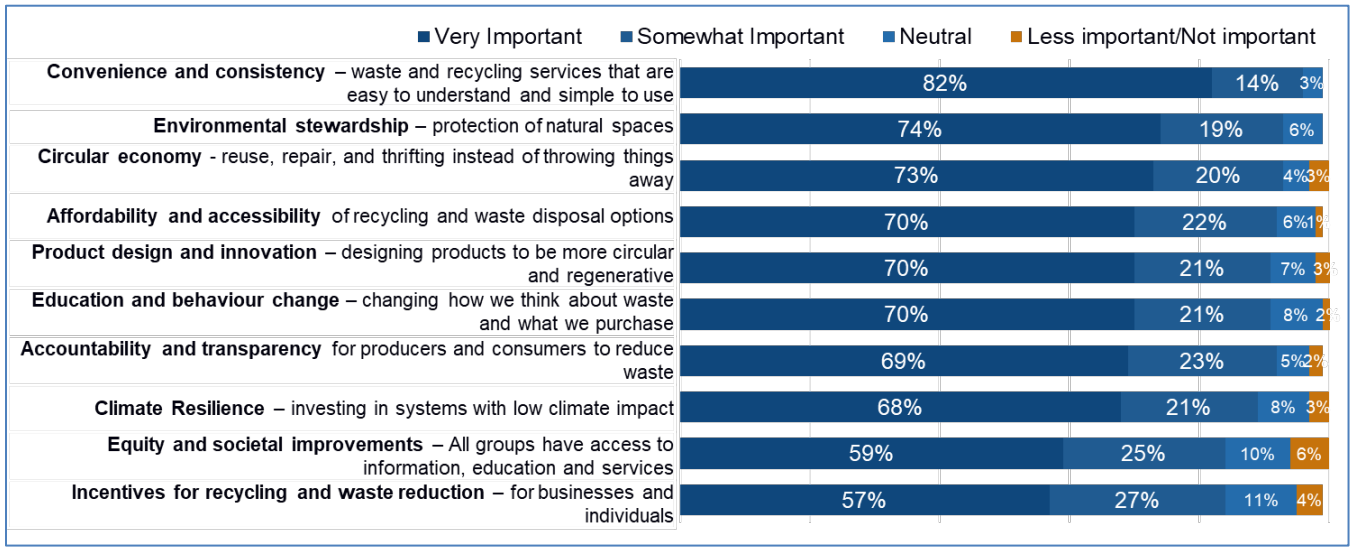
While all ten themes were seen as very important by a majority of respondents, the level of overall importance varied somewhat.

Convenience and consistency was the theme most often seen as very important (82%), followed by three quarters who said that **environmental stewardship** (74%) and **circular economy** (73%) were very important to them.

Seven in ten also said that **affordability and accessibility** (70%), **product design and innovation** (70%), **education and behaviour change** (70%), **accountability and transparency** (69%) and **climate resilience** (68%) were very important.

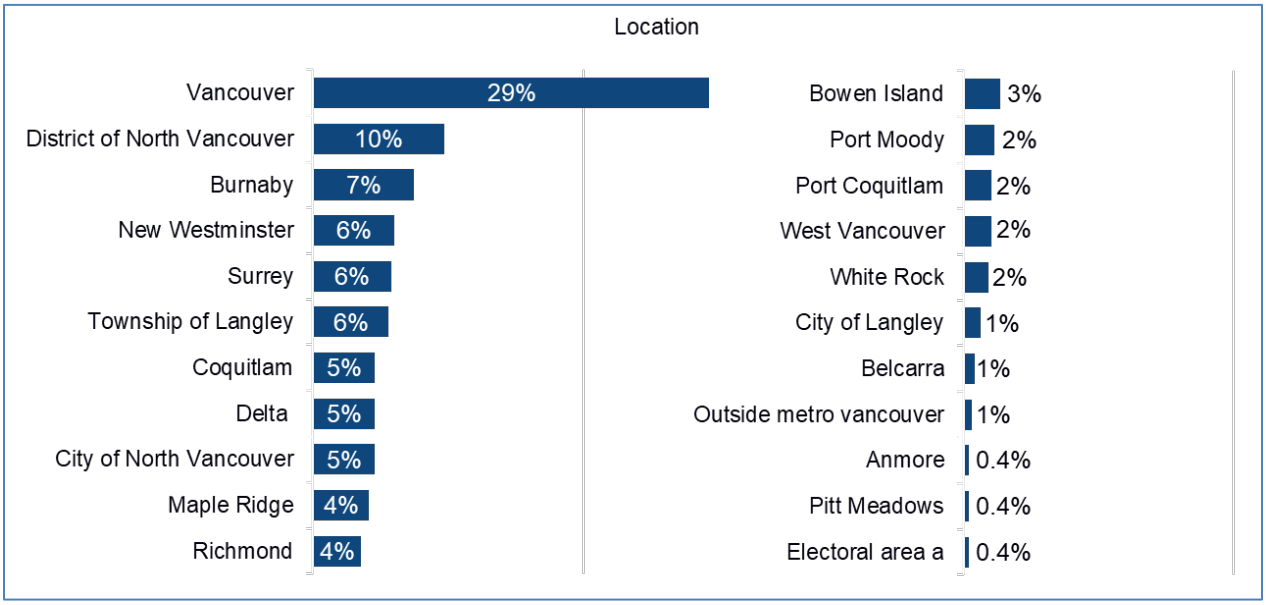
The bottom two themes were **equity and societal improvements** (59%) and **incentives** (57%).

Question: A number of themes have been identified as potentially informing the vision and guiding principles for the updated solid waste management plan. Thinking of how we purchase, use, reuse, recycle, and throw things away in Metro Vancouver, please rank the following values and priorities.

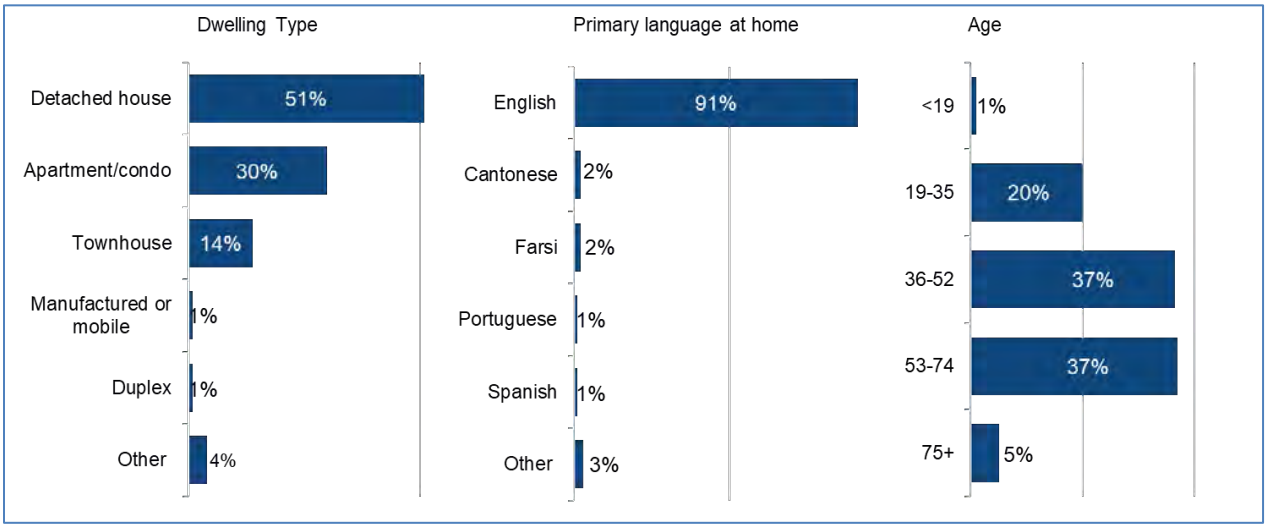


Who Responded

Respondents came from across the Metro Vancouver region, with the largest group from Vancouver.



Half of respondents lived in a detached house (51%), three in ten in an apartment/condo (31%) and 14% in a townhouse. The majority were Anglophones (91%) with 2% speaking either Cantonese or Farsi at home and 1% either Portuguese or Spanish. Other languages, spoken by fewer than 1%, included Afrikaans, Czech, Finnish, French, German, Hindi, Hungarian, Slovak, Korean, Mandarin, Marathi, Polish, Punjabi, Tagalog, Ukrainian and Urdu. All age categories were represented, with 21% being 35 years of age or younger, 37% between 36 and 52, 37% between 53 and 74 and 5% 75 years of age or older.



Solid Waste Management Plan Update

Idea Generation – Questionnaire Findings Summary

November 25, 2024

Methodology and Objectives

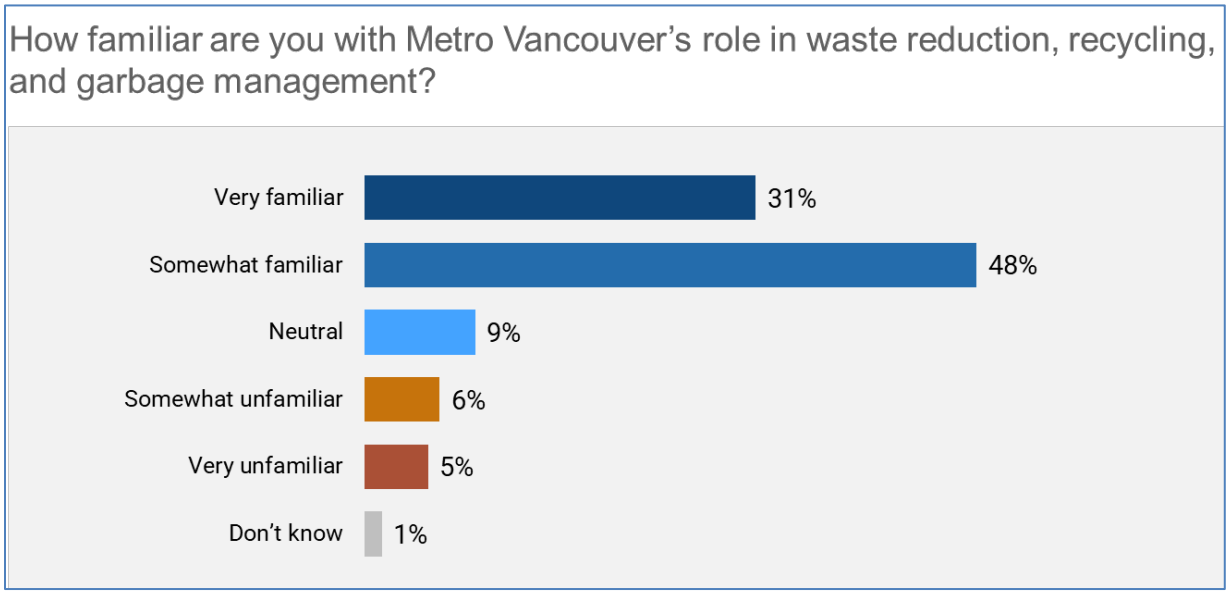
An online questionnaire was conducted as part of the Idea Generation phase of engagement for Metro Vancouver's solid waste management plan update from August 23 – November 8, 2024, with 228 respondents.

The questionnaire aimed to explore public practices, confidence, and priorities in waste reduction and recycling, as well as barriers to participation. This brief report summarizes the findings.

Key Findings

Familiarity with Metro Vancouver's Role

Eight in ten participants (79%) demonstrated familiarity with Metro Vancouver's responsibilities in waste reduction, recycling, and garbage management, including three in ten (31%) who said they were *very* familiar. Only one in ten (11%) said they were somewhat or very unfamiliar, and a similar proportion were neutral (9%)



Current Waste Reduction Practices

When asked about their waste reduction habits, the most frequently reported practices included:

- Bringing reusable shopping bags: consistent behaviour among respondents, with three quarters (74%) saying they always do this, and another 22% saying they often do this.

- Composting organic waste: reported as an action they do *always* by eight in ten respondents (83%) and *often* by another 7%.
- Donating or passing down items: most of the respondents highlighted their efforts to give unwanted items a second life either *always* (57%) or *often* (30%).

Less frequent practices included repairing items, participating in repair cafés, and bringing reusable cups and dishes which indicates potential areas for targeted programs or resources.

Respondents were asked about other actions they take to reduce waste (78 comments). The following key themes emerged from the responses, which include a combination of reinforcement or detailed examples of the actions identified in the previous question, additional waste reduction practices that had not been identified, and some challenges and barriers[1]:

1. *Conscious Consumption*
   - Reducing Purchases: Many respondents focus on reducing waste at its source by purchasing less, resisting impulse buying, and prioritizing needs over wants.
   - Choosing Sustainable Options: Efforts include buying second-hand, using thrift stores, and opting for high-quality, durable items.
   - Refusing Unnecessary Items: Practices like avoiding swag from events, refusing single-use utensils or napkins, and limiting takeout orders were highlighted.
   - Avoiding Excessive Packaging: Participants actively seek out products with minimal or paper-based packaging and buy in bulk to reduce waste.
   - Thoughtful Gifting: Giving experiences or consumables instead of material gifts is a popular way to reduce packaging waste, as is prioritizing recyclable or minimal packaging options when choosing gifts. Advocating for Systemic Solutions: Calls for businesses to adopt environmentally friendly packaging alternatives, including packaging alternatives that can be composted.

[1] Themes for this open-ended question, and all open-ended questions throughout this summary, are displayed in order of frequency, starting with the most prominent themes based on qualitative analysis.

2. *Reuse and Repurposing*
   - Creative Reuse: Participants repurpose pasta jars, reuse produce bags and create cleaning rags from old clothes or baby wipes.
   - Refillable Containers: Refill stores for soaps, detergents, other personal hygiene items (such as refillable dental floss containers) and bulk food items were frequently mentioned as preferred shopping destinations.
   - Clothing Swaps and Hand-Me-Downs: Exchanging clothes with friends, donating, or borrowing items are common practices to extend item lifespans.

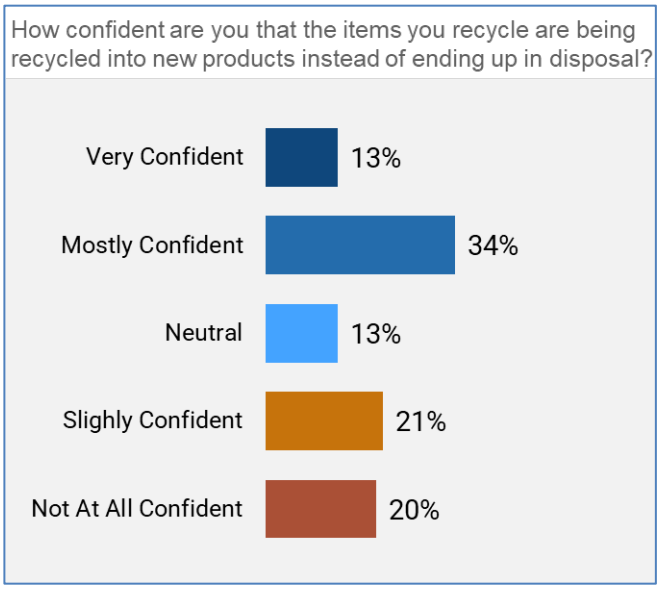
3. *Recycling and Proper Disposal*
   - Dedicated Efforts: Respondents take recyclable items to transfer stations or depots, including batteries, electronics, toner cartridges, and soft plastics.
   - Separating items into various parts to recycle or dispose of them all properly: An example includes breaking down umbrellas to recycle all parts.
   - Advocating for Systemic Solutions: Some respondents suggested improved accessibility to depots and clearer guidelines on recycling procedures.

4. *Food Waste Reduction*
   - Mindful Practices: Freezing food before it spoils, meal planning, and creatively using trimmings for soups or stocks are common actions.
   - Composting: Many participants compost at home or use municipal composting programs, though challenges exist for those in multifamily residences.

5. *Education and Community Engagement*
   - Raising Awareness: Respondents educate children and community members on waste management through hands-on activities and programs.
   - Advocating for Systemic Solutions: Suggestions include incorporating recycling education into schools.

6. *Repair and Maintenance*
   - Extending Product Lifespan: Practices such as repairing appliances and regular maintenance to prolong the life of devices were noted.
   - Lack of Access: Respondents highlighted a need for more repair centers, particularly for electronics and appliances.

Confidence in the Waste System



Confidence in the recycling system was mixed, with less than half of the respondents to this question (47%) indicating that they are either very or mostly confident and 41% indicating they are only slightly or not at all confident that the items they recycle are being recycled into new products instead of ending up in disposal.

When asked what could be done to increase confidence in the current recycling systems, the following recurring themes and actionable suggestions for enhancing public trust in the recycling systems emerged from 153 comments.

1. *Transparency in Recycling Process:* Many respondents emphasized the need for clear, detailed information about what happens to recyclables after collection, including videos, reports, and publicized success stories. They also expressed doubts about whether items are truly recycled.
2. *Education and Awareness:* Requests for public education campaigns, workshops, or school programs to teach proper recycling practices, the benefits of recycling, and the lifecycle of recyclables. Some suggested multilingual education materials to reach diverse populations.
3. *Statistics and Reporting:* Publishing regular statistics on recycling rates, contamination rates, and outcomes (e.g., what recyclables are turned into). Respondents also asked for comparisons with other regions and proof of recycling effectiveness.
4. *Better Product and Packaging Design:* Calls to reduce non-recyclable packaging, mandate sustainable materials, and simplify packaging designs to make recycling easier.
5. *Tours and Hands-On Learning:* Requests for public tours of recycling facilities to show how materials are processed and repurposed to help promote confidence in the system.
6. *Enhanced Communication Channels:* Respondents wanted more communication through newsletters, YouTube videos, or apps, detailing recycling practices and successes.
7. *Reducing Contamination:* Requests for clearer instructions on cleaning and sorting recyclables to reduce contamination rates and ensure materials are properly processed.

Some respondents added comments related to challenges and solutions, including:

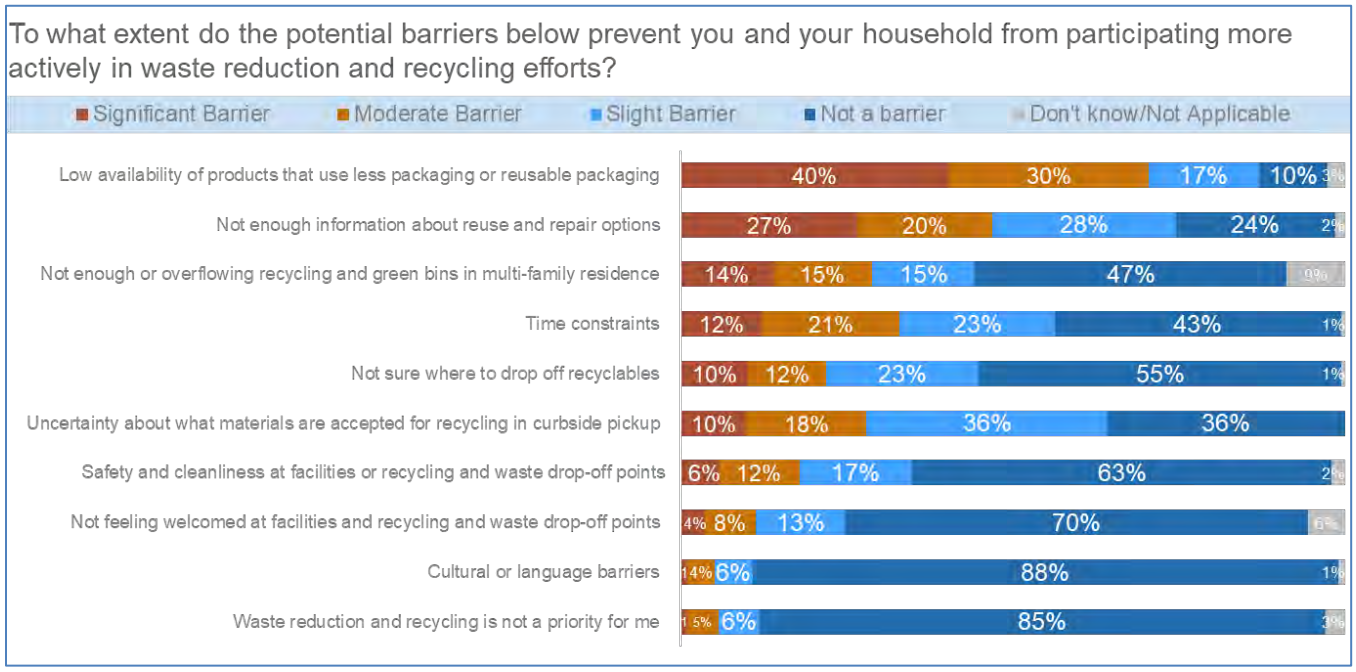
1. *Access and Convenience:* Expanding curbside recycling programs, increasing public recycling bins, and ensuring drop-off locations are accessible for all recyclable items. Many expressed frustrations with limited recycling options or inconsistent service.
2. *Accountability and Enforcement:* Suggestions included imposing fines for improper sorting or contamination, holding municipalities and businesses accountable for their recycling practices, and ensuring items don't end up in landfills or overseas waste dumps.

3. *Legislation and Systemic Changes:* Suggestions for laws to eliminate non-recyclable plastics, enforce producer responsibility, and promote the use of recycled materials in new products.
4. *Incentives for Participation:* Proposals included increasing deposits on bottles and cans or creating incentives for proper recycling and reduced disposal.
5. *Advocacy for Reuse and Reduction:* Encouraging reuse of items and reducing waste before recycling is necessary. Some highlighted the importance of promoting circular economy practices.

Barriers

The questionnaire also explored the extent to which various factors prevent individuals and households from actively participating in waste reduction and recycling efforts. Respondents evaluated barriers such as accessibility, education, convenience, and systemic challenges, offering valuable insights into obstacles that hinder broader participation.

Seven in ten (70%) identified low availability of products that use less packaging or reusable packaging as a moderate to significant barrier. Additionally, lack of information about reuse and repair options (47%), time constraints (33%), lack of recycling and green bins in multi-family residences (29%), uncertainty about what materials are accepted for recycling in curbside pickup (28%) and uncertainty about where to drop off recyclables (22%) were indicated as barriers, suggesting that there is an information gap. On the other hand, fewer respondents reported cultural or language barriers (5%)[2], lack of prioritization of reduction and recycling (6%), and issues at facilities (not feeling welcomed – 11%; safety and cleanliness – 18%) as barriers.



Respondents were asked to think about other barriers not listed above that prevent them and their households from participating in waste reduction and recycling efforts.

[2] The questionnaire was only offered in English.

The following themes emerged in response to this question:

1. *Lack of Convenience:* Difficulty accessing recycling depots without a car, limited drop-off locations for items like soft plastics and Styrofoam, and the need for more recycling and composting bins in public areas. Many respondents highlighted the inconvenience of traveling long distances or navigating crowded facilities. As well, challenges with curbside collection, such as bins being left in inconvenient locations or recycling pickup being unreliable were noted in this context.

2. *Issues with Multi-Family Residences:* Storage issues were cited as a major barrier in multi-family residences in particular. Limited space in these residences and small homes to store recyclables like milk jugs, soft plastics, and deposit-return items was mentioned. Overflowing bins in multi-family buildings were also noted. Challenges in enforcing proper waste sorting in multi-family residences, contamination in recycling and compost bins, and lack of enforcement or penalties for violators were also mentioned. Some residents felt their efforts were undermined by others in their building.

3. *Lack of Education and Awareness:* Confusion about what materials can be recycled, how to properly sort waste, and where to dispose of hard-to-recycle items like hazardous waste or Styrofoam. Some noted the need for better signage and multilingual educational materials.

4. *Inconsistencies in Rules and Instructions:* Inconsistent rules for recycling across municipalities, frequent changes to what can and cannot be recycled, and lack of clear communication about system updates.

5. *Cost Barriers:* High cost of greener alternatives, reusable products, and bulk-buying options.

6. *Lack of Trust in Recycling System:* Concerns about whether materials are truly recycled, suspicion that items end up in landfills or are incinerated, and doubts about the effectiveness of collection and recycling processing systems.

7. *Inconvenience of Sorting and Cleaning:* Time-consuming processes for cleaning containers, sorting different types of plastics, and managing multiple waste streams at home. This was especially seen as challenging for families and older residents.

8. *Cultural Barriers:* Differing cultural norms among newcomers and various age groups, and feelings of judgment or shaming for not adhering to strict waste reduction standards.

9. *Repair and Reuse Challenges:* Limited access to repair facilities for appliances and electronics, lack of repair cafes, and high costs of repairing items compared to buying new.

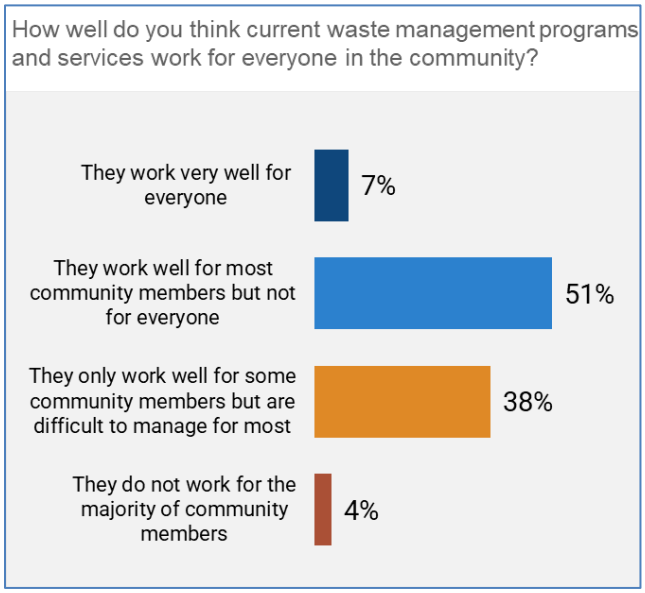
10. *Challenges at Solid Waste Facilities and Depots:* Complaints about dirty or unsafe recycling depots, lack of help with unloading heavy items, and limited hours of operation.

11. *Packaging Waste:* Over-packaging of consumer goods, difficulty disposing of composite materials, and frustration with non-recyclable packaging.

12. *Animal and Hygiene Concerns:* Composting challenges, such as odour and attracting animals. Some felt these issues discouraged participation.

Accessibility and Inclusion

On the topic of accessibility and inclusion, respondents were asked to assess how well current waste management programs and services meet the needs of the community. Findings indicate that while half of respondents (51%) believe current waste management programs work well for most community members, only 7% think they work well for everyone and 38% believe they only work well for some and are difficult to manage for most community members. A small percentage believe they do not work for most community members (4%).



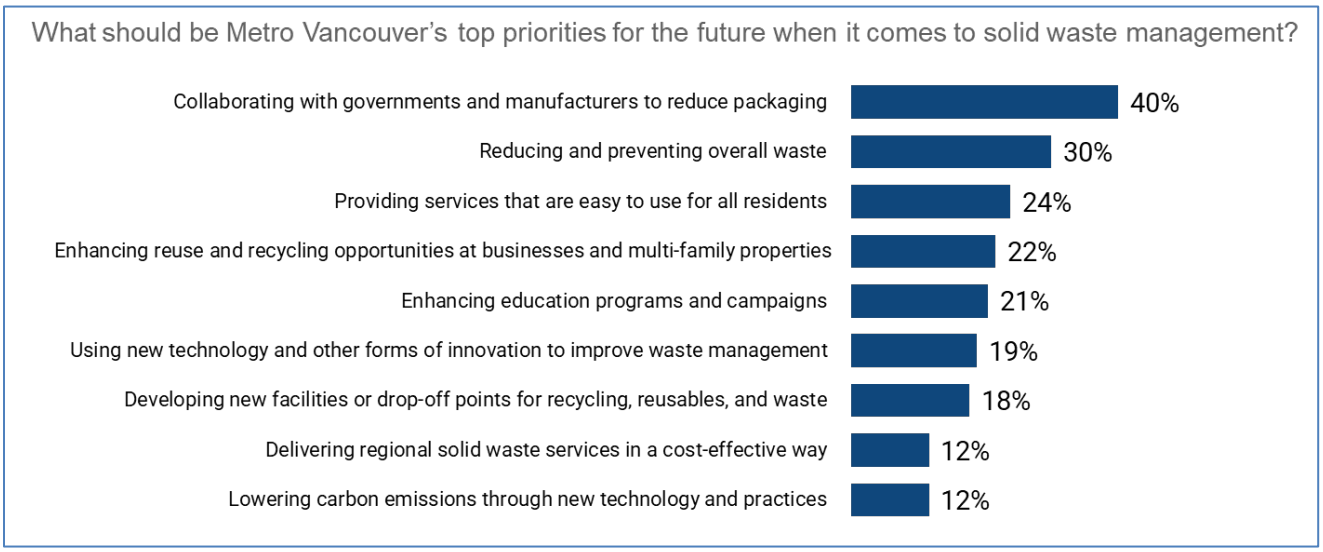
Respondents were also asked to identify community members who may be having a difficult time with the current programs and services and the following list emerged:

1. *Elderly and Mobility-Challenged Residents:* Seniors and people with disabilities often struggle with transporting items to recycling depots, managing heavy bins, or sorting waste properly due to physical limitations or mobility issues.
2. *Residents Without Cars:* Individuals who rely on public transit or do not have access to vehicles face significant barriers in transporting recyclables like soft plastics, Styrofoam, or electronics to depots.
3. *Newcomers and Non-English Speakers:* Language barriers, cultural differences, and lack of familiarity with recycling programs in Canada often prevent participation. Many suggested providing multilingual education and outreach.
4. *Multi-Family Housing and Smaller Home Residents:* Challenges include limited space for sorting, contaminated shared bins, lack of clear instructions, and insufficient enforcement for proper waste management in strata buildings or rental properties. People in small multi-family residences or homes often lack the space to store recyclables, especially bulkier items like cardboard, soft plastics, and deposit containers.
5. *Time Constraints:* Time constraints and overwhelming daily demands make it difficult for busy households to sort waste, visit recycling depots, or participate fully in waste reduction programs.
6. *Affordability:* Limited financial resources make it harder to afford sustainable or reusable options, and many prioritize affordability over environmental concerns when purchasing products.
7. *Homeless and Marginalized Groups:* Individuals experiencing homelessness or those struggling with mental health or addiction often lack access to recycling facilities or the means to participate in waste management programs.
8. *Those with a Lack of Knowledge and Education:* Many respondents cited misinformation or confusion about proper sorting, what materials are recyclable, and where to take certain items. This leads to non-compliance or improper disposal.

9. *Those with Limited Local Recycling Services:* Some communities or buildings do not provide comprehensive recycling services (e.g., no bins for batteries, Styrofoam, or organics), making participation more difficult.
10. *The Unmotivated or Uncaring:* Some individuals, regardless of demographic, lack interest in or motivation to follow recycling practices, often due to convenience or skepticism about the system's effectiveness.
11. *Transient Populations:* Visitors, tourists, and short-term renters (e.g., Airbnb guests) often lack the knowledge or resources to participate in local waste programs effectively.
12. *Construction and Commercial Sectors:* Businesses and construction sites are not always required to follow recycling guidelines, leading to waste that could otherwise be diverted.

Priorities When Looking to the Future

From a list of nine priorities, respondents were asked to pick Metro Vancouver's top priorities for the future when it comes to solid waste management. Respondents emphasized collaborating with governments and manufacturers to reduce packaging and enhance recycling infrastructure as the top priority with 40% of respondents choosing this option. Other top priorities include reducing and preventing overall waste (30%) and providing easy to use services (24%). Lowering carbon emissions through new technology and practices and delivering regional solutions in a cost-effective way were the bottom two priorities (12% respectively).



When asked about additional priorities, the following emerged as suggestions:

1. *Reducing Packaging and Consumption, using Legislation, Enforcement and Incentives:* Advocating for reduced packaging at the source, encouraging manufacturers to use recyclable or compostable materials, and banning Styrofoam. Several respondents emphasized taxing unnecessary packaging and promoting reusable alternatives. Specifically, mentions of introducing stronger regulations to reduce plastic use, requiring businesses to adopt sustainable practices, imposing costs on companies that generate significant packaging waste and enforcing compliance through fines or penalties for non-compliance, while also

providing incentives such as tax breaks to zero-waste businesses and rewarding residents for reducing waste.

2. *Consistent, Improved and Expanded Recycling Services and Infrastructure:* Expanding curbside recycling to include items like Styrofoam, soft plastics, and textiles; ensuring consistent recycling rules across municipalities; and offering large-item disposal days or drop-off events. Building more recycling depots and drop-off centers, integrating advanced sorting technologies, and ensuring recycling programs are accessible to all communities was also mentioned.

3. *Advancing Circular Economy Practices:* Promoting repair and reuse through fix-it workshops and reuse centers, supporting the development of markets for recycled materials, and collaborating with industries to incorporate recycled materials into new products.

4. *Education and Awareness:* Increasing public education about recycling and waste reduction through schools, community outreach, and transparency about where recyclables go. Respondents suggested focusing on behaviour change and targeting businesses and schools.

5. *Waste-to-Energy and Alternative Technologies:* Supporting research into compostable plastics and clean waste-to-energy technologies, while some respondents advocated phasing out incineration due to emissions concerns.

6. *Construction and Demolition Waste:* Reducing construction and demolition waste by supporting deconstruction over demolition, recycling concrete, and introducing major restrictions on the demolition of usable buildings.

7. *Equity and Accessibility:* Ensuring programs are inclusive by targeting multi-family buildings, businesses, and low-income residents, and providing drop-off services or neighbourhood recycling solutions.

8. *Transparency and Trust Building:* Showing how recyclables are repurposed, publishing regular updates on recycling success rates, and offering tours of recycling and waste management facilities to improve public confidence.

9. *Innovation and R&D:* Funding research into alternative materials and technologies to replace petroleum-based plastics and minimize waste.

10. *Addressing Special Waste Items:* Offering guidance and collection for food waste recovery, or for niche waste items like textiles, diapers, kitty litter, and bulky furniture.

11. *Integrating Indigenous Knowledge:* Collaborating with First Nations communities to incorporate traditional knowledge into waste management strategies.

Idea Generation

Finally, respondents were asked to provide further ideas for Metro Vancouver to consider as it works towards reducing the amount of waste in the region. Common themes identified, were:

1. *Reducing Packaging and Waste at the Source:* Respondents emphasize the critical need to minimize waste by addressing its origins. Suggestions include mandating sustainable packaging, banning Styrofoam and non-recyclable plastics, and reducing excessive packaging in online shopping and grocery goods. Advocates

propose incentivizing manufacturers to adopt reusable or compostable materials and cracking down on non-recyclable or environmentally harmful packaging to prevent waste from entering the region altogether.

2. *Education and Public Awareness:* Education is seen as fundamental to waste reduction. Respondents call for clearer communication about what can and cannot be recycled, raising awareness of the lifecycle impacts of products, and engaging children through schools to influence household behaviors. Many stress the need for media campaigns and community outreach to make recycling practices accessible and widely understood.

3. *Standardization and Consistency Across Regions:* A major concern is the inconsistency of collection programs across municipalities, leading to confusion and reduced participation, such as in organics and recycling collection. Respondents advocate for harmonizing collection systems, bins, and acceptable materials to create a simple, unified waste management process across Metro Vancouver, making it easier for residents to comply.

4. *Incentives and Rewards:* Incentives for good waste practices, such as deposit-refund systems, bulk buying rewards, and tax breaks for zero-waste businesses, were frequently suggested. Penalties for excessive waste generation and rewards for individuals and businesses adopting sustainable behaviors are seen as vital strategies to encourage compliance and innovation.

5. *Reuse, Repair, and Circular Economy Initiatives:* Expanding repair cafes and reuse hubs is viewed as a key strategy for reducing waste. Respondents recommend promoting repairable products, supporting businesses that repurpose waste into usable goods, and creating community spaces to encourage the reuse of clothing, electronics, and furniture. These initiatives are seen as essential to building a circular economy where resources are continuously reused rather than discarded.

6. *Expanded Recycling Services and Facilities:* Accessibility to recycling infrastructure is another pressing concern. Suggestions include building more drop-off centers, increasing public recycling bins, and offering curbside collection for hard-to-recycle items like soft plastics, textiles, and electronics. Seasonal or mobile recycling depots are proposed to address bulk or unusual items.

7. *Producer Responsibility and Corporate Accountability:* Respondents strongly advocate for holding manufacturers accountable for waste creation. Suggestions include implementing extended producer responsibility programs, requiring manufacturers to take back their products and packaging, and imposing fines for excessive or non-recyclable materials. Many emphasize shifting the burden of waste management from consumers to corporations.

8. *Waste-to-Energy and Alternative Solutions:* Technological solutions like waste-to-energy facilities are highlighted as viable alternatives to landfills. Respondents propose repurposing existing facilities to incorporate waste-to-energy, investing in biodegradable plastic technologies, and improving composting infrastructure to address organic waste including compostable plastics such as PLA. These innovations are seen as critical for reducing landfill dependency and maximizing resource recovery.

9. *Community Engagement and Inclusivity:* Building an inclusive waste management culture is deemed essential. Suggestions include engaging religious and cultural groups to promote ethical waste reduction, supporting seniors and low-income residents with accessible recycling options, and collaborating with businesses to align with sustainability goals. Respondents stress the importance of fostering community-wide cooperation.

10. *Addressing Construction and Demolition Waste:* Construction and demolition waste is identified as a significant challenge. Suggestions include promoting the reuse of construction materials like wood and concrete aggregates and encouraging deconstruction practices over demolition to reduce waste in the construction sector.

11. *Transparency and Accountability:* Many respondents call for increased transparency in waste management processes. They propose providing detailed information about the lifecycle impacts of products, the benefits of recycling, and the end-use markets for recyclables. Transparency is seen as essential to building trust and motivating residents to participate in waste reduction initiatives.

12. *Legislation and Enforcement:* Stricter regulations and enforcement are frequently suggested as necessary to drive change. Respondents recommend penalties for illegal dumping and improper sorting, mandatory labeling for recyclable materials, and legislation to ban misleading marketing like “flushable” wipes. Strong enforcement is viewed as a cornerstone of effective waste management.

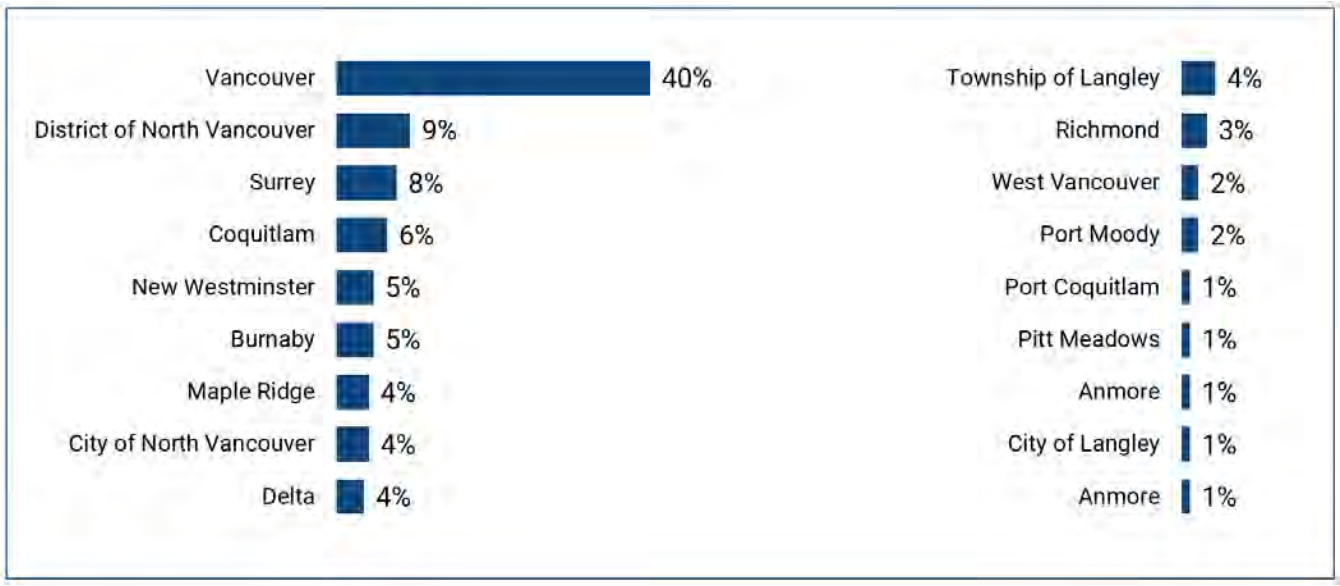
13. *Food Waste and Organics Recovery:* Reducing food waste is identified as a priority, with proposals for donation programs, expanded organic waste collection, and improved composting systems. Respondents stress the importance of tackling food waste to reduce greenhouse gas emissions and make significant environmental gains.

14. *Behavioural Change and Systemic Efforts:* Shifting societal attitudes toward consumption is seen as a critical long-term goal. Respondents emphasize reducing reliance on disposable products, encouraging sustainable behaviors, and creating programs that are simple and inclusive to ensure widespread participation. They view waste reduction as a systemic issue requiring coordinated efforts across all sectors.

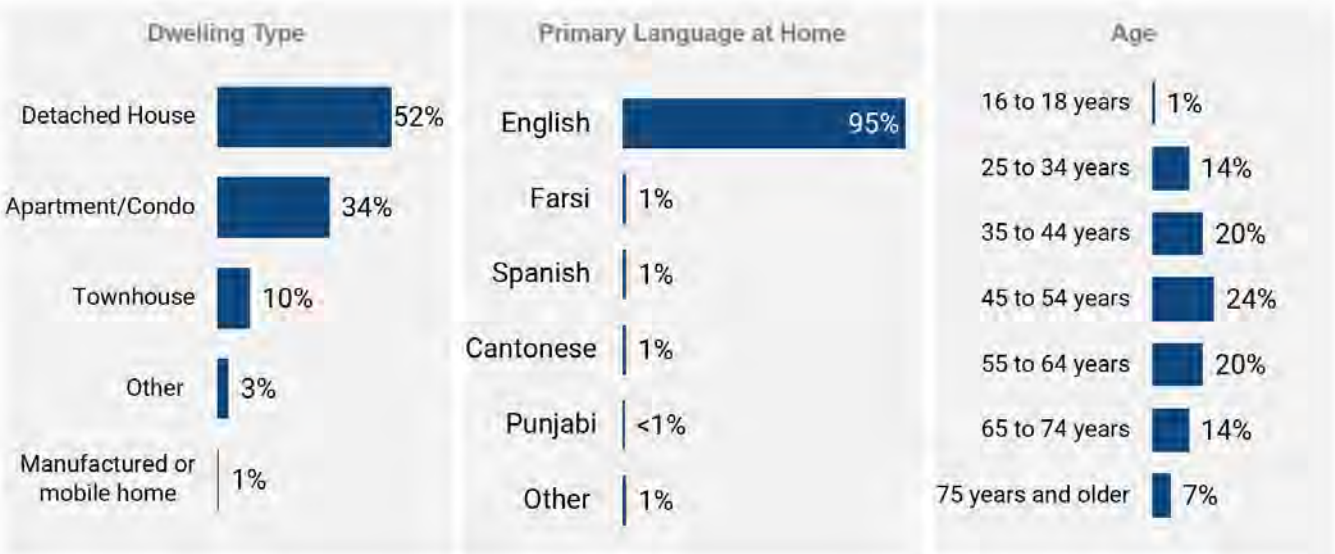
15. *Collaboration with Industry and Research:* Finally, respondents advocate for partnerships with businesses and researchers to develop innovative recycling technologies, create sustainable materials, and support local industries that transform waste into profitable products. These collaborations are seen as essential to achieving systemic and technological breakthroughs in waste management.

Who Responded

Respondents came from across the Metro Vancouver region, with the largest group from Vancouver.



Half of respondents lived in a detached house (52%), three in ten in an apartment/condo (34%) and 10% in a townhouse. The majority were Anglophones (95%) with 4% speaking Farsi, Spanish, Cantonese or Punjabi at home. Most age categories were represented, with 35% being 44 years of age or younger, 24% between 45 and 54, 20% between 55 and 64 and 23% 65 years of age or older.



Solid Waste Management Plan Update Phase 3 Options Analysis – Questionnaire Findings Summary

November 6, 2025

Methodology

An online questionnaire was open to the public between September 19 and October 31, 2025. It was hosted by Metro Vancouver. Engage Delaney assisted in design, data analysis, and reporting of the findings.

Close to 400 participants (390) engaged in the questionnaire.

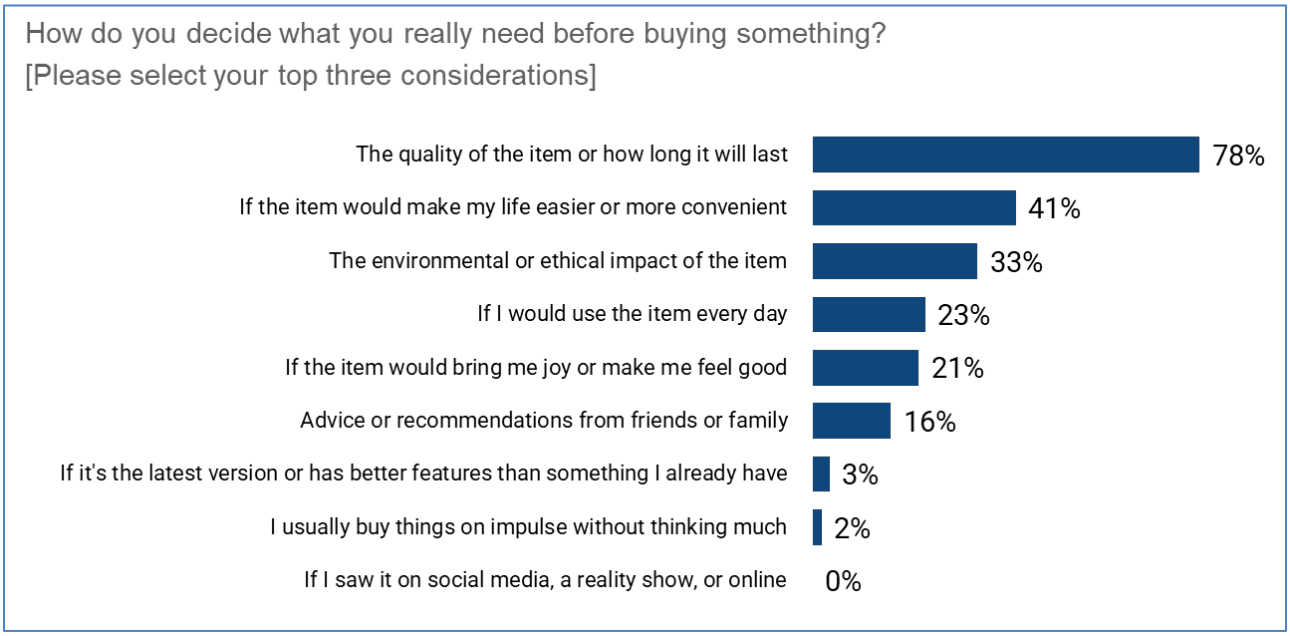
Key Findings

Rethink

When making purchase decisions, the top factor when considering needs was the quality of the item or how long it will last.

Eight in ten respondents (78%) said this was among their top three considerations. About half as many (41%) said that they considered whether or not the item would make their life easier or more convenient, while a third (33%) considered environmental or ethical impacts of the item.

Fewer respondents base purchase decisions on whether or not the item would be used daily (23%) or if it would spark joy (21%); 16% say that word of mouth recommendations are a factor. Very few said they look for better versions of something they already have (3%) or are impulse buyers (2%).

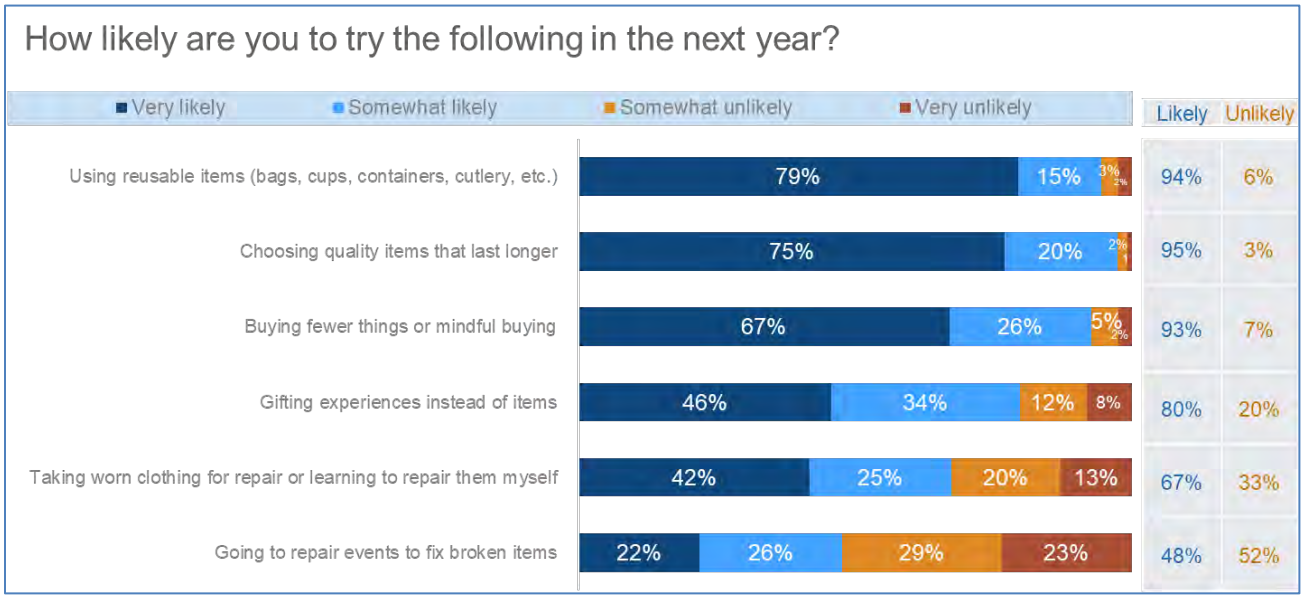


When asked if there was anything else that is important to them when deciding whether they need something, many respondents added other considerations or expanded on the list provided. Main themes included assessing necessity and replacement (questioning whether an item is truly required or simply a want), seeking reuse or second-hand alternatives before buying new, including if they could borrow it instead of buying it. Others described making decisions based on sustainability and lifecycle considerations such as repairability, recyclability, and packaging waste, and preferring locally or Canadian-made products (and avoidance of U.S. or Chinese products) was also mentioned. Practical considerations like cost and affordability, storage space, and brand ethics also emerged as smaller themes, alongside more personal factors like reflection before buying and aesthetics, fit, or functionality.

Many questionnaire respondents indicated they were likely to make changes in the next year to prevent waste.

The most popular actions were choosing quality items that last longer (95% saying they're likely to do that, among whom 75% very likely) and using reusable items such as bags, cups, containers, and cutlery (94% likely; among whom 79% very likely). Somewhat less popular were buying fewer things or mindful buying (93% likely; 67% very likely).

Gifting experiences rather than physical gift items, was also quite popular, with eight in ten overall likely (80% likely; 46% very likely). While two thirds said they are likely to repair worn clothing (67% likely; 42% very likely), this was among the least popular actions, with a third saying they'd be unlikely to do this (33% unlikely; 13% very unlikely). The least popular action was going to repair events, with half saying they're likely to do this (48% likely; 22% very likely) and the other half unlikely (52% unlikely; 23% very unlikely).

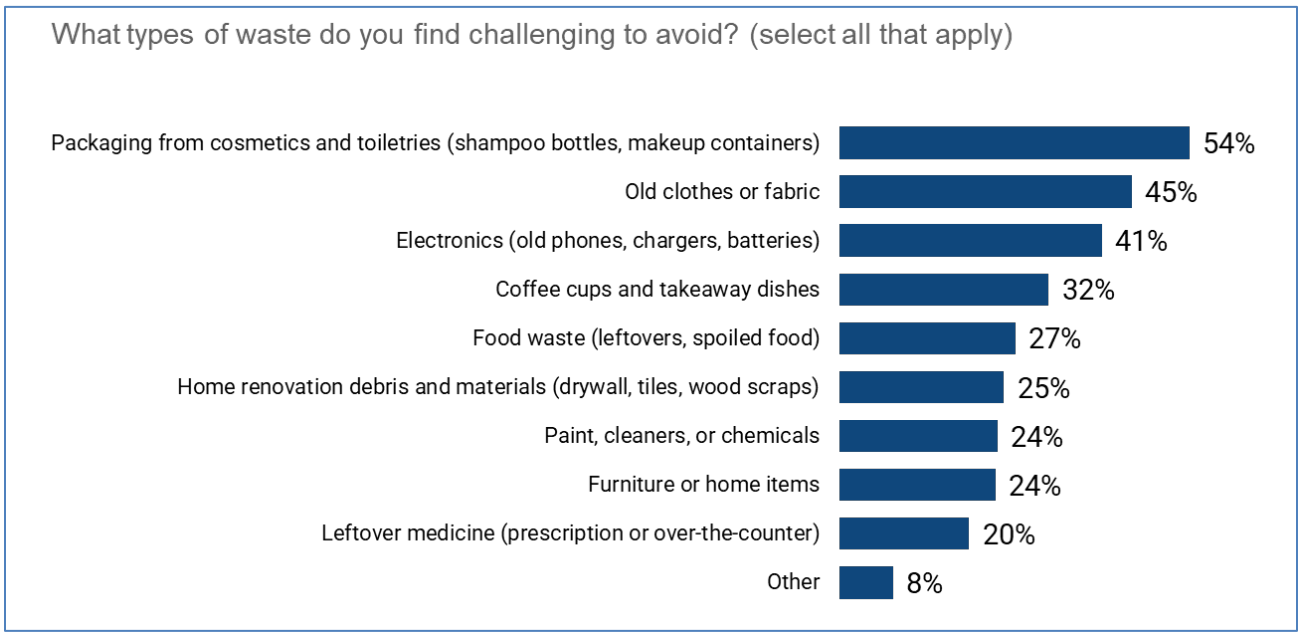


Reduce

When looking at waste items that respondents found the most challenging to avoid, there was only one that the majority found challenging, namely packaging from cosmetics and toiletries. Just over half (54%) selected these items from the suggested list.

Rounding out the top three were old clothes (45% saying they're a challenge to avoid wasting) and electronics (41%). A third said the same of coffee cups and takeaway dishes (32%) and approximately a quarter reported having a difficult time with food waste (27%), home reno waste (25%), paint, cleaners and chemicals (24%), or furniture (24%). Fewer said the same of leftover medicine (20%).

Among the 8% of respondents who mentioned other types of waste as challenging to them, the most mentioned difficulties were related to other plastic and product packaging, including molded plastics and films, and non-refundable or non-recyclable materials. Respondents also cited issues with other household items such as toys or tools. Several noted challenges with paper and gift wrapping, pet waste, and bulky or specialized waste such as tires, broken glass, and aerosols.



The majority of respondents indicated an interest in recycling programs for packaging (69%), with just over half also interested in electronics recycling (54%) or buying in bulk or from refill stations (52%). Somewhat fewer were interested in community events or buy-nothing groups (42%).

Less popular were cup or dishware sharing programs (28%), bulk buying groups (27%), or clothing repair workshops (23%).

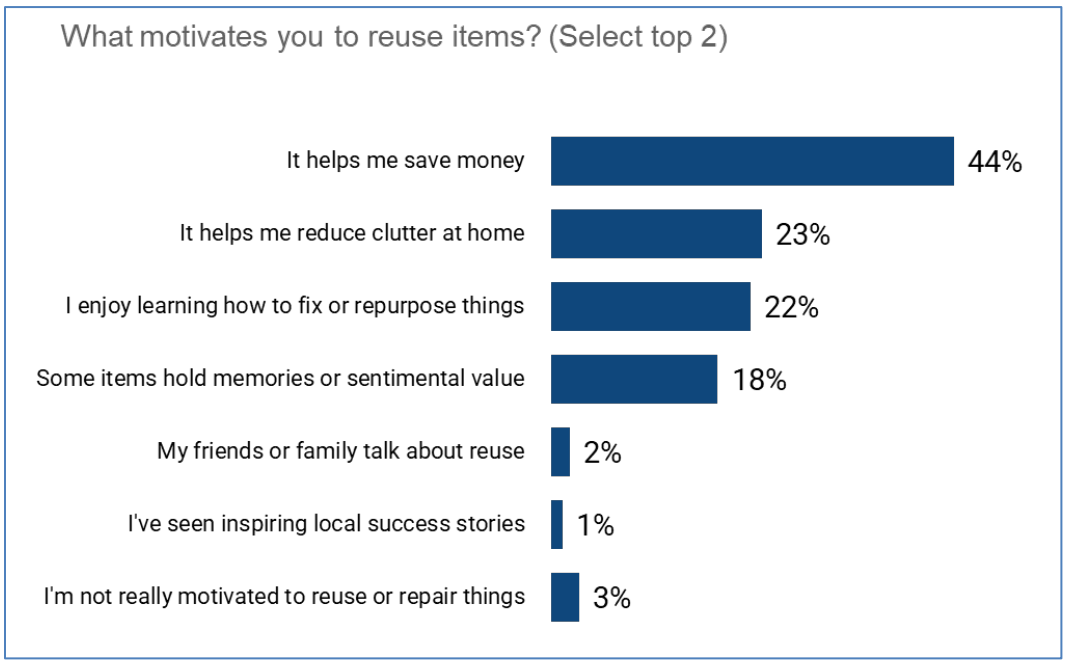
Among the 16% who mentioned other types of waste reduction programs they'd be interested in, many expanded on the list by giving examples such as expanding the range and accessibility of recycling, repair, and reuse programs. For example, some respondents supported community-based reuse initiatives such as free stores and shared tool sheds, as well as food waste and organics solutions, including bring-your-own-container programs for restaurants. Common suggestions called for broader or more convenient recycling opportunities, including drop-off or curbside collection for hard-to-recycle items, dedicated textile and fabric recycling, and specific repair programs for electronics, appliances, and household goods.

Many also wanted manufacturers and retailers to take greater responsibility for packaging waste, through take-back, standardized materials, or bans on problematic plastics. A few respondents emphasized the need for

government leadership, financial incentives for low-waste households, and public or industry education to reduce overpackaging at the source.

Reuse & Repair

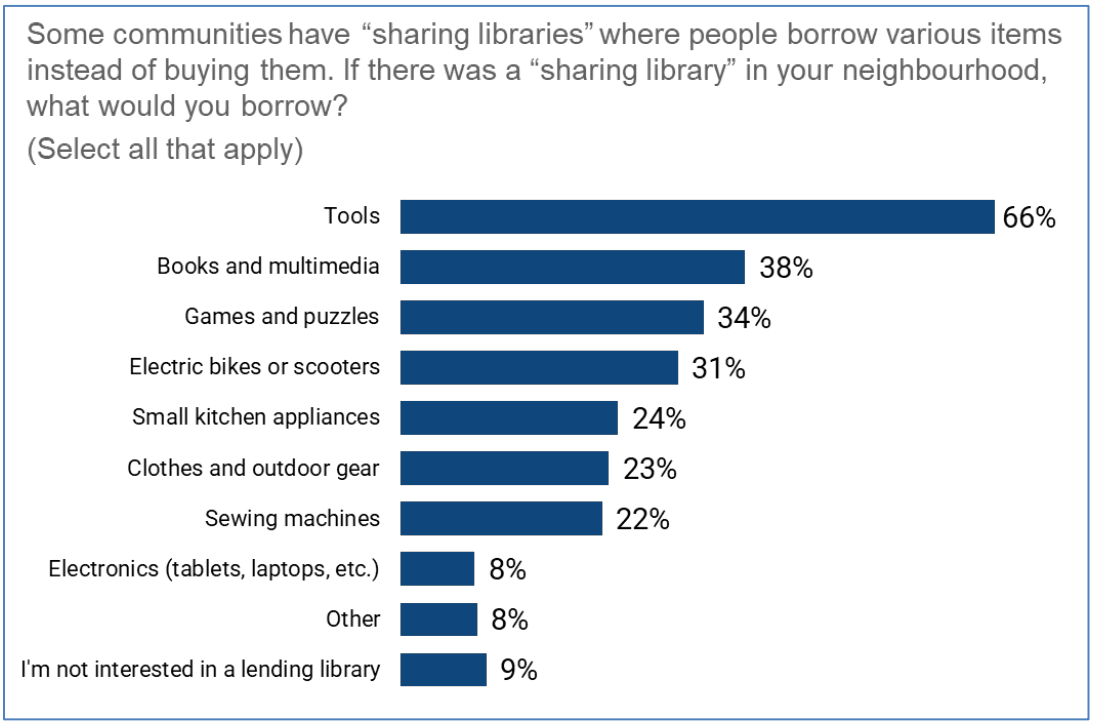
By far the most important factor that motivates respondents to reuse items is financial – 44% selected this as one of their top two motivators. Many also said they liked reusing because it reduced clutter (23%), they enjoy learning how to fix things (22%) or they have items of sentimental value they hold onto (18%).



Many also mentioned other motivating factors. The most frequent additions were a strong sense of avoiding waste and moral responsibility, an appreciation for quality, longevity, and durability, and the influence of family or cultural values around thrift and stewardship. Others described personal fulfilment and enjoyment, or a desire to reject consumerism and convenience culture. Additional motivations included convenience and effort avoidance, community sharing and exchange, economic necessity, and social norms.

Sharing libraries were explored, with the majority of respondents expressing an interest in borrowing tools (66%). Books came in second place (38%), followed by games/puzzles (34%), and electric bikes or scooters (31%). Fewer, yet sizable proportions were interested in borrowing small kitchen appliances (24%), clothes and gear (23%) and sewing machines (22%). Of least interest were electronics lending libraries (8%), and one in ten said they're not interested in a lending library (9%).

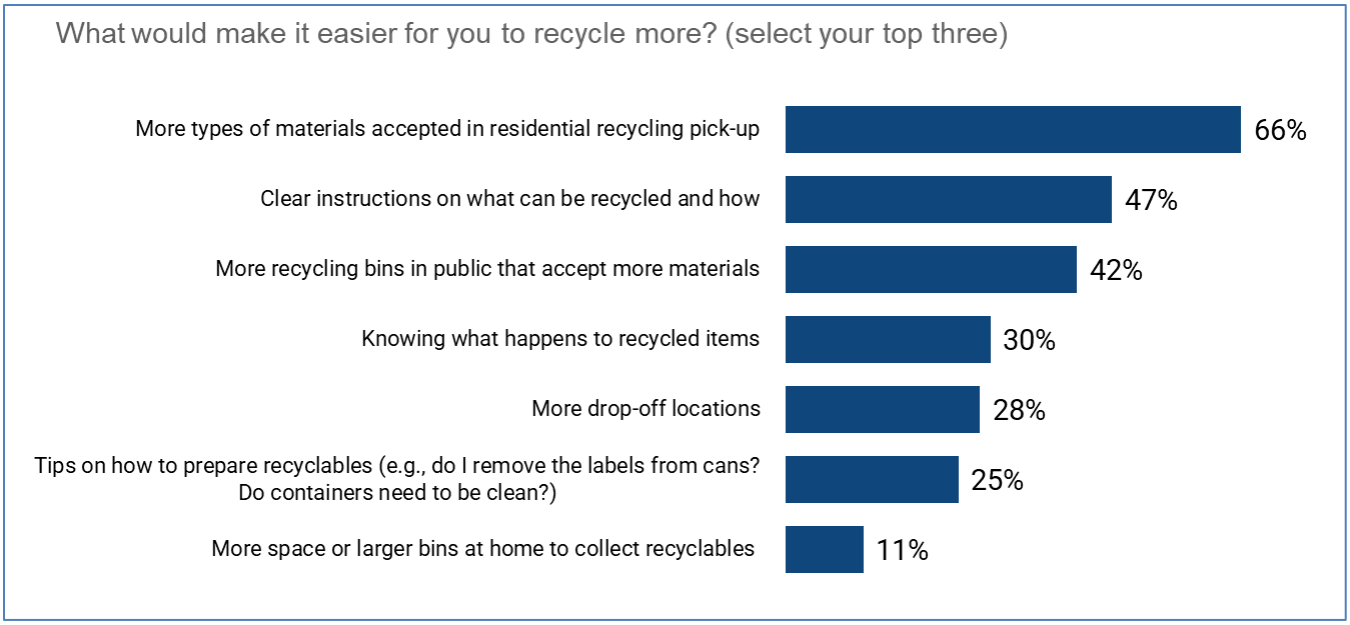
Those mentioning other items cited a variety of examples, including gardening tools and equipment, camping and outdoor gear, children's bikes and bike trailers, sport gear, cleaning equipment, art supplies, and furniture (such as for events).



Recycle

When asked what would make recycling easier, the majority of respondents (66%) said that more materials being accepted for residential recycling pick-up would be an important factor. Almost half of respondents (47%) said clear instructions on what can be recycled and how to recycle more, while four in ten (42%) said having more recycling bins in public areas would make it easier.

Three in ten would like to know what happens to recycled items (30%) and a similar proportion would like to see more drop off locations (28%). A quarter said that tips on how to prepare recyclables would help them. The least popular recycling aid was having more space or larger bins to collect recyclables (11%).



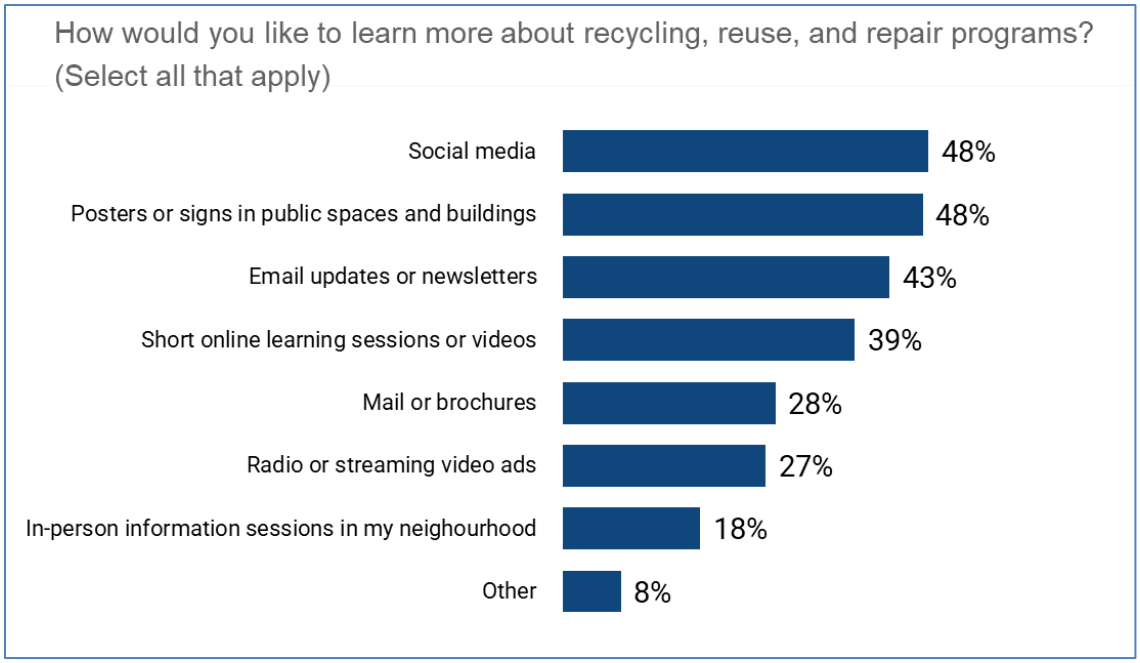
When asked what else would make it easier to recycle more materials, many expanded on existing categories from the list, while others introduced new solutions or priorities. Respondents highlighted both system improvements and broader policy changes. The most common suggestion was to simplify and expand residential collection, with calls for unified sorting systems, single-stream recycling, and curbside pickup for hard-to-recycle materials such as soft plastics and Styrofoam. Many also wanted greater trust and transparency, expressing skepticism about whether materials are actually recycled and calling for transparent reporting and accountability from government and industry.

A main theme involved shifting responsibility upstream, with respondents urging manufacturers, retailers, and restaurants to use recyclable packaging, provide clear labelling, and participate in take-back programs. Others emphasized better access and convenience, including integrated drop-off depots at grocery stores, small neighbourhood centres, and more equitable access for multi-family housing residents. Some respondents also pointed to the need for consistent education and communication, including clear terminology, standardized rules, and visible information at public facilities and transit hubs.

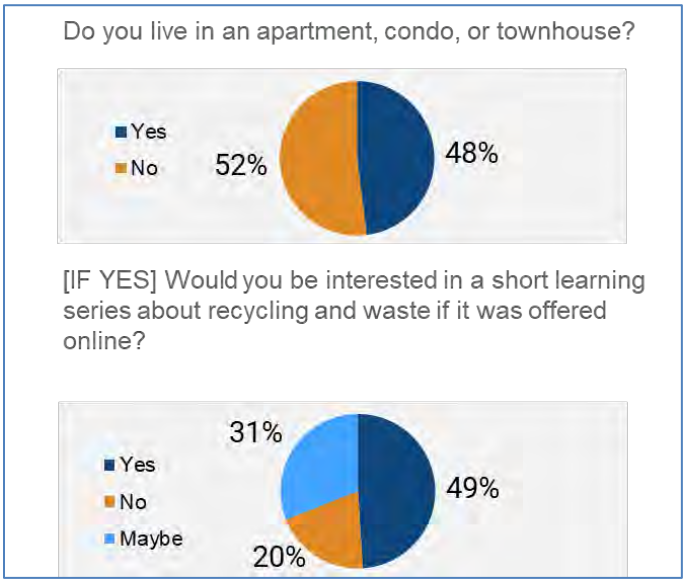
Education and Resources

For the most part, respondents wanted to learn about recycling, reuse and repair programs through social media and posters or signs in public spaces. Half of respondents (48% each) selected those as their preferred information channels. Many would also like to receive emails on recycling education (43%) or attend short online learning sessions or watch videos (39%). There was slightly less enthusiasm for mail/brochures (28%) and radio or streaming video ads (27%), with in-person neighbourhood information sessions the least popular.

Among the 8% of respondents who suggested other ways to learn about these programs, the most commonly mentioned was online (website or clear search results), through an app, or through school or other educational programs.



Among respondents who live in multi-unit dwellings, eight in ten said they'd be interested in a short learning series about recycling and waste if it were offered online, were either definitely interested (49%) or maybe interested (31%).

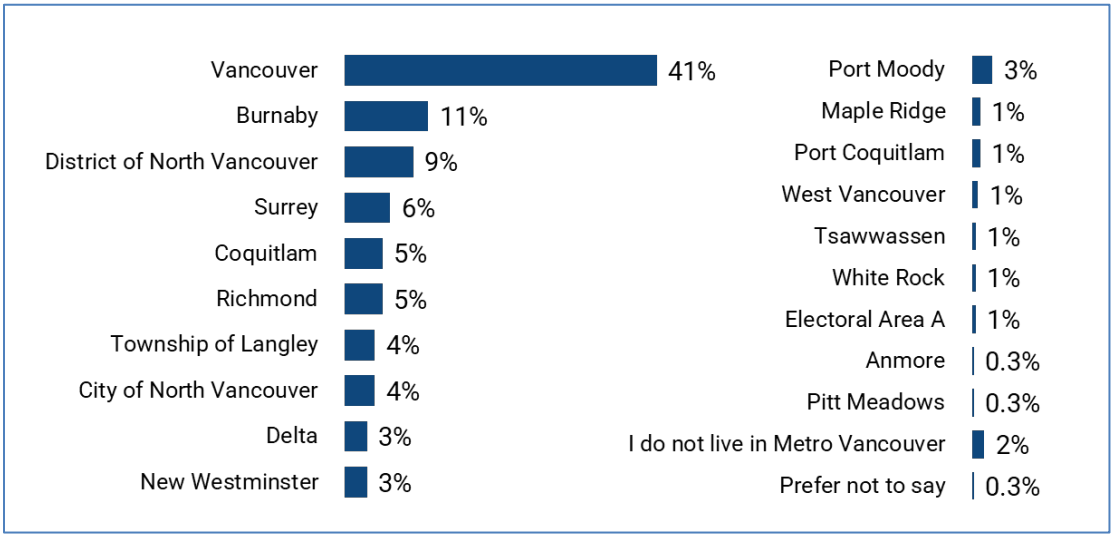


Respondents living in a multi-unit dwelling were also asked for ideas on how to make it easier to recycle food scraps in their building. Respondents shared many practical ideas. The most frequent suggestions focused on clearer education and signage, including multilingual materials, welcome kits for new residents, and reminders in shared waste areas. Many emphasized cleanliness and maintenance, requesting leakproof or pest-proof bins, regular cleaning, and convenient access to facilities. Providing free or affordable compostable liners was one of the strongest recurring ideas, as was ensuring that every building has suitable organics collection infrastructure and visible management support.

Several respondents also wanted building-level waste champions or on-site composting programs that connect food waste to community gardens, while others recommended enforcement for contamination or policy incentives for compliance. A smaller number noted that reducing food waste at the source – through food literacy, smaller packaging, and community sharing – would help more than focusing solely on collection systems.

Who Responded

Respondents came from across the Metro Vancouver region, with the largest group from Vancouver.



Half of respondents lived in a detached house (51%), three in ten in an apartment/condo (32%) and 13% in a townhouse or multi-unit complex. The majority were Anglophones (94%). Most age categories were represented, with 39% being 44 years of age or younger, 39% between 45 and 64, and 18% 65 years of age or older.

Metro Vancouver Solid Waste Management Plan Update

Vision and Guiding Principles

Community Events Summary

1. About the Metro Vancouver Solid Waste Management Plan

Metro Vancouver is responsible for waste reduction, recycling planning, and the operation of a series of solid waste facilities in the region.

We are updating our solid waste management plan, building on the strengths of the current *Integrated Solid Waste and Resource Management Plan* (2011), and identifying opportunities for accelerated waste reduction and recycling while reducing greenhouse gases and promoting a circular economy.

The plan update process is expected to take 2-3 years and we are currently in the vision and guiding principles phase. Throughout all phases, we are actively engaging with governments, including First Nations, government agencies, waste and recycling industry, waste producers, businesses, communities of interest, and Metro Vancouver residents to guide updates to the plan.

2. About the Engagement Program

In Spring 2023, Metro Vancouver completed early engagement with First Nations, member jurisdictions, adjacent regional districts, and advisory committees to seek feedback on the fundamental values, vision and guiding principles that will guide the plan development and implementation. The feedback heard helped to identify the following 10 emerging themes:

1. Accountability and transparency for producers and consumers to reduce waste
2. Affordability and accessibility of recycling and waste disposal option
3. Circular economy – reuse, repair, and thrifting instead of throwing things away
4. Climate Resilience – investing in systems with low climate impact
5. Convenience and consistency – waste and recycling services that are easy to understand and simple to use
6. Education and behaviour change – changing how we think about waste and what we purchase
7. Environmental stewardship – protection of natural spaces
8. Equity and societal improvements – all groups have access to information, education and services
9. Incentives for recycling and waste reduction for businesses and individuals
10. Product design and innovation – designing products to be more circular and regenerative

3. Engagement Promotion

The vision and guiding principles will set the direction and build the foundation for the plan and will be informed by engagement input and feedback, Provincial guidelines, a review of the current plan, Metro Vancouver guiding documents, and a review of solid waste management plans in other jurisdictions.

We have been listening and learning from the public and affected parties on key values and priorities related to how residents and businesses purchase, use, reuse, recycle and throw things away in Metro Vancouver.

The public engagement process took place from September 18 to November 10, 2023.

Public engagement feedback is helping to shape the vision and guiding principles for the updated plan. The following are several ways that the public was able to participate in the public engagement process:

1. Sharing feedback by completing a 5-minute online questionnaire
2. Signing up to participate in a virtual or in-person workshop
3. Stopping by our booth at a community event
4. Registering to speak with the Consultation and Engagement Panel
5. Signing up to receive timely information and updates by visiting the project page
6. Sharing insights and feedback with Metro Vancouver staff at zerowaste@metrovancouver.org

4. Engagement Participation

Activity	Date	Number of Participants
Riverfest – New Westminster	September 23, 2023	167
Shipyards Festival	September 23, 2023	203
Car Free Day – Vancouver	September 24, 2023	317
Pitt Meadows Farmers Market	September 26, 2023	34
Metro Vancouver Housing Site – McBride Place	November 2, 2023	28
Diwali Surrey	November 5, 2023	82
	Total participants	831

5. Summary of Public Engagement Event

Metro Vancouver is committed to sharing information with the public and interested parties about its engagement. We are also committed to listening and learning from the community so that their values and interests can help inform a vision and guiding principles for Metro Vancouver's solid waste management plan update. During vision and guiding principles engagement, we participated in community events in six areas of the Metro Vancouver region. Below are some points of interest that were learned. *(Note: the following engagement feedback has not been formally coded or analyzed but is a representation of observations made from engagement representatives at each event.)*

Riverfest – September 23, 2023

- Many members of the public who live in condos or multi-family developments shared that education is still key to behaviour change and compliance in recycling sorting.
- Several visitors commented that property managers need to be held accountable to ensure the accessibility of recycling and waste disposal options.

- Convenience was a consistent topic and was noted as a reason why people may or may not make the effort to recycle. We heard from many who said that it can feel complicated and confusing with so many messages around how to recycle, and it can appear easier to throw everything in the garbage.

North Vancouver Shipyards – September 23, 2023

- We learned that there is confusion related to where and how to recycle textiles when clothing is too worn to deliver to charity organizations and a growing interest in the need to raise awareness to support a circular economy to reuse and support donation in a greater way.
- There were countless conversations started through the sorting game with several people acknowledging that they had "learned a lot" on which bin to put certain recyclable and disposable items.
- We learned of an overall public expectation for accountability and transparency for producers of products that are labelled compostable yet are destined for the landfill. i.e. plastic compostable cutlery, compostable take out cups/containers.

Car Free Day – September 24, 2023

- A consistent theme that stood out as surprising was a sense of shame and fear of being judged for not knowing as much about recycling as one feels they publicly should.
- This was a concern shared by parents of children who were unsure of sorting, teenagers who were unclear of items outside of pop cans, and young and older adults who admitted they were overwhelmed by the choices so have chosen not to learn. Through the sorting game, a lighthearted dialogue, and small prize regardless of score, all these individuals left with a better feeling about what they do know about recycling, knowledge of where to get more information, and a more positive outlook.
- One participant shared that, "they didn't know how much they already knew, and it made them feel better." We spoke to many visitors who left feeling the same way.

Pitt Meadows Farmers Market – September 26, 2023

- On the topic of consistency, some visitors noted that there are inconsistencies in material accepted across the region at recycling and waste facilities. One visitor said that she recently moved to Maple Ridge from Vancouver and finds it confusing that there are inconsistent recycling practices across the region. i.e. textiles, crinkle plastic.
- Accessibility was a key topic related to seniors and those with mobility challenges. Several visitors spoke of the need for support services to be provided for recycling pick-up for seniors and other populations with mobility challenges.
- One visitor said that recycling is a priority for him, but he cannot carry the bags and bins to the curb anymore. In addition, we heard from more than one resident who said that the seniors care facilities need more accountability in providing education and recycling options to their residents.

Metro Vancouver Housing Site – November 2, 2023

- The game was a hit and there were lots of recycling lessons learned. Regardless of age, all our visitors were eager to learn and asked lots of questions with many of the kids coming through more than once to test their increased level of knowledge.
- We heard that it is common at this site for children to be the ones to take the recycling out and that the lack of recycling knowledge within this group, and in their homes, contributes to the contamination of the bins. This was a frustration for those residents who separate their recycling and are committed to reducing waste.

- The common misconception that we heard about recycling practices was around thin plastics and the disposal of large quantities of cooking oil. One visitor noted that she has a large garbage bag of plastic bags in her home "that keeps getting bigger" because they don't fit into the criteria of the recycling bins, and they were not sure what to do with them. The inability to recycle onsite or to travel to specific facilities was seen as a barrier to recycling these items, even for those who were very committed and actively participating in reducing waste.

Diwali – November 5, 2023

- Several visitors said they were new to Canada and were eager to learn and understand recycling and how they and their families can participate more fully.
- Many of the kids were happy to discuss where they have seen a recycling bin and food waste containers and how they are used and were also very comfortable expressing that this sorting game was "so easy."
- We spoke with an elementary school principal who was eager to understand the current Metro Vancouver programs that would create educational opportunities for his students, on a deeper level. Creating recycling and solid waste champions from the ground up, it sounds like that momentum is already happening.

6. Next Steps

Phase 1 engagement closed on November 10, 2023. Feedback received during this engagement process will help to inform the Vision and Guiding Principles for the Metro Vancouver solid waste management plan update which will be presented to the Zero Waste Committee in early 2024.

Metro Vancouver Solid Waste Management Plan Update

Idea Generation

Community Events Summary

1. About the Metro Vancouver Solid Waste Management Plan

Metro Vancouver is responsible for waste reduction, recycling planning, and operating a series of solid waste facilities in the region. We are updating our solid waste management plan, building on the strengths of the current plan (approved in 2011), and identifying opportunities for accelerated waste reduction and diversion while reducing greenhouse gases and promoting a circular economy. An updated solid waste management plan will guide our region's policies and collective actions over the next decade and beyond and engagement is critical to its success.

The plan update process is supported by robust First Nations and public engagement.

2. About the engagement program

The current phase is idea generation, which builds on the previous phase (vision and guiding principles). The results from this phase will inform the next phase of engagement: options analysis. Metro Vancouver is building on the strengths of the current plan and identifying ways to further reduce waste and greenhouse gases, increase recycling, and advance a circular economy.

As Metro Vancouver updates the plan, we are engaging on the following seven key areas that can build on our current success of achieving one of the best recycling rates in North America.

- Rethinking and prevent waste in the first place.
- Enhancing accountability for eliminating waste.
- Leveraging knowledge and expertise through collaboration.
- Increasing participation and reduce contamination in organics and recycling programs.
- Promoting confidence in recycling systems.
- Expanding inclusive programs and services.
- Planning for future infrastructure and systems for waste management across the region.

3. Engagement Participation

Activity	Date	Number of Participants
SFU Vendor Expo	September 5, 2024	190
Car Free Day – Main Street	September 15, 2024	450
Metro Vancouver Housing – Heather Place	September 18	1
North Shore Shipyards Festival	September 21, 2024	430
RiverFest, New Westminster	September 28, 2024	140
Tsawwassen Mills Shopping Centre	September 30, 2024	18
Diwali Festival, Surrey	October 20, 2024	156
	Total participants	**1,385**

4. Summary of Public Engagement Events

SFU Vendor Expo – September 5

- The sorting game was again the highlight, and we often had a lineup of students wanting to join in, even in the 31-degree heat! We spoke with environmental science majors, and several self-proclaimed experts in recycling who regularly educate their roommates, family, and friends of the importance of recycling and waste management.
- Some participants were unsure of their level of knowledge, so because more heads are better than one, we often had teams playing the game. This resulted in brainstorming, discussion, group compromise, laughs, and learning.
- Our observation was that often people had far more knowledge than they thought they did and the validation through the game and a high five was all they needed to know they should keep doing what they were doing.

* SFU is modelling the way with multi-stream garbage bins located at every entrance, bathroom area, and in the hallways. They use images and words to communicate the streams, and even have food waste containers for the students to use.

Car Free Day – September 15
