Project Overview

To increase the reliable delivery of high-quality drinking water, Metro Vancouver is planning to build a new water supply tunnel beneath the Fraser River. The project will feature a tunnel approximately 1.1 kilometers long and 4.5 meters in diameter, constructed deep beneath the riverbed. To connect the tunnel to the existing water system, deep vertical shafts will be built—one in Vancouver and one in Richmond—along with underground valve chambers. The project is currently in the design stage, and construction is anticipated to begin in 2029.

The Cambie-Richmond Water Supply Tunnel is one of the several new water supply tunnels in the region designed to withstand major earthquakes. It will also provide additional long-term supply capacity to meet increasing demand for the region's growing population.

Together we make our region strong

Metro Vancouver is a federation of 21 municipalities, one electoral area, and one treaty First Nation that collaboratively plans for and delivers regional-scale services. It delivers regional scale water, wastewater, and solid waste utility services. Metro Vancouver also regulates air quality, plans for urban growth, manages a regional parks system, provides affordable housing, and serves as a regional federation. The regional district is governed by a Board of Directors of elected officials from each member jurisdiction.
